I have referred to the fact that when this Trade Board was first established promises were given by Mr. Leggett on behalf of the Minister of Labour that two District Trade Committees should be formed for Scotland and certainly one District Trade Committee for Somerset and Dorset. On reference to the minutes of the first meeting of the Rope, Twine and Net Trade Board held on the 4th and 5th December, 1919, it will be noted "that the Board considered the advisability of establishing District Trade Committees," and, Item 7, "It was agreed that consideration of the matter be deferred." The explanation of this is that the appointed Chairman of the Board ruled that the question of District Committees could not be considered until the minimum rate had been fixed—withstanding very strong protests made. Further, the workers' side of the Board were opposed to the setting up of District Trade Committees. *The fact that the appointment of a District Trade Committee rested on the decision of the Chairman and the agreement of the workers' side of the Board had never been explained or the Scottish Net Manufacturers' Association and the Bridport Manufacturers' Association would never have withdrawn the valid objections they lodged with the Ministry on the 28th March, 1919, to the inclusion of the netting trade with the rope and twine trades.*

It was at this first meeting of the Board also apparent that, at the outside, not more than 8 members of the entire Board were interested in the question of home workers. An absolute deadlock was reached at this meeting with regard to the Dorset and Somerset area, which had always covered a strongly localised trade, and had, as had repeatedly been pointed out to the Ministry of Labour, very little in common with the rope and twine trade as generally known.

It was decided that it would be better if the employers and workers in the Dorset and Somerset area held a local conference with a view to fixing, not only their rates of wages, but their degrees of skill, which, of course, would have to be based on the minimum rates proposed by the Board at this first meeting. As a result a conference was held in Bridport on the 30th day of January, 1920, a full account of which is attached. Complete agreement was reached, and at the next meeting of the Rope, Twine and Net Trade Board, held on the 12th February, 1920, rates were definitely fixed for Dorset and Somerset for a period of 18 months ahead, and these rates in conjunction with minimum rates for the rest of the country were duly confirmed at the meet-

ing of the Board held on the 11th and 12th October, 1920. In view of the evidence that will follow it is important to note, that although denied a District Trade Committee, the principle of a district was granted to Dorset and Somerset.

In consequence of the rates being fixed on a progressive scale for 18 months ahead, the question of District Trade Committees was for the time allowed to lapse.

On the 1st November, 1920, however, because of a proposition which had been put forward for discussion at the coming Trade Board meeting on the 10th November, "that the time has now arrived when it is expedient that the Rope, Twine and Net Trade Board should appoint a District Trade Committee for the counties of Dorset and Somerset," a further conference was held between the employers and workers in that district, at the request of Mr. McConnell (Chairman of the workers' side of the Board and trade union leader for the district). As a result of the conference 4 votes only were obtained from the workers in favour of the establishment of a District Trade Committee. The matter therefore had again to drop.

A revision of rates was due in October, 1921. Another conference was held and the employers were met with the following resolution, dated 19th May, 1921:—

"We having carefully considered the proposed reduction in the wages of employees in the flue, twine and net trade in Dorset and Somerset and have come to the conclusion that as the question will affect the whole of England and Scotland it would be detrimental to the best interests of the workers outside Dorset and Somerset to attempt to recommend any reduction for those two counties, but to discuss the whole question in London next Tuesday from a national point of view."

It will therefore be abundantly evident that it is impossible under existing conditions for a Trade Board to appoint a District Trade Committee unless by agreement between both sides of the Board, which, from the foregoing it would seem, could never be hoped for.

That the Ministry of Labour evidently had some faith in District Trade Committees is proved by remarks made at an interview at the Ministry of Labour when Sir Robert Horne (then Minister) met a deputation on the 9th March, 1920, of employers and workers, from the Jute Trade Board, the Flax and Hemp Trade Board, and the Rope, Twine and Net with regard to the overlapping of these three Boards, and asked why District Trade Committees had not been utilised, and he was promptly told by the workers' side that they objected to them.

As a member of the Flax and Hemp Trade Board also, I have further concrete evidence of the determination on the part of the workers not to have District Trade Committees, as on this particular Board the workers voluntarily accepted $\frac{1}{2}$ d. an hour less on their minimum rate rather than discuss the question of District Trade Committees for Scotland.

On complete examination of the whole question it would appear that District Trade Committees could not be worked advantageously, as any decisions arrived at would have to be subject to confirmation by the main Board. The result would be an enormous amount more time spent, and, accordingly, an enhanced cost.

The employers of the Rope, Twine and Net Trade Board therefore consider that the question of District Committees is one that should be eliminated as impracticable, but they do consider that the *Rope, Twine and Net Trade Board should be able to divide itself into sections, namely, a Rope Section, a Twine Section, and a Net Section.*

Present Method of Altering Rates.

The present method of altering rates, with the period allowed for the reception of objections, constitutes a very serious difficulty, added to which a rate may not be varied within 6 months except by special permission of the Ministry of Labour.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

One illustration of this will suffice. In consequence of a munitions award under the Wages Temporary Regulation Act, a certain class of female workers in the rope trade was receiving 10jd. an hour. It was agreed by the Rope, Twine and Net Trade Board at a meeting held on the 19th May, 1920, that the wages of these workers should continue at this rate for 4 months in accordance with the Statutory Order 410. The Chairman of the Board insisted that this constituted a proposal to vary, and that accordingly notice had to be issued.

At the meeting of the Board held on the 29th June, 1920, a special leaflet was issued pointing out that certain workers, and certain workers only, were affected by the notice of proposal to vary the Chairman had insisted was necessary to be issued. At the meeting of the Board held on Thursday, the 16th September, 1920, this notice of proposal was carried, but the representatives of the employers' side abstained from voting, and as a result of pressure brought to bear on the Minister the rates were not made effective until the 31st December, 1920.

As a result of this having been fixed for four months these rates ran until 30th April, 1921, whereas the original intention of the Board had been when the agreement was made on the 19th May that the rates should become effective and lapse by the 31st December, 1920.

In consequence of this a most unfortunate dispute arose in the Liverpool district, the trade union there having called a strike against a reduction of the rates which naturally automatically came about at the expiration of the four months' period, and this strike still continues, notwithstanding the statement made by Dr. Macnamara at the Royal Agricultural Hall on the 20th September, 1921—

"There is this remarkable fact to be placed to the credit side of the Trade Board balance sheet, that never once has there been anything approaching a serious strike in an industry covered by a Trade Board."

—and Mr. Humbert Wolfe, when giving evidence before our Committee as reported in the "Times" of October 14th, 1921, said:

"I do not know of a single strike or lock-out arising from any decision of a Trade Board."

This question has been carefully considered by the employers and the workers' sides of the Rope, Twine and Net Trade Board, and they are unanimously agreed that when a rate is passed by agreement it should come into force forthwith, that is, within a month at the latest.

The employers' side of the Board is of opinion that the objections should be wiped out altogether, and they do not consider it is fair to any Minister to be subject to the political pressure which undoubtedly at times now takes place and results in inordinate delay in a rate being finally confirmed—such as has been illustrated in the foregoing.

The employers' side further consider that a rate once fixed should remain in force for six months, and think this is necessary in view of the export trade of the rope, twine and net industry to allow the necessary costings to be made and maintained for a certain definite period; in other words, there must be fixed rates for, at any rate, a definite period of time.

Minimum Rates Becoming Standard Rates or Maximum Rates.

The Rope, Twine and Net Trade Board was formed at a time when wages were already high. The Wages Temporary Regulation Act (which terminated September, 1920) and the Munition and Industrial Courts were maintaining high rates of wages even in organised trades, with the inevitable result that the so-called minimum wage became the maximum, in addition to which the working hours in this trade, namely, 55½ on the textile side and 55 on the non-textile side, were reduced to 48, while the higher wages were fully maintained. Munition work ceased, but the munition wage for factories on ordinary work continued.

A system had grown up during the war of a living wage calculated on the cost of commodities as shown by Board of Trade points. The cost of living and the price of commodities depend upon spending power, and present figures show that a reduction in price has rapidly followed a reduction in wages. A trade slump was bound to follow world conditions, and particularly in Europe with the collapse after the war, but the hours of work were reduced too soon; consequently there was a less production and higher prices.

A living wage strictly interpreted means enough to support life. A standard wage means a bare subsistence with a certain defined degree of comfort added. A living wage successfully fixed would constitute a very inferior degree of comfort. The standard of comfort must be fixed by the surplus arising from the disposal of commodities after paying for the cost of production. Now we have to secure a surplus in order to pay our way and to sustain life. If we do not secure that surplus even a living wage cannot be paid, and the trouble in the rope, twine and net industry to-day is that the necessary surplus is not being made and will not be made until settled conditions prevail.

At the last meeting of the Rope, Twine and Net Trade Board held on the 5th October, 1921, the attention of the Board was drawn to the Ministry of Labour's figures of unemployment in the rope trade, the twine trade and the net trade, and, although it was shown conclusively that the percentage of unemployment in the net trade was five times as great as in the three (rope, twine and net grouped together), yet such a startling fact did not prevent the same rates being fixed for all three branches of the trade.

The system of fixing a minimum rate for the whole trade independent of districts is, in so far as the employers' side of the Board is concerned, impracticable.

In a recent budget produced by the workers' side from the London area, the rent was named at 18s. a week. There are hundreds of workers in the rope, twine and net industry in the rural districts whose rent runs from 3s. to 5s. per week, whilst in the smaller towns from 7s. to 10s. a week.

Very many of the country mills are situated in the centre of agricultural districts, and in so far as the country rope makers are concerned, a great many of these employers are also landowners and practical farmers; while there was a scarcity of flax during the war many grew flax.

Now that the Agricultural Wages Board has ceased to exist and wages are being arranged by agreement in the various counties, it is interesting to note, from photographs produced, that on one side of a hedge an ordinary labourer engaged in the rope, twine and net trade might be earning 52s. a week as a minimum wage, whilst on the other side of the hedge there might be an agricultural labourer whose wage would be 38s. per week—and in the adjoining county 36s. a week. The rope, twine and net labourer's wage being for a 48-hour week and the agricultural labourer's for a 50-hour week.

There should be some arrangement by which rates could be fixed for rural districts or urban districts on the basis of population as against a city or town.

Whilst on the subject of wages, it is my duty to point out that when Trade Boards were formed for the rope, twine and net trade, the jute trade and the flax and hemp trade, three trades were brought under the Act any one of which had a larger export business than the whole of the other trades covered by Trade Boards in existence, and it is the employers' opinion that one of the great causes of unemployment existing to-day in these industries is the fact that, owing to the limited hours of work and the high rates of wages, it is impossible to compete with countries which are not so hampered, to say nothing of the increased capital which would be required to secure the same production when 48 hours only are being worked as against 56.

30 November, 1921.]

Mr. E. J. W. BUCKPIT, J.P.

[Continued.]

The workers' side of the Board laugh at any idea that the employers have not made sufficient profit in the past to provide for this, or they claim that the enhanced costs can be passed on to the consumer, and it is against a stone wall of opinion of this sort that the employers struggle to get wages down to a point where business can be resumed and consequently employment be ensured.

Professor Hobhouse, the Chairman of the Rope, Twine and Net Trade Board, in an introduction to a book by W. Addington Willis, LL.B., entitled, "Trade Boards at Work," says that "through the presence of appointed members deadlocks are avoided. The Boards can always come to a decision. The fact that the two sides (employers and workers) have in the end to convince a jury compels careful statement and a reasoned exposition of relevant facts," and yet, as mentioned previously, the same chairman, speaking recently at Whitfields, said that sometimes the employers' side and the workers' side took up a position which the appointed members did not feel they could support! Surely a jury is required to give a verdict, and in the opinion of the employers it is in consequence of the facts now stated that the minimum wage has become the maximum wage for the industry and, as a result of its being fixed too high, has gone a long way in creating unemployment and loss of trade.

It might be well here to mention the attitude taken up by the appointed members and the workers' side with regard to the rates for young persons of both sexes.

These rates, under existing methods, are fixed far too high for the following reasons:—

The employer finds young labour very irresponsible, indifferent, and materials are liable to be spoilt.

In consequence of this, parents are finding it exceptionally difficult to get the young members of their families into work, with resultant hardship to themselves.

Lazy habits are engendered in young persons, and industry will ultimately lack trained workers.

Present rates where young persons are concerned are not conducive to good discipline in the works.

There is a disregard to parental control at home, and utter indifference either to the interests of the employer or the future of the young persons themselves, and on more than one occasion workers in the trade have told me that as parents they have in no way benefited by the higher wages which the young persons of the family earn.

I have reason to believe that employers in the town of Lowestoft, where there are factories which come under the Rope, Twine and Net Trade Board, have approached your Committee relative to the high rate of wage laid down for juveniles, and at the risk of reiteration, it is worth pointing out that in the borough of Lowestoft on the 27th of July this year, there were 287 boys and 232 girls available for employment, and that for 10 weeks prior to this date, only 20 boys and 35 girls had been placed in employment.

Position of Outworkers.

It has already been stated that it is estimated that there are about 1,580 female outworkers in this trade, of which 1,000 are in the Dorset area, and these workers are net makers.

These outworkers to-day, and for many months past, have been practically entirely without work, in consequence of the action of the Ministry of Labour in interpreting the Act so as to exclude beatsters or beltsters (who in different circumstances from the homeworkers or outworkers make and mend nets), in spite of continual protests from the Trade Board from the first meeting against their exclusion, to which can be definitely traced the unemployment among outworkers. In the United Kingdom the beatsters outnumber the women engaged in every branch of the trade brought under the Rope, Twine and Net Trade Board.

Independent of the undoubted hardships which have been caused to the outworkers, the employers have practically lost the whole of the business which employed this labour, and I take it that the Committee will readily understand that a market or a portion of a market once lost is never fully regained. In fact, it is almost easier to create a new market or a new demand than to get back a market that has been lost.

This question has seriously engaged the attention of the industry before the final formation of the Board, and continuously since, as the following evidence will conclusively prove.

At a conference held at the Ministry of Labour on the 7th April, 1919, when the question of the formation of a separate Board for the net trade was under consideration, the strong protests made both by the Scottish and English netting manufacturers consisted of:—

- (1) That the net trade had nothing in common with the rope and twine trades. Different conditions affected the prosperity of the three trades, and it would be manifestly unfair to have one Board fixing rates for such widely divergent trades;
- (2) That the Draft Order left out the large number of workers in all fishing centres and elsewhere engaged in mending nets both for fishing purposes and for other purposes such as turning disused fishing nets into boundary netting, fruit netting, etc.;

and at this conference the employers pointed out that such workers outnumbered very considerably the total number of female workers engaged in the three industries.

Mr. Besso, who was present at the conference, definitely said that the Ministry had sent out investigators and that it was principally upon their reports as to the conditions under which the said net mending and re-making was carried out that the Ministry had decided to add the net trade to the rope and twine trades and bring them under the scope of the Acts.

Mr. Besso further stated that net menders were, in the opinion of the Ministry, included in the Draft Order but in order that there might be no mistake whatever the Draft Order should be amended so as to make it certain that these workers actually came under the Board. Yet ever since the Rope, Twine and Net Trade Board came into existence the Minister of Labour has ruled that beatsters or net menders are not within the scope of any Board.

The workers' side, from the inception of the Board until the present day, have joined issue with the employers in claiming that this class of worker, i.e., beatsters, came under the Board.

At the meeting of the Rope, Twine and Net Trade Board held on the 13th February, 1920, it was moved by Mr. McConnell (Chairman of the workers' side), seconded by Mr. Beeton (Chairman of the Scottish Net Manufacturers' Association), and agreed

"that the Trade Board request the Minister of Labour to extend the Rope, Twine and Net Trade Boards Order to include all beatsters and net menders not already included in the Order."

At the next meeting of the Board on the 11th March, 1920, it was reported that the following letter had been received from the Ministry of Labour in reply to the request of the Trade Board, that the Minister of Labour would amend the Trade Board's (Rope, Twine and Net) Order, 1919, so as to include within its scope all net menders and beatsters wherever employed:—

"Sir,

I am directed by the Minister of Labour to refer to your letter of 25th February, submitting a recommendation of the Rope, Twine and Net Trade Board as to the inclusion within the scope of that Board of all net menders and beatsters wherever employed. I am to request

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

that you will inform the Board that the matter is receiving the Minister's immediate and sympathetic consideration and that the necessary investigation into the questions at issue will be undertaken at an early date.

I am, Sir,

Your obedient servant,

(Signed) F. W. LEGGETT."

At the next meeting of the Board held on the 18th and 19th May, 1920, a letter from the Minister of Labour was read:—

"Sir,

I am directed by the Minister of Labour to request you to inform the Rope, Twine and Net Trade Board (Great Britain) that he has had under consideration the recommendation of the Board that the Trade Boards (Rope, Twine and Net) Order, 1919, should be amended so as to include within its scope all net menders and beatsters wherever they may be employed.

He is of opinion, as at present advised, that it would be desirable to amend the above-mentioned Order so as to include the mending of all kinds of fishing nets, whether carried out in association with manufacture or not, except where such work is performed by crews of fishing vessels. He considers that it would not be desirable to include other branches of net mending carried out independently of manufacture, since it would appear from the information available that such an inclusion would involve encroachment on a number of trades not related to the rope, twine and net trade.

I am to enclose herewith a copy of the draft definition of the rope, twine and net trade as revised to embody the amendments above outlined.

The Minister proposes to publish Notice of Intention to amend the Trade Boards (Rope, Twine and Net) Order, 1919, on the above lines, subject to the observations of the Trade Board, and he would be glad if the Board would consider these proposals as soon as possible.

(Signed) F. W. LEGGETT."

The rope, twine and net trade, that is to say:—

- (1) The making or re-making, etc., as present Clause 1.
- (2) The bleaching, teasing, etc., as present Clause 2.
- (3) The manufacture of packings, etc., as present Clause 3.
- (4) The braiding, etc., as present Clause 4.
- (5) The mending of fishing nets (including trawl and drift nets) and all processes and operations incidental thereto, except where carried out by crews of fishing vessels.
- (6) The mending of nets (other than fishing nets) and the winding, etc., as in Clause 5.

The remainder of the definition—no change.

After discussion it was agreed to inform the Minister of Labour that the Trade Board approved of the draft definition of the rope, twine and net trade as revised, provided that Clause 6 was intended to include the mending of disused fishing nets.

About this time it was pointed out that work for homeworkers was falling off; that the competition in the trade of the beatsters was being seriously felt.

At the Trade Board held on the 29th July, 1920, it was stated by Mr. Besso that in order to meet the wishes of the Board, that the mending of disused fishing nets should be included within the amended Order, the Minister had under consideration the alteration of the proposed amending Order set out in paragraph 5 of the minutes of the meeting of the Board held on 18th May, 1920, so that clauses 5, 6 and 7 would be as follows:—

"The mending of fishing nets (including trawl and drift nets) and all processes and operations

incidental thereto except where carried out by crews of fishing vessels.

"The conversion of fishing nets into netting to be used otherwise than for the purpose of fishing, and all processes and operations incidental thereto where carried out in conjunction with or in association with the mending of fishing nets as specified in the above paragraph.

"All other mending or conversion of nets where carried out in a factory or workshop in which any of the articles (a) to (g) specified in the Trade Boards (Rope, Twine and Net) Order, 1919, are made or remade."

It was also stated by Mr. Besso that certain objections had been raised against the proposed amendment of the Trade Boards (Rope, Twine and Net) Order and the suggestion had been made that a separate Trade Board should be established for the fishing net industry.

It was moved by Mr. Cardwell, seconded by Mr. McConnell, and agreed, that the Minister of Labour should be informed:—

(a) That the Trade Board were opposed to the establishment of a separate Trade Board for the fishing net industry.

(b) That the Board held the view that beatsters were already included within the scope of the Board and that the definition therefore required no alteration to bring them in, but that beatsters merely required to be informed that they were so included; but that if the Minister of Labour did not concur in this view, the simplest possible amendment should be made in the present definition for the purpose of bringing all net menders and beatsters within the scope, *e.g.*, by the addition of the words "the mending of nets (other than lace nets) without qualification."

Naturally as a result of this, the Board felt satisfied that these workers would now be brought within the scope of the Board, but at the next meeting, held on Thursday, 16th September, the following is recorded:—

"It was reported by Mr. Besso that the objections raised against the proposed amendment of the Trade Boards (Rope, Twine and Net) Order, 1919, to include beatsters and net menders not already included within the scope of the Order, might result in the Minister directing a public inquiry into the matter to be held."

Mr. Besso then withdrew.

"After discussion it was agreed to inform the Minister of Labour that the Trade Board attached great importance to the inclusion of all net menders and beatsters within the scope of the Rope, Twine and Net Trade Board and to request the Minister that in the event of such inquiry taking place as suggested by Mr. Besso, due notice might be given to the Trade Board and an opportunity afforded to them of being represented at the inquiry."

It will be seen, therefore, that the Minister or his representative had not carried out his undertakings in this matter, and it is important to note, that during all this time unemployment had been increasing amongst home workers or outworkers.

At the meeting of the Board held on Wednesday, 4th May, 1921, the following letter was read:—

"23rd April, 1921.

"Sir,

"I am directed by the Minister of Labour to refer to previous correspondence and conversations which have taken place between the representatives of the Department and the Rope, Twine and Net Trade Board (Great Britain) on the subject of the inclusion of beatsters and net menders within the scope of the Trade

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

Board. I am to state that the Minister, after giving the question his very careful consideration in the light of the information and observations which have been laid before him, is of the opinion, as advised, that the work of beatsters and net menders does not fall within the definition of the rope, twine and net trade as set out in the Trade Boards (Rope, Twine and Net) Order, 1919. It would appear from the information which has been collected by the Department that the work in question is very generally performed by shore hands in the fishing industry and also by workers in the fish curing industry, and that it is therefore a branch of work in these industries. On the information before him, therefore, the Minister feels that he has no power under the Trade Boards Act to include these branches of work within the scope of the rope, twine and net trade. I am, however, to state that should the Minister consider it expedient to apply the Trade Boards Act to either of the above-mentioned industries or any branch of them, he will bear in mind the possibility of including within the scope of appropriate definition the work of the beatsters and net menders."

It was agreed that a letter should be sent to the Ministry of Labour asking that a deputation might be received from the Board to discuss with the Minister the exclusion of beatsters and net menders and also the question of enforcement of the rates.

It will thus be seen that the Minister definitely declined to bring this class of worker within the scope of the Rope, Twine and Net Trade Board, and although up to this date the beatsters' rates of pay had been lower than those paid to similar workers coming under the Rope, Twine and Net Trade Board, they about this time fell to 18s. and 20s. a week, as against 34s., the minimum rate for homeworkers or outworkers. This naturally resulted in a bigger increase in unemployment among the outworkers and consequently a further loss of business to employers.

The deputation (referred to recently) was received at Montagu House on the 2nd June, 1921, the following gentlemen representing the Ministry of Labour: Mr. Humbert Wolfe, Mr. Nicholson, Mr. Counsell and Mr. Chegwidan. The deputation was composed of four representatives from the employers' side and four representatives from the workers' side, and the record of the proceedings is as follows:—

"The question as to whether the work of beatsters and net menders did or did not come within the scope of the Rope, Twine and Net Trade Board, and in the event of such work not being considered as within the scope of the Board, the possibility of it being so included was then discussed.

"Mr. Buckpitt claimed that beatsters and net menders were already included within the scope of the Board. Mr. Wolfe stated, however, that unless net mending was carried on in a factory or workshop in which certain specified articles were made or re-made, workers employed on net mending would not come within the scope of the Board. He further stated that as a large number of beatsters and net menders were directly employed by boat owners it was claimed that these workers were engaged in the fishing industry rather than in the rope, twine and net industry. It was stated by Mr. Buckpitt that a number of large boat owners owned net mending or beatsters' lofts, and that small owners who were unable to run such lofts sent their work to the bigger owners for mending. He also stated that a great number of disused fishing nets were made into garden nets. Mr. McConnell urged that in view of the extremely low rate of wages received by beatsters the work of beatsters and net menders should be brought within the scope of the Rope, Twine and Net Trade Board, if possible, or failing this, that a Trade Board should be established for the fishing industry.

"In conclusion it was stated by Mr. Wolfe that further consideration should be given to the matter, but that in view of the fact that the fishing industry claimed that beatsters and net menders came within the scope of the fishing industry not only would the fishing industry have to be convinced that beatsters and net menders were within the scope of the Rope, Twine and Net Trade Board, but that the Minister of Labour would have to be able to show that the work of beatsters and net menders was in fact a part of the rope, twine and net trade. If, however, beatsters and net menders could not be brought within the scope of the Rope, Twine and Net Trade Board, the possibility of applying the Trade Boards Acts to the fishing industry might have to be considered."

The report of this Conference was discussed at the next meeting of the Trade Board held on the 22nd June, 1921, and it was agreed that the Ministry be informed that the Board unanimously and emphatically adhere to the opinion already expressed that both beatsters and net menders are included within the scope of the Trade Board, and in drawing up the proposed new rates in conjunction with the new grading beatsters were included.

The Minister of Labour, however, refused to confirm the new rates until beatsters were struck out. Consequently employers of this class of workers are at liberty to pay any rate of wage their workers will accept, whilst a worker deemed by the Ministry to come under the Rope, Twine and Net Trade Board has to receive a minimum wage of 32s. per week.

The employers' side of the Board desire me to emphasise again the fact that there are a greater number of female workers engaged in this class of work—outside the scope of the Trade Boards Acts—than the whole of the female workers within the scope of the Acts.

The Scottish net manufacturers particularly ask me to point out the inaptitude and the unfairness of the application of the Acts.

It should be noted also that the outworkers or homeworkers are almost entirely in country districts. The work is taken to them often a distance of 20 miles. They are paid on completion of the job at their own homes when the work is fetched. No machinery is involved, and there is no contract of service; the employer gets his work done as and when the worker thinks fit. During the hay and harvest seasons these outworkers or homeworkers are often employed on the land.

Scope.

The question of scope which is now entirely decided by the Minister of Labour is one which is continually causing difficulties and has been largely dealt with in stating the position of the beatsters at considerable length.

It will be apparent that whilst the Minister of Labour claims that all questions of scope shall be finally decided by him, there is bound to be friction. It is perfectly obvious that scope is a matter which should be left to the Trade Board itself to decide seeing that the Board is composed of practical representatives of the industry, and therefore such injustices as have been dealt with in connection with the matter of beatsters would have been prevented.

The employers' side and the workers' side of the Rope, Twine and Net Trade Board are of the unanimous opinion that the Board should decide questions of scope, but with regard to any question of scope which affects any other of the Boards, they consider general meetings of such Boards should be held, and, failing agreement being reached, the question should be submitted to an Industrial Court for an expression of opinion.

It is not necessary to labour the point, but three decisions made by the Minister of Labour might perhaps be cited in order to prove how impossible it is to expect harmony in an industry or in an individual firm whilst these matters are settled by the Minister of Labour:—

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

(1) The Minister holds that workers engaged in cleaning machines in a rope, twine and net factory are outside the scope of the Board. The Board expressed the opinion that they disagreed with this decision which is at variance with the custom of the trade—the trade having always held that for workers engaged in manufacturing processes the cleaning of machines is regarded as a process necessary to manufacturing.

(2) The Ministry of Labour, at a meeting of the Board, held on the 4th May, 1921, is reported to have held that an errand boy employed in a warehouse was within the scope of the Board, but that an errand boy employed on outside errands was not within the scope of the Board.

The absurdity of the first definition for an errand boy will be seen by reference to the plan produced which shows a warehouse situated about three-quarters of a mile away from the main works—and this warehouse itself is entirely outside the scope of the Trade Boards Acts, because it is merely a packing warehouse apart from the factory or workshop in which the articles coming under the Rope, Twine and Net Trade Board are made and re-made.

(3) The third case to which I should like to draw particular attention is that of halters, of which I produce a specimen.

In the manufacture of these halters the rates of four Boards operate, namely, the Jute Board, the Flax and Hemp Board and the Rope, Twine and Net Board, and the Made-up Textiles Board—and then there is a process, namely, that of "eyeing," which does not appear to be covered by either one of these four Boards.

These halters in various sizes are largely manufactured by the country rope-makers and are to be found in every agricultural market throughout the United Kingdom, and yet in as small an article as this four if not five Trade Boards apply, different rates of pay operating in each case.

Labels have been attached to the halter showing the parts which come under the different Boards. I shall welcome cross-examination relative to this and hope to prove as a result, that if this were the only case, I should have abundantly proved that the decisions of scope should be settled by the Trade Board itself and this responsibility be entirely taken away from the Ministry of Labour.

This point will again arise under the question of overlapping.

Grading.

The next point is with regard to grading, that is to say, endeavouring to fix the varying degrees of skill in the trade and describing the processes as fully as possible in the vernacular customary in the various districts.

After a full discussion of this matter at a Board meeting of the Rope, Twine and Net Trade Board, held on the 5th May, 1921, it was decided to form a committee, consisting of 10 members of each side of the Board, to consider and report to the Board within two months a suggested grading for all workers, male and female, within the scope of the Rope, Twine and Net Trade Board, and to make recommendations as to the minimum rates they would suggest as applicable to the grades proposed.

This committee duly sat, and the grading drawn up was unanimously agreed by the 10 employers and 10 workers forming the committee. The whole trade was graded into four sections, and the committee considered they had solved a big problem in having been able to unite the various branches of the trade in an industry with so many sections.

The essential point of the grading was that there should be a definite rate of wage for each grade, and that as grade 4 was considered the lowest, or covered the least skilled worker, this should have a flat minimum rate applicable to it. The employers' proposals allowed for a difference between each grade of 1d. an hour or 4s. per week of 48 hours for each male worker 21 years of age and over, and on the women's rates a difference of ½d. an hour or 2s. a week of 48 hours between each grade.

The whole balance of this detailed grading (as referred to in a previous note) was entirely upset when, at the suggestion of an appointed member, in consequence of the two sides of the Board failing to agree a rate, and the appointed members practically saying that they would not vote for the employers' proposals (which of course naturally stiffened the backs of the workers who stood out for their proposals in full), in order to secure the appointed members' vote the employers had to agree, as far as female workers were concerned, to amalgamate grades 3 and 4.

Of course the committee and the members of the Board present understood the position, but it has been impossible to explain satisfactorily to the 600 firms covered by this Trade Board why the system of grading was introduced, when the same rate of wage, as far as female workers are concerned, applies to grades 3 and 4, and thus the grading scheme, of which the committee had such great hopes with a view to securing uniformity throughout the trade, was entirely upset at the very outset.

Members of the Board who know what they wanted and how to get at it were unable to prosecute their ideas entirely through the action of the appointed members. The Grading Committee therefore in the eyes of the trade, to whom, as I have said, it is impossible to explain the whole circumstances, have been made to look ridiculous, and I consider it my duty to make, as the chairman of the committee, this full explanation, in the hope that it will reach the trade at large, because the greatest possible thanks of the trade as a trade are due to the Grading Committee for the very difficult task they undertook and the thoroughness with which they performed the work.

Inspection and Prosecution.

It is a matter of common knowledge that in every trade, unfortunately, disloyal and unscrupulous employers will be found, and Trade Boards were perhaps welcomed by loyal employers as a means of quickly bringing the unscrupulous employer into line, and considered that when once a rate was fixed the Ministry of Labour, who control the inspectorate, would immediately investigate every complaint received, and if satisfied that the evidence would be forthcoming to prove that the rate had not been paid, immediate action would be taken against the offender.

Unfortunately this has not been the case, with the result that the loyalty of the good employer—paying the Trade Board rates—has been strained to the uttermost.

The Rope, Twine and Net Trade Board has a concrete case which they desire me to put before the Committee with a view to proving that the present machinery at the Ministry of Labour is altogether too cumbersome to bring a defaulter to book within a reasonable time, and it will be appreciated by the Committee that when wrong is done no time should be lost in seeing that the wrong-doer is prosecuted and justice done.

It is submitted that the system of inspection is unsatisfactory and unfair owing to the small percentage of inspectors to the number of firms under the Trade Boards Acts.

I would also say that the reports of inspectors are often widely divergent as the following case will prove.

The wages books of a certain works coming under the Rope, Twine and Net Trade Board were inspected

30 November, 1921.]

Mr. E. J. W. BUCKPIT, J.P.

[Continued.]

in the autumn of 1920, and the inspector's report was that the rates of pay fulfilled the conditions laid down by the Board. In the spring of 1921 a different inspector visited the same works and reported to the local manager that the rates of pay in a certain department were grossly inadequate, and advised him at once to get into communication with his directors and have the matter put right. Between the time of the visit of the inspector in the autumn of 1920 and the visit of the inspector in the spring of 1921, there had been no variation in the rates fixed by the Rope, Twine and Net Trade Board; the employers in this particular case had not altered the rates of pay in the particular department referred to—yet in spite of this fact there are the above-quoted reports of the two Ministry of Labour's inspectors—from whom employers have no appeal except to the Law Courts, and that at the instance of the Ministry of Labour. The employer in this case had a return made out of each individual's earnings for three months, which showed the earnings to have been *more per worker* than the Trade Board's piece-work basis time rate then in operation.

I will now put before Committee facts showing the *inordinate* delay which occurred before a prosecution was finally made under the Rope, Twine and Net Trade Boards.

In August, 1920, complaints were lodged with the Ministry of Labour that a firm was paying its workers from 33½ per cent. to 50 per cent. below the Trade Board rates fixed for the workers. In November, 1920, certain pressure was brought on the firm by the Ministry of Labour, and, as a result, £29 was refunded to the workers, but the Trade Board was not notified of this.

In January, 1921, further complaints were lodged with the Ministry of Labour concerning the same firm, but no acknowledgment was received from the Ministry. In March, 1921, the matter was reported as being "in the hands of the Minister's Legal Adviser."

In April and May, 1921, questions were asked in the House of Commons relative to this matter, and were reported in "Hansard" as follows:—

April 6th. "Mr. J. Jones, M.P., asked the Minister of Labour whether his attention had been drawn to the communications that were forwarded to the Ministry regarding the non-payment of rates of wages laid down by the Rope, Twine and Net Trade Board by a firm in . . . resulting in at least two visits and inquiries by inspectors of the Board during the months of August and December, 1920; whether he is aware that no replies have been received regarding these communications, and whether in view of the proved evasion of the Trade Boards Act by firms who are paying less than the wage fixed by the Trade Board, immediate and effective steps can be taken to enforce compliance with the said Act and thus remove an unjustifiable handicap upon competing firms who conform to the law by paying the rate of wage fixed by the Trade Board?"

Dr. Macnamara: Complaints have been made to the Department with respect to a firm at . . . and visits of inquiry were paid by inspectors in the months mentioned. It is true that no written reply to the communications has been made, but the correspondents in question have been interviewed. The reason for the delay in the case has been the difficulty of determining precisely the liability of the firm under the Trade Boards Act. Steps have, however, been taken to obtain the payment to the workers concerned of arrears of wages due to them and to ensure that in future the wages paid reach the statutory minimum."

May 4th. "Mr. William Thorne, M.P. To ask the Minister of Labour if he is aware that a firm of rope and twine makers at . . . refuse to pay the rate of wages fixed by the Rope, Twine and Net Trade Board; if he is aware that the firm in question were members of the . . . Association, and as such had

agreed to pay the rates agreed upon between the association and the trade union, and afterwards sanctioned by the Rope, Twine and Net Trade Board; if he is aware that the firm is only paying 26s. 11d. instead of 33s. 1d., the agreed rate; if he is aware that other firms in . . . who are paying the rates agreed to by the Trade Board have stated that unless the Ministry of Labour insists upon the firm paying the agreed rate they have threatened to reduce the rates of pay, and if he can state whether his Department intend taking any action against the firm so as to make the employers carry out the decisions of the Trade Boards Act.

Dr. Macnamara: I am aware that a firm of rope and twine makers at . . . have paid certain of their workers at a rate less than the minimum rate fixed by the Rope, Twine and Net Trade Board and that in certain cases the underpayment was of the order stated in the question. I have no information upon the other matter indicated in the question relating to the firm, nor as to any proposed action by other firms in . . . Arrears of wages appear to be due in respect of two types of work. These arrears have been paid to the workers engaged on one of these types of work, and I am in communication with the firm regarding the other."

At the meeting of the Rope, Twine and Net Trade Board, held on the 4th May, 1921, the whole question of the non-payment of rates was discussed, and it was agreed that the Minister of Labour be urged to take drastic action in respect of all cases of non-payment of the rates, and, further, be informed that the Board had appointed a small deputation which would be glad to wait on him to put before him particulars of cases of infringement and the views of the Board as to the seriousness resulting from the non-payment of rates being allowed to continue with impunity.

This deputation was received by the Ministry on the 2nd June, 1921, when action was promised, in regard to the specific case with which I am dealing, *within seven days*. On the 16th June the Minister was asked what progress was being made. On the 18th June the Minister replied that there would be a *new inspection*, and I have reason to believe that between June and July there was a further inspection. On the 12th July the Ministry were again asked what action they were taking, and *no reply was received*. On the 18th July the Ministry was asked to give a reply to the letter of the 12th, and on the 25th July the Ministry was again written to and the seriousness of the continued delay pointed out. . . . On the 26th July the Ministry replied that the matter was in the "*hands of their legal advisers*." On the 28th July another letter was sent to the Ministry saying no progress had been made, and on the 4th August the Ministry had to be asked for a reply to this letter. On the 5th August the Ministry replied that the matter was in the *hands of their legal adviser*.

I do ask the Committee's careful attention to the Ministry of Labour's part in this matter, particularly seeing that the matter had been laid before them by the Trade Board itself, and that the Ministry had received a deputation consisting of equal numbers from the employers' side and from the workers' side relevant to this case.

The prosecution finally took place in September, 1921, and the Trade Boards Quarterly Gazette, covering 1st July to 30th September, 1921, on page 10, reports that a conviction was secured in respect of 46 cases. The firm have given notice of appeal on one account, and the appeal is to be heard on 4th January, 1922.

I will give another instance of the ineffectiveness of the inspection and prosecution branches of the Ministry of Labour. At a meeting of the Rope, Twine and Net Trade Board, held on the 4th May, 1921, a direct application was made from the Board to the Minister for an inspection, and on the 21st June, 1921, no action having been taken, the Board again requested the

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

Minister of Labour to reply relative to the application for an inspection. On the 5th October, 1921, no reply to either of these having been received from the Ministry of Labour, it was resolved to ask the Ministry of Labour the number of complaints that had been received by them during the year and the numbers of visits that had been made by inspectors as the result of such complaints made either from the Rope, Twine and Net Trade Board, or from employers or workers who came within the scope of that Board, and at an administrative committee of that Board, held on the 8th November, 1921, the following letter received from the Ministry of Labour was read:—

1st November, 1921.

"Sir,—I am directed by the Minister of Labour to refer to your letter (R9730/21) of the 13th October, asking for information as to the number of complaints received during the year ending 2nd April, and the number of visits paid by inspectors as the result of such complaints. In reply I am to say that, with the limited clerical assistance available during the period referred to, it has not been found possible to keep a record of complaints received and investigated.

The Minister regrets, therefore, that he is not in a position to furnish the Board with the desired particulars. I am, however, to say that arrangements have been made which will make it possible in future to supply the Board with the information asked for.

I am to add that, as requested by the Committee, arrangements will be made for the officer who is in charge of the inspection work to attend a future meeting of the Committee, and to request that the Department may be furnished with information as to the time and date when it is desired that the officer should attend.

I am, Sir,

Your obedient Servant,
(signed) J. S. Nicholson."

The employers' side of the Rope, Twine and Net Trade Board are unanimously of opinion that the Chief Inspector and the Legal Adviser should be at the offices of the Trade Board and directly under the Trade Board, and after careful discussion with the workers' side of the Board, the employers and the workers submit as agreed between them that the present supervision of the operations of the Trade Board by the Ministry of Labour is defective and should be brought to an end; that the organisation of the Trade Board should be centred at the Trade Board offices with the present secretarial staff and with the addition of the Chief Inspector and the Solicitor to the Board.

The employers' side of the Board desire me to emphasise that in their opinion there should be co-ordination between the present inspectorate and that of the Home Office, the National Health Insurance, and the Trade Board.

Further, although not wishing to add to the present number of inspectors on the grounds of expense, they consider that when a case of evasion of rates has been discussed at a Trade Board meeting an inspection should take place forthwith, and if the employer be found to be evading the Act in any way, an immediate prosecution should follow, the employers' side of the Board being convinced that one prosecution is better than ten inspections.

The employers' side of the Board would also like me to direct the Committee's attention to the provision of the Trade Boards Acts whereby the employer is liable to a penalty, whereas there is no penalty whatever on the worker, who is allowed to go scot free, although, presumably, by accepting a lower rate than that fixed by a Board he also breaks the law.

Overlapping.

In so far as the Rope, Twine and Net Trade Board is concerned, although closely allied with the Jute

Trade Board and the Flax and Hemp Trade Board (because of the similarity of the processes), the employers have never been able to get the rates that were being fixed for these Boards considered in conjunction with their own.

On the 9th March, 1920, a meeting of representatives from both sides of these three Boards was held at the Ministry of Labour, and Sir Robert Horne (Minister of Labour then) presided. (I have already referred to this meeting under the heading District Committees.) The question of how far co-ordination of the work of these three Boards might be effected was discussed at some length, and finally a further conference was promised, Sir Robert Horne particularly stipulating that Mr. Besso, of the Ministry of Labour, should represent him at such conference, to report direct to him. This conference was held in York on the 23rd April, 1920, and to the surprise of the meeting no representative of the Ministry of Labour was present, and to this day no explanation has been given to either of the three Boards as to why the definite instructions of Sir Robert Horne, that Mr. Besso should represent him, were not carried out. As a result, it was agreed by the Rope, Twine and Net Trade Board "that a single Trade Board should be established for the three trades." No further meeting, however, since the York Conference has been held of the co-ordinating committee of the three Boards.

The jute trade, the flax and hemp trade, the rope, twine and net trade, and the made-up textiles trade all overlap to a very serious degree. It is perfectly true that the Ministry of Labour discussed the question of the Made-up Textiles Board with the Rope, Twine and Net Trade Board, but it was also evident from the commencement of the discussion that this was merely a matter of form, and that the mind of the Ministry of Labour had already been made up—that they would proceed with the formation of the Made-up Textiles Trade Board.

In order that this matter may be made as clear as possible to the Committee, I produce a plan of two actual works. In the line and twine sheds on the plan now produced, it would be possible to have the Jute Trade Board scale of wages applying in one walk, a Flax and Hemp Board scale of wages applying in the second walk, a Rope, Twine and Net Trade Board scale of wages applying in the third walk, whilst in another building the Made-up Textiles Trade Board rates might apply—thus it would be possible for these four Trade Boards rates to apply in one firm's works. In dealing with the question of Scope, I have already produced to the Committee a halter clearly showing this overlapping. The experience of the employers' side of the Rope, Twine and Net Trade Board would seem to indicate that if the Ministry of Labour finds that a material or process has been omitted from a Board on that material or that process they at once proceed to form a new Board.

As far as the Rope, Twine and Net Trade Board is concerned, the matter of overlapping is further complicated by the fact that there is also an Irish Rope, Twine and Net Trade Board with, again, different rates of pay for what are identically similar processes.

How is it possible to have industrial peace under such circumstances?

The tables of wages (produced) will show, perhaps, far better than any words of mine, the overlapping that exists.

I also produce a card showing raw manilla fibre, dressed manilla fibre and manilla yarn (this is a hard fibre). I also produce a card showing raw flax, dressed flax, flax sliver (soft fibre), and a card showing raw Italian hemp, dressed Italian hemp, and Italian hemp sliver (soft fibre), and a card showing raw jute, carded jute and jute sliver (soft fibre).

There is, as will be evident to the Committee, the greatest possible difference between the hard fibre and the soft fibres, and yet, as far as the Rope, Twine and Net Trade Board is concerned, these fibres are linked together.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

With regard to the Made-up Textiles Trade Board, the following letter received by the Rope, Twine and Net Trade Board is very instructive:—

26th August, 1921.

"Dear Sir,

I am directed by the Made-up Textiles Trade Board (Great Britain) to say that at a recent meeting they had under consideration the position in which a considerable number of firms in the trade are placed through the fact that they carry on work or engage in processes which come within the scope of the Rope, Twine and Net Trade Board (Great Britain), the Flax and Hemp Trade Board (Great Britain), and the Jute Trade Board (Great Britain).

The Made-up Textiles Trade Board understands that a joint or co-ordinating Committee of the three above-mentioned Trade Boards has been appointed for the purpose of considering how these difficulties caused by the overlapping of these Boards can best be met, and in view of the fact that they are closely affected by difficulties similar to those to be considered by the joint Committee, the Made-up Textiles Trade Board desire to ask that they may be afforded representation on that Committee.

Yours faithfully,

(Signed) F. POTTLEWELL."

The Rope, Twine and Net Trade Board, of course, agreed to the request contained in the above letter, but the co-ordinating Committee would have no power to influence the Ministry of Labour in any decision they had formed to create a new Board.

A certain association had explained to the Ministry of Labour that the manufactures of their members were covered in the main by the Rope, Twine and Net Trade Board, but that *very occasionally* they might make a tarpaulin, wagon cover or a few coal sacks. These manufactures are included in the scope of the Made-Up Textiles Trade Board. This clearly was a case where a little elasticity in the Rope, Twine and Net Trade Board might have got over the difficulty. Instead of this the Ministry of Labour insists that these firms also come under the Made-Up Textiles Trade Board, which is bound to lead to confusion.

I beg to submit to the Committee that it is absolutely impossible to continue a manufacturing business when the wages are subject to the rates of four or five Boards.

It might be well to survey the definitions of these Boards. *The Jute Trade Board* covers the preparing, spinning or weaving of jute, and any other fibre except flax and hemp, and the packing, despatching, warehousing, storing and other operations incidental thereto or appertaining to any of the above-mentioned work. *The Flax and Hemp Trade Board* covers preparing, spinning and weaving of scutched flax and hemp, and a mixture of scutched flax and any other fibre, and of a mixture of hemp and any other fibre including waste, and the packing, despatching, warehousing, storing and other operations incidental or appertaining to any of the above-named work. Thus these two Trade Boards deal with specified fibre whilst *The Rope, Twine and Net Trade Board* covers processes, that is to say, the making or re-making of rope, cord, lines, twine, lanyards, nets, and the bleaching, tearing, hackling, carding, preparing and spinning of the materials required for the making or re-making of any of the articles above when carried on in the same factory or workshop as such making or re-making, and the mending of nets is specified. Many of these operations are excluded when incidental to or carried on in association with or in conjunction with defined operations which come under the *Made-Up Textiles Trade Board*.

I therefore submit that on the definition of these four Boards alone overlapping to a very serious degree with crippling effect to the trades is inevitable.

The Netting Trade.

I am particularly requested by the netting manufacturers of the United Kingdom to lay special stress on the fact that they as a trade have nothing whatever in common with the rope and twine trades, and to point out that as a trade they were never consulted until the Minister had decided to apply the Trade Boards Acts 1909/1918 to these industries. By every possible legitimate means they protested against their being included with the rope and twine manufacturers.

Although the netting manufacturers feel that on the grounds of expense they cannot make a particular point at the moment of there being a separate Board formed for this industry, they reserve to themselves freedom of action in the future, meanwhile loyally awaiting the decisions of the Committee.

Fully 75 per cent. of the material used in the netting trade is cotton, which is not covered by any Trade Board at all; doubtless from the reason that the cotton trade, both on the employers' and workers' side, is one of the, if not the, most highly organised trades in the United Kingdom.

The netting trade embraces three separate processes of manufacture.

There is the netting entirely made by power machines or semi-power machines; the netting made by hand machines, and the netting which is entirely made by hand independent of any machines, and this latter is chiefly done by the homeworkers or outworkers.

The bulk of the netting is, of course, destined for the fishing industry, and the fishing industry to-day is, as doubtless the Committee will be aware, in a most difficult position, in fact never in the history of the trade has there been so much unemployment in the netting end of the industry.

From records which have been made it would seem that in July, 1914, including outworkers, there were something like 3,970 workers employed in the netting industry, and in October, 1921, something like 2,800 were unemployed, and of those employed none were working full time.

The netting trade covers 16 per cent. of the total workers under the Rope, Twine and Net Trade Board.

As far as power looms are concerned, there is uniformity, but a great difficulty presented itself as far as hand machine braiders are concerned, because in Scotland the hand net loom has always been worked by female workers, whilst in England they have always been worked by male workers. After prolonged discussion between a committee appointed by the Trade Board composed of 5 representatives of employers and 5 representatives of the workers, an agreement was reached on what was deemed to be an equitable rate for the women workers of Scotland and the male workers in England, based on production, and the overworking required by women workers as compared with male workers, and the War Cabinet Committee's report on "Women in Industry" (published as a Blue Book in 1919) guided the Committee in their deliberations.

The Committee put forward a Notice of Proposal for 320 separate and distinct piece rates covering the whole range of hand netting looms both in Scotland and England, and these rates were proposed by a member of the employers' side of the Board, seconded by the chairman of the workers' side of the Board, and the proposal was sent forward to the Minister for confirmation and issue, subject to the two months allowed for objections to be received. At a meeting of the Board held on the 29th June, 1920, it appeared that slight adjustments were necessary in connection with 10 of these rates, varying from 7½d. to 2s. 0½d., and it was agreed in forwarding these to the Minister that the minimum rates of wages as varied and fixed should come into operation on the 16th July, 1920. At a meeting of

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

the Trade Board held on the 29th July, it was recorded:—

10th July, 1920.

“ Sir,

I am to state for the information of the Board that the Minister of Labour has had under consideration the departures in the draft notice of fixing from the terms of the notice of proposal, in respect of hand machine braiding, mackerel and herring and pilchard mesh 18 and 21 rows per yard.

“ He is of opinion as at present advised that these departures constitute a substantial alteration of the terms of the Notice of Proposal. He regrets that he is accordingly precluded from confirming these rates, and in accordance with the desire of the Board he refers the whole determination back to them for re-consideration. He further observes that the alteration in certain cases involves a change in the former relative positions in the piece work list of the rates payable for the class of work in question, and if the rates are eventually submitted to him in substantially the same form, he would be glad of an explanation of the fact. I am to add that he would be glad, if the Board so desire, to send a representative to discuss the matter with the Board.

I am, Sir,

Your obedient Servant,

(Sgd.) F. W. LEGGITT.

To the Secretary,

Rope, Twine and Net Trade Board.

“ The Board received Mr. Besso, representing the Minister of Labour, who explained the grounds on which the Minister felt difficulty in confirming certain of the general minimum piece rates for hand machine braiders as fixed by the Board having regard to rates proposed by them. Discussion ensued, during which it was stated by the representatives of employers that the alterations in the general minimum piece rates proposed by them for hand machine braiders were made as a result of the working of the proposed rates which were voluntarily put into operation on 2nd April, 1920, experience having shown that the rates for sizes 18 and 21 rows required adjustment. It was also pointed out that the fact that the lowest general minimum piece rates occurred at different points in the English netting looms list and the Scottish netting looms list respectively was to be explained by the fact that in the case of the Scottish netting looms different machines were employed for the larger and smaller meshes of net, whereas in the case of the English netting looms the same machine was used throughout whatever the size of the mesh. It was agreed that a letter (the terms of which were subsequently approved by the Board) should be sent to the Minister of Labour explaining the reasons as set out above for the difference in the general minimum piece rates proposed by the Board and those fixed by them for the making of meshes 18 to 21 rows to the yard.”

It will be seen that on an extremely small alteration of this description the Ministry summoned a Board practically for this purpose only, the cost of which to the country must have been close on £400, and they also jeopardised the harmony which should exist between employers and workers, as the employers had agreed with the workers that the Minister should be asked to make the rates effective as from the 16th July. The rates actually came into force on 13th August, 1920.

This is a concrete case of the hopelessness of the administration of the Trade Boards Acts to an industry of this description where officialdom and red-tapeism clashes with the business man.

The hand braiders or outworkers have already been dealt with under the heading of “ Beaters,” but

it is necessary to draw the serious attention of the Committee again to the fact that if the present Trade Board rates apply to the outworkers, and the vast body of beaters and net menders are still held to be outside the scope of the Acts, the outworkers branch of the industry must be definitely killed. As I have already mentioned, the work is taken to the outworker in his or her home, often 20 miles from the warehouse. The work is fetched and payment is made at the home of the workers, and there is no contract of service as far as these workers are concerned; therefore the argument that establishment charges are saved where homeworkers are employed does not hold good in this trade.

At least 75 per cent. of the netting trade is export, and although I propose dealing with the question of export in relation to the Rope, Twine and Net Trade Board later, it is well in passing to say that no branch of the trade has been so penalised with regard to its export trade as the net end.

Although it may be somewhat outside the terms of reference of your Committee, my Lord, I have been asked, if possible, to direct the Committee's attention to a grave injustice as far as the Scottish net manufacturers are concerned who employ outworkers. The Board agreed in March, 1920, to report to the Minister of Health that the unit of work for female outworkers in the rope, twine and net trade should be fixed at 24s. At the meeting of the Board held on the 18th May, the Insurance Department of the Ministry of Health agreed to the fixing of a unit of work of 24s. for female outworkers engaged in the rope, twine and net trade, and the question having been raised as to whether the Ministry of Health's Insurance Department applied this to Scotland, it was agreed to request the Ministry to allow the unit of 24s. to operate throughout Great Britain.

At the meeting of the Board held on the 29th June, 1920, it was reported that a letter had been received from the Ministry of Health, saying the Department only had authority to fix units of work for outworkers in England, but that the application for a uniform unit for Great Britain had been brought to the notice of the Scottish Board of Health and the Welsh Board of Health.

At the meeting of the Board held on the 29th July, 1920, no unit had up to that date been fixed for female outworkers in Scotland or Wales, and at the meeting of the Board held on the 15th September, 1920, the Scottish Board of Health fixed the unit at 16s. So that you have the Ministry of Health in England fixing 24s. as a unit, and the Board of Health in Scotland fixing the unit at 16s., whilst the Rope, Twine and Net Trade Board has agreed rates for the entire United Kingdom.

Position of the Rope, Twine and Net Trade with Regard to Export Trade.

The trade is mainly an export one. During the war, however, the trade (and more particularly the rope trade) was engaged in filling the requirements of the War Office and the Admiralty. At the conclusion of the war there was a very large surplus of ropes of every description which had to be dealt with, and while this stock was being disposed of, every possible effort was put forward by the rope trade to regain the export markets they had perforce been kept out of during the period of the war, and this also applies to the twine trade in all its branches.

The manufacturers in these trades were face to face with these accumulated stocks on a falling market. Flax which stood at £850 a ton has since fallen to £125 per ton. Manila hemp which stood at £69 per ton has since fallen to £39 per ton. Italiap hemp which stood at £139 per ton has since fallen to £57 a ton and a standard cotton largely used in the netting trade which stood at 62d. per lb. has since fallen to 24½d. per lb.—and yet against this there was a continuous rise in the Trade Board rates of wages from April, 1920, until the 14th November, 1921.

30 November, 1921.]

Mr. E. J. W. BUCKITT, J.P.

[Continued.]

With your permission, my Lord, I should like to table the following samples illustrating the range of the trade, namely, a sample of one of the finest manilla yarns spun, and a sample of a large manilla rope; a sample of one of the finest twines made and a sample of one of the largest twines made; a sample of one of the finest yarns spun and a sample of one of the largest yarns spun; a sample of one of the smallest lines made and a sample of the largest line made (the Rope, Twine and Net Trade Board has fixed the standard for a line and a rope, i.e., one and a half inches circumference and under being a line and anything over being a rope); a sample of the finest machine made netting and a sample of the coarsest machine made netting; a sample of the finest hand made netting and a sample of the stoutest hand made netting.

Owing to the whole of these manufactures coming within the application of the Rope, Twine and Net Trade Board, and the impossibility of making any individual arrangements with the workers, a vast amount of export business is undoubtedly lost, and as I have before stated it should be unnecessary for me to point out to the Committee that a market once lost is seldom or ever regained, and that it is almost easier in business to gain a new market than to regain an old one.

In a recent speech of the Prime Minister, reported in the "Times" on the 20th October, 1921, he made the following statement:—

"There was a case came before me the other day of a contract which was brought to a big firm in the North of England. The Germans were competing. The manager said he could not, whatever he did, and without any profit at all, come anywhere near the offer that was made. He went to his workmen. He put before them the tender of the Germans and what he could do, and he said, 'If you will meet me here upon this basis, I shall be able to tender.' The workmen agreed and the firm got the contract. I really entreat the responsible leaders of labour to consider that position."

Speaking, my Lord, with the full sense of my responsibility, and having personally investigated this matter throughout the trade, I can say with confidence that had the rope, twine and net trade been free from the Trade Boards Acts, and in the position of the firm whose case the Prime Minister quoted, there would have been nothing like the unemployment we have been faced with in this trade for the past 14 months.

Under the Trade Boards Acts, where a minimum wage is fixed, it is impossible for the employer and the worker to get together as was always the case in the past, and the result has been that order after order for the export market has been lost to this country.

I have every reason to believe that labour, that is, the workers in the industry, would have responded to any reasonable call made upon them to meet the conditions of foreign competition and the export market.

I can state a concrete case of an order for 25,000 nets which were offered a firm by their foreign agent. The firm was prepared to cut out profit entirely in order to keep the looms running, and had they been able to call their workpeople together, and in this instance it would have meant 15 per cent. below the Trade Board rate of wages, the order would have been secured, and would have meant employment for 60 looms for nine months for the skilled workers, to say nothing of the number of workers who would have been employed in unskilled processes. In the circumstances, however, the order had to go to Germany. The name of this firm and the fullest details are at the disposal of the Committee.

Another order for 2,500 nets which would have meant work for 50 workers for six weeks was lost and a French firm secured it, the English firm being unable to ask their workers whether they would ensure them getting the order by accepting in this case

a reduction of wages somewhat similar to that mentioned in the previous case.

Instead, therefore, of the employers being able to get into closer touch with their workers, they find themselves, since the trade came under the Trade Boards Acts, farther away from the workers than ever in the past—as far as being able to consult them relative to the general position of the trade is concerned.

Further, with regard to the export trade in flax goods, which undoubtedly is as badly off, if not worse than the other branches of the trade, large areas of land at the instance of the Ministry of Agriculture were laid down for flax cultivation during the war and factories for retting and scutching were erected. Whilst to-day the majority of the spindles in the flax trade are standing idle, flax in these retting and scutching factories is being prepared and exported to Czechoslovakia, where it is being spun into yarn and then largely exported to America. The nation sank a huge amount of money on the retting and scutching flax factories during the war.

In addition, the overtime rates that apply under the Rope, Twine and Net Trade Board seriously affect the export business.

For instance, the normal number of hours that may be worked in the textile portion of the trade under the Factory Acts are 55½ per week. The Trade Board fixes them at 48 per week.

It may be that a manufacturer had costed on an extremely slight margin, in fact, manufacturers in this trade to-day are costing at cost, profits for the time being being a thing of the past. A manufacturer gets sudden notice—and this is no uncommon thing at present—that a steamer has been fixed for a port and finds that it may be necessary to work a few hours overtime in order to secure shipment. The additional rate payable between the 48 hours and the 55½ hours is a serious handicap, and workers have definitely stated to me—that is to say, workers who know the necessity of making shipment when shipment is due, that they cannot see why the overtime rates should apply in the way they do.

The resuscitation of the export trade of the country is, it is agreed by, I think I may safely say, the whole trade, the most growing need of the hour.

I am convinced as a result of the evidence submitted to me by the various associations comprising the federation, and the employers' side of the Board, that under existing Trade Board conditions, with the inelasticity of the Acts, it is going to be increasingly difficult for this trade to hold the small portion of its export trade it now has, as compared with 1913.

I am prepared to state that when a definite order might be secured, employers in this trade would meet organised labour and the two sides would confer, and by mutual sacrifice arrive at an arrangement of wages whereby the order could be booked; but while you have fixed a minimum wage in any industry which allows of no inelasticity to meet the almost hourly changing conditions in the export markets, this would be an impossibility. The result of not being able to do this is short time and unemployment.

Trade Board relationship to the Ministry of Labour.

In the autumn of 1920, largely as a result of the rapidity with which new Trade Boards were being foreshadowed and the general unrest that was being caused in business circles, the Minister of Labour consented to meet a deputation from the Trade Boards of Great Britain on the 20th October, 1920, at which meeting the Minister, after very considerable pressure, and after he had secured the following resolution: "Recognising the good work Trade Boards have been able to accomplish and with a view to extending the operation of that work, we recommend that a committee be appointed by the Minister of Labour to make recommendations to the Ministry with respect to the work of Trade

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

Boards and the administration of the Trade Boards Acts," consented to the setting up of this Committee.

The committee duly sat, under the chairmanship of Mr. Humbert Wolfe, C.B.E. Although the committee under its terms of reference (if the resolution quoted can be called such) were empowered to make recommendations to the Ministry with respect to the work of the Trade Boards, it would appear that the witnesses who gave evidence were entirely officials of the Ministry of Labour or of the Trade Boards.

The committee (the Trade Boards Administration Committee) drew up and presented a Majority Report, and a Minority Report was attached to same drawn up and signed by an official of the Ministry of Labour.

It is doubtful whether there ever has been a case which justified the saying, "A house divided against itself cannot stand" more than this, and to any careful reader of the report it is at once evident that the machinery of the Ministry of Labour is altogether too cumbersome.

The Majority Report contained a number of recommendations. On the 3rd May, 1921, the Minister of Labour called a further conference of employers and workers associated with the various Trade Boards, and at this conference said he was prepared to give effect to one recommendation of the Majority Report of the Trade Boards Administration Committee, namely, "That a Standing Advisory Committee be appointed to advise the Minister on the views of the Boards and on the general Trade Board position." This proposed committee, if set up, was supposed to ensure equality between the various Boards, the rural and urban areas, and Scottish interests were to be adequately represented, as also the employers, workers and appointed members, and yet, "The committee should consist of not more than 19 persons," three of whom were to be selected from the appointed chairmen, and of the other 16 eight were to be appointed from the employers' side of the various Trade Boards and eight from the workers' side.

On the 15th June, 1921, a general invitation was issued to the appointed members, employers' representatives and workers' representatives of the various Boards for a conference to be held on the 5th July, 1921, to nominate names for this Standing Advisory Committee, and with this invitation was issued a general statement to be considered in view of the forthcoming conference, which set out the following:—

"That the Minister of Labour desired to state that even if the present industrial uncertainty did not exist he might feel a real difficulty in adopting the report as it stood (i.e., the Trade Boards Administration Committee's Report). The report was clearly a compromise between two points of view."

Well, now, my Lord, I desire to point out that if the Report was a compromise between two points of view, these two points of view were held merely by two officials of the Ministry of Labour, the chairman who signed the majority report, Mr. Humbert Wolfe, and Mr. S. L. Besso, who signed the minority report.

So that if this were the only evidence I could submit, I would say with confidence, that this opinion of the Ministers, as definitely expressed, shows clearly the friction that existed within the Ministry, and fully justified the action of the employers' side of the Trade Boards when in conference on the 5th and 6th July, 1921, they passed the following resolution:—

"That this meeting is not prepared to proceed with setting up of the Advisory Committee on Trade Boards until the Minister of Labour has adopted the principal recommendations of the Majority Report of the Trade Boards Administrative Committee."

At conferences of the workers' sides of the Trade Boards held on the same days a similar resolution was passed:—

"The representatives of the workers' side of Trade Boards express their regret that the decision of the Minister of Labour on the subject of the recommendation of the Majority Report renders impossible their participation in the establishment of an Advisory Committee at this juncture, but express their readiness to assist in establishing the Committee subject to the adoption by the Minister of Labour of the recommendations of the Report."

As a result of these resolutions being passed the Minister of Labour decided he could not proceed with the appointment of an Advisory Committee, and the following is an extract from his letter conveying this decision:—

"The Minister has given his most careful consideration to these two resolutions. He has, however, already explained in detail the decisions which he has felt bound to take upon the Report and has fully explained the grounds upon which those decisions are based. In these circumstances, while it is his sincere wish to co-operate in the most cordial way with the Trade Boards in the administration of the Acts, he is unable to vary his previous decision. He naturally much regrets that the two sides are unable to agree to nominate members to the Committee. To attempt to set up a Committee in face of this attitude could not but end in failure. In the circumstances, the Minister would not propose to proceed further with its constitution."

It will be seen therefore that no useful purpose could be served, in the circumstances, by the appointment of the proposed Standing Advisory Committee, and the decision arrived at in conference between the employers' and workers' side of the Rope, Twine and Net Trade Board is fully justified—

"That the Rope, Twine and Net Trade Board should act as the governing body for the industry with the function of determining the industrial conditions of the trade (subject to the laws of the land) and with powers of legal enforcement,"

and, furthermore, as a necessary corollary—

"That if the Board became the governing body it would of necessity control the administrative machinery, i.e., the question of dividing the Board, say, into a rope section, a twine section or a net section; the questions of districts, out-workers, grading and overlapping."

In other words the Board should become a Board and not merely an advisory committee to the Ministry of Labour—in fact, entire divorcement from the Ministry of Labour is desired.

I am particularly asked by the employers' side of the Rope, Twine and Net Trade Board to protect emphatically, provided the reports in the "Times" of the 13th, 14th and 15th of October are correct, against the evidence of Mr. Humbert Wolfe, Principal Assistant to the Ministry of Labour.

In the first case, against Mr. Wolfe's assertion that "he did not know of a single strike or lock-out arising from any decision of a Trade Board," I have already dealt in my earlier evidence with the unfortunate strike in the Liverpool area.

In the second place to the statement of Mr. Wolfe that the abolition of Trade Boards could not be contemplated while wages were still paid in exceptional circumstances, which, deducting the general advances to meet the increased cost of living, brought them back to the old sweated rates of 1½d. and 3d. an hour for the abolition of which the Act was passed, when Mr. Humbert Wolfe as a permanent official of the Ministry of Labour should have known that the first rates fixed by the Chain Trade Board when it was established were 5d. an hour for adult males and 3½d. an hour for adult females. For the Lace and Net Trade Board when first established, 2½d. an hour for adult females, and for the Paper Box Trade Board,

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

when first established, 6d. an hour for adult males and 3d. per hour for adult females. And Mr. Humbert Wolfe's evidence in this respect, my Lords, largely confirms the opinion that the employers' side of the Rope, Twine and Net Trade Board have held from the very start, that rather than have it a Trade Board and a governing body in the industry, the Ministry of Labour would keep it a Wages Board, and at the same time the employers' side ask me to emphasise their opinion that it is no part of the duty of a civil servant to say what is a sweated wage. They regard this as a matter for Parliament, and Parliament only, to decide.

Conclusions.

In presenting the foregoing statement I have endeavoured to keep the terms of reference fully in front of me, and trust that I have not submitted any statement which the committee will regard as being outside these terms of reference.

The statement may appear rather lengthy, but having regard to the number of sections covered by the Rope, Twine and Net Trade Board, and the fact that I am representing all these sections, it has been necessary for me to deal with the different points very fully, and I am sure the committee will appreciate the responsibility of my task.

The recommendations suggested have been made with a view to benefiting the trade as a whole, both from the employers' and workers' side.

I have endeavoured to deal with actualities rather than generalities, and to this end have given concrete instances to support my criticism, and have made all possible references and illustrations to prove my statements.

The employers' side of this Board ask me *emphatically to say that it is their considered judgment that the quickest and best way to restore prosperity to the industry is the immediate removal of all Government control in any shape or form.* In my statement I have given certain pledges on behalf of the employers which should be evidence to the committee that the employers have thought out schemes which could be applied, either collectively, or individually, without the necessity for any Government interference.

I am further asked to point out the enormous strain there is upon employers in attending meetings of Trade Boards, administrative committees, and meetings of associations and federations which are the necessary consequence of the Trade Boards Acts. This strain is particularly felt when, as in the case of this Board, the employers' side is composed entirely of working employers.

To attend Trade Board meetings, distances, often of 500 miles, have to be covered each way by many employers. If the proceedings of the Board last more than one day, in many cases four days' absence from home is entailed, and if the proceedings only last one day an absence of at least three days is often entailed. On more than one occasion, after the conclusion of a Board meeting at which little has been done a workers' representative has said to me "far better that we had both stayed at home looking after our jobs!"

On the grounds of expense, I would point out that there is very considerable anxiety on the part of employers as to the amount of money that is being spent on Trade Boards. Various replies to questions in the House of Commons as to the cost of the Boards to the country have given it from £80,000 per annum to £100,000, and yet in a recent letter from the Ministry of Labour, dated 15th July, 1921, it is suggested that certain alterations in the forms of notices in respect of rates of pay (*produced*) would mean a saving of £5,000 a year, although this appears to the employers to be only a trifling item in Trade Board expenditure.

In these days, when economy in every branch of industry and life is imperative, if the country is to be kept going at all, the employers' side of the Board have decided that if their amendments were adopted, and the Trade Boards Acts were

administered by the Trade Board itself—apart from the extra staff which it would be necessary to add to the present staff at the Trade Board Offices—they would be prepared to pay the whole of their expenses on the condition that the workers' side also paid their expenses.

After consultation with the whole of the trade as far as possible, and after considering letters from all parts of the country which in the main speak in the terms of strongest protest of the present administration of the Trade Boards Acts (copy of these letters can be produced if the committee so desire), I am asked to press for:—

Immediate amendments on the lines indicated, but if it will take any great length of time to bring these into effect:—

That the Trade Boards Acts, in so far as the Rope, Twine and Net Trade is concerned, be suspended for two or three years

and, failing this, the employers' side of this Board unanimously decided that I should urge:—

That the Rope, Twine and Net Trade be withdrawn from the scope of the Trade Boards Acts, 1909-1918.

The following are the amendments which were unanimously agreed by the employers' side and the workers' side of this Board:—

- (1) That the rope, twine and net trade should act as the governing body for the industry with the function of determining the industrial conditions of the trade (subject to the laws of the land) and with powers of legal enforcement.
- (2) That the present supervision of the operations of the Trade Board by the Ministry of Labour is defective and should be brought to an end, and that the organisation of the Trade Board should be centred at the Trade Board Office with the present secretarial staff with the addition of the chief inspector and the solicitor to the Board.
- (3) That if the Board became the governing body it would of necessity control the administrative machinery, i.e., the question of dividing the Board, say, into a rope section, a twine section or a net section; the questions of districts, outworkers, grading and overlapping.
- (4) That the Board should decide questions of scope, but that in so far as any particular question of scope affected any other Boards, provision should be made for joint meetings of such Boards and that, failing agreement being reached by the Boards on such question, the question should be submitted to an Industrial Court for an expression of opinion.
- (5) That in constituting any Trade Board, care should be taken to see that both sides of the Board consist of a satisfactory number of members actually engaged in the industry.
- (6) That the Board should appoint its own chairman by agreement.
- (7) That when a rate is passed by the Board by agreement it should come into force forthwith, that is, within a month.

In addition to the above amendments agreed by employers and workers, there are the recommendations of the employers, which are embodied in the foregoing statement.

Finally the employers' side of the Board ask me to state that it is their desire to have placed on record that, as far as the Rope, Twine and Net Trade Board is concerned, they have always received from the officials at the Trade Board Offices the greatest possible attention. There has been great promptitude in dealing with matters, and efficiency of a very high order is apparent in the organisation. From the experience of the employers on this Board,

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

however, they are unable to say the same with regard to the Ministry of Labour. It is the fact of this efficiency on the part of the Trade Board officials that has guided the employers in the recommendations they make, that the whole operation and administration of the Trade Boards Acts should be centred at the Trade Board Offices with the present Trade Board staff and the necessary additions.

EDWIN J. WOTTON BUCKPITT,
Chairman of the employers' side of the
Rope, Twine and Net Trade Board and
of the Rope, Twine and Net Manufacturers' Federation.

22nd November, 1921.

3365. *Chairman*: You are Chairman of the Employers' Side of the Rope, Twine and Net Trade Board?—That is so.

3366. You are also a Member of the Flax and Hemp Trade Board?—Yes.

3367. The Rope, Twine and Net Board is selected from members of certain associations which are concerned in that trade?—Yes, and outside members who are not associated with any associations, but the associations are federated in one federation.

3368. I think, since this Inquiry was announced, there has been a meeting of the associations representing employers?—Each one of the associations has held independent meetings, there have been two meetings of the entire federation, representing the nine associations, and then there was one meeting to which the whole trade was summoned, consisting of the associations, the federated members, and the members who were not connected with any association and consequently were not in the federation.

3369. That was a meeting held on 18th October last?—That is so.

3370. At that meeting, I think, you were selected to give evidence on behalf of the whole trade?—That is so.

3371. Have you also held meetings of the workers' side of the Board?—We have held two meetings of the workers' side of the Board. When I say the workers' side of the Board, that requires a little qualification; the two meetings were held with 10 representatives of the employers' side and 10 representatives of the employees' side who were appointed to consider the terms of reference of your Committee; so it is best to say that they were appointed by both sides of the Board. They were not the entire representation of the workers. The workers' side and the employers' side had appointed 10 representatives from each to confer and to see whether any point of agreement could be reached.

3372. Did you find yourselves in agreement on any point?—We found ourselves in agreement on many points, which I have embodied in the statement which I have sent to your Committee.

3373. We will take this statement as part of your evidence. You have made a careful statement of the main points, and you may treat it as being in and read by us.—Then I take it I shall be cross-examined on that statement.

3374. Questions will be asked you on the statement.—Quite so.

3375. You summarise the negotiations for forming the Board, and insist especially upon the view that the net trade should not be included in the Board?—Yes, I think that is fully contained in the statement which I have sent in to the Committee. I think it should be evident to the Committee that in the formation of this Board the net trade were never consulted and never considered; and it is on behalf of the net section of the trade that I have to emphasise that objection. The position is somewhat difficult in that in this Board, as I have endeavoured to show in the statement which you have, three, if not four or five, distinct trades were embodied in one Board without any consultation of the trade as a whole.

3376. *Mr. Poulton*: When you say the net trade were never consulted, do you mean individuals were

not consulted, or the association was not consulted?—There was no consultation either with individual net manufacturers or associations in the net trade, and the first intimation we had so far as the net trade was concerned, came by the courtesy of the British Hemp Ropemakers' Association, who had got to hear that the new Trade Board applying to the Rope Trade was going to be called the Rope, Twine and Net Trade Board.

3377. And, so far as you know, no one had a letter from the Ministry of Labour stating that they were going to widen its scope?—There was not any widening of the scope; that is as it was originally started. The Board has not been widened. This was the original Board, the Rope, Twine and Net Board. There was no widening of the scope, but that is the original Board as decided upon by the Ministry of Labour, and I am perfectly confident that no net manufacturer had any direct knowledge, or had been summoned to any meeting, until we applied to the Ministry of Labour for a conference.

3378. *Chairman*: I am told there are two associations in the net trade.—There is the Bridport Manufacturers' Association, which embraces the English end of the netting trade, although there is the name of a town tacked on to the association—it was so called because of the trade being located there very largely, but it represents the English net manufacturers—and then there is the Scottish Manufacturers' Association.

3379. The Bridport Association had not been formed when the investigations were being made locally?—One of my difficulties has been to find out when any investigations were made. When we attended at the Ministry here and protested, we were told that investigation had been made, but I am afraid they were years ago.

3380. I think you yourself have been seen?—Some years before I had been asked if it were possible to divide the twine trade from the rope trade, but there had been at that time no specific definition of a rope.

3381. Perhaps we need not go into this detail; at all events, you think that they were not properly heard or consulted?—Yes.

3382. Then you make a statement about the many meetings which you held and representations which you have made, which, I am afraid, did not lead to much?—They led to the formation of the Board.

3383. I mean, your representations did not lead to much?—That is so.

3384. Then there is a point about the beatsters; perhaps you will explain to the Committee exactly what a beatster is. They are female workers, are they not?—Yes, and there are some male workers whom we call lumpers as against the term beatster for the female worker. I have not specialized on the lumpers' side of it because they are a comparatively small body.

3385. Beatsters are employed by boat owners, are they not?—Yes, and by people who own net lofts in big fishing centres. At the end of the fishing season the fleet of nets is taken out of the boats, and if the owner be a big enough man he will have a net loft of his own, but if he is a small man he will send his nets to a man who has a net loft, where these nets are overhauled and the necessary repairs done in order that the fleet of nets which has been fishing for a season, and which consists of anything from 20 to 50 or 75 nets, may be thoroughly overhauled and repaired.

3386. Are all those repairs done in the lofts?—Yes.

3387. Are not some done on the shore?—Very few. On the south coast of England there are certain foreshore rights where the fishermen use the foreshore, but in the big North Sea herring fisheries the volume of nets is very big, and it would be necessary to do the work in lofts because the foreshore work would be subject to weather conditions. The beatsters' business is a business that is going on all the year round.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

3388. I gather that your feeling is that these beatsters ought to have come under the Board?—The history is rather a long one.

3389. I am trying to put it shortly, and that is the result of it, that these beatsters, you think, compete with the ordinary Rope, Twine and Net Trade?—They compete most seriously with the net people. A very big business has sprung up in taking disused fishing nets and turning them into garden nets, and nets for putting round tennis courts, and so on, and for various other things. Originally that was a netting trade, and there was a very big proportion of it done by *bonâ fide* outworkers in the netting trade; but now the beatsters, through not coming under the Board, are increasing their trade very largely and new businesses are being started for buying up old fishing nets and turning them, as we claim, into a practically new net for a new purpose by mending them up and selling them for use for garden nets instead of fishing nets, which was their original purpose.

3390. You consider it is unfair that that should be done at an unregulated rate of wage, while ordinary workers are regulated?—Yes, and the proof of that is that to-day practically the whole of the outworkers who are scheduled in the country are out of work, and have been for nearly a year, while the beatsters' business is an increasing one; in addition to which there are something like 12,000 or 13,000 women normally in this trade, and there are quite 13,000 beatsters who are outside it. The result is that you have the operatives penalised (and I say it advisedly) by a Trade Board, while you have a great number of women at the mercy of any wage any employer chooses to offer them.

3391. I suppose the opposition comes from the boat owners?—The position that the Ministry have taken up on the point is extraordinary, if I may say so. We were originally told that the beatsters would come under the Board: that was emphasised by our own appointed chairman, presumably in consultation with the Ministry. Following that we had a correspondence which has extended now over nearly two years, various definitions have been proposed, and the last bombshell we got from the Ministry here was that the fishing boat owners might object. But we had objected from the start, and our objections counted for nothing, while apparently, now the fishing boat owners' objections are strong enough to prevent justice being done.

3392. *Sir Arthur Pease*: Do any of the fishing boat owners have men who go to sea in the fishing season, and mend the nets during the other part of the year?—There would be very few, and in any case we should not class them as beatsters or lumpers: they would not be within the category. Those people who mend nets and go to sea, presumably, would be paid by the boat owners, and there would be very few of them, and they would not be included. What I am speaking of is a *bonâ fide* process of remanufacture. I will endeavour not to labour the point at all, but part of the trouble arose perhaps during the war, when the price of these nets got to such a very high pitch. As a rule a man would renew his fleet in three years, he took one-third of a fleet each year for three years, but prices got to such a pitch that it paid him better when he could have his nets re-made into garden netting, tennis stop-netting, and so on, to clear out the fleet, and a new business has grown up in beatstering or re-making and mending disused fishing nets.

3393. *Mr. Poulton*: You say that it becomes a serious competitor with you, and that it ought to be brought within the four corners of the Trade Board as well as the other?—If the Trade Boards for the trade are to continue, that certainly should be brought in.

3394. *Dame Adelaide Anderson*: Is it on the ground that they are employed by the fishing trade that they are excluded?—It is difficult to find out exactly the attitude of the Ministry, because they have shifted their ground a great many times. It is diffi-

cult to find out exactly what they mean. We have received deputations from the Ministry at the Trade Board and have discussed the thing until we are tired of it. At one time they say they are in the Board and at another time they say they are not. Then we are going to have the order amended so that they shall be included—but it will be noticed that we have never budged from the original position. This is an important point on which the employers and the workers on the Board have been unanimous ever since the Board started.

3395. *Chairman*: This conversion of fishing nets into garden nets and nets for other purposes is done, as I understand you, mainly in these beating lofts?—It is done in these big net lofts.

3396. By some big firms?—No, it has been done by a great many small firms which are now getting big. It can be done by any man. At present a man can take a room and buy 50 disused fishing nets, bring them into that room, put a lot of beatsters to work on them and turn them out as garden nets. He can do that in the centre of a town without coming under the Rope, Twine and Net Trade Board.

3397. Is it done by homeworkers at all?—In Scotland the bulk of it is all taken home, but in England it is done in net lofts or other buildings.

3398. Have you any figures comparing the wages that those people get with the Trade Board wages?—The last figures we had were supplied by Mr. McConnell on the trade union side of the Board, and he said that they were running in the Lowestoft district now at 18s. At that time our rate in the Trade Board for an unskilled woman was 36s., while to-day it is 32s.

3399. *Dame Adelaide Anderson*: Originally, I suppose, the name of beatster was applied to a worker working in the fishing industry?—That is so.

3400. And it got transferred to the workshops where they are making these new nets out of old ones?—Yes, so far as I remember, and I speak with 37 years' practical experience, there have always been beatsters in any fishing port of any size.

3401. Are you aware of the fact that beatsters as originally working for the fish curing industry by a decision of a court were declared to be unregulated by the Factory Acts?—That is so.

3402. There was a case taken to Court by the Factory Department?—That is so.

3403. That was a decision of a Court, not a Departmental decision.—Exactly. We raised that point when we were petitioning against the formation of the Trade Board, and it is interesting to note that we were told by the Ministry in this building that the wages paid to beatsters were one of the reasons, if not the main reason, why after their general inquiry they decided to apply the Trade Boards Acts to the industry.

3404. *Sir Arthur Pease*: What was the difference between the rates of the beatsters and the other classes of labour, before there was a Trade Board?—I should say that they were quite equal.

3405. There was no differentiation?—Not so far as we know, at any rate, competition from beatsters was not felt, and I should say, judging by the rates that we had in force before there was a Trade Board, that they were absolutely even.

3406. *Mrs. Lyttelton*: So that the rates in the rope trade were too low? You say that the beatsters are too low now?—No, one does not admit that the rates in the rope trade were too low; I am not admitting that they were too low. I am admitting that the beatsters were on a level with the Rope, Twine and Net Trade.

(After a short adjournment.)

3407. *Chairman*: I want to put one point to you about the beatsters of whom you were talking. You distinguish between those who are mending fishing nets as fishing nets, and those who are converting them into nets for other purposes?—Yes, most certainly. I was going to ask your permission to refer to the question which Dame Adelaide Anderson put to

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

me on that, namely, that according to a judgment of a Court the beatsters did not come under the Factory Acts. We do not complain so much about that part of the beatsters' work which is *bona fide* work connected with the fishing boats and with the fishing boats only, but what we do say is that, owing to the existence of the Rope, Twine, and Net Trade Board a trade is springing up of mending and repairing those nets, and that is what we object to.

3408. That is what I understood.—That is our objection to this. As a matter of fact, in Scotland it would be very difficult to apply it to the whole of the net menders, because as a rule they do the whole of that net mending by taking it home; but this is a growing industry owing to the beatster or net mender not being included within the scope of the Board, and that is our main objection.

3409. Were you not mistaken in saying that the Ministry intended to include, or expressed the intention at the beginning of including the beatsters?—If you will allow me, I think I can find the full reference to that.

3410. I mean before the Board was formed?—May I refer you to my statement. What I say refers to an interview which we had at the Ministry. Mr. Besso, of the Ministry of Labour, stated to a conference of both sides, manufacturers and workers, that net menders were, in the opinion of the Ministry, included in the draft Order.

3411. Does not that mean persons who were converting fishing nets into nets for other purposes?—No, because we were very explicit all the way through that they had to be included. We should never have withdrawn our objection, which I understand was a valid objection, but for that.

3412. Your objection was that the persons who converted fishing nets into other nets ought to be included. That is the objection?—No, at that time we were dealing with beatsters as a whole.

3413. I understood from what you said just now that you did not raise much objection as regards the people who simply mended fishing nets for fishing purposes?—You will remember that the Board has been sitting nearly two years, and during that time we have learnt a great deal about different processes in different parts of the country. At that time we were dealing with the position, particularly so far as Scotland was concerned, with the boat owners; but at the time when Mr. Besso attended the Board we were insistent that all beatsters should be included within the scope of the Board.

3414. I daresay you were, but what I am putting to you is that you are mistaken in saying that the Ministry ever said that the one reason for forming the Board was the position of those beatsters in the proper sense, that is to say fishing-net menders?—I can only say that that is what we were told. My memory is quite clear on the point that we were told so.

3415. Then we must leave it there.—I point out in that same paragraph that Mr. Besso said that the Order should be amended so as to make these workers come under the Board. That was a definite promise made on the 7th July, 1919.

3416. I am told that that meant the net coverers, if I may so call them. You did not take the same view?—I should like to say that that has often happened, that a conference has been held, or a meeting of representatives of the Ministry of Labour and the Board has been held, and apparently both sides have gone away with a different definition of what really has happened.

3417. That does happen sometimes. Now we will go on. You tell us that the rope trade is a very ancient trade: I can well believe that. In fact, I think you trace it back to Egypt?—I do.

3418. Have you had any trouble hitherto in agreeing with your workers as to wages?—So far as we have been able to find out there has never been anything approaching a dispute in the industry.

3419. *Lord Weir*: In the net part of it?—No, the rope, twine or net.

3420. In all three?—Ycs.

3421. *Chairman*: Nets used to be made by hand entirely, used they not?—Originally the whole of the netting trade prior to about 100 years ago was a hand trade.

3422. Does net making by hand still go on?—Yes, there is a very large amount of hand net making now, in which it is estimated that there are something like 1,580 regular women workers on hand braiding.

3423. Do they work in these rope walks?—No, in their own homes. They are outworkers: there is very little hand net braiding done in factories.

3424. You have a photograph there, have you not, or some photographs showing some of these smaller rope walks?—Yes.

3425. *Dame Adelaide Anderson*: Is not the hand net making chiefly done in Dorsetshire?—Yes, and in Scotland. These are the photographs (*some produced*), and they perhaps need a little explaining. These are two rope walks in the Peak District of Derbyshire, where they work in caverns. There are no factories there at all, but they are the actual caverns, and they have been running for over 250 years.

3426. How are they lit?—By ordinary oil lamps. They have been in the same family for 250 years.

3427. *Lord Weir*: Have you any foreign competition?—We knew nothing about foreign competition at all in the Home Market Net Trade until this Trade Board came in.

3428. *Chairman*: These other photographs are of sheds more modern, are they not?—Yes. My idea was to show the country districts in which a great many of them are situated, and I come to that again under the heading of wages, the agricultural rate and the country rope makers' rate, in my statement. There is an interior view of one rope walk, with a small body of employees, but unfortunately this manufacturer got his employees to dress up in their best for the photograph. I would rather have had that photograph in their working costume.

3429. *Sir Arthur Pense*: What are the ropes doing as they go through a long shed like this?—The yarn is laid down the shed and the ropes are made coming up through the shed. You get a length of yarn, then it is made into a strand, and then from a strand it is made into a rope. I produce a sample of rope which will perhaps illustrate that. Here is a sample of rope which consists of three strands. (*Examined.*)

3430. You have handed in arms of the Guild of Ropers?—They were on Tyneside and were established about 500 years ago, as far as the records go. *Hutchins'* History of Dorset records that seven ropers left Bridport to go to Gt. Gidding-on-Tyne to start the roping industry in 1588. I see it reads, "Let Hemp bind those that Honour won't," so you can imagine how shocked we were when we had a Trade Board put on us.

3431. *Mrs. Lyttelton*: When was the order for halters for hanging given to Bridport?—I think about 1500. I think it is on the Bridport Coat of Arms. "May he be stabbed with a Bridport dagger" is the version.

3432. *Chairman*: The date of the Charter is 1253?—Yes, and tradition says that we held it from King John's time. At any rate, we have an established Charter from 1200.

3433. The Bridport dagger is a dagger of rope?—The Bridport dagger means the halter with which a man was hanged.

3434. You have some suggestions to make for amending the Trade Board Acts, and you say if those amendments were made it would be possible to work them, as I understand. Let me go, first of all, to the constitution of the Board: what do you say about that?—On the point of the constitution of the Board we are in agreement with the workers' side of the Board that the principle of appointed members should be abolished, and we further agreed that the Board, always assuming the Board continues to exist, should appoint its own Chairman by agreement.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

3435. Would that be a Chairman from outside?—We hardly went as far as that. There is a difference of opinion as to whether it would be possible to take a man from the trade. At any rate he should be a Chairman appointed by the Board and not an appointed Chairman.

3436. Would you give him a casting vote?—We would give him a casting vote.

3437. Then I think the workers suggest assessors?—The workers apparently had the idea that in Admiralty cases the judge has two admirals, I believe, to sit with him as assessors.

3438. They may be admirals or captains?—Yes, or captains; and the workers' side had the idea that there might be two practical men in the industry, one from the employers' side and the other from the workers' side, who might sit as assessors.

3439. They would be chosen from outside the Board?—Yes; but we consider that there would be great difficulty there, because presumably the assessor would have to be a man who had retired from the trade, otherwise it would be difficult to get rid of the idea of bias.

3440. And after all the whole Board are assessors to the Chairman?—That is so.

3441. *Sir Arthur Pease*: I presume the idea of that is to deal with points that are not quite clear from the evidence, upon which you want to get a little technical information?—That was the idea of the workers' side. We on the employers' side do not think that is necessary.

3442. *Chairman*: Failing agreement, what do you suggest?—Failing agreement, the employers' side of the Board consider that having the Industrial Court established on which they understand there is a panel, industrial matters could be referred by the employers' side to that Court, so that if a deadlock were reached we could go to the Industrial Court and state both sides, their decision being binding just in the same way as one would go to arbitration.

3443. Would it not be the same thing if you had a Chairman with a casting vote, as if the Industrial Court were to decide?—We are in this difficulty: we have already a Chairman, and suppose we are anticipating trouble the Chairman hears both sides, but both sides may take up a position that the Appointed Member or Members cannot follow. If that is so, nothing happens. We are assuming that something of that sort might happen, and then we suggest, in order to safeguard the position, that we should go to the Industrial Court.

3444. I understand your suggestion, but would it not be much simpler to have a perfectly independent Chairman with a casting vote, who must give his vote one way or the other?—We have not found this operate with the Appointed Chairman who may take up the position that he will not give a vote either way.

3445. Has that ever happened?—It has happened on the Flax Board, of which I am a member.

3446. It is rather a heavy undertaking if we are going to have the Industrial Court giving decisions in the case. It means that the Court has to be informed of the facts, and it means calling evidence and so on, at a very great expenditure of time and money?—We do not accept that. In the ordinary procedure of a Trade Board the whole matter would be thrashed out on the Board, and there could then be short concise statements of the facts submitted by both sides to the Industrial Court. We have never considered the idea of calling evidence. Our idea was that the two Chairmen, one from one side and one from the other, would merely state the case.

3447. That is really arbitration?—We imagined that the Industrial Court was for that purpose.

3448. *Sir Arthur Pease*: Do you mean to say that the Chairman of a Board cannot suggest a middle course but he has to give his casting vote either one way or the other? Suppose he considers the employers' proposal unreasonable, and the workers' proposal unreasonable, must he vote for one or the other?—He has no power under the Act to take a middle course.

3449. He is only one, and unless he can carry one side or the other on his middle course, he cannot do it?—That is so, and that is where the unfortunate deadlocks arise. That is the whole trouble.

3450. Is he not an arbitrator?—I am speaking now of the case of our own Chairman. He says he is not an arbitrator, and he lays it down very strongly. He says he is merely foreman of a jury, and that we have to convince the jury. I claim, as I have said, that a jury has to give a verdict, but he says no; and therefore you get what has almost reached the pitch of an eternal trafficking to and fro; you come back and you re-state your case to your appointed members, who have not the power to take a middle course, and say, we decide so and so.

3451. *Chairman*: Do you want the Industrial Court to have that power?—That is what the employers' side authorise me to say. We would go to the Industrial Court.

3452. You would give the Court power to give such decision as they liked?—I would give the Court absolute power. Suppose there were a difference of, say, 2d. an hour between the employers and the workers, if the Industrial Court said, "We will make it 1d." or "We will make it 1½d." I would give them that power after both sides had stated their case; but not for one moment do we anticipate calling evidence or anything of that sort: there would simply be the Chairman of each side to state the case.

3453. Are your employer members all working employers?—We have not a representative of the trade who is not a working employer; in fact, I do not think there are any employers in the Rope, Twine and Net Trade who are not working employers daily engaged in their business.

3454. Does the same thing apply to the workers' side of the Board?—On the workers' side of the Board I think we have seven Trade Unions represented, and there is a tendency to get over-representation by Trade Union representatives. We on the employers' side ask that there should be a limitation of 25 per cent. of the workers' side of the Board's Trade Union officials. We submitted that to the workers, and I got accused of gross impertinence for dictating such a thing.

3455. This only comes from the employers' side then, of course?—That is so; but I would point out that we did reach an agreement that in constituting any Trade Board care should be taken to see that both sides of the Board consist of a satisfactory number of members actually engaged in the industry. That is the vote of the employers and the workers; so it is only a small point.

3456. It is a question of proportion really?—Yes. We are under agreement that there should be a correct proportion but on the employers' side they are all working employers.

3457. *Lord Weir*: Have you many non-Unionists in this trade?—I can only say that I have endeavoured to get from our Trade Union representatives on the Board what proportion of our trade they consider they have in their Unions, and I never have succeeded in getting it; but I should say that very few in the trade are in Trade Unions, in the country districts particularly. The difficulty, of course, is that if you had one Union governing the industry you would not have much trouble possibly, but where you have a great many Unions which have nothing in common, there is difficulty. For instance, in a country district in Somerset the workers are linked up with an Agricultural Labourers' Union, while in London we get a representative of the Dockers' Union sitting on the Board, and a woman representative of the National Union of General Workers.

3458. The reason I asked you that is because you say that the workers' side of the Board had flatly declined to sit with a non-Union man.—That is so, they will not.

3459. Then it would be difficult to get adequate representation if you had a large number of non-Union members?—It is impossible to get it. I did

30 November, 1921.]

Mr. E. J. W. BUCKFITT, J.P.

[Continued.]

not know you had reached quite so far as that in my *précis*, but I should like to be allowed to state that case clearly. In the case of the employers' side the Ministry have always insisted that notwithstanding the fact that we have all these Associations and Federations, outside manufacturers must have representation. The Ministry selected them without telling the Board anything about it, and without asking us. Those employers came and we naturally welcomed them. We asked the Ministry if they would not see that non-Union members were represented, but the workers' side would not have it. A non-Union worker got on the Board from Hull; she was a very capable woman, a woman who from the start showed that she knew her work. She sat twice; the matter got talked about, and at the next Trade Board meeting I challenged the Chairman of the workers' side of the Board to know why this woman was not attending, and he said that they were not going to sit with her and they were very sorry they ever had. They found out that she was a non-Unionist.

3460. She had been appointed by the Ministry?—That did not matter; she could not sit because the workers' side will not allow her to do so, and they take up that position to-day, so we have no representation of what might be some of the very best class of workers that we have who happen to be non-unionists.

3461. *Chairman*: Had this lady of whom you are speaking, who had been sitting, been nominated by a union?—No, I understand that she had been nominated by an employer who was complaining that the outside firms had not got any of their representatives.

3462. Is there not also another lady member who is not nominated by a Union?—Do you mean on the workers' side?

3463. Yes.—No, she is a unionist, the woman representative of the home workers, a Miss Spiller.

3464. You say she is a unionist?—Yes, most certainly. I had no idea that that would be mentioned, but now that that case is mentioned I may say that two or three names were put forward of non-unionist workers who were far better representatives of the out-workers' section of the trade, which is the worst organised section of the trade, than Miss Spiller; but the Ministry sent down and inquired into the position, and they selected her on the spot because the Union put her name forward. She is distinctly a member of the National Union of General Workers. I guessed her name right away if I am correct in my surmise. You may take it, and I say this quite distinctly, that there is no non-unionist representative on the workers' side of the Board, and the workers' side of the Board have specifically said that they will not have it.

3465. You have dealt with the appointed members?—Yes.

3466. *Sir Arthur Pease*: You do not know the proportions of the trade unionists and non-unionists?—The only possible way in which you could get that would be from the trade unionist representatives on the Board, and their officials; and I have tried all I know to get the information, but cannot get it.

3467. But you consider that there is a large proportion of workers outside the unions?—I am certain there is.

3468. *Chairman*: Now we will pass on to the district committees, which you deal with in your evidence. Have you any district committees in the rope trade?—I am afraid it has been an impossible task in the time at your disposal to run through this statement.

3469. On the contrary, I have read it carefully, and most of us have.—I am honoured: I could not get it into shorter compass, I am afraid. With regard to the district committees, we withdrew the valid objection which the net end of the trade had made to the formation of the Trade Board on the distinct promise that we should have two district committees for Scotland and one for England. That did not come to anything.

3470. The English one would be for Bridport and district, would it not?—Yes. In the Bridport district not only had we good organisation on the manufacturers' side, but we had local agreements with our workers on all points which the Trade Board afterwards covered.

3471. *Lord Weir*: Did you not obtain these committees?—We had no possibility of obtaining them.

3472. Why?—I want to make it perfectly clear that we had lodged a valid objection to the Act being put into force; that means to say there would have had to be a public inquiry; we withdrew that because we were assured in this building that we could as a matter of course have district committees. We were not conversant with the Act or with the working of it, but we accepted that, and then at the first meeting of the Board, after the opening of the proceedings, I quoted the promise that had been given to us, and the Appointed Chairman said that the matter of district committees would be reached later, but our business was to apply a minimum wage.

3473. *Chairman*: Before you get to that, you said you were distinctly assured that there would be district committees: were you not told that the formation of district committees would be a matter for the decision of the Board when established, but that the Minister thought there would be little probability of the Board refusing consent to the appointment of district committees?—We were certainly told that it would be a matter for the Board, but we were led distinctly to believe that it was only a question of our applying and that the Board had never been known to refuse a district committee. Those are the exact words which were used to me personally at that conference in this building.

3474. I was quoting from a letter which was written on the 5th July, 1919: "I am to add that the formation of separate district committees in the Bridport area would be a matter for the decision of the Board when established, but in view of the position obtaining in that area there would seem to be little probability that the Board would refuse to consent to the formation of district committees."—That is so. That was a formal letter following the conference, and the point was emphasised at the conference that the idea of there being any difficulty was simply absurd. There could not be any difficulty.

3475. That letter is quite clear, is it not?—Yes, but I point out that that letter followed the conference, and we had gone back to our constituents with our report of the conference.

3476. Did you object to that letter as not representing what had happened?—We objected to that letter at the Trade Board meeting following, and we have laboured on the district committee matter right through.

3477. At all events you applied, and at the first meeting you say the matter was postponed?—Yes. May I point out that the only possible advantage of a district committee on the formation of a Board would be in the differentiation of the rates, but the Chairman ruled that our first business was to pass a minimum rate.

3478. *Lord Weir*: Did you persevere? Did you raise it again at the next meeting?—Yes, we again raised it at the next meeting.

3479. What was the objection that time?—We were told then, "If you can do this, go back to your own particular district and see what can be done." We went back to our particular district, and had a local meeting of the workers and the manufacturers, at which we not only drew up a scale of wages, but we drew up a scale of the different degrees of skill in the trade for the first time in the history of the trade; and we came back with absolute unanimity in that district to the Board. The Board said, "Capital. Good work done: now we will proceed as a Board, and there will be no necessity for you to have any committee, because we will adopt your plans," and the Board graded at this

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

second meeting (I think it was) the trade for the country, and the rates applicable, practically on the decisions at which the local conference had arrived.

3480. *Chairman*: So you got the benefit of a district committee?—We did not get the benefit, because we were unable to get a different rate: we could not get a different rate from the country districts as apart from the towns or the cities, because when we went back we had only a flat minimum rate for the whole country to build on, and we built on that.

3481. Do you still think that district committees should be established?—So far as Trade Boards are concerned, our considered judgment is that district committees are useless: they are unworkable under the Act.

3482. Why is that?—First of all, there has to be agreement, and the workers in no circumstances will entertain district committees. Notwithstanding the arrangement that we were able to make in that particular district, which worked without a hitch for 18 months, when we again approached our workers and asked them whether they would put forward another arrangement which would bring up the district arrangements similar to the one which had worked very well for 18 months, we were told that the workers had now decided that they were going to think nationally, and would not for a moment entertain districts; and we have never been able to get the workers' side of the Board to consider districts. We found that even if we had districts it would be simply a waste of energy, because you would have Trade Boards with an appointed Chairman sitting in districts having to go over the whole matter again when it got to the main Trade Board, being unable to do anything, having no executive power. A district committee under the Act, as we interpret it, would be merely an advisory committee for that district reporting to the main Trade Board. The whole matter would have to be gone over again, and it would be quite competent for the Trade Board to reject any suggestions put forward by a district committee?—That is true—if it is not outside the evidence at the moment, I may say that I am a member on the employers' side of the Trade Board which sits in Edinburgh, where the employees distinctly said that they would sooner accept the proposition which was then on the table of *ad. an. hour less*, provided the employers would scrap the idea of district committees.

3483. So we may put that aside?—I think you may put the question of district committees aside, as the Act stands at present, as absolutely unworkable in the Rope, Twine and Net Trade, though we consider that there should be a differentiation between the towns and cities and the agricultural districts pure and simple.

3484. We shall come to that later?—Yes; but that cannot be got by the district committees.

3485. *Sir Arthur Pease*: That differentiation would be made by the Central Board, do you mean?—The Trade Board itself would have to agree it, but the principle at present has not been adopted, I think, by any Boards, for the simple reason that as a rule the so-called minimum has been too high.

3486. *Chairman*: I believe it has been adopted by at least one Board.—I am sorry, I did not know that.

3487. I mean differentiation as between London and country towns?—Was that done on a population basis?

3488. I believe so.—Then I did know it, but that is comparatively recent.

3489. About a year ago?—Yes.

3490. Then you do think, I gather, that there might be a division into sections?—We have nothing in common in the rope trade, the twine trade, or the net trade; there is nothing at all. We are a body of employers and a body of workers with no interests really and truly in common; but there are a great many firms which do a little of each, and that is the main trouble. So far as the rope trade, pure and simple, is concerned, there is no connection with the

twine trade, and the netting trade is absolutely remote from either.

3491. If you had a division, would you not have three rates, and have different rates in the same factory sometimes?—We have an idea that if we were left to manage our own business we could arrange that quite satisfactorily.

3492. When one is considering dividing into sections, one wants to know how you would get over that?—There is an important section which is also harrassed by the result of there being wire rope made in the same factory as this manilla rope. That does not come under the Board.

3493. I am not sure that you are right about that.—If wire rope is made in the same factory it does not come under the Board. May I read the definition.

3494. *Dame Adelaide Anderson*: Do you mean that the factory does not come under the Board?—The rope end of the trade comes under the Board, but the wire end does not.

3495. *Chairman*: I have the Order here, and it says "Excluding the making of wire rope, unless made in the same factory or workshop as hemp or similar rope," so it looks as if by the terms of the Order wire rope when made in the same factory as other rope does fall within the Order?—Yes, I am sorry, I am wrong there.

3496. I know it because we had it out, the other day, from another witness.—I am afraid I got wrong there, and I am sorry. They are different processes.

3497. We have had complaints from many quarters that you sometimes get three or four different rates operating in the same building, and that produces confusion and dissatisfaction, as one can quite understand. I suggest that if you had three rates for rope, twine, and net, you might have a similar grievance?—We do not say that there would not be difficulties, but we think that there would be less difficulties than there are at the present if that were possible; but it would only be possible, I would remind you, provided our recommendations were carried out. In existing circumstances it could not be done, but if we could be the governing body in the trade—you will remember we have been studying this matter on the employers' side very carefully—if we could be the governing body in the trade we think we could see our way clear to form a rope section, a twine section, and a net section.

3498. You would have to make some special rule governing the cases where two or more were combined together?—Yes, and that could be done provided we were a governing body suitable to the district concerned, but it cannot be done at present, because we have a flat rate for the whole country. It might be that we could agree on a rate for a composite factory embracing all three processes, possibly.

3499. You would have to consider which was the prevailing trade, or something of that sort?—Yes. We had an idea that the bigger end of the trade would govern the other proposition. We have carefully worked out that scheme, assuming that we were the governing body.

3500. Now let us pass to the methods of altering the rates. You say the period allowed for objections creates difficulties?—The period that is allowed for objection we consider should be wiped out altogether, and we have the agreement of the workers' side with regard to that.

3501. Do you say it should be wiped out altogether?—In actual practice the objections amount to nothing. I am speaking quite seriously, after two years on our own Board, and I say the objections amount to nothing.

3502. *Lord Weir*: Do you apply that to old rates and to new rates? Do you mean the fixing of first rates, and also variations in the rates? Would you wipe out that period for objection altogether?—Yes, I would wipe it out altogether. It is a physical impossibility to consider objections at the rate that some Boards get them; it could not be done. They run into thousands—not on our own Board.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

3503. *Chairman*: If a rate is so objectionable as to produce thousands of objections, would you be quite wise to confirm that rate without giving a chance of objection?—If a Board were properly constituted of proper representatives properly selected from the branches of the trade, and if the Board were the governing body for the industry with full powers, the Board should be capable of fixing a rate for the industry.

3504. We are dealing with unorganised trades. The Minister has to do the best he can in choosing persons to represent the two sides, but still he cannot get people to represent everybody, and there may be thousands and thousands of people who do not consider that they are represented on the Board. In those circumstances it is quite right that they should be bound by the rate without being given a chance of objecting to it?—I would only point out that in our own trade alone, if that were definitely to go forth, it would be quite possible to hang up a rate for years. It could be hung up almost indefinitely.

3505. But still, you must meet the point that it is rather hard on both employers and workers to be subject to a rate of which they have heard nothing, and to which they have not had a chance of objecting?—The whole thing is hard. It is hard to have a rate put on a trade which we claim is not an unorganised trade.

3506. I dare say it is, but we are now dealing with the question of machinery. We have got to that point. I could understand your saying that the period for objections ought to be shortened, for instance, that the time for objections should run from the moment when the rate is proposed, and not as it is done now from the moment when notice reaches everybody?—From the date of the notice of the proposed change.

3507. I quite see that, but if you propose to alter a rate, then you must give sufficient notice of the rate which is decided upon by the Board. It comes to the same thing—to run from the date of the proposal. That would, of course, shorten the time very much, and you might allow a less period than is now allowed, but as to abolishing objections altogether, is not that rather a serious thing to do?—We think not. The workers' side of the Board are in agreement with us in thinking that when a rate is passed by the Board by agreement, it should come into force forthwith. We suggest that it should be within a month, because it would take that long for printing, and so on. But may I point out that we have a very grave case of postponement of a rate in consequence of objections: that was the case of this 10½d. rate. There was a certain class of workers who came under a Munitions Award who were largely on one side of a factory, and there were workers on the other side of the factory who did not. The first lot of those workers had been brought under the Munitions Award of the 12½ per cent., which was afterwards confirmed by an Award of the Interim Court of Arbitration No. 410. It seemed that when the rate was fixed by the Rope, Twine, and Net Trade Board at 8½d., the workers under the Award who had been given 10½d. would drop too suddenly, consequently we said we would continue the 10½d. rate for four months, which four months would have expired, I think, in December, 1920; but the Chairman of the Board said, "No, you cannot make any arrangement of that sort; you cannot do it; there will have to be a new notice of proposal to vary." We debated the matter for a whole day, and eventually we had to give in, and a new notice was issued. This is one of the difficulties of conducting any business under the Trade Boards Acts, and really when it comes to applying business principles you are entirely at sea. Here was a body of business men and a body of workers in the trade who loyally agreed round a table that for four months they would continue to pay a certain class of workers 10½d. an hour, whereas the Trade Board had laid down a rate of 8½d. Any ordinary business man

would enter into that arrangement with his work-people, and the thing would be loyally and honourably kept to; but under the Trade Boards Acts the machinery, to say the least of it, necessary to legalise a small, every-day business operation of that sort is stupendous. The Chairman ruled that it was a notice of proposal, and the notice of proposal was issued; and what is now known as the famous R. 14 form in the trade distinctly sets forth that for certain classes of female workers who are employed on certain processes specified in the Rope, Twine and Net Trade Order it is a proposal to vary their rate for a period of time, namely four months. A notice of proposal somewhat in that form went out in my own Federation. It may apply to a very small proportion of workers, but in these trades, when it is so essential to get industrial harmony, I point out to those members of the Committee who are conversant at all events with factory life that the woman who was getting 8½d. immediately she saw that would say, "Well, I am 2d. an hour up." She did not stop to consider whether she was one of the special workers or not. This notice was posted as a proposal and taken as a proposal, and we had to call the attention of the Trade Board seriously to the fact that we had protested against its being issued as a proposal, but the Chairman had insisted, and it went forth, and now it was not clear that the only workers affected were those workers who had had that Award No. 410 applied to them. A pamphlet similar to this had to be issued pointing out that there was evidently a misapprehension amongst the workers, and that the only workers affected were such as came under that Award and so on in those factories.

3508. *Sir Arthur Pease*: By whom was that pamphlet issued?—By the offices of the Trade Board.

3509. *Lord Weir*: I have not followed this very well. As far as I understand it, you had a Trade Board rate of 8½d., and some other private arrangement with a section of your workers covering a 10½d. rate for a period of four months. The Trade Board rate is a minimum, so could you not have made outside the Trade Board some arrangement to pay 2d. extra to the people who were under your other agreement? The only legal rate was 8½d.?—May I point out that when the first Trade Board Notice went forth it read: "Without prejudice to any workers who are earning a higher wage," and may I go a step further. The notice read: "Without prejudice to workers earning a higher wage than the fixed rate of 8½d.," and there were already some workers under Award No. 410 who were getting 10½d. When that Award expired, which I think was in October of last year, they would automatically drop under the Trade Board to 8½d., failing any agreement. At that time there was a great element of suspicion in the Trade Board because we had not got to know one another, and we wished to legalise that 10½d. for four months.

3510. *Chairman*: When you say legalise it, you mean to make it compulsory on all the trade?—And thereby to legalise it.

3511. At any rate, legalising a private agreement by making that arrangement compulsory?—We wanted to make that rate compulsory on the trade. It was hung up for months and months, and finally, instead of its expiring in December, as we wanted it to, it did not expire until April, 1921. I want to point out not only the great trouble, but the suspicion that that created, because in April, 1921, we had just reached the end of 18 months' agreement of three 6-monthly periods, each one advancing, which expired in April. We had wanted that 10½d. to expire in December, 1920, but instead of that it expired in April, 1921. Our application for a reduced rate coming in in April, 1921, brought the 10½d. workers down bump as compared with the 8½d. workers, and we had wanted to benefit them by making it in two steps, December and April; but instead of that those who were getting 10½d. came down right away instead of having two slighter drops, with the

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

result that in the Liverpool area to-day we are in the twenty-eighth week of a very bad strike, the worst strike that I have ever known in the history of the trade prior to a Trade Board being brought in.

3512. *Sir Arthur Pease*: Is not the rate below 8½d. now?—Yes, but my point is that the drop of these people who had been under Award No. 410 would not have been anything like so much if they had come down in the two steps at December and April.

3513. What is the rate now?—For the lower grade women it is 8d. There was only a 2s. drop.

3514. You have got a strike in this trade?—For 28 weeks there has been a strike in the Liverpool rope-making trade. There are three large firms mainly concerned, and every effort to bring about agreement has failed. I heard yesterday that it is possible that the services of the Chairman of the workers' side and my own may be required at a final arbitration, but up to now we have not been able to bring the employers and the workers together.

3515. Is it a strike against the decision of the Trade Board?—Yes, it is a strike against the decision of the Trade Board. The past history of the strike is that owing to that 10½d. rate running on until April when we had wanted it to expire in December, the Liverpool Trade Union representative on the Trade Board came into a conference as to a reduction of wages and flatly said that whatever we decided about the reduction he was going to keep his people up to the rate that they had been getting, namely, 10½d. The result was that although we arrived at an agreement by a majority as between the employers' side and the workers' side, he left the meeting and went straight back to Liverpool, and before the proposals for the new rate were considered he had called a strike, knowing that those proposals looked like going through.

3516. *Mr. Layton*: One question with regard to that 10½d. I suppose if you had not had the 10½d. rate made legally enforceable by the Trade Board you might have got certain firms giving it and others not giving it?—Our impression was that the moment we arrived at agreement on that Board we should have recorded this on the minutes, and that would have been sufficient.

3517. Do you think the firms would have loyally abided by it?—The whole of the firms paying that 10½d. were on the Board and they agreed to it with the workers. I do not think there were any firms which would not have paid it. I put it to the Chairman, might we record this on the minutes as an ordinary business transaction, and he said No, we must issue a notice of proposal.

3518. *Chairman*: There is nothing to prevent you paying higher wages. What he meant was that you could not make it a Trade Board Order unless you went through the Trade Board procedure.—It is extremely difficult for business men to adopt methods of that kind. At any rate, we were not allowed to do it.

Chairman: You were not prevented from paying the wages, but you were not allowed to treat it as a Trade Board Order.

Mrs. Lyttelton: You had to treat it as a Trade Board Order.

3519. *Chairman*: I mean you were not allowed to treat the agreement as a Trade Board Order without going through the proper steps?—That is so.

3520. *Sir Arthur Pease*: Was there any question about the price you would get for your material if it was not sanctioned by the Trade Board?—I do not think any question of that sort arose at that time.

3521. You know what I have in my mind, do you not?—Yes.

3522. Certain prices were fixed for materials according to the wages?—That was not in my mind at all.

3523. *Chairman*: Have you something to say about minimum and standard rates which you could put shortly to us?—Yes. Our experience is that the rates which are fixed now are not minimum rates in the accepted sense of the term; that is to say, if you fix a flat rate for the whole country, unless that flat rate

is fixed low enough to enable one of the worst equipped and worstsituated factories in the country to pay that wage it must of necessity pay a wage which becomes more or less a maximum or a standard rate. In our own trade it has become, I am rather inclined to think, a maximum. We are in this difficulty, that at the present moment in all country districts throughout England you have an agricultural rate of wage on a 50-hour week of 36s. or 38s. by agreement. The photographs which I handed in, I think, will be in your memory. On one of them there is a hedge shown, and on one side of that hedge there may be a man earning 36s. for a week of 50 hours. It is in the middle of a country district, and it may be taken as typical of hundreds of little rope factories throughout the country. On one side of that hedge there is a man working 50 hours a week for 36s. or 38s., which, by agreement with the farmers, is the agricultural rate, while the minimum, that is to say, the compulsory rate, of the Rope, Twine and Net trade up to the 14th November was 60s. for 48 hours' work, and not 50 hours. The rate has now dropped to 52s. as from the 14th November, but up to the 14th November our minimum for the Rope, Twine and Net trade was 1s. 3d. an hour, or £3 a week of 48 hours.

3524. *Lord Weir*: In making that comparison do you suggest to us that if they had a Trade Board on the same lines as your Rope, Twine and Net Board they would not have fixed a 36s. rate, but they would have had some higher rate?—Judging by my experience on the two Trade Boards on which I sit, I do not think it would be possible to suggest anything of the kind. I think the Appointed Member would immediately have said, "I am not entertaining such a rate at all."

3525. *Chairman*: Such a rate as 36s.?—Yes, such a rate as 36s. or 38s.

3526. *Lord Weir*: It would have been more?—It would have been infinitely more under any Trade Board system.

3527. *Chairman*: Is there any great difference between the cost of living of the agricultural worker and the cost of living of the rope worker?—So far as we can get the evidence, it is generally accepted that one lives considerably cheaper in a country district than in a city. As regards housing alone, it would cost very much less in the country. If you take rents in London, the average to-day would probably be about 18s., and I think it may be safely said that there are not hundreds, but thousands of small country cottages occupied by ropemakers in the country which range from 5s. to 5s. a week, or from 7s. to 8s. a week at the most in small towns.

3528. I am comparing the 52s. with the 36s. Would the cost of living of the man with 36s. be substantially less than that of the man who gets 52s.?—They are living side by side. The whole of the country ropemakers' labour is recruited from the agricultural labourer class.

3529. Then if the rate is fixed on the cost of living it should be the same, or nearly the same, as that fixed for the agricultural labourer?—Yes, but I cannot find that a Trade Board rate is fixed on the cost of living. We have had from our Appointed Chairman a series of figures in which he has interpreted or endeavoured to interpret the sovereign of to-day as compared with the pre-war sovereign; but in ordinary business usage that cannot be done. The purchasing power of a sovereign in one household is very different from what it is in another, and in the country districts it may be taken that the agricultural rate is the rate which is, practically speaking, applicable to whatever little industry is situated in that country district. In the bigger towns the rate is governed by the bigger businesses. For instance, on Tyneside the rate payable will be governed more by the wage that is being paid to the ship worker in the shipyard, and you get the same thing in the Liverpool district and in the Milford Haven district, and the rate of wage in a rope works placed in Birmingham will be governed by the rate of wages in the biggest industries in Birmingham. It is, therefore, quite clear that the rope

30 November, 1921.]

Mr. E. J. W. BUCKFITT, J.P.

[Continued.]

workers in a country district will be governed by the agricultural rate of wages payable in that district.

3550. *Mrs. Lyttelton*: Is the agricultural rate quite a fair comparison, because it is very often mixed up with other things, sometimes houses, sometimes milk, vegetables, and all sorts of things which come into the rate, so does not that prevent it from being quite a fair comparison?—I would not in any shape or form put forward a suggestion which would not bear the strictest investigation, and I do not think it is unfair to say that the average country rope-makers' employees would certainly get all the advantages that an average agricultural labourer gets.

3551. So you think that your parallel is a fair one?—Yes, it is, for this reason, that in most country rope works the employers, in my experience, before the Trade Board rates came in, had always managed to find odd jobs for the men, when bad weather stopped their working, in the same way as a farmer would for his men; but now our experience of the last two years has been that in those works in bad weather the workers are simply laid off, because where a man could have paid a wage of 35s. or 36s. a week he cannot afford to pay 43s.

3552. *Dame Adelaide Anderson*: What proportion of the industry is in the country? Is it only a small fraction?—It is very difficult to say exactly, because of the scattered nature of it. I have a Bradshaw map here which I have ruled off, giving the number of firms under the Trade Board in different counties, and if I run through this perhaps it will be helpful. I show here the actual number of firms and the counties. (Same handed.)

3553. *Chairman*: We want to get to the bottom of this, and you are giving the best information we have. Did you say the rates are not fixed according to the cost of living: by what are they fixed on the Boards on which you sit?—The history of rate fixing has been that a rate has been put forward by the workers' side: there has been no reason given why that rate has been put forward, or at any rate I have never heard a reason given.

3554. When you come to argue about the rate what reasons are given?—From the workers' side it has been that they have taken certain rates. You can rarely pin them down as to exactly why they have put forward that rate as a rate. Then you get a certain number of weekly budgets showing what it costs to keep an average working man's home going. We had that in this instance which I am going to give now, where they put the rent at 18s. for the Millwall district of London. On the employers' side you have put forward what the trade can stand. When it comes to the cost of living, at the present time you will fully appreciate how extremely difficult it is to talk in terms of the cost of living, when you remember that for the past 14 months in this trade two or three days a week has been the utmost that the trade has been working. I am perfectly convinced that there is not a firm in the trade that has made a profit in the last 12 months. That is a serious statement to make, and I make it knowing the responsibility I am under.

3555. You make that statement for the purpose of showing that you must take not only the cost of living, but the profits of the trade?—The profits of the trade, and what the trade will stand, bearing in mind the competition which the trade has to meet. This trade, so far as the twine and rope end of it is concerned, up to comparatively recent times so far as the home market was concerned had competition from Germany and from Belgium in yarns, twines and ropes, but had not a great deal of competition as regards nets. It is a trade that has a very large amount of export trade. In the netting trade I think I am right in saying that something like upwards of 75 per cent. would be export. Those markets were lost during the war: we lost Australia, New Zealand, and the Southern Seas, because we could not ship, and Japan got the trade. We had the vast fishing in the North Sea, and in Iceland; and the salt cod which has been stored in Iceland, which was usually sent to Germany and Southern Russia, is there still to the tune of nearly two years' stock. Newfoundland and Canada are in identically the same position.

Newfoundland, so far as her stocks of cured fish are concerned, is in a worse position than she has ever been in in her history, and she is our oldest Colony, so it is a serious thing to say about her. The Russian and German markets are entirely closed so far as the cured fish trade is concerned, but they are entering into serious competition with the netting manufacturers in this country, and for the first time Dutch nets are being sold in the Lowestoft and Grimsby districts within the last three months. Orders for *bond fide* export are leaving our manufacturers and going to Germany and France. The rates of exchange are such that it is no good talking about them, and we claim that it is no good talking about the cost of living. The point is that we have lost our export trade as a trade, and we say that the rate laid down under the Trade Board has been a contributory cause of that loss. When we come to agree rates of wages, we want to approach it from the point of view of re-establishing a trade which is one of the oldest trades in the Kingdom, and I say frankly to-day that if we went to a Trade Board and suggested an agricultural rate of wages the Appointed Members would say, "We are not going to consider this."

3556. *Dame Adelaide Anderson*: To go back to the proportion of the trade which is alongside agriculture, I gather from that map that it is an insignificant proportion, because the majority are in the big towns in Counties such as Lancashire, London, Yorkshire, and so on, and there is a very small proportion alongside the agricultural workers?—Those that are in Lancashire are spread over quite a big country area, and in the West we have them spread right through Dorset, Somerset, and Cornwall, missing Devonshire, where there is very little. It is a comparatively small number compared to the whole.

3557. The great bulk of them are in towns, are they not?—They live all the way down there. You will find little country rope-makers in the neighbourhood of Market Weighton, Driffield, through the Wold towns, and in the Summer Bridge district there are quite a few.

3558. But they are quite small factories?—Yes, they are quite small factories.

3559. The great bulk of the works are in the towns?—Yes, the great bulk of them are in the towns, but there is a great number spread throughout the whole country. There are certainly something like 300 works, but they are admittedly very small. The average country rope-maker may be a man in a country district who has seven, eight or nine operatives.

3560. The wages on the whole have to be compared with those of other workers in the towns on the lines you have yourself suggested?—If we are going to continue the Trade Board rate, which we claim is not a minimum rate. I think we originally started this on standard and minimum rates, and it has led back to that. That is the point. If you are to have a minimum rate it must be a minimum rate which would apply to the smallest factory in the smallest town or in the remotest country place, and at present we have a flat rate which operates throughout the whole country irrespective of the situation of the factory.

3561. On that showing, the minimum wage for the work in the town would be determined not by what the worker needed, but by what the trade at any time could afford?—I should say that that is practically what governed it in the past.

3562. And what led to sweated wages?—I must strongly object to the statement that there were any sweated wages in this trade.

3563. I did not want to suggest that, but if you work on that principle alone, that is to say what the trade can afford, at a time of stress you might get down to sweated wages?—I do not know that there would be any more question of the worker being sweated than the employer. We are in the position to-day of having lost our trade, and at all costs it must be regained. It has been shown by the agricultural labourer what can be done in that direction,

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

and I am not at all certain that if the employers and workers got together independently of the Trade Board the problem would not be to a large extent solved. The workers are as anxious as the employers to resuscitate the trade. There is a different feeling about altogether now from what there was many years back in this trade, and there is far greater unity in the trade than there was. At present we are 'hide-bound': we cannot make an agreement between employers and workers in these days at something a bit above the minimum rate.

3544. *Mr. Layton*: Then your arguments about export apply mainly to the town people here?—No, they would apply to the country people with equal force. There are a great many of the small country factories that have specialised on certain small special things for export, and they are collected in the country.

3545. *Mrs. Lyttelton*: Do they export direct?—Yes. For instance, in the netting trade you will not find any netting factories in a big town, and the netting trade is wide: it covers the whole world so far as export trade is concerned.

3546. *Dame Adelaide Anderson*: In a town like Grimsby, for instance?—There you will get export trawl wet trade, but the bulk of the nets will be used for home consumption, and you would not get such a huge business from Grimsby as you would from the Musselburgh area or from the Bridport area in the net trade.

3547. *Sir Arthur Pease*: Was there any differentiation between the rates of net makers and agricultural labourers before the war?—Before the war in our own immediate agricultural district (and I speak with first-hand knowledge of that district) it was practically an agricultural rate which was applied to the rope, twine and net factories. Subsequent investigation which I have made proves that the same thing happened in the Somerset area, in the Yorkshire area, and in the Lancashire area. Throughout Scotland it was absolutely regular, and there was about 1s. or 2s. difference. Of course, if there was a little country rope works it was quite possible that of two or three members of the same family one would be in a rope factory, perhaps, one with a farmer, and one at some other little industry, and therefore the rate generally applicable to the biggest trade in the district I claim is the rate that governs the trade within that district. If you have a country district, it is therefore the agricultural rate that governs it.

3548. There is one other matter which is not quite clear to me: you state that the whole of the net industry is in country districts, but the bulk of the rope and twine trade is in big towns?—The heavy rope and the twine trade, such as the parcel and shop twine trade and so on, would be in much bigger towns than the making of twine which would be used for the fishing net trades, because of necessity these (the rope and twine) are highly specialised branches which could not exist unless they were working close to the spot from which they were going to market their goods.

3549. *Chairman*: The ordinary rope walk, you have told us, is very often in a country district?—Yes.

3550. They want a good deal of space, of course?—Yes; a rope walk in the country will often be from 150 to 240 yards, and, of course, space in a town is valuable.

3551. *Lord Weir*: Did the Trade Board make any change in your hours?—Yes, and that was the most serious matter. The Rope, Twine and Net trade had been working under two Home Office schedules: we had had the textile side and the non-textile side; on the non-textile side we were working 56 hours a week, and on the textile side 55½. I understand that the law administered by the Home Office is that 56 and 55½ hours may still be worked, but the Trade Board fixed 48 hours, and made the time between 48 and 55½ or 56 overtime to be paid at an overtime rate.

3552. *Dame Adelaide Anderson*: The textile week is a 54-hour week, is it not?—It is 55½, I think. I came down to 53 hours. It varied a good deal in different districts; in the Newcastle district I find it was 53, but we voluntarily came down some years ago to 53. At the same time, I think we could work 55½.

3553. Those are the maximum hours?—Yes. It was 56 in non-textile and 54 in textile. At any rate, we came down to a flat 48, and the first two hours overtime would be paid at time-and-a-quarter, and after that time-and-a-half.

3554. *Lord Weir*: Was that a change?—It was an absolute change, and the result was that we adopted a 48-hour week, with a consequent fall in production and an increased cost of production.

3555. Was there any change in the actual overtime rates?—Previously the overtime rates had been a matter of arrangement.

3556. Then there was a change?—There was a decided change, because, as a matter of fact, on the workers' side there are a great many who do not approve of that overtime rate. The worker says: What I am looking at more, within reason, is the amount of money I get on the Saturday; I do not see why I should be confined to a 48-hours' week if I would like to work 56 hours.

3557. *Dame Adelaide Anderson*: In many industries they have not worked up to this maximum for years: it is only a maximum, is it not?—Yes.

3558. It is not a standard?—Just so. In many cases, it may be interesting to the Committee to know that we voluntarily came down some years ago to 52, and we found that at 52 we could maintain a 56-hours production, but we cannot do it with 48 hours.

3559. *Chairman*: We have already dealt with some of your important points, and we shall perhaps go faster now. We note what you say about the rates for young persons of both sexes, which confirms other evidence which we have had on the subject, and we note what you say as regards out-workers, with which I think you have already dealt in talking about the beatsters. Shall we now go on to page 20?—I should like to emphasize, if I may, without wasting the time of the Committee, the very serious position as regards unemployment amongst out-workers, and the fact that nets are now coming from Holland and Denmark, which are the equivalent of out-workers' nets so far as trawl nets are concerned, for the first time in the history of the trade into Lowestoft and Grimsby.

3560. That is all connected with the rate of pay, of course?—Yes.

3561. With regard to scope, you say it should be left to the Trade Board itself to decide; but where you get a question between the Trade Boards you must have some other tribunal, must you not?—Yes, we have agreed with the workers' side on that. The workers' side and the employers' side are in agreement that the Board should decide questions of scope, but so far as any particular question of scope affects any other Boards we think provision should be made for joint meetings of such Boards, and if agreement is not reached by the Boards on such question it should then be submitted to the Industrial Court for an expression of opinion.

3562. That, if I may say so, is very intelligible?—We have reached agreement on that with the workers' side.

3563. Then we need not labour that point. With regard to grading, your paragraph really comes to this, that a proposal which was approved by the Board was not confirmed as a whole, but had to be modified in material particulars?—Yes, in order to secure the vote of the appointed member.

3564. That confirms what you said just now.—Yes, exactly, and I think it might be read in conjunction with that. Now may I apologise for a slight typing error on page 23. Towards the bottom of that page, the thirteenth line up, I have got these words: "but the employers in this particular case had advanced the rates of pay in the particular Depart-

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

ment referred to," and I have been told by that employer personally this morning that they were not altered, and the word "advanced" should be struck out and "not altered" substituted. I put this in my statement just as he sent it to me, but that is what he now tells me.

3565. That section of your evidence comes to this, does it not, that there ought to be, if these Trade Boards are to continue, a good deal more inspection and rapid prosecution in cases where there is a breach of the law?—So far as we are concerned, on both sides of the Board we are in agreement on that point, that one prosecution is worth more than ten new inspectors. We fully sympathise with the position of the inspectors: it is a most difficult position. There is one inspector to every four Boards working now, I think, and I do not see how it is possible for an inspector, no matter how painstaking he may be, to get into all the various little ins and outs of our trade.

3566. When you say "prosecution" you mean a successful prosecution, of course?—I most certainly mean a successful prosecution, but if the Trade Board were the governing body in the trade, and they had the facts stated to them and decided the matter as a Board, I venture to say that they would institute far more prosecutions with the likelihood of their being successful than there are under the present methods, judging by the experience we have had.

3567. Of course, you have to consider who is going to pay the costs of the prosecution?—We fully understand that, and so far as the trade itself is concerned, if it could run itself it would meet all its own expenses. We are not in any circumstances desirous of increasing costs, and I would point out in that connection that two or three prosecutions would not cost as much as two or three new inspectors would.

3568. The salaries of the inspectors, of course, are paid by the public: do you mean that the costs of prosecutions would be paid by private individuals?—If a prosecution is successful it carries costs with it.

3569. I daresay you know that the prosecution does not get all its costs?—I know it does not by any means, but I think the matter should be much further pressed.

3570. That means an alteration in the general law. I am rather trying to deal with the matter as things stand. Are you suggesting that every Trade Board should be at liberty to prosecute, and that the costs so far as they were not borne by the accused should be paid by the Board?—I think the matter would resolve itself into this, that if there were a few energetic, successful prosecutions undertaken, you would be able to wipe out the item of expense, because there would be no more prosecutions.

3571. That does not quite answer my question. I am asking what you are proposing: is it that the Trade Board should bear the costs, or that somebody else should?—We think that if the Chief Inspector and the Solicitor to the Board were at the offices of the Board (which they are not at present) and we had a case stated to the Board as a Board, we could then call in the Chief Inspector and discuss the matter with him: we could then call in the Solicitor and discuss the matter with him; and then if the Board were absolutely in agreement that it was a case for prosecution we do not think there would be much danger of losing the case.

3572. Then it does mean that you think the public should bear the cost?—We do.

3573. *Sir Arthur Pease*: But you think there should be consultation before a prosecution was undertaken?—We would not for a moment advise that the public should have to stand the cost of any prosecution which might be instituted: we only suggest that course when the Board has been consulted. I am laying stress on the fact that I think the Board ought to be the people in consultation with the Chief Inspector and the Solicitor to the Board, who should decide whether a prosecution should be undertaken.

3574. You think the prosecution should be undertaken with the assent of the Solicitor to the Board,

or something like that?—Of course, somebody must consider the matter from a legal point of view.

3575. Yes. I do not for one moment think the Board would take it upon themselves to do anything which the Solicitor did not advise.—I am taking it that they would put themselves in his hands as clients.

3576. *Dame Adelaide Anderson*: The most important point is to get the evidence gathered before you can proceed to prosecute?—I am only dealing with my own cases, not hypothetical cases. There all the necessary evidence was forthcoming on the Board from both sides.

3577. And the witnesses?—The whole thing.

3578. *Mr. Layton*: You continually emphasize that you are speaking on the Employers' Side: is there a difference of opinion about this?—No, I think there is no difference of opinion on the question of prosecution. I think, if anything, the workers feel more strongly on this question of prosecution than the employers. But we have reached agreement on this, that we want to be the governing body for the industry with the function of determining subject to the law of the land the industrial conditions of our trade, and that we should have the Secretarial Staff, the Chief Inspector, and the Solicitor at the offices (which is not the case at present). That means practically that we are in agreement on those matters.

3579. *Chairman*: You suggest that there should be co-ordination between the inspectors, the Home Office, the National Health Insurance and the Trade Board?—It does seem that when one puts forward a suggestion one is met with the question of expense, but we are all on the economy side to-day, if we can effect economy anywhere, and it seems to the average employer that he has a Home Office Inspector calling on him, a National Health Insurance Inspector calling on him, and a Trade Board Inspector calling on him, and he feels that there might be some sort of co-ordination. There is a separate piecework inspector at the Home Office who is chiefly inspecting piecework rates throughout the country, and it seems to us that their knowledge would be most valuable from a Trade Board Inspector point of view.

3580. *Dame Adelaide Anderson*: Without evidence as to particulars being given you cannot proceed to decide whether the rate is paid or not?—Just so.

3581. *Chairman*: You mean that the Factory Inspector or the Home Office Inspector might take as an additional duty the investigation of Trade Board questions?—I think there might be co-ordination between the Inspectorate without largely increasing the staff of Inspectors. It is really bearing upon this question of inspection and prosecution. You might say that if you are going to do that you must largely increase your Inspectorate; but it would appear to us as manufacturers that you have the Inspectorate, if it is properly co-ordinated.

3582. You mean that the total expense would be less than if you had a separate body of Inspectors?—Yes. I think it might well be done.

3583. *Dame Adelaide Anderson*: Do you know that it was originally suggested that that should be so at the time of the first consideration of Trade Boards?—No, I did not know that. I had not heard it.

3584. *Lord Weir*: Do you agree that the training of the Home Office Inspectors and the character of the work which they do at present would fit them very well for this Trade Board work?—Most certainly.

3585. *Sir Arthur Pease*: I suppose in a well-organised firm it would take comparatively few minutes to find out that the wage rates were all right, would it not?—If the firm were well-organized and had proper records, which they are bound to keep under the Trade Board Acts, it would be a matter of a very short time. The trouble is, if I may say so, that it is the well-organised firms who keep good records, and so on, who get inspected very often.

3586. My point was that if you had one Inspector for the three duties really his time is occupied in going from one place to another?—That is so.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

3587. And that the actual work of inspecting the books for this extra purpose would take a very short time, as a rule?—If a Home Office Inspector called upon an ordinary normal visit to a well-organized factory with proper records, and so on, it would amount to very little to do the Trade Board end of the inspection at the same time.

3588. Of course, if things were not kept in good order it would take a long time, anyhow?—Yes, but any Inspector then would have a rough time, whether he was a National Health Insurance Inspector or any other Inspector.

3589. *Dame Adelaide Anderson*: Are you aware that a certain amount of co-ordination of the kind has already been attempted—that the Home Office in enforcing the Particulars Clause invited the co-operation of local authorities?—Yes, I know that. You mean the Piecework Particulars Clause?

3590. Yes.—Yes, quite so; because, if I remember rightly, that originated with the question of the names of all out-workers in villages being filed with the local authorities of the district.

3591. So that there is co-operation in existence already; there are precedents?—Yes, which to our mind could be largely extended.

3592. *Chairman*: You have some suggestion to make about the worker not being penalised. Do you press that?—I rather press that. It does seem distinctly unfair that the whole of the penalties under the Act should be on the employer. The employer gets the class of worker that he deserves; that is my experience. If a bad employer tries to pay a lower rate than he gets a bad class of worker, and I would stop the bad class of worker as well as I would stop the bad employer. There are all these notices put up throughout the whole factory, and every penalty in these three columns right across the bottom is on the employer, and there is nothing on the worker. How are you going to stop a bad employer if you are going to let the worker take the rate that he may offer?

3593. *Mrs. Lyttelton*: Some people would think that that was the penalty on the worker already.—I must confess that I cannot see that the worker is under a penalty if the worker voluntarily accepts it and covers up an employer who does not pay the stipulated rate.

3594. *Chairman*: He would not have much to pay his fine out of. On the question of overlapping, you have made some observations which I have read very carefully, and I think you have got some exhibits to show us on this matter.—I will endeavour to shorten that as much as I possibly can, but on overlapping the points are mainly these: that you have got three Boards, the Jute Board, the Flax and Hemp Board, and the Rope, Twine, and Net Board. I think the Committee might like to see these fibres (*producing exhibits*). There you have the raw jute, the carded jute, and the jute sliver, and I have repeated that in raw flax, dressed flax, and flax sliver; raw Italian hemp, dressed Italian hemp, and Italian hemp sliver; raw manilla hemp, prepared manilla hemp, and manilla yarn. In so far as those fibres are concerned for the processes in connection with the jute, you have got a Jute Board, and you have got a Flax and Hemp Board, which covers those fibres in so far as preparing and spinning are concerned; but if you begin to make a twine, or make a line, or make a rope, or make a net out of any of those, you are then under a Rope, Twine, and Net Board, so that you have got three Boards which are hopelessly overlapping. I produce a plan of an average rope, twine, and net factory in which you have all these sections; I have not marked them, because it will be obvious. If they are separate buildings, and there is a spinning mill over *here*, and there is another mill over *there* in that direction, although it may be in the same field or the same district, they will be on the premises to which the Trade Boards Acts apply—when done on these premises.

3595. Would the same man spin and also make the rope?—Exactly. The whole of those processes in

those sets of fibres would be interchangeable, but you will find that in dealing with soft fibres, such as jute, flax, and Italian hemp, you have a class of worker who is not connected in any shape or form with the worker on the hard fibre or the heavier fibre, as illustrated by that manilla sample which I am showing you now. Then I produce two plans of two factories—there are some of them in the country—which are engaged in working all these fibres in these different processes; and there are separate rates of pay applying throughout different parts, not exactly of the same factory but of the same firm. Then, according to a quite recent decision—I have illustrated it here by an actual firm who have their warehouse three-quarters of a mile away from their main works—the warehouse itself would not be under the Board at all, and yet there would not be an employee in the warehouse of that firm who would not have relatives working in the mills attached.

3596. But are not the processes quite different? The process of spinning is one thing, and the process of rope-making is surely another?—Yes, quite so, but the process of spinning being carried on in the same place in which you are making the rope comes under the Rope, Twine and Net Board. That is the point.

3597. Is it carried on in the same building?—In all probability it would be carried on in a building which very likely would have the same roof; it might be an extended roof. It would be possible to have one big spinning mill—there is one illustrated here—which would have a cantilever roof covering the whole. One might be a jute mill, one a flax mill, and the other might be a manilla spinning mill.

3598. Would there be any transfer of labour from one to the other?—There is a considerable amount of transfer of labour; the labour is interchangeable. My point then is that there is no co-ordination between the Boards at all, and you have got all these different rates of pay applicable. The fibres are more or less identical; they are fibres which are used for making lines, or twines, or ropes, and ultimately some of it, but only a small proportion of it, goes into nets. At least 75 per cent. of the netting trade is cotton, and that is not covered by a Board at all. You have these Boards working, and every male unskilled worker to-day in the jute trade you have got to pay 43s. 9d. for a 48-hour week; in the flax and hemp trade you have got to pay 48s. 6d., and in the rope, twine and net trade you have got to pay 52s. since November 14, and up to November 14 you had to pay 23. In the made-up textiles, which is closely allied to it, you have got 53s. There is now a Sack and Bag Board, which is also allied to it, which I do not think has yet fixed a rate; and then you have the Rope, Twine and Net Trade Board for Ireland, which has been sitting since April 21, 1920, and has not yet fixed a rate for male workers.

3599. Are you suggesting combining these Boards, or what?—I am saying that it is impossible to have industrial harmony in the trade—in fact, it is impossible to continue the trade where you are working these different fibres while you have these different rates applied by different Boards.

3600. There has been a Conference between the Boards, has there not?—We had a Conference at York, and we there passed resolutions that each trade should include within the Order governing the trade all the processes ancillary to the things carried on in the trade.

3601. There was a Co-ordinating Committee, was there not?—Yes, the Co-ordinating Committee had that one meeting, and they are going to meet again in January of next year; but in the meantime I would like to point out that we have been labouring under this disadvantage all this time, and competition now has been very seriously accentuated by the rate in the country districts in Ireland being fixed at 54d. for women, or 22s. per week, and 6d. in Belfast, or 24s. per week. In the jute trade

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

we have 28s.; in the flax and hemp trade 28s.; in the rope, twine and net trade we have 32s.; and in the made-up textiles 29s.; and this 22s. rate for women spinners in the Irish country districts has had the effect of shutting down a good deal of the trawl net industry in England. Trawl nets are now being bought from Ireland more cheaply than they can be made in England. The Irish pay a trifle more for making the net, but this 54d. rate for women has brought the price of the trawl twine which they put into the net down to such an extent that they can put the net on the market in Grimsby, Lowestoft and the Hull district at less than the cost of the twine to the English manufacturer.

3602. *Lord Weir*: Is that sufficient to keep out Dutch competition?—We have not yet known how that is going to affect us, but the Dutch is coming in at about the price at which the Irish is coming; but the English manufacturer is out of it.

3603. Do you mean that the Irish conditions would enable you to meet the foreign competition?—I think so. This information has only come to hand during this last week since I prepared the bulk of my statement. This particular bit as to Ireland is not in the statement. I have had it all authenticated. It only reached me a couple of days ago officially, but it will be perfectly obvious that dealing in the same article, in the same fibres, with a differentiation of rates from 22s. to 32s. for women, that is quite sufficient to put the 32s. manufacturer out of business.

3604. *Sir Arthur Pease*: Is the netting which comes from Holland made in Holland, or does it come from somewhere else?—No, it is made in Holland.

3605. Are you sure of that?—Yes, I am perfectly sure.

3606. *Lord Weir*: You mentioned Denmark?—Yes, there is some netting coming now from Denmark. That is quite a new thing. I do not know how long that is likely to last. There always has been some competition from Holland, but Denmark is something quite new. There has been Dutch competition on the Continent, but I have never known any Dutch goods come into England until now.

3607. Your competition was from the Germans, was it?—You cannot estimate anything about German competition now, really and truly, because of their rate of exchange.

3608. But is it taking your work?—So far as our netting trade is concerned I refer later on in my statement to a definite order for 25,000 nets which did go to Germany, which we could have taken in this country; and we could have taken it if we could have got even a little higher rate than the present Irish rate. But to our knowledge that went to Germany.

3609. *Mr. Layton*: You say it is a French firm?—A French firm and a German firm; I think I refer to both. Will you tell me on which page of my statement it is?—

3610. It is on page 34.—In the paragraph before you will see that I say "In the circumstances, however, the order had to go to Germany."

3611. *Dame Adelaide Anderson*: You would not suggest that the rates in England should be governed by these rates in other countries?—Not for a moment, but I would say that the rates should be fixed bearing in mind what competition they had to meet. You could not say to-day, for instance, that the rates should be fixed proportionately to Germany; it would be an impossibility.

3612. Or even to Ireland?—Ireland I am not so certain about. I very strongly object to a city like Belfast getting off with 6d. and a country district with 54d. for women workers.

3613. Do you mean that that is fixed by a local Board?—No, it is fixed by the Rope, Twine and Net Trade Board for Ireland. If there is a substantial portion of an industry in Ireland, they only have to make application and they get their own Trade Board.

3614. *Mr. Layton*: You say that the trade is mainly an export one? Can you tell us what proportion is export?—In so far as the netting trade is concerned, I

think I said that about 75 per cent. pre-war would have been export, and there is a very big export trade in the rope and twine trade.

3615. You cannot give the figures there?—I am advised that it might be safely said that between 55 and 60 per cent. of the rope and twine trade pre-war was export trade.

3616. Taking the netting trade, is it possible to do anything else but to have your wages governed by the price at which continental countries can compete? You said just now in answer to Dame Adelaide Anderson that you could not be governed by continental prices. If three quarters of your trade is export, can you do anything else?—We could at any rate get appreciably nearer, because at any rate for English netting as well as for English ropes and twines you could get a better price than the average foreign maker, if you were somewhere near it.

3617. *Mrs. Lyttleton*: We make it better perhaps?—Yes. I could always get a better price against a continental maker.

3618. *Mr. Layton*: That gives you a permanent margin in your favour, but subject to that permanent margin are not your prices governed by the continental market to-day?—You cannot quite take the continental market as it stands to-day; it is abnormal. We have wiped that out really. If we got to something more normal we should certainly have to approximate to the level of wages on the Continent. But the only thing we have to go on is our pre-war figures.

3619. *Dame Adelaide Anderson*: My question was not directed to suggest that you should not take it into account, but really that you could not let that absolutely decide, because you might then get down to so low a level of wages that it would be undesirable for the country?—As a matter of fact if you take the German exchange to-day, your worker would work for you for a week, and owe you money for working for you. You could not do it.

Dame Adelaide Anderson: That is all I want to suggest.

3620. *Lord Weir*: On that very point you have spoken equally of competition from a country with normal exchange like Holland, and a country like Germany?—Yes, I was asked to emphasise that point. That was borne out by a statement on the other side from Mr. Layton. I was coming to that in a moment. The funny part of it is that you have got a country with a normal rate of exchange like Holland, which for the first time in the history of the trade is able to send in goods. We are bound to buy all this raw material, and I take it that Holland is buying the raw material at the same price as that at which we are buying raw material, and therefore we of necessity draw the conclusion that the difference is purely a wage one.

3621. *Dame Adelaide Anderson*: Or skill in managing the factory?—That might be; but not for a moment are we going to admit that the Dutch are managing their rope, twine, and net factories better than we are.

3622. *Sir Arthur Pease*: Have you been troubled by having heavy stocks which prevented you competing?—I do not know that the heavy stocks have prevented us from competing. Practically every manufacturer in the country at the time of the Armistice, largely owing to following departmental Government advice, was chock full of raw material, particularly in a trade like this where the whole of the raw material was brought overseas. It was necessary, and therefore we all held abnormal stocks when the Armistice came, but we scrapped immediately. There was no question of holding stocks for higher prices. I would like to say that the trade, as a trade, from the very moment when there seemed some prospect of regaining the markets which we had been cut out of during the war, went "all out" for those markets. They were prepared to meet anything to get the trade back.

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

3623. But, having these heavy stocks on your hands made it more difficult to meet the market?—It meant loss after loss, and on the top of that loss we got this Trade Board operating with a rising scale of wages for 18 months. During the whole time we were face to face with a drop in raw materials, which I think I have emphasised in my statement.

3624. *Chairman*: I think you have dealt with your recommendations on page 37 about the Trade Board acting as the governing body for the industry, and we come to your conclusions. I see a passage underlined on page 39, asking for the removal of all Government control in any shape or form. You mention there the strain and the expense upon the employers of attending these Trade Boards?—Yes.

3625. Is that serious?—It really is extremely serious in the case of a Board like this. Take my own case, if you will take that as practically typical of the average manufacturer, except that I have not the distance to travel except when I go to Edinburgh. I cannot attend a Trade Board under 3 days' absence from home, and the whole of the time you are away things are waiting for you when you get back. It may take four days. In the case of my going through to Edinburgh, it certainly means four days, and then it meant two nights in the train out of three, for which the Ministry of Labour do not pay, according to Treasury instructions.

3626. I suppose the Trade Board work throws some amount of work on your staff in the business?—In so far as staff work is concerned, it has now reached such a pitch that my own private secretary practically devotes herself to Trade Board work. The expense of these Trade Boards is extremely serious.

3627. *Sir Arthur Pease*: If it is a fair question, can we have some indication of the size of your own business?—Do you mean my own firm?

3628. Yes?—In what way?

3629. You say that the work in your firm takes so much time to do. A small firm would take much less; that is the point?—Yes; but I am taking it that Viscount Cave's question to me was as to employers who were attending the Boards. If you take the average employer who would be attending Boards, it does not matter much whether he is a small firm or a large firm; the point is that he is away from his duties, and he is not looking after his own work, independently of the money which he would naturally be out of pocket over it. You have to form small Associations, all of which costs money; you have then got to form a Federation of those Associations, because when the Trade Board is formed the Ministry say: "Very well, if you want representation on the Trade Board you have got to get into some association, or you have got to get into a federation"; in other words, you must organise. If we had not these associations and the federation, where would the trade be? The Ministry would simply select from different parts of the country representatives of the trade. If you got associations and a federation you can put forward to the Ministry names of suitable people as representatives on the Trade Board.

(The Witness withdrew.)

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS, called and examined.

Mr. Miller Thomson handed in the following statement as his evidence-in-chief:—

I am Secretary and Treasurer of the Edinburgh and District Aerated Water Manufacturers' and Beer Bottlers' Defence Association and in that capacity have been in close association with the Aerated Water trade for the last twenty years. I also act as the legal adviser of the Scottish Federation of Aerated Water Manufacturers' and Bottlers' Associations. The Associations constituting the Federation and the number of members belonging to each Association are as follows, viz.:—

Name of Association.	Number of Members.
1. Aberdeen Aerated Water Trade Association	18

3630. *Mr. Layton*: You are not complaining of having to organise, are you?—I am not complaining at all about the organising, but I do think that the trade would be better left to organise itself. It had in a great many cases organised itself, and I do not think that there should be compulsory organisation. I certainly complain of that.

3631. *Dame Adelaide Anderson*: You do not complain of the motive for organisation?—I have failed yet to discover the motive in this particular instance. I really cannot find it.

3632. But in fact as a result of the establishment of the Board the trade did begin to organise?—There was an organisation existing in the trade which has been largely extended as the result of the Board being formed.

3633. *Chairman*: We have your conclusions tabulated on pages 40 and 41. You give seven which are agreed to by both sides?—I have particularly marked those which have been agreed to.

3634. You wish to add that you have always received from the officials at the Trade Boards Offices the greatest possible attention?—Certainly. I say that that is largely because they are in constant contact with the Board, whereas the officials of the Ministry of Labour were only reached by such a roundabout way, and after such a length of time.

3635. It is the personal element which does it really; you are able to discuss matters with them?—That is so.

3636. *Mrs. Lyttelton*: I want to go back for a moment to the District Committee question. I want to know whether you feel that the system is not workable because the workers object to it, or whether you think that supposing their objection were done away with, it is unworkable because of the tremendously widespread nature of the industry, and the distances which separate those engaged in the industry? I want to get at what your real objection is to the District Committee?—Apart from the fact that the workers objected, I am confident that you could not under existing circumstances work District Committees satisfactorily.

3637. *Chairman*: Thank you. We will not forget your other points which I have not put to you. We are very much indebted to you for coming here.—May I emphasise that one paragraph, that: "The employers' side of the Board ask me emphatically to say that it is their considered judgment that the quickest and best way to restore prosperity to the industry is immediate removal of all Government control, in any shape or form," and that if we cannot get the recommendations which we have put forward *en bloc*, we would press with all the power we can use for a suspension for a period of two or three years, and failing that that we think the trade should be removed from the scope of the Act altogether.

I have to thank you, my Lord, and the Committee for the patient hearing you have given me.

Name of Association.	Number of Members.
2. Dundee and District Aerated Water Manufacturers' and Beer Bottlers' Defence Association	44
3. Dumfries and Galloway Aerated Water Manufacturers' Association	12
4. Edinburgh and District Aerated Water Manufacturers' and Beer Bottlers' Defence Association	38
5. Glasgow and West of Scotland Aerated Water Manufacturers' and Beer Bottlers' Defence Association	84
6. Perth and District Aerated Water Manufacturers' and Beer Bottlers' Trade Defence Association	30

30 November, 1921.]

MR. JAMES MILLER THOMSON and MR. JOHN CHALMERS.

[Continued.]

Most of the individual members of the Associations are engaged in the manufacture and sale of aerated waters only. A considerable number of the members are engaged in the bottling of beer on a wholesale scale as well as in the manufacture of aerated waters, and some are engaged solely in the bottling of beer. There are few manufacturers in Scotland of aerated waters who are not members of one or other of the local Associations comprising the Federation. The Associations control the Bottle Exchanges which in recent years have done so much to effect economies in the trade.

I have been deputed by the Federation to give evidence before your Lordship's Committee. The Chairman of the Federation, Mr. John Chalmers (William Leitch & Co., Ltd., Edinburgh) is also present but as he has not been well I have been asked to make the statement.

The Aerated Waters Trade Board for Scotland was established on 8th January, 1920. On 11th March, 1919, a Trade Board for the Aerated Waters Trade was established for England. It was as a result of representations made by the Federation that a separate Trade Board was established for Scotland. A copy of a Memorandum that was prepared by the Federation at that time, dated 26th February, 1919, and submitted to the Ministry of Labour, is produced. The Scottish Manufacturers were opposed to the establishment of a Trade Board for the Industry, but when the Order was made they assisted the Ministry of Labour in getting it constituted. When they were asked to suggest names they put forward as the representatives of the employers' part of the Board, the names of *bonâ fide* manufacturers only. These were accepted by the Ministry, but when the names of the employees' side of the Board were obtained it was ascertained that only a few *bonâ fide* workers were on the list, the other names being those of Trade Union leaders, who knew nothing about the trade, but had devoted their lives to the study of rhetoric and the polemics of industry. The manufacturers were advised that the appointments made by the Ministry for the employees' part of the Tribunal were competent, and accordingly they insisted upon the appointment of their legal adviser as a member of the Board. To this the Ministry ultimately agreed. One of the manufacturers retired, and I joined the Board in his place. The implied compliment, that I was nominated to counter-balance the experts of the opposition, was one that I could not but recognise. The appointed members were Professor Baillie, C.B.E., Miss M. G. Cowan, and Professor D. H. McGregor.

The first meeting of the Board was held on 5th February, 1920, with Professor Baillie in the Chair. Miss Cowan was also present. The Federation are quite satisfied with the selection of the Appointed Members. Professor Baillie has proved a good Chairman and Miss Cowan has been equally satisfactory, but notwithstanding their efficiency the performance of the Board has been a complete failure. The Federation is of opinion that the failure is due, not to the personnel, nor to the machinery of the Board, but to the fact that statutory regulation of wages is fundamentally 'unsound.'

Before dealing with the grounds for this opinion it will be proper to state the wages fixed by the Scottish Board. The First Wage Order took effect as from 14th June, 1920, and was as follows:—

Section I.—Male Workers.

	Per hour.
s. d.	
For workers under 16 years of age ...	0 4½
" " of 16 and under 17 years of age ...	0 5½

It was also declared that the normal hours of work in the trade were to be in any week 48, provided that all hours worked by a worker on Sundays and on generally recognised District Holidays, not exceeding six in number in any one year, were to be regarded as overtime, to which the overtime rates were to apply. The overtime rates were fixed then as follows:—

- (1) For all time worked on Sundays and on generally recognised District Holidays, not exceeding six in number in any one year, the overtime rate shall be equivalent to double time, that is to say, twice the minimum rate otherwise applicable;
- (2) For all time worked in excess of 48 hours in any week the overtime rate to be equivalent to time-and-a-half, that is, one-and-a-half times the minimum rate.

The hours of work which female workers and young persons are allowed to work are subject to the provisions of the Factory and Workshops Act, 1901.

Before these rates came into operation the workers put in an application for an increase on the rate of wages payable to male workers of 21 years of age and over of 1d. per hour, and for female workers of 18 years of age and over with not less than six months' experience in the trade of ½d. per hour. This application was given effect to and the rate of wages as from 18th October, 1920, were accordingly as follows:—

Section I.—Male Workers.

	Per hour
s. d.	
For workers under 16 years of age...	0 4½
" " of 16 and under 17 years of age ...	0 5½

" " " 17 " " 18 " " "	0 6½
" " " 18 years of age and over—	
(a) who have not completed six months' employment in the trade ...	0 7½
(b) who have completed six months' employment in the trade ...	0 8

The basis of overtime rates remained as originally fixed but of course, owing to the increase affecting male workers of 21 and over and female workers of 18 and over with not less than six months' experience in the trade the result was an increase. These rates are still in existence.

IN THE OPINION OF THE SCOTTISH FEDERATION THE TRADE BOARD HAD NO EVIDENCE UPON WHICH IT WAS ENTITLED TO FIX THE FOREGOING RATES AS MINIMUM RATES OF WAGES IN THE INDUSTRY. No enquiry was made as to the minimum rates of wages being paid in the trade or in any other trade at the time when the rates were fixed or prior to the War. No evidence was collected as to the numbers of employers and employees in the trade, the number in each class or grade, or as to whether the employees were satisfied or dissatisfied with the wages that were being paid to them. Notwithstanding vigorous protests made on behalf of the employers, the proceedings took the form of a fishwife-like haggle between the two sides which ended by a vote on the irreducible figures of the contending sides, the determination being by the appointed members. Some figures were agreed to,

30 November, 1921.]

MR. JAMES MILLER THOMSON and MR. JOHN CHALMERS.

[Continued.]

because they inevitably followed the result of earlier votes. To the argument that the Trade Board was not a Conciliation Board but was legislating, as it were, for the whole country, the answer was made that all the other Trade Boards in the country, without exception, adopted the haggling method of procedure. This was confirmed by the Secretary of the Board, who professed to know the procedure of other Boards. The Board did not attempt anything like a scientific enquiry into the facts of the industry. The trade union leaders on the Board contributed some excellent sentiments in support of the claims they made, but no facts. The rates fixed cannot be said to be ideal rates, particularly in view of the high cost of living at the date upon which the rates were fixed, but the submission of the Federation is that there was no evidence whatsoever before the Board to justify the rates as minimum rates. It may be said that it is more than doubtful whether the Trade Board, however it proceeded, or whether the most sapient of Arbiters could reach a sound conclusion on the question to be determined. No one has ventured to define the phrase "minimum wage." The Trade Board Acts do not define it; but it is reasonably clear from what has been said that the rates fixed by the Aerated Water Trade Board for Scotland (and it is believed those of other Boards) have not been reached upon any interpretation whatsoever being given to the meaning of the phrase, or any consideration given to the scope of the enquiry that should be made in order to reach an interpretation. In fact, no enquiry of any kind was made.

There has been no meeting of the Aerated Waters Trade Board for Scotland since 23rd September, 1920. Regulation 10, of the Regulations, applicable to the Aerated Waters Trade Board for Scotland, reads as follows:—

"10. At the end of one year from the date of the establishment of the Trade Board the Members representing the employers and the Members representing workers shall retire from the Board." As THE BOARD WAS ESTABLISHED ON 8TH JANUARY, 1920, IT IS DOUBTFUL IF IT HAS ANY LEGAL EXISTENCE AT THE PRESENT TIME. It is suggested that Regulations 12 and 16 may apply to over-ride Regulation No. 10, but Regulation No. 12 is expressly stated to be 'subject to Regulation No. 10,' and it is difficult to see how a Board may continue in existence for such a long period without members.

The Central Executive of the Scottish Federation recently considered its attitude to the question of Trade Boards and decided to invite the constituent associations to consider the question and intimate their views. These associations all passed unanimous resolutions disapproving of the regulation of wages by a Trade Board. The Central Executive again considered the matter and resolved that evidence should be given before your Lordship's Committee, and it was remitted to the chairman of the Federation and myself to appear to-day and give evidence accordingly.

The reasons that induced the associations and the federation to pass the resolutions were many and various. In order to test the matter more closely, the secretary of the Federation sent out a questionnaire addressed through the local secretaries to individual manufacturers. This questionnaire was directed particularly to getting some facts as to the effect of the Trade Board Regulations upon the numbers employed in the industry, and in particular whether it had been found necessary to dispense with work people whose earning capacity was low. The replies all disapproved of the Trade Board regulation of wages, but were rather argumentative than helpful with data. This, however, is not surprising because, while the industry is undoubtedly languishing at present and is really in a very bad state, there are many contributing causes. For example the imposition of the Table Water Duties has had a most disastrous effect upon the trade, particularly in Scotland. The members seemed to think there was no room for argument. They knew that the

operation of the Trade Board was injurious and that was enough. From a communication I received from the secretary of the Glasgow association, dated 26th October, 1921, I gathered that the council of that association, which has the biggest membership of all the associations, and which contains some of the largest makers in the trade either in Scotland or in England, found that the operation of the Trade Board was so irksome that they were determined to risk prosecutions rather than abide by its findings. I have that letter here and shall read it, if desired, as it makes very clear what is thought of the Trade Boards in Glasgow and district. I am glad to say, however, that other members dealt with the question a little more in detail and I have several specimen replies here which show how the trade has been affected. A firm in Kilmarnock writes: "We, of course, have been working with the minimum of hands and now that we are in the quiet season instead of being able to keep them employed we are dispensing with a few of them in rotation." A firm at Ardrossan writes: "I had to dispense with three of my workers regarding the high wages I had to pay." He goes on to say that he is not in favour of the "Board of Trade interfering with our trade in any way. I think they have ruined it between short hours and high wages." A firm in Newton Stewart writes: "We have to state that as a result of the standards fixed we were compelled to reduce our staff by 25 per cent. The rates as fixed are 30 per cent. above the rates previously ruling in these districts where costs of living are low and it is manifestly absurd to standardise wages according to age and without having regard to costs of living as between city and rural areas. Furthermore the working day, beyond which hours overtime rates are necessary, is absolutely inadequate in summer time." There are many other communications on the same lines.

On behalf of the Scottish Federation I am instructed to state that they are so opposed to the operation of the Trade Board system that they urge the repeal of the Trade Board Act of 1918 in its entirety. If that view does not recommend itself to your Lordship's Committee or to Parliament, they would desire that the Aerated Water Trade in Scotland should be withdrawn from the operation of the Act. They give the following reasons, viz:—

I. THE ACT RECEIVED LITTLE OR NO CONSIDERATION EITHER IN PARLIAMENT OR IN THE COUNTRY WHEN IT WAS PASSED IN SEPTEMBER, 1918. Parliament was told that it was the policy of the Ministry of Labour to have Trade Boards in industry where there was no adequate machinery for the effective regulation of wages throughout the trade. There was no evidence produced that the workers wanted any regulations. Owing to the shortage of labour at the time wages were quite satisfactory in most industries. The Act proceeds upon two assumptions: (1) That it is desirable to regulate wages; and (2) That labour is or may be unorganised in any industry in this country. Both assumptions are quite wrong. A brief sitting of a Trade Board very soon shows that even the most humble of industries is marvellous in its organisation and the complexity of its functions, and that the organisation of labour within it is as complex as the human organism itself.

The only possible explanation of the Act was that the nation was in the throes of the war, and military notions of regimentation and regulation dominated the Government's policy in everything. For a minimum of work a minimum ration was to be allotted. Such a policy may be justifiable in a military state but has no justification in times of peace. Such legislation may have been even necessary in time of war, but it is impossible to see how it can be regarded as progressive legislation in time of peace. I am sure that many historical parallels could be obtained to show that restraints on freedom of contract in labour are, like many other restraints, the inevitable consequence of war and are injurious in a truly industrial state.

30 November, 1921.]

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS.

[Continued.]

II. STATUTORY INTERFERENCE WITH FREEDOM OF CONTRACT DOES MORE HARM THAN GOOD. Let it be granted that the object of the Act is to improve the status of the humbler classes of workers. I have every sympathy with the unskilled worker. I find from experience that his sphere of work is the dumping ground of all the Trade Unions. A man, while refusing to work at his own trade for less than his Trade Union rate of wages rarely hesitates to engage himself in other pursuits if these are available. But the real question is, is it possible by an Act of Parliament to determine permanent rates of wages. Surely these are determined by other causes. This was illustrated during the war when the remuneration of labour went up by leaps and bounds because so many men were engaged on active service. Similarly I have read that when the Black Death removed a great proportion of the population wages became so high that Acts of Parliament were passed and penalties imposed to keep them down. Needless to say these attempts at regulation quite failed in their object. "Where the demand for labour is great wages cannot be kept down, and where it is small they cannot be kept up." If that is so, is it not inevitable that any artificial interference will do harm? This has been seen in agriculture, and has resulted in the repeal of the Corn Production Acts and the abolition of the Agricultural Wages Board. The futility of endeavouring to regulate wages in agriculture is easily demonstrated. As soon as the cost of cultivation deprives the farmer of an adequate return on his capital, land goes out of cultivation. Everyone sees at a glance that high wages in agriculture result in no wages. Hence the prompt repeal of the Agricultural Wages Board. The effects of regulation of wages in other industries are not so manifest but they are identical. The proposition is simply this, that if manufacturers cannot pay the wages provided they must go out of business, become bankrupt, or raise their prices. Whatever they do, the community suffers, including the general wage earners. It may be said that this does not apply to a luxury trade, and that the Aerated Waters Trade is a luxury trade, but that is not so. The great bulk of aerated waters sold in this country are sweetened beverages which have a certain food value, and the working classes are by far and away the largest consumers of these beverages. In many industries there is what might be called an "industrial thirst" which is quenched by the consumption of aerated waters. Again, it is a convenient beverage for lunch taken at a man's work. Before the war these beverages were cheap, potable and portable. Unfortunately, owing to the imposition of the Table Water Duties and other statutory inflictions on the industry the output is enormously reduced, but it would be quite wrong to regard the industry as one that might never be missed. If the trade is suppressed probably beer will become more popular with the working classes in Scotland, or it may be that we shall import more foreign aerated beverages.

III. THE TRADE BOARD DOES NOT, AND CANNOT FROM ITS CONSTITUTION, FUNCTION AS AN INTELLIGENT REGULATOR OF WAGES. I have alluded to the haggling methods adopted. These would perhaps be not so dangerous if they were voluntary. It is the compulsion of the uninstructed vote of the appointed members that leads to inevitable futility.

IV.—THE FIXATION OF WAGES BY THE TRADE BOARD IS INJURIOUS TO THE EMPLOYEES. The Aerated Waters Trade is a seasonal trade. The demand is much greater in the Summer than in the Winter. Even in Summer the demand is spasmodic. A spell of very warm weather very soon exhausts the stocks of the manufacturers. The restrictions of the Factory Acts on overtime must be observed. The further restraints of the Trade Board are intolerable when a busy period comes along. A manufacturer must face inefficiency or a prosecution. It is felt that the new Act will increase the tendency to drive the small maker out of the trade, because of the resources possessed by the large maker to meet emergencies. The Act has not been in force for sufficient time to enable reliable evidence to be obtained on

this point except that it may be said that the expression of exasperation towards the Trade Board seems to be more vigorous among the smaller men. Several of our most successful makers are men who have come from the ranks, and were lorry drivers and salesmen in their youth. The meticulous regulation of wages by the Trade Board is the last straw that is going to kill an industry which, until 1915, had been useful and progressive. The Finance Act of 1915, which introduced the new Table Water Duties, had a most disastrous effect on the trade. The Duties are 4d. per gallon on all sweetened waters and 8d. per gallon on all unsweetened waters. The result was an immediate average reduction of about fifty per cent. on the sale of aerated waters by manufacturers. The trade in beverages is finding new sources of supply. The Italian ice cream merchant now makes on his premises and sells beverages otherwise than in bottle upon which it is impracticable to collect the duties. The caterer at social functions makes and sells still lemonades and other like beverages which escape the duties. It has never been suggested that the Italian ice cream man or his employees should be made subject to the Aerated Water Trades Board, but his competition cannot be met if he has a free hand. The soda fountain is also a keen competitor which has defied the ingenuity of the Excise as to how its product is to be taxed. There are many other injurious effects of the Table Water Duties which need not be mentioned here, but sufficient has been said to justify the statement that the additional burden of the Trade Board is likely to bring to ruin the Aerated Water Trade as presently established. The excellent weather in the South of England during 1921 created a particularly good demand for beverages, which has rather obscured the issue. Generally the demand in England is of longer duration and more uniform than in Scotland.

The demoralising effect of liability to quasi criminal prosecutions for breaches of Orders that may be quite absurd must be most injurious, and subjection to the system of spies that becomes necessary is most hateful.

Further, manufacturers as employers of labour at the present time are too valuable to the community to have to spend their time in meetings of Trade Boards and all the consequential meetings of employers and so on, involved in the matter. The need of the present moment is employers. Probably after they have been reduced in number and efficiency Parliament will think it meet to grant subsidies to encourage them!

V. THE TRADE BOARD IS ALSO INJURIOUS TO THE WORKER. The general principle is capable of demonstration on broad lines, but it is not so easy to produce facts or data to support a particular case. What one can say with confidence is that the manufacturers, as practical men, know that the operation of the Trade Board is hurtful to the workers in their industry. Old or inefficient workers have to go. Larger reductions of workers now take place in winter than formerly. Some factories have met the situation by working "short time." The plant is not fully employed. The efficient worker, as well as the inefficient worker, suffers by "short time." The on-cost-charges are necessarily greater in proportion to the output. Uniformity of wage implies the taxation of the efficient for the benefit of the inefficient. It results in large additions to the ranks of the unskilled worker. The efficient worker has less for his own children when he has to contribute to the support of the children of the inefficient. He has less for their education and training, and they go to swell the ranks of the unskilled, or the less skilled workers. This is true of all taxation of the efficient for the benefit of the inefficient, but when it takes place at the source, in the wages given, it is particularly objectionable. The good worker gets a lower wage because the poor worker has to get one above his deserts.

VI. DEFECTS IN MACHINERY. I understand that other witnesses have spoken to manifest defects in the machinery of the Trade Boards. I have alluded to the outstanding objection to its mode of working, but apart from that there is no doubt that the machinery of the Trade Board is bad. It would be a

30 November, 1921.]

MR. JAMES MILLER THOMSON and MR. JOHN CHALMERS.

[Continued.]

marvel in legally constituted official establishments if its machinery was good. It is bound to be bad, and, as vested interests associated with it increase, it will get worse. Already there is a small army of people who are making a living in connection with Trade Boards, and it is possible I may be neglecting my own personal interests in not offering myself as a professional Trade Boarder. The Federation have read the recent Report of the Enquiry on Trade Board machinery at which evidence was submitted mainly by Officials of the Ministry. It is painful reading. In fact, it is nauseous. Pages of print are occupied in the discussion of the difference between "Tweedledum" and "Tweedledee." The mass of printed, typographed and typewritten matter that reaches me as a member of one small Board is horrible, and I am told that I get off very easily. The cost of compilation of the so-called Trade Board Gazette would pay the wages of some factories for a year.

IN CONCLUSION, I may be asked if it is not the case that the standard of wages in the trade in Scotland prior to the war was very low, and indeed so low as to justify the trade being classed as a sweated industry. The answer is in the negative. While the figures were low, they were fair in comparison with those paid in other like industries for the class of work obtained, but great improvements had taken place and were taking place. The labours of Mr. John Chalmers, the President of the Federation, and other pioneers of the Bottle Exchange system succeeded in reducing trading costs immensely. The adoption of a Bottle Deposit scheme in the decade before the war still further improved matters. I believe that in successfully piloting this scheme Mr. Chalmers and his friends in the trade did more for the workers than the Trade Boards can or ever will do. If the trade had not received such hard knocks from legislation, I am confident the improvements in the condition of the worker would have continued.

It may also be asked, has your Federation any suggestion to offer as to how the economic pressure on the poor unskilled worker is to be averted or lessened? As I have said, I have great sympathy with the unskilled worker, but I am afraid there can be no final relief so long as the population is too great for its means of subsistence. But the production of the means of subsistence is being retarded. The condition of the unskilled worker has been made much harder by the Trade Disputes Act of 1906. It means that a well-organised body of workers can always make a strike in a factory effective against the inroads of other labour. That may appear to be a good thing for the organised worker, but, as a matter of fact, it is disastrous to him and to the unskilled worker who is denied opportunities of work. I could give several illustrations from my own personal experience, but perhaps one will suffice. In a large business in Edinburgh which is engaged in a form of metal work there is valuable plant that is so efficient that it can turn out and complete the most intricate brass work, screws, and so on with little or no help from the attendant. Young girls can attend to these machines and do other work in brass. They did so in large numbers during the war. They do so no longer. The Trade Unions say "No." The Trade Disputes Act of 1906 makes their position impregnable. The result is that work that would employ dozens of girls in Edinburgh is not done. If it were permitted, probably the same number of men would be employed in directing the work as are presently employed in tending the machines that are presently worked. The Scottish workman has a great deal of latent capacity for direction which is thus unemployed, and he is left to the soul-destroying job of tending machines which could be looked after by young girls whose contribution to the income of the home until their marriage would be very valuable. The employment of these girls in brass work would also relieve the congestion of labour among the bottle washers of the Aerated Water Trade.

THE SCOTTISH FEDERATION ACCORDINGLY RESPECTFULLY SUBMIT THAT THEY HAVE MADE A CASE FOR

THE RECONSIDERATION OF THE TRADE BOARD ACT OF 1918 AND FOR ITS REPEAL. If it is thought advisable to keep it on the Statute Book, it is respectfully suggested an Amending Act should be passed withdrawing the almost absolute power given to the Minister of Labour to place and keep an industry under a Trade Board whether those engaged in it wish it or not.

3638. *Chairman*: You are a Writer to the Signet, Mr. Miller Thomson?—(Mr. Thomson): Yes.

3639. You are the Secretary and Treasurer of the Edinburgh and District Aerated Water Manufacturers' and Beer Bottlers' Defence Association?—That is so.

3640. You come here to give evidence on behalf of the Scottish Federation of Aerated Water Manufacturers?—Yes. That is a Federation of half-a-dozen Associations in different centres—Aberdeen, Dundee, Dumfries, Edinburgh, Glasgow and Perth.

3641. Most of your members are engaged in the manufacture and sale of aerated waters?—Yes; aerated waters only.

3642. Some of them also bottle beer?—Yes.

3643. The Federation is representative of those engaged in those industries?—Yes.

3644. The Aerated Waters Trade Board for Scotland was established on January 8, 1920?—Yes.

3645. And the Board for England in March, 1919?—Yes.

3646. I think the Scottish manufacturers were opposed to the establishment of the Trade Board?—Very strongly.

3647. But when it was formed they did their best with regard to it?—Yes.

3648. Are the employer members of that Board actual manufacturers?—With one exception; that is myself.

3649. Does the same apply to the workers' representatives?—No. That was a grievance at the very outset. The Ministry of Labour accepted the suggestions of the manufacturers, and nominated all the manufacturers who were put forward, who were *bona fide* manufacturers, but when we learnt the names of the workers' representatives we found that most of them consisted of Trade Union leaders, and the manufacturers thereupon pressed that they ought to have some other representatives added, and one of the manufacturers withdrew in order to allow me to sit, but we only got that after some trouble.

3650. They thought a little extra weight was required?—It was very complimentary.

3651. You have, of course, three appointed members?—Yes.

3652. What do you say as to the success of this particular Trade Board?—I think, if I may say so, that this Aerated Waters Trade Board for Scotland has been a complete failure, and the conclusion that the employers' side of the Board has reached is that the failure is not due to any defect in machinery, but it is fundamentally bad. The whole system of fixing wages in an industry like this by a Trade Board seems to be a physical impossibility.

3653. Before you give reasons for that, have rates been fixed?—Yes, rates have been fixed, and you will observe that these rates are very closely differentiated as regards ages in the case of both male workers and female workers. In fact, I understand that an aerated water manufacturer has now to examine the birth certificates of his workers, and it so happens that there is a good deal of heartburning in the works between one worker and another. Simply because a girl happens to be a year older than another she has to get a very much higher rate of wages, although she is probably less competent.

3654. The rate of wages rises according to age up to the age of 21 in the case of men?—Yes.

3655. And 18 in the case of women?—Yes.

3656. The normal hours are 48 as fixed by the Trade Board, are they?—Yes. For instance, a girl who is over 17 and under 18 years of age now gets 26s. per week, and over 18 years of age she gets 32s. per week.

3657. How do those rates compare with those which were paid before the Trade Board?—I think one may

30 November, 1921.]

MR. JAMES MILLER THOMSON and MR. JOHN CHALMERS.

[Continued.]

say that those were the maximum rates being paid in the trade at the time. They are very much higher than the pre-war rates, but they were substantially the best rates that were being paid in the trade.

3658. *Lord Weir*: You do not object to the actual rate; it is to the system upon which these rates have been fixed that you object?—We do object to the rates, yes. We think the rates are absurd.

3659. *Sir Arthur Pease*: You object to the rates as minimum rates?—Yes.

3660. They are really standard rates?—They are really 'maximum' rates.

3661. Well, standard rates?—It is very difficult to know what a standard rate is. I think a lot of these words will require definition. There are very few aerated water manufacturers in Scotland who pay any of their employees higher rates than these wages; in fact none of them, so far as I know.

3662. *Mr. Layton*: But before they were fixed there was a graded scale below this level?—There were people who were paying less.

3663. Why?—They were paying the economic rate for the time being.

3664. Do you mean that they were in different districts where rates were lower?—Yes, different districts—different centres. They were probably getting a different quality of labour, or there were different demands. One finds certain centres where there was a large demand for female labour, and they had to pay more.

3665. There is no difference in the character of the work done in the different works?—Not substantially, no.

3666. *Chairman*: On what kind of evidence are those rates fixed?—No evidence at all.

3667. What was the process?—I have described it in my paper here as a form of fishwife haggling. It was just a case of the representatives of the workers putting forward a claim which they did not support in the slightest; in fact, when they stated their claim—and it was stated with a great deal of oratory on the part of one of the representatives of the workers—I asked deliberately if that was his case, and he said it was; and I suggested, therefore, to the Chairman that we had no case to answer. After a good deal of talk he invited us to state what our views were, and we did so, and then it was a case of going out of one room and into another, and coming back and meeting the Chairman, until finally everybody got exhausted, and the Chairman told us he would support a certain figure if we moved it, and then that was carried. I think another rate was put to the vote, one against the other, and so on. There was no evidence, no inquiry whatsoever as to what the rate should be.

3668. Was reference made to the cost of living?—Yes, there were some rather extraordinary figures submitted, but they were not vouched in any way.

3669. And was reference also made to the existing rates of wages?—I think the only case that was quoted by the other side was the case of a co-operative society which paid certain rates of wages, and that those were the wages which ought to be fixed in the trade.

3670. *Mr. Layton*: You say there was no inquiry. Would not that be really a matter for your own representatives on the Board to put forward a statement of the local variations and matters of that kind?—That was exactly where we found ourselves at variance with the Appointed Members, because we made a special motion that it should be remitted to a committee consisting of a representative of the employers and a representative of the employees, or one or two representatives on each side, to make inquiries into the actual facts of the industry; because it was quite impossible at that first meeting to investigate all the facts. But that motion was rejected.

3671. Did you ask for a postponement in order that you might prepare your case?—Not to prepare our case, because we were just in the same position as the other side. All we could do was to tell them

what we knew about our own particular industries, what the individual members knew. We stated certain facts about the trade—what wages were being paid and so on—but there was no scientific inquiry about the thing. I am not surprised at that; I do not think it is possible to do it.

3672. I should like you to pursue that. You do not think it is possible to have a proper inquiry?—Not a scientific inquiry as to what the wages should be from time to time. The Trade Board would have to sit all day and every day. My own impression is that in a trade like this—and I have been engaged all my life, more or less, in advising industrial people—every trade has an organisation so complex in its character that you would require almost a Jean Henri Fabre to analyse it and set it forth and determine it.

3673. But you would normally expect to set out a case where there is a matter of this kind coming forward, probably a written statement of the case, showing variations of wages and other evidence bearing on the capacity of the industry to pay?—We could tell them what we thought from our individual experience the wages should be at that particular juncture; but that is not evidence.

3674. But you could have submitted evidence?—Well, I say that it would require to go on for weeks before you could get a really scientific investigation as to what the wages should be. You would have to have a knowledge of the price being obtained for the goods, the cost of distribution, the effects of competition, and so on.

3675. But if the only information which the Appointed Members have before them is the unsupported opinion of the labour people, who say that such and such should be the wage, and the opinion on the other side, again unsupported by evidence, is it possible for them to do anything but engage in a process of bargaining?—I agree that it is quite impossible for them to do anything else.

3676. But you think there is no remedy for that?—I do not think there is any remedy.

3677. *Sir Arthur Pease*: But would not it be quite impossible for you, before you went into the conference, to get some of the leading rates?—We did so.

3678. The rates in the different districts and the different positions in the works, and to have laid them before the Board not as opinions but as evidence as to the existing state of things?—We did tell them what the existing wages were in certain districts and in certain areas, but that does not exhaust the subject within a hundred miles.

3679. Then it becomes simply a question of whether there is going to be an increase or a reduction of those rates, does it not, or a minimum which is covered by all those rates?—If it is to be a minimum, of course, the question of the word "minimum" arises, and with all respect I think that that question was not considered at all, as to what it was we were to set out to determine.

3680. *Mr. Layton*: But there are certain obvious lines of evidence. Supposing the employees say the wages should be 50 per cent. above the figures which you quote as being the current wages, there must be evidence as to the general conditions of trade, and as to profit, and so on?—But we were living in such abnormal times that the inquiry then was more difficult than usual.

3681. *Dame Adelaide Anderson*: Was it not possible to adjourn for a short period until certain members had explored the question?—I should have suggested, of course, that the first question to consider was, what do you mean by a minimum wage—but we never even considered that.

3682. But I mean as to collecting evidence?—With regard to collecting evidence as to what a minimum should be, I suggested that this committee of inquiry should proceed—and I moved accordingly and the motion was lost—to find out what the pre-war rate of wages was; that we should find out the current wages, what goods were being sold pre-war as compared with then, that we should find out the

30 November, 1921.]

MR. JAMES MILLER THOMSON and MR. JOHN CHALMERS.

[Continued.]

possibilities of foreign competition, what the export trade was, and so on—whether we should be able to buy our raw materials in the immediate future as cheaply or as dearly as we were doing then.

3683. *Mr. Layton*: And was that ruled out as irrelevant, or what?—It was ruled out as likely to delay the action of the Board.

3684. *Sir Arthur Pease*: Then your complaint is really that this Board as it is performing its duties is not giving sufficient time for considering what the wages should be before it gives a decision?—I have made inquiry about the action of all other Trade Boards, and I find that they all move identically in the same way, that there is not a Trade Board which has proceeded into the facts of the particular industry; and I should say if the Appointed Members were cross-examined as to their knowledge of any particular industry as to the prices ruling in the trade, as to what the raw material was costing, and so on, without exception they would be found totally ignorant of all these questions.

3685. But why could not you have had all this evidence ready before the Board?—Because, of course, we had only assembled there as a unit for the first time—each individual member assembled as individual units.

3686. If you had another examination as to the minimum wage you could go to a Trade Board now very much better prepared than you could then?—Undoubtedly; but, with all respect, I think that the inquiry is almost a hopeless one to legislate for the future, even after a scientific inquiry.

3687. *Mr. Layton*: How many meetings were held before you arrived at a proposal?—We met once, and adjourned till the following day, and fixed the proposal the second day. We did not fix it, mark you, by agreement; there was no agreement about the rate fixed.

3688. No; but the haggling was repeated on the second day?—Yes, and reached a conclusion.

Dame Adelaide Anderson: The next day!

3689. *Mr. Layton*: Never having seen one another before as a body—as an organisation?—Precisely.

3690. *Chairman*: Did not you ask for some more time to consider?—We made the motion I have mentioned, that the thing should be adjourned and a committee appointed.

3691. The Board met for the first time on the one day, and fixed the rate on the next day?—Yes; that is almost universal; I think it is the common experience. I do not know of any Board that has proceeded otherwise.

3692. *Lord Weir*: Do you really mean that a Board meets for the first time and settles a rate for the whole country, a minimum rate, without more than 24 hours' consideration?—I believe that that has been the common experience in the National Union of England. The English Board, I think, did the same thing.

3693. But surely there is some mistake, because I see the first meeting of the Board was on the 1st of February, and the first rate fixed was 14th June?—Effective.

Mrs. Lyttelton: That is the approval.

Chairman: That is the approval, after the time for objection.

Witness: It became effective afterwards.

Chairman: We have had Boards that have taken months of haggling.

3694. *Sir Arthur Pease*: But the point is that as far as the Board is concerned it is fixed in two days?—Yes.

3695. The Board as a Board are committed to that as a proposal, and the objection cannot then come from within the Board; it has to come from outside?—Yes.

3696. And if there are objections sustained by anybody else, then that would be reconsidered?—Yes.

3697. But that would mean a delay of another four months?—I think so.

3698. *Lord Weir*: It would be rather of interest to know if this rapid rate which you fixed held against

all the objections; or did the objections overrule it?—We did consider objections, which were brushed aside, of course, at the next meeting.

3699. So that this rapid rate held against all the objections?—Held against all the objections, yes. Of course, we were in a rising market at the time.

3700. *Mrs. Lyttelton*: Was the rate very much higher than the employers wished?—No; I think that it was not very much higher; 1d. an hour for female labour, I am told.

3701. *Dame Adelaide Anderson*: On the whole, what was the rise?—There was a rise; the rates were rather higher than the old rates, or were they about the same?—I think about 1d. an hour for female labour was substantially the average increase.

3702. For women and girls?—Yes.

3703. And for men and boys?—(*Mr. Chalmers.*) There were very few men and boys employed in the factories in Scotland; it made very little difference there.

3704. *Chairman*: That may be the explanation of the short time taken?—It was really in connection with the female labour that we were fighting. We met that morning at 10 o'clock, and we finished at half-past seven; we started at 10 o'clock the next morning and sat till 3.30, and then were were absolutely tired out, and the appointed members told us if we would agree to so-and-so they would vote for that. We were not content, but we simply did that because we thought they would go no further. They knew nothing about it. They said, "We have statements from the one side and the other, and although we cannot prove either, if we do not do this we will do the other."

3705. *Sir Arthur Pease*: Were the rates much different in the different parts of Scotland before?—Yes, they were.

3706. And they were all put to one rate?—They were all put to one.

3707. *Mr. Layton*: Have the rates since been varied at all?—No. On page 5 of my memorandum before these rates came into operation the workers put in an application for an increase of 1d. an hour, and that was given effect to on 18th October, 1920.

3708. *Lord Weir*: Mr. Thomson, apart from what you have told us about the fixation of the rate, you started by saying the Board was a complete failure?—(*Mr. Thomson.*) Yes.

3709. Now how is that instanced?—By the fact that they failed to fix a minimum wage at all; they have not executed their function.

3710. That was the meaning you wished to put on it?—Yes.

3711. *Mr. Layton*: Have these rates been current throughout as the actual wages paid?—Yes.

3712. And did the actual wages paid not go higher than these figures on the rising market you have spoken of?—No; I think the tendency of the rate fixed by the Board was really to stabilise the rate in all factories at these figures. If formerly they had been higher they came down to that. There may have been one or two exceptions, but the tendency was to make it the standard general rate for the trade.

3713. *Chairman*: Are the rates too high?—They are distinctly too high at present.

3714. Have you proposed a reduction to the Board?—There has been notice given, but at present the Board is evidently in a state of suspended animation, because no new members have been appointed.

3715. Do not they go on until new members have been appointed?—That is rather a curious point. I must say I have been asked to offer an opinion in law on the subject, and I have had great difficulty in making up my mind. It depends upon the regulations governing the Trade Boards.

3716. But have not you been advised by the adviser to the Labour Ministry that until new members are appointed the existing members continue?—Yes, but we cannot see how he reaches that conclusion upon the Regulations that have been issued. There are two Clauses in the matter—or, rather, three: Regulation 10, which says that all the members shall retire

30 November, 1921.]

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS.

[Continued.]

at the end of one year; that meant they all retired automatically on the 8th January, 1920; Regulation 12, which says that, subject to Regulation 10, the members shall remain for a year; and then a still further Regulation, Regulation 16, I think it is, which says that the Trade Board shall continue in existence until dissolved by Order of the Minister of Labour; but, of course, if all the members have retired it is rather difficult to see how they can continue in existence.

3717. Have you got the Order there?—Yes. (*Copy handed to the Chairman.*)

3718. However, you have given notice, I understand, to revise these rates?—Yes. No new members have yet been appointed.

3719. I think you had better try it, Mr. Thomson. —We have sent the communication for the new Board.

3720. Then why do you say the Act is a failure so far as your Board is concerned?—I thought I had given the answer, my Lord, that we have not fixed minimum wages, and that it is causing a great deal of complaint throughout the industry. I have received numerous replies from all over the country that the rates fixed and the conditions fixed are leading to the dismissal of employees and the working of short time, and so on.

3721. You have information to that effect, have you?—Yes.

3722. Have you any material here supporting that?—Yes. We sent questionnaires throughout the whole trade; but first I may say that each individual Association throughout the country, in Aberdeen, Dundee, Dumfries, Edinburgh, Glasgow, and Perth, has considered the question very carefully, and they all passed unanimous resolutions against the continuance of the Trade Board. They found that it worked such hardship upon industry and such inconvenience with regard to their employees; and then following upon that I sent out three questions to the local secretaries and asked them to say how they had reached those resolutions, and how the Trade Board had operated to the disadvantage of the trade; and I found that, while the questions were answered directly by a great number, most of the replies I got were rather argumentative than otherwise; but they were all unanimously of opinion that the Trade Board operated badly.

3723. What I wanted to know was, have you any evidence of any trouble being caused by employees being discharged?—Yes, I have several cases.—I do not think there would be any objection to my putting in the letters—where they have said individual persons have been discharged.

3724. If you would make a copy of those for us and send it in to the Secretary, you can leave the names blank if you like; we assume that you have the original letters.—I have the originals here in several cases. The Glasgow Association apparently find themselves so exasperated with the position that there was a disposition, evidently, to disregard the operation of the Board altogether.

3725. That would have to be settled with the police authorities. Then you have some reasons, I understand, and your wish, or the wish of your Federation is that the 1918 Act should be repealed?—Yes.

3726. Or that you should be withdrawn from it?—That is so.

3727. You give your reasons for that: first, little or no consideration was given to the matter in Parliament or in the country when the 1918 Act was passed?—I think that is so, because although we were evidently very much interested, I do not think that we knew anything about this Bill when it reached the final stage. We were all interested in other matters at that time.

3728. We will take that as a short statement of what you have given us here.—Yes.

3729. You say: "Statutory interference with freedom of contract does more harm than good."—Well, that is really our experience. We find that the fixing of uniform wages tends to the dismissal of the inefficient. It also tends, of course, to the efficient

man getting less than he deserves, because if an employer has to pay wages to the inefficient at a higher rate than he ought to pay, then, of course, the efficient man gets less, and so on. It seems to me that the complexity of the question is so great that it is very difficult to legislate for a whole industry in this way.

3730. *Dame Adelaide Anderson*: If the inefficient are driven out, does not that leave the field free for the efficient? Does not that, at any rate, whatever its demerits may be, leave the field free for the efficient ones?—With all respect, the inefficient one is driven out, but it means that they are not always all driven out; there are always so many workers of less capacity than others, and they must get the standard rate.

3731. *Sir Arthur Pease*: Do you mean that there is less effort made to be efficient?—It means that both the efficient and the half-efficient get the same rate.

3732. And as a consequence of that there is not the same effort to become efficient?—Precisely; that is, of course, one of the moral effects, but it also means that the employer, if he has to pay an inefficient man the same wages as an efficient man, the efficient man does not get the reward of his capacity.

3733. *Chairman*: You give as an instance the Corn Production Acts?—Well, that is an illustration, I think; and, if I may say so, I would adopt in connection with the comparison of the minimum wage of the agricultural labourer and the wages of the aerated water manufacturers the evidence given by the preceding witness, which I heard. A great many aerated water manufacturers are in rural districts, and it is a local industry to a great extent, and the class of employee that they have is drawn from the agricultural people. The minimum rate of wages in the agricultural industry, I think, might be applied to the aerated waters trade. One finds this, of course, too, that the fact that the Agricultural Wages Board went by the board, or has been repealed, goes very strongly to show that this system of regulating wages by a Wages Board is quite unsound and quite hopeless; but the hopelessness or the defect of it as a system is more readily seen, I think, in agriculture than in any other industry; you can trace the effect of it more quickly, and that was demonstrated in the House of Commons, I think, when the Wages Board Act was repealed. I should like to adopt almost verbatim as part of my evidence the speech of the Minister of Agriculture when he introduced the Corn Production Act Repeal Act, and the reason is this—that if you are paying higher wages than the agricultural industry can stand, then land goes out of cultivation. Everybody sees it at once: higher wages mean no wages right away. The question, however, unfortunately, is more complex in a factory; the conditions are very much more, as it were, covered up. A man may say: "I know that my factory is being injured by this regimented rate," but it is very difficult to put your finger just on the spot as you can do in agriculture, and so prove that your industry is suffering.

3734. *Lord Weir*: I take it that what you mean by "injury" really is that the cost has gone up, the demand has stopped, and you get the unemployment. Is that the form of injury you mean?—I am looking at it from three different points of view as far I can. There is first the point of view of the employer; secondly, of the employee, and, thirdly, of the community; because, although one might think that this Aerated Water trade is a luxury trade, it is not really so, and particularly in Scotland; and, from the point of view of the manufacturer, it means that, if his costs of production go up his output goes down, his margin of profit goes down; and, after all, in the case of this trade I know for a fact that the living in it is not a fat one; it is a very moderate living whilst the aerated water manufacturer makes throughout Scotland.

3735. *Chairman*: Up to a point you can pass it on to the consumer?—Yes; but there is an economic limit, of course.

30 November, 1921.]

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS.

[Continued.]

3736. But if you pass it on too much, the consumer strikes and says, "No, I will buy no more"?—Yes, and that has been illustrated unfortunately for this particular trade, in a most ruinous manner since the introduction of the Finance Act of 1916, which imposed certain table water duties. It may not appear to be quite relevant, but it is in a way, because I think this Trade Board Act is the last straw, as it were, that is going to kill the trade altogether. I have been watching it very carefully. In 1916 duties were imposed of 4d. a gallon on sweet waters and 8d. a gallon on unsweetened waters. I am told that that Act is almost as heavy upon the aerated waters as it is upon excised alcoholic liquors; but the immediate effect of the passing of that Act was a reduction in the sale of all aerated waters throughout the country on an average of not less than 50 per cent. I believe that the reduction in the case of some manufacturers was much higher. (Mr. Chalmers): 75 per cent., I think. (Mr. Thomson): 75 per cent. in the city of Aberdeen. That, of course, was a very serious matter. The serious effect was not appreciated altogether by the manufacturers because of the readiness with which they were able to raise their prices. The wages were high; the working classes were making big incomes, and they did not mind paying more for aerated waters. We were able to keep up the price and the margin of profit, but that situation has now gone, and then comes along the stabilising of wages with the cost of production, and the tax remains, with the result that, at present, throughout the whole of Scotland the trade is in a very bad way.

3737. *Sir Arthur Pease*: But a very considerable proportion of the population at that time were leaving the country—I mean the male population—in 1915?—Yes; but the extraordinary thing was that the military camps and so on throughout the country, and the large wages made by those who were left, enabled a big circulation of money amongst the working class which enabled them to buy; but I agree that the actual consumption went down by 50 per cent.

3738. Could you tell us at all how much direct wages enter into the cost of production of mineral waters?—I could not tell you. Perhaps Mr. Chalmers might tell you. (Mr. Chalmers): From 25 to 35 per cent. In regard to your remark about the male population, I should like to point out to you that, while the war was going on, in the Scottish towns such as Edinburgh, Glasgow, Aberdeen and all those places, there were always great bands of men on leave, and they had full pockets, and they spent right royally all the time they were there.

3739. *Sir Arthur Pease*: The figures you gave come from the whole country?—Yes, but they were practically all over Scotland.

3740. *Chairman*: Has the Act had any effect upon the small manufacturers?—(Mr. Thomson): I think, unfortunately, there is a tendency on the part of the standardisation of wages to eliminate the small manufacturer, which I think is a great pity, because the small manufacturer has very often been a man who has driven a lorry himself, and has been a saving man and built up a little business and prospered, and, of course, he finds that he cannot afford to pay these wages; he has not got the same resources at his disposal as the big manufacturer who can carry stocks. The trouble about this industry is that it is a seasonal trade very largely, and we have a very short season in Scotland, and the small manufacturer cannot keep up stocks in the way a large manufacturer can; he may not have the space, or he has not got the money to stock it, and so on; and if he is hampered in the way of getting additional employment in the summer time, then, of course, he cannot carry on to advantage.

3741. *Dame Adelaide Anderson*: This trade is scheduled as a dangerous trade?—I cannot understand why it should be nowadays; in fact, we have demonstrated, I think, to everybody but the Home Office that it is no longer a dangerous trade, because we now fill at such a low pressure that there is no danger at all.

3742. You mean that the appliances have so improved?—Have been so improved, yes.

3743. Are those appliances within the reach of the small trader?—Oh, yes, I think so. Again, perhaps, I should appeal to my colleague Mr. Chalmers; but in Scotland I think there are very few of the old high-pressure machines to be found.

3743a. Are there very few accidents in these small places?—Yes; we have been going into that quite lately with the Home Office, and I had a meeting with the Minister quite recently, and he has now issued regulations for the first time under the last Factory and Workshop Act, which are very mild regulations indeed, and, I think, demonstrate that the trade is not a dangerous trade at all.

3744. Milder than the simple early rules?—Slightly, I think. (Mr. Chalmers): Very much milder.

3745. On the ground that there is much safer machinery?—(Mr. Thomson): Yes, it is all due to the fact that the bottles are now filled at a uniformly low pressure instead of being filled at high pressure. (Mr. Chalmers): It is not a much more elaborate system. The Chief Inspector in my factory less than a month ago pointed out to me that all low-pressure filling machines practically reduced the risk of accidents to vanishing-point. It was only in the outlying places where they were using old-fashioned bottles that there was any danger at all.

Dame Adelaide Anderson: I was only trying to find out whether the small trader was not to some extent handicapped by the low-pressure machinery.

3746. *Chairman*: You have spoken about the injury to the trader. Have you heard about the injury to the employee?—(Mr. Thomson): It has been curious that most of the evidence I have had has been in the direction of showing that men who were less efficient have been dismissed; men who were getting on in years and so on; and female employees who were not so adroit as others. Most of the evidence I have collected was in that direction.

3747. Sometimes I suppose short time is worked?—Yes. Of course it is only fair to say that the short time at present is not entirely due to the Trade Boards Acts, or it might be bettered much more quickly. The spending power of the working classes and the operation of the Finance Act have had an influence. (Mr. Chalmers): Prior to the Trade Boards Acts the bulk of manufacturers kept a regular staff all the winter and paid them; but now, owing to the heavy rate of wages and the reduced sales, and the increased cost of production, they are simply putting them all on to short time and only paying them for the actual hours they work. In some parts of Scotland at the present time they are not working more than two days a week.

3748. At this time of the year the trade is out of season?—Yes, but even during the season trade was bad. In my own case I have three machines, and I was only able to work one, and then only four days a week instead of six.

3749. That was partly due to the new tax?—It was due to the tax, high wages, the increased cost of distribution, and so on, and unless we can get prices down, including wages, I do not see how we can go on.

3750. *Sir Arthur Pease*: And the coal stoppage no doubt affected you?—The coal stoppage affected the trade greatly.

3751. *Chairman*: As to the machinery of the Act, do you want to say anything about that?—(Mr. Thomson): I have already alluded, of course, to the fundamental objection that there was no inquiry at all into the facts of the case to justify the findings of the Board, and it is really very difficult to know how the machinery of the Board could be improved unless, as I say, they sit from day to day and every day, and try to work out the figures that might be imposed upon the industry.

3752. Do you complain of the cost?—Certainly. If I may say so I see behind the scenes a little on the employers' side; I know the cost to the employers. The employers are not wealthy men, but it involves them having all sorts of meetings; they have a meeting first to consider what their motion should be, and they must get into step of course. They have then to

30 November, 1921.]

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS.

[Continued.]

appoint a Committee to represent them, and this Committee has to meet, and they go on having meeting after meeting about this Trade Board. That, I think, is most injurious to the trade as a whole, because it distracts them from their legitimate business.

3753. Were the wages paid before the Act very low?—Yes, unfortunately I think they were rather low, but I cannot say that they were lower, from what inquiries I have been able to make, than the wages paid in similar industries.

3754. Still, they were very low, I understand?—They were undoubtedly low.

3755. Has an effort been made to raise them?—Unquestionably. I am glad to say that without the Trade Boards Acts a great many improvements have been made in this industry through the co-operation of the employers; and if I may also say so in Mr. Chalmers' presence, it was due a great deal to the energy that he displayed as a pioneer in one or two different directions, particularly the establishment of bottle exchanges. Each manufacturer has his own stock of bottles with his name on. That, of course, meant that unless he could get them back they were lost for all time, and the system of establishing bottle exchanges resulted in enormous improvement in trading results. Then they established another system called the bottle deposit system, which also improved the trading results enormously.

3756. How did that affect wages?—Again, speaking from my own experience, the effect was that as the masters did better themselves from the results they were getting through co-operation, the employees also benefited.

3757. It appears by the Report of the inquiry into the earnings and hours—you know the Report of 1906—that in this trade female workers earning under 10s. a week of 54 hours were 5·8 per cent. of the whole, and that 97½ per cent. of the whole were earning less than 15s. per week of 54 hours. Those were very low wages?—Yes, unquestionably they were very low throughout the country, both in England and in Scotland.

3758. It was right to raise those wages?—Yes. (Mr. Chalmers): Immediately before the war the wages were from 10s. to 12s. per week; but before the Trade Board came along at all the wages had been raised to 22s. and 24s. a week.

3759. Lord Weir: So that normally under the 1909 Act you would not have expected a Trade Board to be set up for the trade?—Not at the time it was set up. There may have been some justification in 1906 under the old Act. We do not object to the old Act, but we object to the 1918 Act.

3760. Dame Adelaide Anderson: Then you would suggest that these rates which were actually fixed are too high?—(Mr. Thomson): Yes, much too high.

3761. They are not very high to look at?—I quite agree, but when one knows the state of the unskilled labour market at the present moment, the supply of labour unfortunately for this particular industry is extraordinarily large. (Mr. Chalmers): For instance, we are paying 32s. for female labour for washing aerated water bottles, and a beer bottler who is not inside this Trade is paying 24s. to-day. That also applies to vinegar bottles, coffee bottles, and everything else; they all come under the same rates. Why should the mineral water maker be compelled to pay the higher rate?

3762. These rates would apply to the bottle washer in your industry, according to age?—(Mr. Thomson): Yes, but Mr. Chalmers' point, I think, is that the man who bottles beer, and beer only, has employees who only get 20s. to 24s. a week. (Mr. Chalmers): That is for washing whisky bottles.

3763. Yes, or jam pots or preserved fruit bottles.—(Mr. Thomson): Yes. (Mr. Chalmers): Another thing in connection with the Trade Boards is this. I have kept all my employees even though they are over 18 years of age; but in a great many cases they are dismissing the girls when they come up for the full rate of wages, and are bringing in girls of 16 and 17 years of age.

3764. Lord Weir: That is so as to use them when they are cheap, because very little intelligence or skill is needed?—Yes.

3765. Dame Adelaide Anderson: You do not object to a minimum wage for very low paid industry?—(Mr. Thomson): Well, my instructions are to say that we object to the Trade Board in this industry fixing any minimum wage. Whether my Association would object to a minimum rate of wages fixed by some other Authority, I could not say.

3766. You say in your Proof that there is no final relief to be expected for the unskilled worker so long as the population is too great for its means of subsistence?—I am afraid that part of it is a personal view. I have asked my friends in this industry to suggest a remedy which they can put forward as an alternative to this Trade Board, which they abuse so much. I have asked if they have any other suggestions to offer to prevent the unskilled worker being reduced to the condition that he was in before the war; and I am afraid I got no satisfactory answer, except that they were quite hopeful that the female worker would never be quite so badly off as she was before the war.

3767. Even in an unorganised trade?—Even in an unorganised trade, because undoubtedly the public conscience is more alive to these matters, and it is hoped, I think, that the industry will improve and help the situation. As a matter of fact I think the best thing that could be done to raise the status of the worker would be to establish freedom of contract all round.

3768. Combined with some sort of support for the unskilled worker, I suppose? I mean the worker must have some means of living. Do you consider that they should have some sort of training?—I think it is like this. If the avenues to the higher branches of labour were opened, the unskilled labour market would be immediately improved. It is the demand for labour which increases wages; we have seen that throughout the war, that automatically a demand for labour increases the rate of wages. In the time of the Black Death, as I have read somewhere, when the population was so enormously reduced, the wages were immediately raised, and they rose to such an extent that Acts of Parliament were passed to penalise people who paid these wages. There have come within my own personal knowledge several cases where the unskilled labourer, both man and woman, through this fear of work has been the dumping ground of all the Trade Unions. I know of one case where certain men would not take skilled labour at less than the wages which had been fixed, and they took unskilled labour there and flooded the unskilled labour market. I know also a case of a joinery where the men would not work, although the employer told them quite frankly he could not give them certain rates of wages, and they then went to the unskilled labour market at the docks. I think, if one could realise it, that the best resort of the unskilled labour market's wages would be freedom of contract.

3769. But we had freedom of contract before the Act of 1909 as regards wages, and in those days you agree that the wages were terrible?—With all respect, I do not think we had freedom of contract; I think we had nothing like freedom of contract before 1909 because I think the situation was made even worse as early as 1906 when the Trade Disputes Act was passed.

3770. Did that affect woman labour?—It affected all labour, I think, and particularly unskilled labour. It affected it most seriously. From my own personal knowledge, I am aware of the fact because it means that every strike in a factory nowadays is bound to be effective as against the inroads of the unskilled labourer. The only thing that makes a strike non-effective nowadays is the endurance of the employer, since the 1906 Act.

3771. But I do not see the bearing of that upon the minimum wage for the aerated water people?—I say most emphatically that it has a bearing, because if the unskilled worker cannot improve his

30 November, 1921.]

Mr. JAMES MILLER THOMSON and Mr. JOHN CHALMERS.

[Continued.]

condition by going into another industry where the rates of wages are higher, then he has got to put up with what he can get.

3772. *Sir Arthur Pease:* You express a view that wages in these industries would be higher than they had been before the war; but do you think that is possible? Do not you think that every class of the community will have to take lower wages and lower salaries than they did before the war, having regard to the wastage of war?—Well, perhaps I might modify my view in view of what you say; I had not thought of that particular point at the moment. Unquestionably the loss must be made up somehow; but I would hesitate to ask the unskilled labour of the Aerated Water Trade to take less than they took before the war. After all, there is an economic limit in their case.

(The Witnesses withdrew.)

Mr. ALBERT SHAW and Mr. T. A. CUDDEPP, called and examined.

3776. *Chairman:* Mr. Shaw, you are President of the National Union of Mineral Water Associations?—That is so.

3777. I think your Union accepts the principle that employers and employees should meet together for the purposes of conciliation?—That is so.

3778. You have found that beneficial in the trades with which you are connected?—Yes. The consensus of opinion among the members of the National Union, which covers the whole of England and Wales, is on the whole that the principle of the Trade Boards is beneficial.

3779. Do you mean Trade Boards with compulsory powers?—No, I shall have to qualify that in a further observation which you may permit me to make later on. I think it is only fair to say that at a great conference of our trade which was held on November 22nd, where there were about 350 delegates present from all parts of the country, the subject of the Aerated Waters Board and its effects upon the trade was fully discussed, and eventually a resolution was moved and carried by an overwhelming majority in the following terms, "that, bearing in mind the spirit of the times, Trade Boards are a necessary evil."

3780. What is the meaning of that—what is the spirit of the times?—I am afraid I cannot quite look into the brain of the gentleman who moved that, but it found general acceptance, I know, with the bulk of the members present at that Conference. With the principle underlying we are in agreement—that some method of conciliation between employers and employees should be adopted in the carrying out, not only of the industry of the country generally, but also of our industry, and with that principle of meeting together and of conciliation we have no quarrel at all; we rather favour it. Our strong objection, of course, is to the manner in which the work is carried on, and having had the benefit of hearing Mr. Miller Thompson, I am bound to say that he has stated none too strongly some of the defects; and what we are out for as representing the makers of England and Wales is that those defects should be remedied—that they shall be wiped away in some shape or form—and when we can have those defects removed we are quite prepared to continue operations under a Wage Board as affecting our industry.

3781. What defects do you specially point to?—Well, first of all, many people tell me that the present cost of the upkeep of Trade Boards is altogether excessive and extravagant, and they feel very strongly about the cost with regard to the upkeep of the Trade Board in this industry.

3782. Do you mean the cost to the nation?—The cost to the nation.

3783. Do you know what it is?—I can only quote from a statement that was made in the House of Commons some little while ago, when it was stated

3773. But everybody will have to share this all round.—I agree, speaking generally.

3774. Not individually, but in every class?—Yes, but I think the unskilled workers of the aerated water industry and some other industries would be below the economic limit of contribution. (*Mr. Chalmers:*) In answer to your question, I think our view is that they will be absolutely unable to share in it. You cannot ask them to share in a thing which they are not able to do; and to drive them back to as low wages as they received in 1906 would be unthinkable.

3775. Even if conditions were the same—even if the cost of living were the same?—Yes, even if the cost of living were the same.

that the Minister of Labour admitted that the headquarters cost of the Trade Boards officials at the Ministry of Labour amounted to £45,000 per annum, and the salaries and expenses of the various Trade Boards to nearly £50,000 per annum. The contention of my friends in regard to my own particular Board is that those expenses are altogether too heavy, and that if the Trade Boards could be amended in the way that we would like to see them amended, there would be no need at all for this large sum of money to be spent.

3784. What is the next point?—I have in my mind, having been associated with our own particular Board, the great bulks of stationery and printing which seem to be coming to me almost by every post, until I get almost tired of receiving that amount of stationery and notices. It did strike me as a business man that I should certainly run my own business in a very different style from that. Our feeling is, too, that under what we would suggest as an amendment there would be no necessity at all for Appointed Members as appointed to-day. I remember the reference made by my friend, Mr. Thomson, to agriculture, and I feel quite sure that in our industry we would be able to have a Conciliation Board consisting of employers and employees without the official element, and we would be able to arrive at a satisfactory solution of the wage difficulty which would be satisfactory to our employees as also to the employers. I say this with some little experience. I am a Staffordshire man, and in my earlier days I had a great deal to do with the iron and steel trade of South Staffordshire, and for more than 25 years there has been in existence a Conciliation Board between masters and men in South Staffordshire; and the wages of the men have always been regulated by the fall or the rise in the price of iron and steel. They have no officials at all present, or any Government control, and during the whole of those 25 years there has never been a strike, or anything approaching it.

3785. Of course, there is a strong union there?—But the union, Sir, if I may say so, have nothing to do with it. There is an equal number of working men with an equal number of employers, and they have been able to sit for 25 years and regulate the wages of that particular industry in South Staffordshire without there being a single appeal to a strike or a lock-out.

3786. I understand that. I was putting to you that the men's representatives are appointed by a strong trade union. It probably goes with the trade union, so that helps to preserve peace in that case?—Yes. I want to follow that by saying that I personally, and the majority of the members whom I represent here, are not at all opposed to trade unionism.

3787. I quite follow that, but is there a Trade Union to which your employees belong?—Oh! yes.

3788. What Union is that?—The Mineral Water Workers' Union.

3790. *Lord Weir*: What percentage of the workers would belong to that Union?—I should think that quite 70 per cent. would belong to that Union, and let me say that the employers were very anxious that they should have a Union to deal with, because these people were being got hold of by half a dozen different Unions in the country, and we simply did not know where we were and wanted to have some one body that we could negotiate with and deal with.

3792. Those casual workers would not belong to the Unions probably; it is the permanent workers?—The permanent workers; that is quite true. Mr. Miller Thomson is not over-stating the condition of the trade —not one iota. I have been in business myself for thirty years, and I have never known anything so appalling with regard to unemployment in our industry as at this very hour.

3794. Are you proposing to reduce them?—Yes.

3796. You mention the time that elapses in dealing with wages?—We feel very strongly about that. Without my elaborating at all, you know that before you can get any revision at all at least four months must elapse. During that four months there might be quite a changed condition. You agree, say, in the month of November that a change must take place, but before that change can come into operation four months must elapse. During the interim there may be still other changing conditions, so that at the very hour when you commence to work under the revised rates you have then to commence to think about other revised rates. We have had an experience of that just recently, and we say that it is altogether unreasonable both to worker and to employer to think that such a time should be allowed to elapse as four months before you can make any alteration in the rates. It should operate in both ways, and we very emphatically contend that a month should be the maximum time allowed to elapse before action can be taken in this direction; in fact, personally I think it could be done in less than a month; but certainly the time should be limited to a month, because you give the same opportunity to the worker that you do to the employer, and they have equal cause of complaint as the employers.

3797. Probably you heard the evidence of the last witness as to the number of trade union officials on the Board. Do you support his view?—I absolutely support the views of Mr. Thomson with regard to that. We are up against the professional trade union element being so strong on our Board, and we say it is not fair. We do not agree with it at all; in fact many of these people come in and argue who have never been inside a mineral water factory. I know that they had never been inside a mineral water factory when they came on our Trade Board first of all, because I asked the question again and again of some of these people who were talking, and who had a great deal to say as to what they knew about a factory, and two of them had to admit that they had never been inside a factory, and did not know anything at all about the working of it. We

3798. *Sing, Arthur Pease:* But you do not object to them having a trade union representative to speak for them, do you?—Personally I do not object to them having one, but when it comes to half a dozen of them, who monopolise the whole of the time, and the real employees who knows the work sits there and does not speak, does not say anything at all about it, I do not think it is quite fair to the employers. The employers do not bring in trained professional men, I hope that you will sympathise with me in my position, having to follow a man like Mr. Miller Thomson, for instance.

3800. *Sir Arthur Pease*: Of course an employer is largely engaged in debating things, but that is not the worker's job?—Well, we think so.

3801. *Chairman:* Your remaining two points rather tend to an extension of the Board?—Either extension, or else you must sweep it away, if you are to be fair. You cannot continue unless you do extend it. If you do not do that, I think in common fairness

If you do not do that, I think it common fairness the Board should be swept out of existence. This is one of the strongest contentions in our evidence. Let me just put it in this way. The aerated waters trade bottlers; in fact, the two business sides of the board, the same business, have been run together section and the aerated water bottling section, but where that operates they must pay the rate of wages set down by this Board. But across at the other side of the street there is a man who is not dealing at all with aerated waters, but is bottling beer. He can pay just what wages he likes, and can run in competition with this poor mineral water manufacturer, who is compelled to pay the proper rate of wages; and we have tried again and again and again either to exclude the beer bottlers who are within our ranks as mineral water manufacturers, or else to include these people who are on the other side of the street. Even the employees on our Trade Board feel more strongly than the employers do against this injustice, and I think we took this up from the very first meeting that we had, and the Chairman of our Board, Sir Alfred Hopkinson, expressed himself very strongly about this; and a resolution was passed unanimously by our Board that this matter should be brought to the attention of the Ministry of Labour, and a copy of this resolution was sent to the Ministry of Labour on the 23rd July, 1920, it reads in this way: "That in the opinion of this Trade Board the operations of bottle washing, bottling and filling, and all subsidiary operations preparatory to the sale in bottles, jars or other similar receptacles, of cider, ale, stout, porter and other alcoholic beverages, where these operations are carried on apart from the manufacture of such alcoholic beverages, should be included within the scope of the Trade Boards (Aerated Waters) Order, whether such operations be subsidiary to the manufacture of aerated waters or not." Now that resolution was sent on April 23rd, 1920. We never had any direct reply to that from the Ministry of Labour until the 23rd of this month; nearly 18 months was allowed to elapse. We felt so strongly on one occasion that a deputation of four, two employers and two employees, came down to this very place and practically demanded and forced an entrance, to know why we were being treated in this manner. We were received by an official here, representing the Minister, Mr. Leggett, and I am not divulging any secret when I say that he frankly told us that to try and get these bottlers within the scope of our Board was beyond the power of the Government. I went back to my Board and said that if that was so, I would do all that lay in my power to smash up that particular Board under

30 November, 1921.]

Mr. ALBERT SHAW and Mr. T. A. CUDLIFF.

[Continued.]

which I and others of my friends were suffering this gross inequality. At the conference which I referred to a little while ago, the feeling was most heated amongst our members at this injustice, and I was asked to speak in the most emphatic way and to plead very very strongly that something should be done, and done very quickly, in relation to this matter. Then I think my last point is this. With regard to the importation of foreign mineral waters into this country, I am not here to discuss the pros and cons of that, but we say we suffer a very grave injustice. In the warehousing of these goods and the labelling and sending out, a very great trade is done, and it is done without any regard at all to the wages that are paid and which come under the scope of the Board. Where precisely the same work is being done in warehouses with regard to imported waters, they certainly should be brought within the same scope as that class of work which is being done in our home factories, and that is another very very strong point that we wish to urge upon you with all its importance.

3802. That is labelling and warehousing?—The labelling and warehousing of these waters which come

from abroad. The workers in these places are not included within the scope of our Board.

3803. *Sir Arthur Pease*: Are aerated waters bottled before they come to this country?—Yes.

3804. But the labelling is done here?—The actual label is very often put on the bottle here.

3805. Just as tongue labels are put on the tins in this country as they come from abroad?—Yes.

3806. *Lord Weir*: Are the differences to which you refer very great? Could you give us any example of the difference of the rates of a man bottling beer as compared with the rates of your employees?—Mr. Miller Thomson is quite right in what he says. We as employers have again and again had our attention drawn to the disparity to which he referred, where we pay 33s. 6d. for women's labour over the age of 18, and they at this present hour are paying as low as 20s. to 24s., as against our 33s. 6d.

3807. You do not know the male comparison?—Again, with regard to boys, we do not employ many boys in our factories. The bulk of the work is purely women's work; the bulk of the work in our factory is done by women.

(The Witnesses withdrew.)

(Adjourned to Tuesday, 6th December, at 11 a.m.)

TENTH DAY.

Tuesday, 6th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT

CAVE, G.C.M.G. (*Chairman*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

Mr. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.

Mr. E. L. POULTON, O.B.E., J.P.

Mr. A. MACCALLUM SCOTT, M.P.

Mr. H. D. HANCOCK (*Secretary*).

Mr. DAVID LITTLE, called and examined.

The witness handed in the following statement as his evidence-in-chief:—

My name is David Little and I am a director of Messrs. David Little and Co., Ltd., Wholesale Clothing Manufacturers, 30, Park Place, Leeds. I have acted as an employers' representative on the Tailoring Trade Board (Great Britain) since it was established in July, 1910, and after the Board was reconstituted under the name of the Readymade and Wholesale Bespoke Tailoring Trade Board (Great Britain) since that time. I am also a past chairman of the Wholesale Clothing Manufacturers' Federation, the recognised organisation of employers in the Wholesale Clothing Trade, through whose agency the names of the majority of employers' representatives on the Board who are factory occupiers are sent to the Ministry of Labour.

The first meeting of the Tailoring Trade Board (Great Britain) was held on 14th December, 1910, and there have been 34 meetings of that Board held since then up to the time of its reconstruction as the Readymade and Wholesale Bespoke Tailoring Trade Board (Great Britain). As regards the reconstituted Board, the first meeting of which took place on 15th March, 1920, there have been ten meetings. I have also acted on the Administrative Committee set up by the Board, and have regularly attended their meetings, which, with regard to the Board as first established and as reconstructed, means 47 meetings. The chief work of the Board has, of course, been the fixing of minimum rates of wages for male and female workers in the trade.

It may be noted that up till October, 1916, in the case of female workers and up till December, 1919, in the case of male workers, the minimum rates fixed were one rate for all adult female workers and one rate for all adult male workers, with, of course, proportionate rates for the younger workers in each case.

As regards the former the reason for special rates for female workers employed as cutters, trimmers and fitters-up was an agreement with the Home Office to fix their special rates because they were taking up the place of male workers of the same classes who were engaged in the war. As regards the latter several of the more skilled classes of male workers were dealt with, and thereafter the various classes of skilled workers were taken into consideration, and minimum rates were also fixed for these special classes.

When the fixing of these special minimum rates was taken up it was the view of both sides of the Board that the time had arrived if the Trade Board were to be made more useful to deal with wages in more detail having regard to length of service and skill, keeping in view, however, that in every case the rates to be fixed were minimum rates and not standard rates, and all through this principle has been observed. In order to carry through the necessary arrangements negotiations were entered into between the Employers' Federation and the two unions representing the workers' side of the Board, and agreements were come to as to the minimum rates of wages to enable the Trade Board to fix them. In this connection I may say that when the Trade Board was first formed there was naturally a feeling of suspicion of one another on both sides of the Board, and particularly seeing that Trade Boards at that time were purely experimental. For some considerable time the two sides kept much apart from one another, but for the last five or six years there has been a very close relationship between the two sides. It is suggested that perhaps one cause of bringing this position about was the meetings of the Administrative Committees. At these meetings all permits and questions of scope and other matters relating to the trade were discussed together in a

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

very friendly manner, with the result that both sides recognised the views and interests of one another and so created a mutual and helpful spirit.

I would emphasize again the fact that the rates were in all cases minimum rates, that is to say, they were rates for the special classes of workers below which no one would be paid, but many of the workers were paid higher rates, and this is alluded to by the clause appearing in all the Trade Board Notices dealing with rates as follows: "that they were without prejudice to workers earning higher rates of wages." There is no doubt, however, that during the war the minimum rates rose out of proportion to what they would have been in normal times, and to that extent, being largely due to the increase in the cost of living, they may be said to have tended towards being standard rates in some districts. I am aware that there has been a good deal of complaint on the part of employers throughout the country who have not had much experience of Trade Boards against the power which the Trade Boards have to fix minimum rates for skilled workers, i.e., special classes of workers. The power was given under the original Act of 1909, but it has to be borne in mind that the rates which the Trade Boards fix for special classes of workers can only be minimum rates. It is, however, open to question that Trade Boards in their initial stages should be able to fix such rates. The suggestion might be that in the first instance they should simply content themselves with fixing the General Minimum Rates for the whole class of male workers and of female workers. This would enable the trade to settle down to the new conditions before beginning to deal with rates for the skilled workers. In that case it might be wise to lay down that until both the employers' and the workers' representatives agree to the fixing of such rates the Board should not have the power to do so at least for a period of say two years from the date when the first General Minimum Rates were made effective.

At the numerous meetings of the Administrative Committee a large number of questions from employers as to the application of the Trade Board rates were disposed of by the Committee, and so far as the Committee knew gave satisfaction to the employers concerned. Some of the questions were dealt with by the Secretary of the Board, but they were in all cases put direct to the Committee and the replies of the Committee were sent to the employers concerned.

As regards breaches of the Act any such cases were submitted to the Committee and the Secretary was advised of their views in such questions so as to assist him in dealing with them, although it was generally understood that no prosecution could take place without the consent of the Board of Trade or the Minister of Labour, as the case may be. There is no doubt that the work of the Board and of the Administrative Committee was carried through in an expeditious and businesslike way prior to the Act of 1918, when the Minister of Labour was given extra powers to deal with administration. It was not necessary in the opinion of the employers' representatives that there should have been such a change, as, although considerably more trades have been brought under the Acts, it is very desirable that each Board should control its own affairs in dealing with rates of wages and other relative matters.

The employers' representatives have noted the agitation in the Press and otherwise against Trade Boards. Their view is on the whole that the work of Trade Boards so far as the Readymade and Wholesale Bespoke Tailoring Trade is concerned has been of benefit to the trade inasmuch as it has substantially raised the level of wages paid in the trade over those paid prior to its being set up and has created better organisation in the factories. It has also raised the standard of living of the workers concerned, and it may be added that the improved relationship between employers and workers has been more marked, and is largely due to the better understanding arrived at as a result of the frequent

meetings of the Trade Board. The employers' representatives would point out that the high rates obtained in many Trade Boards have been largely due to the abnormal conditions of the war and are of opinion that had there been normal conditions the rates of wages would not have been so high and would have varied to something like the same extent as had taken place in the case of the early boards which were established about 1910.

The employers' representatives accordingly do not favour the abolition of Trade Boards. On the other hand, however, they have strong views upon the necessity of simplifying and improving the present administration.

- (1) There is a period at present of in all about four months before a rate which is proposed can be made effective. The delay due to this has worked with prejudice to both sides of the boards and the period accordingly should be largely reduced. Steps therefore should be taken to bring this about. At present the long period is due to the two months allowed for objections when a rate has been proposed and the period of one month taken by the Minister of Labour to revise the rates. Something should be done to reduce these periods. In any event any reasonable measure resulting in considerable decrease in the period would largely tend to make the Trade Board much more elastic in its work.
- (2) The question has arisen with regard to the Minister's revision of the rates fixed by the Board and to the delay which takes place in adjusting a final settlement in connection therewith, and it is suggested that the period which the Minister has to make rates effective is too long, particularly in cases where there is agreement on both sides as to the rates concerned.
- (3) The employers' representatives take much exception to the change in procedure by the Minister of Labour in dealing with questions of scope. The Department constitute themselves as the final voice in such questions. In some cases their decisions have been communicated to Trade Boards and are often objected to by the Administrative Committee. If there is any body capable of dealing with such questions as these it is the Administrative Committee or the Board itself who are almost entirely composed of persons experienced in the trade. The view held is that opinions on these cases are more likely to be upheld in the Courts as the views of the trade as against opinions prepared by officials of a Government Department. It is therefore strongly urged that the previous procedure of making the Trade Board the deciding body should be continued.
- (4) As regards the operation of rates fixed and their observation by employers in the trade, cases of non-observance were prior to 1918 dealt with in the usual course of business by the Administrative Committee, and reports were submitted as to the numbers of visits of inspection which were made and in general the position was satisfactory. To-day, in view of the considerable increase in the number of Trade Boards without a proportionate increase in the staff of the Inspectorate, no one can be assured of the general adherence by employers to the rates that are fixed, and as long as this state of matters exists it is decidedly to the disadvantage of such employers who take care that the rates paid by them are not less than the Trade Board rates. Here again it is considered that the work of administration should be in the

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

hands of the Trade Boards and along with it a legal Department in close touch with the work of the Trade Boards.

- (5) As regards the constitution of the Boards, the employers' representatives would say:—

(a) That they do not object to the present system of the Board having a Chairman and Appointed Members, but they consider that great care should be exercised by the Minister in their appointment with a view to suitable unbiased persons being chosen, and in particular that they should not be associated in any way with any organisations, economic or social, previous to their appointment. It is further recommended that both sides of the Board should be consulted before the appointments are made.

(b) That as the Workers' side of the Board is almost entirely composed of members who have practical experience of the trade as well as being members of their Trade Union, and as the relationship between the two sides has been of a very satisfactory character, the employers' representatives have no objections to offer to the present appointments.

- (6) The Board, as the Tailoring Trade Board (Great Britain), set up District Trade Committees, meetings of which were held on each occasion when minimum rates were fixed or varied. It was found from experience of these meetings that very little practical good was obtained generally because of these Committees not having power to fix rates themselves, and latterly it was considered that their work did not warrant the great expense entailed. Upon reconstitution of the Board, the Board did not again set up the District Trade Committees so that these now are not in operation.

- (7) The Board have had since its inception a provision in their Regulations enabling them to carry on their proceedings by side voting. The reason for this is that, as the two sides of the Board must vote under the Regulations in equal numbers, the danger arises that the vote of one member on either side might give the vote against the side by his single vote. When the Minister reconstructed the Board he made an attempt to take away this privilege, but this was strongly resisted, and latterly the Minister allowed the Board to have side voting. It is the view of the Board that, generally speaking, the same provision should apply to all Trade Boards for the purposes of protecting the interests of the majority of either side.

- (8) Many employers to whom the rates apply are engaged in Trade Board trades as ancillary to their main business, the result being that in some cases there is more than one Trade Board rate, or with one Trade Board rate they may be up against the current rates paid to workers in the main business for which there is no Trade Board. These conditions raise difficulties for which some provision should be made.

It has been stated in some quarters that if Trade Boards were suspended some hundreds of thousands of men now out of work would be fully employed. This statement is questioned, as in general it will be found that there is no more unemployment in the case of trades which come under Trade Boards than there is in other trades which are not governed by

these bodies. Further, if the complaint is to any extent well-founded, the cause is one of insufficient elasticity on the part of the Boards in that they have not the necessary powers to carry out quickly any variations in wages that may be made. Probably during the war period and the time since the opportunity might have been taken by the Government to accommodate by legislation the action of Trade Boards towards the existing abnormal conditions.

It is understood that many employers object to the Act of 1918, seeing that it alters the basis of the Act of 1909, upon which the Trade Boards could be set up. The new basis under the 1918 Act is as follows, viz.:—

"That the Minister of Labour may make a special order applying the Principal Act to any specified trade to which it does not at the time apply, if he is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade."

No opinion is expressed with regard to this, but it is suggested that there is very little real difference between the two bases. Not merely is the want of organisation of the trade necessary, but the rates of wages prevailing have to be considered, which obviously means the giving of consideration to rates of wages which are exceptionally low within the meaning of the 1909 Act.

3808. *Chairman*: You are a director of David Little and Co. of Leeds?—Yes.

3809. They are wholesale clothing manufacturers?—Yes.

3810. I think you have been an employers' representative on the Tailoring Trade Board of Great Britain since it was formed in January, 1910?—Yes.

3811. Is that one of the Boards scheduled to the Act of 1909?—Yes.

3812. It has since been re-constituted under the name of the Ready Made and Wholesale Bespoke Tailoring Trade Board?—Yes.

3813. You are Past-Chairman of the Wholesale Clothing Manufacturers' Federation?—That is so.

3814. That is the organisation of employers in the wholesale clothing trade through whom the majority of the employers' representatives are suggested to the Minister of Labour?—Yes.

3815. The first meeting of the Tailoring Trade Board was held on December 14, 1910?—Yes.

3816. Since that time there have been thirty-four meetings of the Board up to the time of its reconstruction, and since then ten more meetings?—Yes.

3817. Have you also acted on the Administrative Committee set up by that Board?—I have.

3818. That Committee meets quite frequently, I suppose?—The Administrative Committee naturally meets very much more frequently than the Trade Board itself, because they are really the executive part of the Board.

3819. They deal with details as to scope and questions of that kind?—At one time we used to have questions of scope referred to us. Under the present arrangement the Ministry decide questions of scope, but originally we used to deal with all questions of scope, and we also had in the first instance to deal with all applications for payment for workers who perhaps through physical disability were not considered to be ordinary workers. Those recommendations were always confirmed by the full Board, but we did the detail work.

3820. Your Board was presided over by Mr. Aves, I suppose?—Our first Chairman was Mr. Yates, and then Mr. Aves.

3821. Mr. Aves was the Chairman of all the Boards at one time?—He was permanent Chairman.

3822. How many Boards were set up under the Act of 1909?—There were four industries scheduled originally.

3823. Others were added under Provisional Orders?—Yes.

3824. He was able to co-ordinate the work of all the Boards over which he presided?—Yes.

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

3825. And your duty at that time, to put it quite shortly, was to prevent sweating?—I am going to say at once that we as an industry never liked the stigma that we were a sweated industry. That was the only part to which we objected, I think, as regards our inclusion in the Trade Board.

3826. Still, you were included under the Act itself?—We were.

3827. You were one of the first Boards. Can you throw your mind back and tell us on what principle you proceeded in those days in fixing minimum rates?—It generally took this line: One or the other side would move a resolution fixing some hourly time rate. It was generally met by an amendment proposing to fix some other rate. At the outset of the Board there was considerable difference of opinion between the representatives of employers' views and the representatives of workers' views as to what was a reasonable rate. There used to be proposals and counter-proposals. In course of time it got boiled down to a point, because with the earlier proposals, as a rule, the Chairman and the Appointed Members did not support either proposal, and therefore it was lost, but by a step at a time we got down to a point when the Chairman and the Appointed Members did vote, and that carried the rate.

3828. Was that usually a vote of the Appointed Members and one side against the other side?—The Chairman and the Appointed Members.

3829. The Chairman is an Appointed Member?—Yes. For quite a period their vote was the vote which fixed the rate.

3830. In more recent times has a change occurred?—Yes, a very considerable change, and particularly when it was felt desirable by both sides that an attempt should be made to extend the rates to cover special classes—I have in mind the more skilled workers—and that resulted in negotiations between the Employers' Federation and the workers' unions, so that we got to a point that as a rule the rate proposed was probably moved by a member of the one side and seconded by another, and carried in almost every instance unanimously.

3831. Was that because it had been arranged by agreement outside the Board?—By negotiations that had taken place previous to the Board meeting.

3832. And an agreement, I suppose?—There is an agreement in existence, yes.

3833. Outside the Board?—Outside the Board.

3834. That is interesting, but I suppose you will not differ if I suggest that when that happened you were really performing the functions of what is called a Whitley Council with the addition that you had compulsory powers?—That is so.

3835. I suppose this trade has become fairly well organised now?—Yes, undoubtedly on both sides there has been considerable addition to the membership.

3836. Is that a result of the Trade Board having been set up, do you think?—Largely due to both sides realising that it was far better to come to an understanding between the two sides than to indulge in conflict.

3837. With regard to the minimum rate, do you think that the compulsory powers which you have are necessary?—In our industry, yes.

3838. That is, you would have employers who might pay a rate so low that it would not really be a proper rate of wage to pay?—Our industry is a scattered industry, although there are large centres such as London, Leeds, Manchester, Bristol, Glasgow and Hadden Bridge. Still, the clothing industry is carried out throughout the United Kingdom, and inspection, particularly such inspection as we have had, would leave a very great chance of evasion if an unfair employer was not, shall I say, by pressure brought to pay the rates that a fair employer would pay. In many cases we are of the opinion that without that compulsion there would be a large number of employers who would ignore what I would term the agreed rate as decided between the Federation and the Unions.

3839. Would that apply in the same measure to the higher rates, the skilled rates of payment, or would an agreement be carried out as regards those?—I think there is a difference between a skilled worker and an unskilled worker. I think a skilled worker has always more command of the market than an unskilled worker.

3840. He has the skill and he can make his own bargain and get something above the minimum?—Yes, I think so.

3841. Lord Weir: So that you really mean that a minimum rate for the lowest paid worker would meet the case, do you?—We departed from that principle when we proceeded to fix rates for special classes, as we believed that it was in the interests of the industry that those classes should also receive consideration. Admittedly at the outset it was wise to confine our operations to one minimum rate which would concern the lowest grade of workers and give them that measure of protection which was necessary.

3842. Did you come to that conclusion because you felt that you would have to make very slow and steady progress in this innovation—this new Act? Was that the spirit which prompted you?—No, I do not think we started out with that intention, because there was no question in the early years of the Board—I am speaking of adult workers now—of going beyond one legal minimum. The other evolved in course of time.

3843. Then your interpretation was that the 1909 Act was an anti-sweating Act, and that all you had to protect was the lowest-paid worker?—They undoubtedly, in the first instance, received the first consideration.

3844. Mr. Lynton: But with that system it was still the fact that higher rates were paid prior to 1916?—The minimum rates as fixed in the first instance were never considered to be the standard rates. Higher rates than those rates were generally paid.

3845. And under the pre-war conditions there was no tendency to reduce the difference between the rates paid for higher-skilled workers and the minimum?—No, undoubtedly there was not. In fact, I think on every determination, it may be somewhat pious, but there certainly was an understanding and words were inserted to the effect, that these rates were not to prejudice workers receiving higher rates.

3846. That was on the decision of the Board; that is not a statutory provision?—No, but it used to appear in every determination.

3847. Mr. Poulton: As a matter of fact that is sent out in all the schedules, is it not?—It is posted in every factory.

3848. Sir Arthur Pease: Are the minimum rates which are now fixed by the Trade Board practically maximum rates?—No.

3849. Are they generally exceeded?—Undoubtedly, through the abnormal conditions prevailing during the war, the rates have increased to a point which brought them very near standard rates, and no doubt would influence an employer who was engaging labour, but I cannot admit that they were ever accepted as standard rates.

3850. Did the same standard rates apply through the whole country?—No; we have not really such a thing as standard rates.

3851. I mean minimum rates?—The minimum rates for female workers apply through the country, and there have been two changes as regards male rates. Certain skilled male workers in London received a higher rate than in the Provinces; and again in the heavy cotton or fustian trade certain male workers have also received special consideration and a lower rate.

3852. Is any provision made for rural districts or country districts, where the cost of living, and so on, is less than in the towns?—No.

3853. Chairman: Is there a provision for young workers?—There is a provision for younger workers termed learners, and there is a schedule of rates which has regard to their age. With regard to the female workers it also has regard to experience, but

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

as regards male learners the rate there is fixed entirely upon age. It has no regard to experience as regards male learners.

3854. Is that wise?—I do not think so, but that is what is the case.

3855. *Dame Adelaide Anderson*: Is it not the case that Leeds was somewhat special on the point referred to a while back, the wages normally being higher than the minimum?—In Leeds and other centres where there is competition for labour probably the skilled labour is, shall I say, largely in the majority: they always earn higher rates than the legal minimum.

3856. And although you would object to the industry at the beginning being described as a sweated industry, it is a fact, is it not, that the rates were very low in some parts, although not in Leeds?—I am speaking as representative of a large area, Leeds. The rates of pay that could be earned in Leeds in our case never warranted being considered sweated rates, but our objection was only to being brought in because it was suggested that we were sweating our workers. We never objected to working the Act, in fact we decided to do our best to make the Act workable.

3857. But do you not consider that it was very necessary, in other parts than Leeds, for raising the minimum wage?—We have always recognised that the Trade Board could do good to the industry.

3858. Then as regards fixing the special rates for special workers, a worker doing special work might be practically sweated at a lower rate than such a special rate as was fixed?—That is not my experience.

3859. That depends then on what is really meant by sweating?—I have never admitted, and I never shall I hope, that where the industry is properly organised it is a sweated industry.

3860. But it was not throughout organised?—The majority of the workers are in organised centres. The Trade Board Acts undoubtedly brought a measure of protection for the few rather than the many.

3861. Even when you proceeded to fix special rates for special workers?—There, again, there was one class of worker that had a measure of protection and another class that had not; therefore, by fixing special rates, recognising skill and length of service, we felt that it was in fairness to that type of worker.

3862. *Chairman*: That was really wage regulation and not anti-sweating. That is what it comes to, does it not?—I might say it was the other side to whom the credit is due, if there is any credit due to anybody for considering the special class. When they put up their case we thought that they made out a case for the protection of that class of worker.*

3863. Protection by wage regulation; that is what it comes to?—Yes.

3864. *Mr. Poulton*: You only called it sweating because the first Act compelled you to use that phrase in the clause which has now been taken away by the 1918 Act?—Agreed

3865. Therefore, that objection of yours to the word "sweating" as applied, at any rate, to Leeds and district, no longer obtains?—I think I can say that is so. I do not remember that in the original Act the word "sweated" did appear.

3866. No, but the phrasing in the 1918 Act is entirely different from that in the 1909 Act.—It had many titles before it became the Trade Boards Act, I think.

3867. *Chairman*: Yes, there was a Bill introduced, known, I think as the Sweated Industries Bill, but in the Act itself you will only find the words "exceptionally low."—That is so.

3868. *Dame Adelaide Anderson*: All I wanted really to bring out was that the words "exceptionally low" were relative to a certain extent. For instance, a shop assistant is obliged to preserve a certain appearance, and so on. A wage might be exceptionally low for one person which would not be exceptionally low for another.—I am sorry I have not quite got your point. Do you mean that as regards piece-workers—

3869. I am on the special rates for special workers point.—The rates for special classes were fixed higher than what I would call the ordinary legal minimum. It is only with male labour that these special classes arise, not female labour, if I except a certain few female workers who had a special rate fixed for them during the war when they came in to substitute male labour.

3870. *Mr. Poulton*: That was a war measure?—That was a war measure, but in the ordinary way, with the special classes, there are these different male rates to-day in our determination, and the skilled worker according to his experience and skill naturally got a higher rate fixed for him than would have been fixed for what I will call the labourer of the trade.

3871. *Lord Weir*: I would like to go back for a moment to the initiation of this first Board. You have had experience yourself on the first Board?—Yes, I was on the first Board.

3872. You described to us that the fixing of the minimum rate took place almost as a kind of bargaining at the Board. Was there no definition or accepted interpretation of the words "minimum rate." The Act lays that responsibility on the Board that you have to fix a minimum rate. Before you can fix a minimum rate surely you must have some clear understanding of what is meant by "minimum rate." What did you take as your meaning of the minimum rate?—Let me say at once that in the early years of the Board there was no bargaining: the two sides did not meet outside of the board room. The only time we got within four walls was when we got inside the board room. Naturally the members of the Board went to the Board with ideas which had been arrived at at meetings. As regards employers' associations in the various areas where the associations existed, those views were discussed by the federation of those associations; therefore, the representatives of the employers, with one or two exceptions—and, of course, at the outset it was a very small Board—went forward to the board room prepared to suggest what would be a reasonable minimum rate for the industry. On the other side the Union no doubt held their meetings and they went to the Board prepared to put up a figure. When we met at the Trade Board there was considerable difference between the two figures and, as I explained a little earlier, then there were proposals and counter-proposals which were voted upon and lost by the appointed members not supporting them, until we got to a point where the appointed members could support either one or the other and then it was carried. Does that cover your point?

3873. Yes. I take it you would agree with me that the interpretation of what a minimum rate was rested with the appointed members?—At that time yes.

3874. It was the rate which met the views of the appointed members?—The appointed members had to decide because there was no agreement between the two parties.

3875. So that it must have been their interpretation of what a minimum rate was?—They were the arbitrators undoubtedly.

3876. *Mr. Poulton*: They were the final referees?—Yes.

3877. *Lord Weir*: Do you consider that that interpretation has changed?—Yes, it has changed to this extent, that it is possible now for the two sides to draw together and discuss. We do not always agree, but we can meet. During the early years of the Board we never did meet and would not meet.

3878. *Mr. Poulton*: Only as you were compelled?—I mean it would have been impossible to arrange an outside meeting.

3879. *Sir Arthur Pease*: Without the appointed members present?—Without the appointed members present.

3880. *Chairman*: Except at the Board, I suppose?—We only met in the Board room.

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

3881. *Lord Weir*: Then was it understood that this minimum rate was a rate, for example, at which a large proportion of the workers would be remunerated?—No.

3882. Or a very small proportion?—Undoubtedly, when 3½d. was fixed for female workers the majority of the workers in the clothing industry earned more.

3883. Has the minimum tended to become the standard?—During the war, of course, with these very high rates I think it has come nearer the standard, but we have never discussed it as being the standard. For one thing, there is not really today an agreed standard in the industry.

3884. *Mr. Layton*: You say on page 1 that both sides agreed that the time had arrived if the Trade Board were to be made more useful to deal with wages in more detail, that is to say, having regard to length of service and skill, etc.?—Yes, that is so.

3885. Had there, prior to 1916, been no attempt outside the Board to fix standard rates for more skilled workers?—The first attempt to fix what I will term standard rates as between the Employers' Association and the Unions concerned was an agreement which was fixed up in Leeds in 1913. Following that agreement in one or two other centres agreements were arrived at. In those agreements they could be held to be standard rates only; of course, they applied to the immediate district concerned; they never became general. Those agreements were never brought to the Trade Board for ratification there.

3886. Did they deal with the wages of various grades?—Yes, classification of skill.

3887. That would be appreciably higher than the Trade Board rates?—Yes.

3888. Have you ever considered whether it would be possible now to fix a schedule of rates outside the Trade Board for those different classes?—We do not favour it because there would be no compulsion behind it. That is why we still favour continuing under a Trade Board.

3889. *Lord Weir*: That is purely as a confirming body?—Yes.

3890. These rates for the higher skilled workers, what might be called the regulation of wages, have been fixed between yourselves and the workers outside the Trade Board altogether?—The negotiations took place outside the Trade Board, but were then carried to the Trade Board, and the proper resolutions were moved on the Board and carried.

3891. *Chairman*: It had become by that time a formality. There was no discussion because the thing was agreed outside the room?—There was some discussion, but I agree it went through quickly.

3892. There had been actual agreement?—Outside, by the majority of course; but on the other hand the Board has to consider objections, and objections were considered. We could not ignore the objections. Had the objections been of such weight that it would have deterred us from going forward, I do not think we should have gone forward.

3893. Did that ever happen?—We did go forward because the weight of objections did not alter our opinion; but objections have altered our opinion as a Board.

3894. Has it ever done so where you had a written agreement outside the Board?—No.

3895. *Mr. Layton*: Did you find that the 1913 agreement which you made in the Leeds district was a handicap or prejudiced you in any way?—No.

3896. You do not find that other districts paying lower rates affect your trade?—Well, of course there always have been certain areas for some reason that had an advantage—I do not mean so much areas as more particularly isolated employers who, probably owing to lack of competition for the labour, would get an advantage as compared with the larger areas where there was competition for labour.

3897. Were you able to make your agreement effective in the Leeds district?—It applied only to the members of our Association: there were many employers who were not in it, but I think it became

very generally recognised even by other employers.

3898. It became in fact an effective rate?—As far as Leeds was concerned, yes.

3899. *Dame Adelaide Anderson*: But would it have become an effective rate if there had not been the Board compelling the lowest people to come up to at least a certain standard?—The agreement of 1913 was a thing quite apart from the Trade Board.

3900. I quite understand that, but could it have really worked if you had had a large number or a considerable number in the district falling very far below the exceptional rates?—Every rate in that agreement was higher than the Trade Board rates, therefore I do not see that the Trade Board rates influenced it at all.

3901. It has been found of course in other regulations that wherever you get any standard fixed, the bigger manufacturers do something better.—Your question, as I understand it, was: Did the Trade Board rates form a stepping stone to these rates?

3902. That is the idea.—I do not think so.

3903. And also would not competition be more serious if the difference were wider between the lowest wages paid by your competitors and yours?

—If an employer in an area can get his labour at a very much lower rate than the majority of employers, undoubtedly he has an advantage, but the question is, How long will he keep it?—because the best class of worker will leave that employer and go to factories where the conditions are better.

3904. *Sir Arthur Pease*: Either before the Trade Board or now, is there much difference in the standard paid in different parts of the country?—No. As I have explained earlier, there is only one rate throughout the country.

3905. Not a Trade Board rate—standard rates?—There has never been any attempt in the industry to standardise rates which apply to all areas.

3906. No, but from your knowledge of the trade, could you say whether the wages actually paid vary considerably in different parts of the country?—I would not say considerably, but there are variations.

3907. *Mr. Layton*: Applying to the more highly skilled people like cutters?—The variations largely concern the skilled workers.

3908. What is the basis of that variation; is it that there is a variation of skill in different districts, a variation in the quality of goods produced?

—If I might take it as an example, the reason that there was a higher rate given to cutters in London was the fact that it was thought that the cutters in London, having regard to the circumstances, were justified in their claim for special consideration, but it was only one class, the cutters.

3909. *Chairman*: Is that because the cost of living was higher?—The other side put up several points in support. The other side claimed it and it was considered favourably by the employers.

3910. *Sir Arthur Pease*: Have you had any other claims than that special classes have specially low rates?—I have referred to what I have called the heavy cotton or fustian trade, where it was held that the cutters in that trade did not need the same measure of skill that they did in cutting cloth, that the measure of skill ought to be taken into consideration, and as a result the Board fixed a lower rate.

3911. But there was no difference in the lower paid workers whether in London or a large manufacturing town, or in the country?—No.

3912. No question of cost of living was taken into consideration?—No, the measure of skill had as much to do with it as anything.

3913. *Mr. Poulton*: Because that was a minimum?—Yes.

3914. *Mr. Layton*: Would you consider that the difference in cost of living between London and other parts of the country would justify a Trade Board in fixing a higher rate in London for highly skilled workpeople than it fixes in other parts?—I think the Board would hesitate to plunge into that differentiation. You are going to open a very wide door if you are going to do that, because every little area

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

might have its idea as to what the rate should be. I think the Board would sit for ever if it took that line.

3915. Is it your opinion that the Board should fix rates for skilled workpeople, but that they should be flat rates?—Yes, unless there are some very exceptional circumstances which would warrant the departure from the general rate.

3916. *Lord Weir*: Taking Mr. Layton's point and applying it to the lowest paid worker, do you think there should be a difference in the minimum depending on the cost of living in the different districts, or do you consider the same minimum should be fixed for London and for the most rural district?—As at present constituted, and in fact right through, the representatives on my side of the Board have always favoured a general minimum rate for the class, and there had to be some very good arguments put up to induce us to agree to any departure from that rule.

3917. *Chairman*: Does your side include representatives of the smaller employers in the country?—The whole of the employers on our side are wholesale. We have not the retail now. We had the retail section with us up to a certain point, but we have not now; we are strictly wholesale now.

3918. They are all big employers, I suppose?—The representatives on the Board are usually employers of a good number of operatives.

3919. *Mr. Poulton*: Although you may have fixed the minimum rate, have you any experience that in centres where the cost of living may be said to be somewhat higher, in some of our great cities, there is a tendency to get away from the minimum to a much larger degree than in the small centres?—I should say yes. The competition in each area, I think, would result in labour earning higher rates, higher I mean than the legal minimum.

3920. *Chairman*: Now that we have had a very interesting general discussion, may we go back to your proposals? I gather that the view of those whom you represent is in favour of the continuance of Trade Boards?—Undoubtedly.

3921. You think that they have had the effect of raising the level of wages over those paid previously?—Yes.

3922. I gather you think that your Board has improved the relationship between employers and employed?—I am sure of that.

3923. You point out that the wages have risen during the war to an abnormal extent?—That is so. There, undoubtedly, the cost of living was bound to influence the Board, because the position had become abnormal.

3924. Though you do not favour the abolition of Trade Boards, you have certain proposals to make with a view to improving the proceedings. I will take those in turn: First, about the time?—We feel that the Board would be more elastic if it had not to observe these rigid periods; that is, of course, the period of two months during which objections can be lodged, and again, the period of one month that the Minister claims before he gives his approval to a rate which may have been proposed. Then there is the period of three months, or some longer time which might be taken. That cannot be reduced as it at present stands.

3925. *Mr. Poulton*: Apart altogether from the Board as a Board, there is three months taken as a minimum in the procedure itself?—That is so.

3926. Which is an unreasonably long time?—Then, again, there is another period, and you cannot help that. Owing to the number of notices that have to be printed it takes some weeks to get the proposal to vary out after the Board has met. Then after the decision is arrived at, there is still a further period. It may take anything from two to three weeks to get a notice printed out, so that there can be no very rapid change of rate.

3927. *Chairman*: You think the time should be shortened. Does that apply to the first rate as well as to the varied rates?—I would not hold that view

if it was an industry being brought in for the first time. An industry that has got accustomed to the machinery of the Trade Board, I do not think requires the same consideration as an industry first brought in. I know it took our industry some time to settle down, to understand the regulations and follow them; it is not done in five minutes.

3928. *Mr. Poulton*: Would you suggest there that the procedure should be allowed to be settled by each Board having regard to the interests of each particular trade?—Of course the Minister must have time to consider; whether he ought to have a month or not he will decide, but as regards the two months for objections, I think that might profitably be reduced. With most Boards they would probably come to an understanding as to the date upon which this rate should come in. We cannot fix that date, but we can suggest it to the Minister.

3929. *Chairman*: Would it be possible to shorten the time occupied in giving notice? I think notice is given to every employer. That, as you say, involves a great deal of time.—I do not think you can shorten that because, of course, it takes time, after a Board has agreed to a proposal to vary rates, to get those notices out, but the two months has to run from the date of that notice, therefore the employer naturally cannot expect to be lodging objections before he gets his notice.

3930. I was wondering whether some form of general notice could be adopted instead of giving individual notice to each of the employers.—That would be an improvement if it could be done—that is to say, a notice through the public Press, et cetera.

3931. Yes. To give notice to every employer is a long process?—Yes, that undoubtedly would be an advantage.

3932. *Mr. Poulton*: With the long experience you have had now upon that point, do you not think we could meet that without sending all these thousands of notices out to individual employers, by some form of notice, as you say, either in the Press or upon our public buildings, as we do other notices?—Undoubtedly as regards the proposals to vary, but I think you would have to issue the determination to every employer, because it might be rather difficult in the prosecution to bring home to that employer that he is a defaulter if he has not had the proper notice as prescribed.

3933. *Dame Adelaide Anderson*: But he is assumed to know our laws, even if he does not know them?—Of course, I am not a lawyer, but I have always understood that it is essential that the employer should receive a notice; and, further, that it is an offence if he does not post it in his factory.

3934. *Sir Arthur Pease*: But surely they could get them out in a week if they prepared them beforehand, and had everything in the way of stationery ready for the notices?—We have been advised by the permanent staff that they cannot do better.

3935. *Chairman*: You have to print them and direct them?—We have always been assured—even the Trade Board members have agreed—that we would get it out quicker; but the earliest would probably be about six weeks.

3936. *Dame Adelaide Anderson*: You want organisation for getting things out swiftly, of course?—I think the Trade Board has to rely upon the Stationery Office for their notices, and I suppose they have other work.

3937. *Chairman*: Do you think the minimum time allowed to the Minister could also be reduced?—Where there is an agreement on the Board—and he has all the Minutes of the Board—I think he could profitably shorten the period. I think where there is a decision of the Board that has perhaps been carried by the Appointed Members only, and where there was considerable difference, he might require time to consider the position; but an agreed decision I think might go through more quickly.

3938. I was referring to the minimum time. It is open to the Minister to take as little time as he likes?—But he has generally taken nearly the full time. On one occasion he did more; at the last

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

minute he referred it back to the Board, and then we had to go over it all again.

3939. No doubt there were special reasons for that. Then you have something to say about the question of scope?—Yes. The question of scope used to be referred to the Administrative Committee consisting of practical men. Now the officials in this building adjudicate on questions of scope. We do not agree that the officials in this building are more competent to deal with them than we are.

3940. *Lord Weir*: What is the composition of the Administrative Committee?—Well, representatives of the employers and workers, presided over by an Appointed Member.

3941. *Chairman*: I think Mr. Aves used to consult the Administrative Committee on questions of scope especially in order to get the benefit of their technical knowledge?—That is so.

3942. But the decision was his?—No. It is very seldom a vote is taken on an Administrative Committee.

3943. I understand that.—We acted as an executive. We did not make speeches and we did not vote.

3944. The decision as to scope was taken by the Chairman, I think, under the directions of the Board of Trade in the old days, after consulting the Administrative Committee?—That is so; but as a rule the decision of the representatives was given—and it was wonderful how we used to agree on both sides on questions of scope—and, as I say, the Chairman used to accept it as a rule.

3945. Would you agree that where a question of scope arises between two Trade Boards there must be some third authority to decide the question?—It did not often happen. There was a question as between the two Boards as to whether a certain article was within our border or not; that was the majority of cases. The other did not often arise.

3946. Where it does arise you would probably go to someone else?—We should express an opinion; whether the Minister accepted it or not would depend upon him.

3947. *Mr. Poulton*: Do I understand correctly your suggestion that the view held is that opinions on these cases are likely to be upheld in the Courts? What you mean there, I take it, is that the customs in the trade which have been handed down from generation to generation could be placed before the Court, and they should be held to be the method by which the particular matter should be determined?—Well, I would put it that the representatives of the industry would be more likely to decide a thing correctly, and in that case it would stand; but if it could be proved by evidence brought from the trade that the decision of the Ministry could not be upheld, I think they might lose.

3948. *Mr. MacCallum Scott*: The point the Chairman has put to you is with regard to a conflict between two Trade Boards as to the definition of a trade. We had some cases, with regard to Birmingham trades, in regard to stamped metals.—Well, an Administrative Committee would express its opinion; it would stand, then, for those higher up to decide.

3949. But if you say the Board is to be the deciding authority?—The point is, here to-day a question of scope arises. It is decided by the permanent staff; it is not referred to the Administrative Committee; they simply report what their decision is to the Board. We hold that on a question of scope we are more likely to know the actual position, and less likely to make a mistake than a permanent official who probably has no knowledge of the industry.

3950. But if you had a conflict between the two?—We should express our opinion, and it would have to rest at that; somebody else would have to decide it then.

3951. Somebody else must be the deciding authority?—Yes, then.

3952. Would you provide that the Minister should only decide the matter when there is a conflict between two Trade Boards?—That, I suggest, would

be more reasonable; he might get other information.

3953. *Dame Adelaide Anderson*: Or would you bring the Boards disagreeing together?—We have had meetings, but it is rather cumbersome. It has been done. At present we have had already three meetings of a Conference of six Trade Boards on questions of scope.

3954. *Chairman*: I think that now the Minister does refer all questions of scope before taking a decision?—No; that is what he is not doing. But let me be quite fair. I suppose they found difficulties in the present method, and they invited representatives of six Boards to a conference, which we have been holding. We have held three, and have not completed our labours yet, and the Ministry have set out a schedule of the occupations, or rather the garments, which they consider should come within the scope of this, that or the other Board; and we have gone through that schedule in conference.

3955. That is a question arising before the Boards?—Yes; but that is a special arrangement. If an inquiry as to a question of scope came in from one of the inspectors or investigating officers to-day, that question would be settled here; it would not be referred to the Administrative Committee of the Trade Board.

3956. I do not know whether you would confirm what I am told; but since that Committee on Trade Boards reported, the Committee over which Mr. Wolfe presided, I am told that the Minister has made it his practice to refer questions of scope to the Trade Board concerned before taking a decision?—That is not our experience. (*Mr. Healy*): In some cases it has been done. (*Mr. Little*): But in most cases they decide without reference.

3957. *Mr. Poulton*: You are talking on the general point that you, as practical people, are more likely to solve a difficulty of that kind than people here who have nothing but a theoretical knowledge?—That is our view.

3958. *Dame Adelaide Anderson*: And that if you could get the people together to consider questions of demarcation and scope, the administrative committees of different Boards, you would be likely to get to an agreement?—Well, as I have just reported about—we have had a meeting within the last few days.

3959. Those are voluntary meetings?—No; called by the Minister.

3960. *Chairman*: I must refer to that point, because we were formally told that the Minister had informed the Trade Boards that all questions relating to the scope of any Trade Board would be referred to the Secretary of the Trade Board concerned before being dealt with by the Department?—He may refer it to the Secretary, but whether the Secretary is going to pass it on is another matter. I am not throwing any stones at the Secretary, but I do say this: as a matter of fact we get notices from time to time reporting that certain questions of scope have been raised, and on the other side of that same memorandum is the decision of this Department.

3961. What is the date of the last of those notices?—Oh, it is quite recent.

3962. Your Secretary may have been consulted, but he may not have consulted you?—We get the decision reported to us as members of the Board.

Mr. Poulton: But, Mr. Chairman, is not it the very narrow interpretation being put upon that—that it is only being reported to the Secretary, and that it is not intended to go farther? I think it is too vague as to the terms of reference; it is sent to the Secretary, and apparently stops there.

3963. *Chairman*: That is what I hear from the Witness, but I am surprised to hear it; I should have thought the Secretary would, as a matter of course, consult his Board?—This is all new to us. Formerly, of course, every question of scope was dealt with by the Board.

3964. Well, I will not discuss it with you. We have the evidence on the point. Now, the next point which you deal with is the question of enforcement?—Do you mean the question of inspection?

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

3965. Inspection, yes?—Well, we have always felt that the inspection has been inadequate. It was inadequate, in our opinion, at the outset of the working of the Act, when only four trades were scheduled. Since then, of course, there has been a tremendous increase in the number of industries brought within the scope, and we have yet to learn that there has been a corresponding increase of inspection; because unless there is efficient inspection, the fair employer is at a distinct disadvantage.

3966. *Mr. Poulton*: I see you finish up that paragraph by saying that you consider the administration should be in the hands of the Trade Boards—the legal department. That means, I presume, by its phrasing, that you want some alteration in the present procedure, apart altogether from inadequate inspection, that the procedure itself is not satisfactory?—Well, our view is that if a change was made in the direction of the Trade Board being, as it were, self-contained, with a legal department which would give them advice, the work would be done better and more expeditiously. We admit at once that there must be a supreme head; we are not suggesting that we should shake off the yoke of the Minister of Labour, but we do feel that the work of the Trade Boards, having regard now to the extension, would be best carried out by an independent department—independent in the sense that they would not have to refer to permanent officials engaged in other work.

3967. *Chairman*: Are you speaking now of inspection, or prosecution?—Well, the question was administration.

3968. *Dame Adelaide Anderson*: Was there more ready access to a legal department direct in the time which you praise—the time when you say the inspection was adequate?—We have always thought that the inspection was not adequate.

3969. Never was adequate?—Even at the outset I think they started off with about eight inspectors for the whole country, for four trades. Please do not take the figures as accurate, but I think it was about that. We have complained from time to time to our Board that the inspection was not adequate.

3970. Might I have an answer to that question? Did the Boards in that time have a more direct access to a legal department?—Well, we were consulted if there was a question of prosecution. It may have been an act of grace, but we were consulted as to the advisability of taking action.

3971. You think there was closer contact?—I am sure there was.

3972. Do you think that the change is due to the growth of the work—the number of Boards?—Well, evidently someone has thought so; but we have not agreed with that decision.

3973. *Mr. Poulton*: At any rate, you consider it is a move backward rather than forward?—We do.

3974. *Lord Weir*: This Trade Board Section has a head; you want that head to be directly responsible to the Minister?—Yes; it ought to be a self-contained Department, and, naturally, it would have to come under the control either of the Ministry of Labour or of the Board of Trade; there would have to be some responsible Minister, but I think it is of sufficient importance to warrant a distinct Section.

3975. *Chairman*: It is not only that you want a distinct Section; there is a distinct Section, but you would like it housed at the Trade Boards Office?—Some things are referred to one person at the Trade Boards Office, and then referred to another, and then there are conferences between the two.

3976. *Lord Weir*: Is not it rather this—that, as between the Minister and the Chief Official of the Section, you wish no one else who is concerned with anything else?—We want those who are concerned with the administration and working of the Board to have more power, and not to have to refer to other officials.

3977. *Sir Arthur Pease*: I think it was put to us by one witness that it was necessary for the Minister to have advisers advising him, to protect the public against combination of the employers and work-people forcing wages too high, where they could get

what price they liked at a particular time for an article?—That is something quite new to me. I cannot see, seeing the publicity that the Trade Board work gets, any combine arising out of it.

3978. I think that point was put up by a witness?—Yes. I should not agree with it, with all respect.

3979. But it might be possible?—Well, I have not seen any possibility yet. We keep one another right; there is still some competition in our industry.

3980. Yes; but supposing you were to put up wages 500 per cent., we will say, and that was legally enforceable over the whole country. You might enforce a rate for a particular article—I am not referring to your particular trade—which was very disadvantageous to the public?—Yes; but then we should want another legal enforcement, and that is to force people to buy our goods.

3981. There are times when you can do it.—Well, I see no hope of it in our industry.

3982. *Lord Weir*: But in a staple industry, in a distributive industry, for example, where there is no foreign competition, and the competition is entirely domestic, would not Sir Arthur's point arise?—It is quite a new point; in fact, it came as a shock, because I never thought such a thing was possible as a combine through the Trade Board—using the Trade Board to inflate wages in order that the workers should get inflated rates for their work and the employers get corresponding inflation of prices and additional profits. I cannot see it. I might say that I attended a meeting of the London Association yesterday afternoon, and the discussion there, the dominant feature of that meeting, was the difficulty which the clothing manufacturers in this country to-day have in commanding the overseas markets. It is a fact that countries that used to buy ready-made garments from this country are now taking piece goods and making up the garments in their own country. It is a very real difficulty to-day.

3983. *Chairman*: What is the cause of that?—There may be many reasons; but the difficulty there put forward by certain members was that we must have reasonable rates of wages if we are going to hold the markets; so to put up, as was suggested, the rates of wages unduly high would be to commit suicide.

3984. *Sir Arthur Pease*: I think an official witness put this point—I am not quite sure—that the Minister must retain in his hands this power with regard to Trade Board rates so as, if necessary, to protect the public interests?—We agree.

3985. You agree?—Oh, we agree to that; someone must have the last word. We are not disagreeing with the Minister's present power to confirm rates; we are not in disagreement there. All we ask is that the administrative work should be in a self-contained Department.

3986. Yes; but if the Minister has to exercise that power, he must have somebody to advise him independent of the Trade Boards, must he not?—One would have thought that the permanent officials on the Trade Board, who have no interest in the fixing of rates, would be quite competent.

3987. *Lord Weir*: You do not suggest that the Trade Board rates are in any way responsible for this new trend of your trade which you spoke of?—I am sorry; I did not quite catch your point.

3988. You have spoken of this trend towards losing the manufacturing of the British material and sending the material to foreign countries to be made up there; you do not attribute that trend in any way to the Trade Board rates, do you?—Undoubtedly the rates to-day are higher in proportion. You can take the cost of living; for instance, in 1914 at the outbreak of war the legal minimum for women was 3½d. whether a worker was on time or piece. The minimum to-day is 8½d. time, 9½d. piece. I think you will admit, if you take the time rate of 8½d. and compare it with 3½d., it shows an increase greater in proportion than the increase in the cost of living. There

6 December, 1921.]

MR. DAVID LITTLE.

[Continued.]

are manufacturers who hold that those rates are too high, and that it is influencing export trade.

3989. *Chairman*: And that, I suppose, might have a serious effect on employment?—That is so. At the moment I think if there is discontent at all amongst the clothing manufacturers as regards the rates, it largely exists with the export manufacturers.

3990. Now, as regards the constitution of the Boards, I think you have no criticism?—No, except with regard to the constitution of the Boards we think that an independent Chairman sitting without Appointed Members, given a good Chairman who is acting not only in connection with our own industry, but with others, would be quite satisfactory. We venture to suggest that the same Chairman should act as Chairman of all the Boards of kindred industries; if you like I will call them the Sewing Trade Boards; as we feel that through him there would be a co-ordination of the Board's work rather than having one individual Chairman for each Board. For instance, take our own industry; there is one gentleman presiding over our Board and another gentleman presiding over the Mantle and Costume, who is quite different, and those two trades, the mantle and costume and the wholesale clothing, are very much akin, and we ought not to have that position. If there was more co-ordination I think a lot of these questions of scope would disappear.

3991. Would you keep the other two Appointed Members as well as the Chairman?—We are not so keen about the Appointed Members. We think that given the right man, a good strong Chairman, the work of the Board would not suffer.

3992. Would you retain his casting vote?—Well, he has the vote anyway, without the casting vote, because he only votes when there is a deadlock.

3993. Yes, I know; but you would still give him his vote. You would not make him a mere conciliator, you would make him a person to decide?—We would certainly give him his vote.

3994. *Mr. MacCallum Scott*: Do you think there is room for two boards in the mantle trade and the other trade, or would it be better if there were just one?—I think, though we are akin, there are so many matters of detail that to give the representation necessary to both industries would result in your getting an unwieldy Board, and we should have the position arising that we probably would be voting on something that particularly concerned the mantle and costume trade, and they would be voting on something which concerned us more closely. I think there is room for two Boards, but we should like to see clear co-ordination.

3995. *Chairman*: Have you tried District Committees?—Yes.

3996. *Mr. Poulton*: Before we go to that, Mr. Chairman, may I ask this? (*To the Witness*): You have suggested "that both sides of the Board should be consulted before the appointments" (of the Appointed Members) "are made." Do you go so far as to say that there might be a suggestion made?—No, I do not think you can pick the other side's team. I think that would have to be an appointment by the Minister.

3997. You do not go so far as in cases where panels are sent along, and you may select from a panel?—I hope it may never arise, but it might be that there would be a particular individual as to whom we could show a good reason why he should not be accepted.

3998. *Dame Adelaide Anderson*: I am not quite clear as to this point of yours about the Boards of kindred industries being co-ordinated; do you mean by one Chairman over several Boards?—We will take the Boards that are nearest to our own particular industry. I will put nearest the Mantle and Costume; then there is a separate Board for the Shirt; there is another Board for the Dressmaking and Light Clothing; you get then on to another Sewing Trade Board, the Corset; their products are largely the product of sewing machines; and we rather think that if you had one Chairman presiding

over those Boards instead of different Chairmen we should certainly do our work more on all fours, so that there would not be this conflict of rates or these questions of scope arising to the same extent.

3999. That would be getting to the position in the time of Mr. Yates and Mr. Ernest Aves?—That is so.

4000. They were not called kindred industries, but could be administered by one Chairman. But if it is necessary to have these kindred industries separately run because of detailed differences, how would it work out practically: would the Chairman not be overworked? Would the Board be able to see to the work sufficiently rapidly? He could not sit on two Boards at once.—No, but the meetings could be arranged so that they did not meet at the same time.

4001. Would you consider the desirability of a deputy in case they needed to meet together?—No, I think if we had one Chairman for what I may term the Sewing Trade Boards, the meetings could be so arranged that there would be no clashing, and we could get his services on all occasions.

4002. *Chairman*: There are only five of them, and they do not meet many times a year?—No.

4003. I repeat my question: you have tried the District Committees?—Yes.

4004. Have you found them answer?—Well, they did not cut any ice; the business was very formal. We used to meet; there would be a very thin discussion, because I think the additional members on the District Trade Committees did not feel that anything that they did or said would materially affect the issue, and therefore there was not much interest taken by what I will call the additional members. Of course, the members of the Board in that particular district were always members of the District Trade Committee; they used to run the show there.

4005. Did they get any benefit from consultation with other persons?—We could not see it there, because you must remember we are always in consultation outside; that is to say, the additional members on our side were members of our Association and they were of our mind.

4006. *Mr. Layton*: What proportion of your trade is included in your Association?—Do you mean the Federation?

4007. Yes.—I have no idea, because if you were to count heads the Federation firms would look to be not a big percentage, but I say without hesitation that we have the principal employers in our Federation. There are a lot of very small employers; take only the East End of London; there are people there who call themselves clothing manufacturers, and they are not in our Association, and if you counted them all in that way it would look as though our percentage was small, but undoubtedly if you take the number of operatives employed we represent a very substantial part.

4008. Half of the trade?—Yes.

4009. *Lord Weir*: Is the Federation growing?—Yes, although not fast because when we created the Federation in 1909 and 1910 I am glad to say that the principal firms invited came in straight away.

4010. *Mr. Layton*: Do you consider that the Board is truly representative of the various interests throughout the country?—We think so.

4011. You do not think it is necessary to have any local variation at all in the rates fixed?—No, we consider a general minimum is the sound policy.

4012. It is perhaps going back to what you discussed before, but assuming that the method of fixing various rates had been in operation in 1913, would you have thought it appropriate to fix as the national rate the schedule of rates obtaining in the Leeds district?—I am sorry, but I have not quite caught your point.

4013. In 1913 you had a condition of affairs in which there were various local variations in wages, and varying schedules. What would you have thought was the appropriate minimum to fix? You had an agreement with your workpeople; would you have considered it appropriate to make that a universal rate?—No, because the whole of these agreements concern wages.

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

4014. But as I understand it, you have now in your Trade Board settlement varying figures which in effect cover the various classes of workpeople?—Yes, but they are minima.

4015. Would you consider the minimum should be the rate in a low-wage district?—I consider that the rate fixed by the Board should have regard to the whole of the country, and the minimum rate fixed would be such that even such areas as you have in mind could pay it, without it being detrimental to their industry.

4016. In other words, it should be based on the capacity of the industry to pay in the lowest wage district?—I should not consider that we had carried out our duties properly if we did not give effect to that.

4017. And the Board gives adequate representation to such districts?—Yes.

4018. *Dame Adelaide Anderson*: But it would assume that the wages in the district where the wages needed to be lower were, at any rate, fixed with regard to the needs of the workers and their subsistence?—Undoubtedly.

Mr. Layton: In that district.

4019. *Dame Adelaide Anderson*: In that district. It would be rather an upward than a downward tendency?—Those areas are represented and have a voice.

4020. *Sir Arthur Pease*: But if you fixed the rate upon that basis it would give no protection at all to the districts where living was expensive?—I have said, I believe, on more than one occasion that as a rule where living is expensive is in the large areas, the big centres; and in those areas there is competition for labour, particularly from other industries, and in that way it levels itself.

4021. But he or she would get no protection from the Trade Board?—It was never thought that a Trade Board could protect everybody.

4022. *Mr. Poulton*: But they would, as a matter of fact, get a considerable amount of protection, would they not, because you would fix the minimum, not of the worst employers, but having regard at any rate to a certain standard of life?—Certainly.

4023. And therefore having fixed it upon that certain standard of life, you would not only protect those unfortunate individuals there, but you would protect the others, because they could not go below it by legal enforcement so far as wages are concerned?—Yes.

4024. *Mr. Layton*: But that standard will cost very much less in Norfolk than in London?—We are not so sure of that from information which we have. We will admit at once that in certain country factories—and there are a few—workers can probably live for less. For one thing their rents would be less, and probably they would be at no expense in getting to their work; but all these points are very fully brought forward, as a rule, before any decision is arrived at.

4025. Then do I understand that the Board really has at the back of its mind that there is no justification economically for variations in wages?—We feel that the interests of the workers in the industry are fully served by one general minimum rate for that class of worker. In our industry there are more female operatives than men; we will take it that if you fix a legal minimum for a female worker of 18 years of age and over, you have fixed a rate which will give the necessary protection to the majority of the female workers in the trade.

4026. Do I understand your answer to be substantially that if you fix a rate which is an appropriate one for what I have called the low-wage district, it will in fact be a protection to other districts, because there is not a substantial difference in the minimum cost of living?—That is so.

4027. *Chairman*: As a matter of fact you have given up appointing District Committees now?—That is so. Well, we did not appoint them, but we were asked for an opinion and we advised that we

did not think they served a useful purpose or justified the expense.

4028. Have you any observations to make about unemployment?—We do not agree with the idea that unemployment is worse in trades covered by the Trade Boards Acts than in trades not covered. I do not know that as a representative of employers here I ought to speak individually, but my experience in Leeds, which is one of the largest centres of clothing, is that there is less unemployment amongst the clothing operatives in Leeds than there is amongst the engineers.

4029. I do not know whether it is so in your trade, but in some of the Trade Board trades I suppose a man unemployed would more easily migrate to another trade than an engineer would?—I do not think so.

4030. I mean there is more interchange between the less skilled trades than there is between the more skilled trades?—We have in Leeds prepared for use every month a very detailed account of the numbers of unemployed, and they are graded down right through, and I scan them very carefully each month when we get them; and I am bound to say that there is no evidence there—and we have, I think, in Leeds perhaps as many industries as the average place—that it is a punishment to an employee to be in a trade which comes within the scope of the Trade Board Act.

4031. *Mr. Layton*: Is the rate of unemployment in the Trade Board trades in Leeds normally less than the average?—I should say yes, if you take the number employed as regards the whole of the industries.

4032. Therefore the condition of affairs which you are talking of now is normal—that is to say for the Trade Board unemployment to be less than the average?—To come back to the Chairman's point and the statement made here, I have not been able to discover that unemployment is created by the fact that a certain industry comes within the scope of the Trade Board Act. It may be possible to put individual cases, but speaking generally I am not of the opinion that that is a cause.

4033. *Chairman*: Are you speaking of your own trade, or of all trades?—I am speaking of my own trades and of watching such figures and information as comes to my hand.

4034. *Sir Arthur Pease*: We have had a considerable amount of evidence given that trade is being transferred to your trade from the retail trade, because of the wages in the retail dressmaking, tailoring, and so on, and that workshops in the retail trade are being shut up, and the work is being transferred to the wholesale shops?—I have no knowledge of it.

4035. *Lord Weir*: You do not believe that the action of the Trade Boards has caused an acceleration of the steady drift towards the mass production of goods?—I have never discovered that there is anything in the Trade Boards Act which, as you put it, has accelerated unemployment.

4036. Or accelerated the transference of labour from the small, shall I call it, inefficient or rural district towards the town factory?—Not through the rates so much as that I do believe that in the large, well-organised factories employment is more constant, and I think—at least it has been my experience—that we had, even before the Trade Board fixed rates, workers coming from the country districts, because in normal times in the large factories they start work on Monday and finish on Saturday, and know practically each week what their wages are likely to be. In the small shops I believe work is not so constant.

4037. *Mr. MacCallum Scott*: It has been suggested that in the bespoke tailoring trade in small businesses in the country, the effect of the Trade Board is to put up prices so much that people have not ordered the goods, but have got the goods ready-made, and that therefore these small businesses are being closed down, and the business transferred to the ready-made trade?—I do not agree with that, but anyone who will review the position during the

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

past 10 or 15 years will admit at once that there has been such a marked improvement in the production of ready-mades—the style and everything is so good—that a man who would a few years ago have scorned to wear a ready-made suit or overcoat will buy it to-day; and I am bound to say that that probably would have its effect on a small country tailor who was not able just to give the up-to-date style which a ready-made garment probably would give.

4038. Then do you think that any closing down of small businesses is due to that, rather than to the effect of the Trade Board increasing the cost?—Undoubtedly. I think that is a question of the big concerns turning out smarter stuff.

4039. *Mr. Poulton*: Due to the development of the trade, and bringing things up to date?—Yes.

4040. *Dame Adelaide Anderson*: Has there in fact been any marked growth in the number of factories, or the size of factories, engaged in this industry in, say, the last 10 years?—Of course, during the war there were a tremendous number of additional machines put down, and to-day you cannot keep them all going, because the volume of work for the Army increased the output of most factories; but it is difficult to say what the position of the industry would have been to-day if we had had no war. I would not like to venture an opinion.

4041. I was going to ask you that question next—as to whether the war had not quickened the use of power?—It undoubtedly caused an immense addition to the machinery employed in the industry.

4042. *Mr. Poulton*: If a Trade Board rate is fixed for the first time there is some rise in wages, but when that trade has had an opportunity of accommodating itself to the new circumstances, has that rise been sufficient to restrict the purchasing of those particular articles, do you think? Have you had any experience as to that?—Judging from our experience I do not think so, because if there was one thing that the employers' side were particularly anxious about when we met for the first time in 1910—although there was quite a period that elapsed before we actually got to fixing rates—it was the feeling on our side that we ought not to keep the rate too high, but rather for the first time when the industry came within the scope we should fix a rate which would not inflict any hardship upon any employer, or cause any unemployment. We wanted to fix a rate that would give the least possible disturbance to the industry, but at the same time we always realised that whatever rates we fixed we should gradually go forward and the trade would follow. There would be a general increase, shall I say.

4043. So that the effect to the consumers really would not be such as to deter them from purchasing?—I should not think so.

Mr. Poulton: I should not think so, but I thought I would like to get it from you as an employer.

4044. *Dame Adelaide Anderson*: May I just ask one question about the effect of the Trade Boards upon deductions in the industry? Before the Trade Board Act there were, in fact, many deductions for power, and cotton, and things like that?—I think deductions for power, although they did exist, were not general, and I think they have disappeared. We never hear of them to-day, but deductions for sewings still exist and are likely to exist.

4045. Then the words "clear of all deductions" do not rule them out?—They need not do so. In calculating the cost of a garment there is so much allowed for sewings, and the workers have that calculated cost of sewings added to the price which would be paid to them if there were no sewings charged. The whole purpose of charging sewings which prevails, not universally but very generally, is the fact that sewings are a commodity that can be wasted and can be easily turned to other purposes. The amount of sewings which are given to a worker are all booked out, and it is always quite clear. There is no question of sewings breaking, shall I say,

the piece-rate or the time-rate down or affecting the wage in any way.

4046. The effect of the Trade Board has been to steady and make fair and just those deductions?—I do not think it affects the position, because a manufacturer, if he brought out a new garment which was absolutely different from anything which was known before, calculates that he will have certain sewings, cottons, silks and other sewings, which are put into that garment: he calculates what labour should receive for the garment plus sewings, and the sewings are calculated and added, and then the worker, if she makes a proper use of her sewings, is not a loser.

4047. *Lord Weir*: From your experience of the two Acts—because you had a long experience of the 1909 Act—what particular benefit has the 1918 Act conferred upon a Trade Board? What help has it given?—We do not think it has improved the position generally. We prefer to work under the old Act.

4048. Under the old Act you could do anything for the good of the industry that you can do under the 1918 Act?—During the years that we were working under the old Act we did not feel any difficulty.

4049. And there were no complaints?—No.

4050. *Mr. Layton*: I see from the figures attached to your summary of evidence that the rates have gone up to about 160 to 200 per cent. above the rates in force in 1914. I think that is about the ratio which you gave us just now?—Yes.

4051. It is 3½d. to 8½d. or 10d. as a time-rate; that is 160 to 200 per cent. Would you say that the price of your products had gone up in about that proportion?—If I might respectfully suggest it, you cannot at the moment compare labour and materials. Although materials have come down very much, a year to 18 months ago our cloths were costing us at least five times the pre-war price, and again the price of the cloth will depend upon the nature of the cloth. All grades of material have not advanced to the same extent. For instance, if you take what I will call a low Cheviot cross-bred wool, which is not popular, the price of cross-bred is very much less than the price, say, of a fine serge where the demand is and perhaps the shortage is.

4052. But prices are not much above that ratio, are they?—I really do not think anyone could give an answer to your question which would fairly represent the position. It is not that I desire to burke the question, but there are other factors than labour in the cost of the production of a garment.

4053. What percentage of the cost of the whole is your direct labour bill? You may take it by your turn-over and your wages bill.—There again I cannot answer that question by one figure.

4054. I suggest that you can. It is the ratio of your wages bill to your turn-over?—But that would not tell you anything, because if a firm is turning out suits, for argument's sake, from 40s. to 120s., the percentage of labour in the 40s. will be in excess of the percentage of labour in the 120s. suits; if you take the sum total at the end of the week, even then it is made up of many percentages.

4055. The point I was on was this: you said that the rates of wages fixed by Trade Boards were complained of by employers as hindering them in their export trade.—The point that I desired to make was that there is greater danger to the export trade if the rates are unreasonably high than there is to the home trade. That is how I would like to put it—that we might in the home trade carry on even with a rate which was on the high side, without doing the injury to the industry which would occur if we got a rate too high which put our products out of competition in the overseas markets, where we met to a larger extent the foreign competition, and of course the competition of the country to which we were selling the goods.

4056. I want to consider the effect upon the home market, which is not subject to that degree of competition, and I put this point: whether the fact that

6 December, 1921.]

Mr. DAVID LITTLE.

[Continued.]

wages in this industry are 160 to 200 per cent. above pre-war would not be a factor in preventing the products of your industry being put on the market at a figure, say, 100 per cent. above pre-war?—I am sorry, but I can hardly give you the answer that you want there if I rightly interpret your wish.

4057. I am not asking you for any particular answer.—I want to point out my difficulty in replying to your question. You are at the present moment comparing a figure for male labour—and the lowest figures for male labour is 1s. 2d.—with the 6d. rate for male labour which was first fixed. I do not think that you can fairly compare those two figures for this reason: a very small percentage of the employees in the industry in 1912 and 1913 would get that 6d.; the majority were getting more than the 6d., whereas now we have got to rates which have become nearer the standard, and therefore you will find that a higher percentage of the workers are getting something near these rates.

4058. But your rates vary up to 2s. 9.—For a skilled worker.

4059. They vary from 1s. 2d. to 2s. 9.—Yes. The 1s. 2d. is only paid to the labourer.

4060. But you will agree that the price of your product is an important factor in determining the cost of living in this country?—Yes.

4061. Would you consider that the rates in your industry fixed by the Trade Board at a rate which is higher than the increase in the cost of living, might be a factor in holding up the cost of living?—It would appear so on the figures, but I think if you

could investigate the actual wages paid there is not that difference for the reason that I state.

4062. You mean the average wage bill is not increased more than 110 per cent. at which the cost of living figure stands at present?—I think generally the workers' position to-day is better than it was when we first fixed Trade Board rates, but not to the extent of the percentage which you mentioned by taking and comparing the Trade Board rates.

4063. But you would not say that his average earnings have increased more than the cost of living has increased?—Yes, I think so, on the whole.

4064. Mr. Poulton: But has that been due till a recent date to regularity of employment, or is it due to the rate?—Of course the general conditions in the industry have improved, and as far as possible there is less waiting time in the factories. The management now so arranges it that when the workers come in there is work for them, so that when they come to their work-places there is work for them.

4065. Mr. Layton: In so far as it is a difficulty, would it not be due to the fact that the rates are falling three months too late; because the rates here which were confirmed by the Minister towards the end of September would probably have been appropriate in May last?—That is so, but as I explained earlier on, some time must elapse. You see, before we go to a Board meeting to propose to vary, we must have a basis; we cannot in December anticipate what the cost of living is going to be in February.

Chairman: We are much obliged to you.

(The Witness withdrew.)

Mr. T. B. HARMER, called and examined.

The witness handed in the following statement as his evidence-in-chief:—

Before the formation of the Tailoring Trade Board conditions varied in different districts, according to the advantages of position, and according to the different standard of wages paid in the various trades in the district. In the industrial districts wages generally were higher than in the agricultural districts, and the wages and conditions in the tailoring trade also varied. These conditions did not lead to an excessive development of the tailoring trade in the country districts, and the larger centres of the industry in this trade continued to expand, in spite of rather higher wages, owing to the better conditions of manufacturing and to the fact that there was a better-paid community to sell the goods to.

The result of the Trade Board system was to establish a minimum wage throughout the country, and that wage was the minimum wage paid in the large centres. The employers in these districts combined with the workers as a matter of course.

Our Association has come to the conclusion that for all practical purposes it is a matter of indifference whether the Eastern Counties District is represented on the Trade Board or not. If wages in a town like Leeds are increased by good trade in trades other than the clothing trade, the representatives of the clothing manufacturers combine with the workers in the other districts to raise their wages to the standard which they have to pay, which may be most unfair. In the larger towns they have the benefit, in these times, of selling to people working under prosperous conditions. In other parts of the country agriculture may be depressed, and the workers in those districts are not in a position to pay increased prices for their clothing.

This system is entirely illogical, and will have to be faced some day. Wages generally are not paid on the same basis in different districts, and there is no reason why trades which are regulated by Trade Boards should be paid on a national basis, and the other trades, which are far more numerous, should be paid on a district basis. Either it should be arranged so that all trades are paid on a national basis, in which case agricultural labourers would be paid the same as labourers in the manufacturing towns, and

skilled agricultural men, such as shepherds, on the same basis as skilled labour in the towns, or it should be left to each district to settle the price of its own labour.

The result of fixing a national rate in a trade must lead to the concentration of trades in the district most suitable for manufacturing, and to the extinction of trade in the country districts especially, and a minimum wage for the whole country seems to lead to a position in which the country districts will eventually confine themselves to agriculture, and the manufactures will be carried on exclusively in the larger centres.

In this case workers in the North of England will have their wages based on the earnings of coal miners and engineers, while workers in the country districts will be paid on the basis of agriculture.

The Trade Boards are endeavouring to alter this by raising the factory wages in the country districts without making any allowances for the drawbacks of position, for buying and selling, and for the fact that the country workers are not so efficient as workers in the large manufacturing towns, who have often been working at their trades for several generations.

One has only to look backward and see what has happened in the history of the textile trade. At one time it was mainly confined to the Eastern Counties. The advent of coal transferred it almost entirely to the North of England.

If it is desired to concentrate trades, the evidence which we have offered, from our experience as members of the Trade Board for several years, is of no value. The only purpose we have in giving evidence is to call attention to the results of the present system.

If it is considered that the present methods and arrangements are not altogether satisfactory, our Association considers that the best method of adjusting them would be by the appointment of District Trade Boards for combined kindred trades in the district. By kindred trades we mean trades where conditions of labour are similar. We do not think it would be any more difficult for the Board of Trade to work with a number of District Trade Boards than it is at the present time with a large number of Trade Boards regulating separate trades, all of

6 December, 1921.]

Mr. T. B. HARMER.

[Continued.]

which are working in London. We are of the opinion that the only method by which trades can be satisfactorily controlled and developed, if it is necessary to control them, will be by the appointment of Committees who are well acquainted with local conditions. We have no desire to urge that wages in the tailoring trade should be less than wages paid in other trades in this district, as it would drive the best labour in the district into other trades, and leave only inferior labour for the trade with which we are concerned. We feel it is necessary that manufacturers and workers should be able to adjust their own differences in times of bad trade, particularly in cases where employment is good in some districts and slow in others.

The Trade Board considered the questions which we have raised when the Tailoring Trade Board was formed, and, in order to deal with these points, appointed District Committees. The work of these Committees was found to be of no value. The Committee consisted of an equal number of manufacturers and representatives of the workers. Some of these representatives were Secretaries of other centres. On the Eastern Counties Committees there were two representatives—Mr. Mallon and Mr. Young—the Secretaries of London and Leeds, and the principal representatives of the workers' side on the Trade Board. We have a very high opinion of the work of both these men, but their presence on the Committee entirely destroyed any local expression of opinion. Mr. Mallon and Mr. Young were fully acquainted with the discussion on the Trade Board, and took charge of the proceedings of the Committee from the workers' point of view. The majority of the other workers' representatives on the Board were out of touch with the proceedings, which were cut and dried from start to finish. Nothing new was ever introduced into the discussion, and the recommendations of the Trade Board were invariably confirmed after a short discussion. We cannot remember a single instance of any recommendation being sent from the Eastern Counties Committee to the Trade Board which has been agreed to.

In our opinion, if a Trade Board was formed in the Eastern Counties, representing trades of various descriptions employing similar labour, wages would be fixed in accordance with what was possible.

4066. *Chairman:* You represent the Eastern Counties Wholesale Clothing Manufacturers' Association?—Yes.

4067. What is your own occupation?—I am a manufacturer of clothing.

4068. At what place?—Norwich.

4069. You have your own opinion as to the national minimum wage in your trade?—As a district, yes. You say my own opinion, but I am representing the district.

4070. I mean your Association has its own opinion?—Yes.

4071. Perhaps I may put in as part of your evidence the statement with which you have been good enough to supply us?—If you will.

4072. It comes to this, that there are, in your view, grave objections to having the same minimum wage for the whole country?—There may be.

4073. Just to develop your statement, before the Trade Boards existed were there differences in wages in different parts of the country?—Yes.

4074. How do you explain these previous differences?—I should say that they were very largely due to inferior organisation. Where you have got factories in a centre the organisation is very good and the method of production is very swift. The result of the Trade Board rate was to some extent to transfer these methods to outlying districts. The old method in the country districts was to make garments very largely by one person, just as a carpenter might make a chair or a table or something else. The result of the Trade Board regulations was to introduce the team system which was prevalent in the larger centres, and the consequence was that the production is very much more rapid. Each person instead of doing the whole process does a very short process. That was one case,

and the other case was this: women are the principal item in the clothing trade as far as work is concerned, and they work very largely on piecework. It is not at all an uncommon thing for a quick girl to do twice as much as a slower one. In the large centres in many trades they have got workers of several generations who have been working at that trade, and also perhaps the whole of their families work at that trade. Their work is quicker and better, and a girl of that stamp, given the same piece-rate as a girl in a district where wages are smaller, would earn a very great deal more. I may say in parenthesis that people try to earn the wage which is generally paid in their district, not only in one trade but in other trades, and having got to a certain stage they are fairly satisfied. The consequence is that in some districts you will find people aim at very much lower wages than they do in the others, even working on the same rate. The result of it is shown very clearly, because if you look back to the history of the clothing trade—speaking of my own case I am the third generation; my father is 86 and his father was in the business before him—the clothing trade sprang up very largely in the Eastern Counties, and the trade there now is a negligible quantity.

4075. Why is that?—Most trades swing to the large centres. It is a matter of common knowledge that if you draw a line from the Wash through Birmingham across England, to the north of it you find practically all the manufacturing, and to the south of it you find practically nothing but agriculture, with the exception of London, which is a place by itself. The essential reasons, I take it, is coal. Other reasons arise much as this, that if you have a number of factories in one trade close together the people in the district are always feeding each other up with ideas. Of course the clothing trade is mainly concerned with clothing working people or people of the lower middle classes. In the manufacturing centres wages generally are much more than they are in agricultural districts and purchasing power is much greater.

4076. You say here that the practice of having the minimum wage for the whole country is entirely illogical, and will have to be faced some day. Why do you say that?—I do not think you can confine it to one trade. If you admit that in one trade there should be a standard wage for the whole country, I cannot see on what grounds you refuse it for all other trades. It is not a fact that carpenters, bricklayers, and labourers are paid the same wages all over the country. There are far more trades outside the Trade Boards Acts than there are in. The trades that are not regulated by Trade Boards fix their wages from provincial reasons, whereas, in other cases when there are Trade Boards they are fixed, as Mr. Little described, by consultation and agreement.

4077. So that your view is that either there should be a minimum wage for each trade, or that you should leave it to the district to fix it?—My own feeling is that if you have a number of trades grouped together in every district you will get a sufficient volume of trade to get a fair wage, as high as that district can afford to pay. The people consulting will be both workers and employers, and they will come to an agreement on the basis of what can be paid.

4078. In that district?—In that district.

4079. *Mr. Layton:* Would your objection to a flat minimum be really removed if it applied to all trades, or is it based upon the fact that under certain economic conditions productivity in a certain district is less?—I do not think you can apply one wage to all trades because the conditions are separate.

4080. The point you were just on was this. You said you could not apply a national minimum to one trade unless you applied it to all trades. Would it be practicable to have one flat national minimum for each trade, possibly a different minimum perhaps?—I do not think it would, because supposing you have two districts, one of which is prospering exceedingly and the other is going somewhat downhill, the people going downhill have only one remedy, that is to sell cheaply, or they must go under (if you deny them the

6 December, 1921.]

Mr. T. B. HARMER.

[Continued.]

privilege of selling rather cheaper than they are finished. Take the experience of my father. He remembers the time when the Eastern Counties made a great part wholly textile fabrics produced in this country. Trade was brought over there originally by people from Belgium who fled from their troubles just as people have come over in the last five years. In my district it was mainly textile; in those times I do not think Bradford was in existence. The steam looms then came into existence—the Eastern Counties looms were all hand looms—and the trade was developed on more progressive lines. I do not think there is a single loom working in my county to-day. At one time the Eastern Counties were the principal producers. What I say is this, that if people find that they cannot carry on on the basis of their present cost they must do the same as everybody else does, they must offer something cheaper or better if they wish to maintain their trade.

4081. *Chairman:* You are dealing with Trade Boards?—Yes.

4082. Apart from other great economic causes do you think it right that the Trade Board should fix their rates of wages for the whole country, or, if not, what alternative do you suggest?—I think so long as you have a national Trade Board it will fix a rate that is practically a convenient rate for the big centres.

4083. You mean too high a rate for the outlying districts?—Yes.

4084. Would the effect of that be to transfer trade from the country places to the great centres?—I think it would undoubtedly.

4085. As a remedy for that do you favour the appointment of Trade Boards for the districts?—Yes.

4086. A Trade Board, I gather from what you have said, which might deal with more than one trade provided they are allied trades?—Yes.

4087. I do not know whether you heard Mr. Little's suggestion just now that the sewing trade might be combined in one Board, but with districts working under it?—Yes.

4088. Do you agree with that?—Yes.

4089. Or if not one Board, at all events in Boards with one common chairman?—Yes.

4090. You are on the Tailoring Trade Board, the wholesale?—I have been.

4091. We know that the Board did appoint District Committees for a time?—Yes.

4092. Were you on some of those District Committees?—Yes.

4093. Did you find they worked?—No.

4094. Why was that?—Take the Eastern Counties District Committee. It consisted of Eastern Counties people and of people from the larger districts, and, amongst others, Mr. Mallou and Mr. Young, the secretaries of Leeds and Loudon, came down to represent the workers. They had everything at their fingers' ends: they knew exactly what they wanted to carry on the Trade Board. The Appointed Members were the same as those at the Trade Board. They had heard all discussion before. The mind of the District Board was made up before it sat. It sat for an hour perhaps, and just chatted the thing over, and then confirmed the original resolution, and that was the end of it.

4095. Were there some cases in which the District Committee sent up a recommendation to London?—It is so long ago since I attended a meeting that I should not like to say. They never sent resolutions up because they knew it was impossible for them to get their attended to.

4096. At all events, you do not remember what happened?—No, not sufficiently to state that a single recommendation had been sent to the Trade Board by the Eastern Counties District Committee.

4097. *Sir Arthur Pease:* You began by saying you thought the rate ought not to be the same in the Eastern Counties because the labour there is not as efficient as it is in the big centres?—I said not necessarily with regard to the rate if I may make that distinction.

4098. I understood on the average it was not as efficient?—No, the labour is not so efficient, certainly, but I said, not necessarily with regard to the rate being the same in the Eastern Counties as in the big centres. We are not asking for a lower rate to-day, but we are asking that it should not necessarily be the same.

4099. You asked that there should be a differentiation of rate for the Eastern Counties, I understood, because your labour in the Eastern Counties is not as efficient as it is in Bradford?—We ask for power to fix our own rates.

4100. For that reason?—Yes.

4101. You started by saying that this industry was a very old one in the Eastern Counties, but you attributed the Bradford success to the fact that the labour there had been for generations in the industry. Have not the workers been for generations in the industry in the Eastern Counties just the same?—That is not my experience. In the sewing trade they go from one trade to another in the country districts. There are not sufficient factories to make it worth their while to continue in the clothing trade; if they lose work in any one factory they will drift into the nearest factory they can. There is no floating labour in the clothing trade in ordinary times.

4102. You maintain that the rate fixed for a minimum in Bradford, which would suit Bradford or Leeds would be too high for a rate fixed in the Eastern Counties?—Yes.

4103. Do you approve of fixing other rates than the minimum or would you fix only the minimum for the lowest classes of labour?—I am not quite clear what your question is.

4104. I will put the question in a different way. Do you approve of fixing a minimum for the different classes of labour or only one minimum for the lowest class?—Do you mean in separate districts or the whole country?

4105. In any district—by the Board?—I think so. So long as you have a Trade Board system you must fix a minimum rate.

4106. Do you mean the minimum rates or a number of minimum rates?—I think one minimum rate for each district.

4107. *Mr. Layton:* You heard probably the previous witness say that he thought that the Trade Boards should fix a rate which was appropriate to the lowest wage district, not necessarily the lowest rate paid in any district, but the lowest rate appropriate to the district. Would you say that was what was done by the Tailoring Board?—No.

4108. What has been the effect of the Tailoring Board's decision?—Practically to fix the minimum rate in their own district and the larger districts.

4109. What has been the effect on the employment in your experience?—I think in December, 1910, the Trade Board first came into force. At that time trade was very good. Then the war came, which, I suppose, possibly doubled the demand for clothing. So up to now there has been plenty of trade to go round. In the future there will not be because the present plant is much larger than the requirements of the country.

4110. Between 1910 and 1914 you found it possible to employ your workpeople at the rate fixed by the Trade Board?—Yes, but those rates were quite low. I should not think they affected many people materially. They went to 3d.; that was the highest rate when war broke out, I think. Part of the time it was 5d. and part of the time 2½d. These rates were rates which everybody found it convenient to pay.

4111. So that the economic effect on your industry is one which you contemplate rather than one which you have actually experienced?—Yes.

4112. *Mr. MacCallum Scott:* I am not quite sure if I understood your answer to Sir Arthur Pease's question. Did you say that you wanted one minimum rate?—For each district.

4113. But not one minimum rate for the country?—No.

6 December, 1921.]

Mr. T. B. HARMER.

[Continued.]

4114. *Mr. Poulton*: I think you are not opposed to Trade Boards as such provided they set up those district methods?—No.

4115. You think that that would solve your difficulty so far as you are concerned?—I am afraid that the District Committees would have no weight. As Mr. Little said, the method of arriving at a decision on a Trade Board is that the workers and employers meet together; eventually there is a majority on the room, whereupon the chairman votes.

4116. I rather assumed that you thought that if there were District Committees with wider powers and varying rates, that would meet the objection you have to the existing system?—It might, but I think it would be far better if the kindred trades were grouped in the district.

4117. And made a Board of?—Yes.

4118. Made a Board for that district?—Yes.

4119. Rather than the existing method?—I think so.

4120. And that they should set rates for that particular area?—Yes.

4121. *Dame Adelaide Anderson*: I understood from your statement that you went rather further, that you would aim at a local Board for most industries?—No, combined. I do not think that any one trade would have sufficient volume to arrive at a proper decision.

(The Witness withdrew.)

(Adjourned for a short time.)

Mr. C. J. WATTS and Mr. CULROSS, called and examined.

The witnesses handed in as their evidence-in-chief a statement in agreement with that handed in by the witness of the Wholesale Clothing Manufacturers' Federation (Mr. D. Little), subject to certain modifications explained in the course of oral evidence as reported below.

4127. *Chairman (to Mr. Watts)*: You are a Director of Messrs. Johns, Son and Watts, who are cardboard box manufacturers of London?—*Mr. Watts*: Yes, that is so.

4128. *Chairman (to Mr. Culross)*: You are a Director of Messrs. Arundel and Marshall, Ltd., who are cardboard box manufacturers of London?—*(Mr. Culross)*: Yes.

4129. You have come here to voice the opinions of the Paper Box Manufacturers' Federation?—*(Mr. Watts)*: If you please.

4130. I think you were an employers' representative on the Paper Box Trade Board from 1910, when it was established, until 1917?—That is so.

4131. You, Mr. Culross, have been an employers' representative on the same Board since October, 1913—*(Mr. Culross)*: Yes.

4132. You have each of you acted as Chairman of the Employers' side of the Board?—*(Mr. Watts)*: That is so.

4133. The first meeting of your Trade Board was held on August 11th, 1910?—Yes.

4134. You were one of the original trades?—Yes, we were.

4135. There have been since then 37 meetings of the Board?—Yes, that is so.

4136. There has also been an Administrative Committee set up?—Yes.

4137. And your chief work has been the setting up of minimum rates of wages, of which you send us a schedule?—Yes.

4138. I think you were one of the first Boards which applied to the whole of the country?—Yes, that is so.

4139. Originally you fixed only one rate for workers?—Yes.

4140. That, I suppose, was a time rate?—That was a time rate, yes.

4141. There was one for men and one for women?—Yes.

4142. After a time you came to fix special minimum rates for special kinds of work?—That was under the 1918 Act.

4143. But I think not in fact until 1920?—It was about that date, yes.

4122. Nor, possibly, sufficient weight of experience?—It would be local experience. If you take the whole trade of a district it would be substantial.

4123. Do you not think there might be a danger of competition between different parts of the country with lower rates for, say, a group of the sewing trades?—No, I do not think so, for this reason, that if trade was prosperous in the district the workers would at once demand increases, and they would get them. No manufacturer can refuse an advance when he is doing well. The workers will at once say, "Trade is good; we must have a rise in wages."

4124. Would you fix special local rates as well as a minimum rate?—Do you mean as regards the men? The special rates, so far as I understand it, are confined to men in our trade, because the work is of a different description. For instance, one man is a cutter, one man is a tailor, and their apprenticeship is entirely different.

4125. Are there no special rates for women in dress-making?—I do not understand dressmaking. As far as I know, in tailoring trades there is one piece rate for women and one time-rate.

4126. Otherwise, if you had local Trade Boards, would part of your scheme be that you would be all directly under the Ministry of Labour?—Yes.

4144. Perhaps you will tell me what your view was in going beyond the fixing of minimum rates for men and for women, and fixing special rates for special work?—I think Mr. Culross can answer you with regard to the special rates for special work. We were, of course, a new Board; we were starting on entirely untried ground, and we took the basis of the old Act of 1909 in fixing the minimum time-rates only—that and the learnership organisation; but with regard to the special rates, I think Mr. Culross can answer you.

4145. Perhaps Mr. Culross will answer now?—*(Mr. Culross)*: The fixing of special rates for specially skilled classes of workers was really the result of an arrangement with the Union, and in order to make the rates which had been agreed between our Federation and the Union binding on all the employers.

4146. That is very frank. Practically you were just endorsing an agreement arrived at before the Board sat?—If you please.

4147. I think the rest of your statement is almost word for word the same as put in by the Wholesale Clothing Manufacturers this morning?—*(Mr. Watts)*: I think that is quite likely.

4148. How comes it that you have arrived at the same conclusion in the same language?—Having the same secretary.

4149. We may assume so far as actual details go it really is a statement drafted by the Secretary but endorsed by the Board?—It has been endorsed by the Board. *(Mr. Culross)*: I think it was settled at a special meeting of an Emergency Committee of the Federation. It is not simply the work of the Secretary.

4150. Still the Committee cannot have altered the wording much, because it seems to echo the view of the other Federation, or perhaps they echo you?—I do not know whether we were the first or the second.

4151. Whether you were the original sound or an echo?—We may have been.

4152. I take it that like the other Federation you desire the Boards to continue, but under improved conditions?—If you please.

4153. I take it that the modifications which you suggest are the same as we heard from Mr. Little, namely, first as to the time you desire that to be shortened?—I think we went a little further than the Tailoring Board with regard to our suggestion for varying rates.

6 December, 1921.]

Mr. C. J. WATTS and Mr. CULROSS.

[Continued.]

4154. You point out that the delay is due partly to the two months allowed for objections and partly to the one month allowed to the Minister for consideration and confirmation?—Yes.

4155. You say: "A suggestion has been made that the present procedure should be retained in the case of a Trade Board for the first time proceeding to fix a rate, but that on subsequent application to vary or cancel a rate, the procedure should be that notice of any application to the Trade Board when given be forthwith advertised in such manner as may be considered sufficient, that objections to the application be invited to be sent to the Board within 30 days of the date of the advertising, and that a meeting of the Board be held to consider the application and objections not earlier than five weeks from the date of the application and not later than seven weeks from such date. The Board should then proceed at such meeting either to vary or cancel as the case may require or to dismiss the application. The decision of the Board upon such application should be confirmed by the Minister within 14 days unless he decides within the same period to refer the matter back to the Trade Board for reconsideration. The notice as issued should be made to be operative as legal notice to alter existing contracts of service to the extent of the alteration of wages authorised." I do not understand that last sentence?—That is a difficulty which has arisen recently. So long, of course, as wages were going up there obviously would be no objection on the part of the employees of a firm to an alteration in their contract of service, because their contract of service would be improved, but in this trade the last notice which was issued was issued on November 3rd and was made operative on November 4th, and it was obviously impossible for any employer strictly to alter the contracts of service of his employees by reducing their wages within one day, he obviously had got to give them seven days' notice.

4156. Yes. Would you alter that?—No, but my difficulty is that the Minister's decision made the new rate operative on the next day—immediately.

4157. Only as a minimum; it did not affect existing contracts of service?—Obviously. I am afraid it has become a practical question, and therefore it would be advisable that the date on which it becomes operative should allow a notice to determine existing contracts of service to be given before the new rate becomes operative.

4158. Is there anything to prevent you giving the notice now at any time?—No, except that one does not know what the new rate is going to be until the Minister has given the notice.

4159. Then you give notice immediately afterwards, I suppose?—That means that the Minister's notice is said to be operative on November 4th in our case—the day when it was received, as a matter of fact—whereas it cannot be made operative for perhaps another week or ten days if any particular set of employees should choose to object. That is not a very practical difficulty.

4160. Surely you cannot alter that; you cannot make the Order of the Trade Board affect existing contracts of service?—No, but we may for some time be on reducing wages, and that means that we must alter the contract of service of our employees.

4161. You do not alter the contract; you give notice if you like, and make a new contract?—That comes to the same thing. There are certain firms who simply proceed to act on the notice as issued by the Ministry; in other words, directly that notice comes out they reduce their wages by the amount to which they are allowed by the notice to reduce them. That, in the opinion of my Federation, is not a thing that they are entitled to do: they must first give a week's notice in the case of weekly employees of their intention to reduce. It is a question which was brought up in London at a general meeting of the employers for consideration, and the majority of the employers were of opinion that the Minister's notice itself enabled them to reduce their wages, and therefore all that I had in mind in making that sug-

gestion to you was that the notice should be issued, for example, on November 3rd, as ours was, but should not become operative until, say, November 10th, which would allow of a week's notice to be given to the employees.

4162. That suggestion I understand. I did not understand it as it was put before.—I am sorry I was not quite clear.

4163. Then you suggest that the Minister should at once make effective rates increases where there has been an agreement on both sides as to the rates concerned?—Yes.

4164. He should have no power to veto or delay?—No.

4165. That means that any agreement between employers and workmen on the Board should be absolutely binding?—Yes.

4166. Then who is to look after the consumers and persons who are not represented on the Board?—If one assumes, as I think we are entitled to do, that the representation on both sides of the Board represents each side fairly, or as well as it can be made to do so, and those two sides are agreed, subject to the point which was raised this morning as to the rate being forced too high against the interest of the consumers, there surely can be no reason why the Minister should intertete.

4167. Your suggestion is to make the Trade Board a kind of legislative body for the whole country and without check. The Minister at least has the check of being responsible to Parliament, but under this scheme your Board would be wholly irresponsible to anybody; and after all, human nature is fallible, and it may be that the Board would not sufficiently consider the question of small employers or of the purchaser. You see both sides of the question?—Yes, I think that there are reasons against it.

4168. *Sir Arthur Pease*: Might I just put this case; in the war a great many contracts were on what is known as time and line?—Yes.

4169. The employer got 5 or 10 per cent. on the money spent?—Yes.

4170. And it became his interest to get wages as high as possible until that was checked?—Yes. Of course, that did not apply in our trade at all. It never has applied, and I am afraid never will apply. I do not think it is possible for it to apply.

4171. I am just giving that as an instance where the interests of the owners and workmen were not in line with the interests of the State in that instance.—I quite admit that there are such cases.

4172. *Chairman*: Then you raise a point about questions of scope; you think that they ought to be dealt with by the Trade Board. I daresay that you were here this morning when it was said by one witness that the Minister did not consult the Trade Boards or their Committee on questions of scope. Since the adjournment I have had some papers looked up, and they seem to satisfy me that regularly in these days questions as to scope are remitted to the Secretary of the Board with an instruction to consult the Board. Is that contrary to your experience?—That is not only contrary to my experience, but when the Trade Board itself has expressed opinions the Minister has altered them.

4173. That is quite consistent with what I say. All that the Minister desires is to have the views of the Board; he is not bound by them.—But in altering, the difficulty is this, and this is my reason for putting it: that you are getting an alteration in a decision which has been given by a body of experienced people in the trade, made by people who have no knowledge whatever of what they are altering. If I might give you one concrete instance it will probably illustrate it. I have a series of decisions recently issued by the Minister. In July the Trade Board was asked by the Minister to advise on three operations in the trade. Two of them are the most elementary operations which the trade does by means of a machine, namely corner-cutting and thumb-holing, and the third was the slitting of paper in rolls into narrower slips of paper for the purpose of putting on binding machines. With

6 December, 1921.]

Mr. C. J. WATTS and Mr. CULROSS.

[Continued.]

regard to corner-cutting or thumb-holing, or punching as the Minister calls it, they are the most elementary operations in the trade, and they are done by boys and girls. The Trade Board advised the Minister that operators engaged in the setting and supervising of those machines were machine minders within the meaning of the special rate which we had passed last year. The Minister publishes his opinion afterwards, and in his opinion he does not make any reference to persons who are supervising and setting those machines; he simply says, "workers employed on corner-cutting and punching machines," and then he is in a difficulty, because we had decided that they were machine minders, that is to say the persons we had in our minds. He sees that he cannot put those people as machine minders, so he alters our decision further and puts them in as cutters, a word which does not appear in our advice to him at all. In other words, a perfectly sensible decision of the Trade Board is made ludicrous when it comes out of the Ministry, and that decision must have been seriously altered by the officials in the Ministry. That is not the only case in which it has happened. We have found on so many occasions that there are decisions formulated by the Ministry which are absolutely absurd from the trader's point of view, and after all we are a Trade Board appointed to assess wages in the trade of cardboard box making. There is only one point upon which there has been a little difficulty. It is a case which has been bandied to and fro between the Federation and the Ministry—the case of a man who makes paste inside a box-making factory. Paste is a component part of a box, in that it is used to join the cover of the box to the board of which the box is made. The Minister has decided that a man who makes paste is not within the scope of the Act. I personally can see that there is some little difficulty in that position, but in the other decisions in which he has put people outside the scope of the Act he has taken people out of a trade and decided that they are not within the scope of the Act, and their whole business is doing the very thing that the trade does under every condition in the trade of box making. We really make a point of this trouble. I could multiply these instances if necessary. There is another decision—I am sorry, because I do not want to waste your time, but this is of importance to us.

4174. You are not wasting time at all.—There is another list of opinions issued by the Minister of Labour from May 10 to June 10. In that cycle the Minister gives seven opinions, and in the respectful opinion of the trade there is only one of those opinions which is a sensible opinion, and that is one in which the Minister, in answering the enquiry, does nothing more than quote the actual words of the Statute. He is asked to decide a case in a kindergarten materials factory, and there he simply answers that "people are box makers who are workers employed in the making of boxes or parts thereof wholly or mainly of chip cardboard or other material"; in other words, he quotes the exact words of the Statute.

4175. You do not mean of the Statute, you mean of the Order?—Of the Statute, because we are in the schedule to the first Statute. Later on, under the heading "Straw boards," the answer of the Minister is "a worker engaged in putting straw boards on to the machines and drying and packing the straw boards provided such straw boards are subsequently made into boxes is a box maker." To begin with, one does not know what the machines are. These are opinions which the Minister has given and made public. We do not know what the machines are; the only thing we can conclude is that the Minister is dealing with what is known as a board-lining machine. Those boards are quite possibly lined in Holland. There are paper mills over here which make boards, and which in some cases line the boards, that is to say, cover them with some material before they are delivered to the consumer. On this decision they are box makers. If the Minister confined himself to those operations when conducted in

a box factory there would be no difficulty about it at all; they are box making if they are done in a box-making factory, but they are not box making if they are done by somebody who sells me a lined board; I have to make the box out of the lined board afterwards.

4176. *Sir Arthur Pease*: Are the boards used for anything else?—Yes, certainly. Lined boards may not be, but very probably the lined boards are. They are used for packing in certain cases—I mean for putting between certain things, and so on.

4177. *Mr. MacCullum Scott*: What does "lined" mean?—You have the plain board and then you cover it with some paper, which may be anything; it may be white enamel or ochre, or anything of that sort. It is in those ways that these scope decisions of the Minister put us in a difficulty. They are not always referred to the Trade Board, and in many cases when they have been referred it has been six months or eight months after the decision has been asked for from the Ministry. We had in the first place a Scope Committee, and Mr. Watts sat on it, and Mr. Watts has a printed list of the decisions to which we came then, issued by practical people in the trade. Our submission is that the trade must know better than officials in the Ministry what is box-making and what is not box-making. We want to decide ourselves our own internal affairs, subject of course to the Minister being advised that, as in the case of paste, we are outside our definition.

4178. *Sir Arthur Pease*: When you have these differences, are all communications on paper, or do you have an opportunity of explaining them verbally where they are very complicated conditions peculiar to the trade?—They are sent down to the Trade Board, and sometimes we have had to send them back because we have declined to give an opinion without seeing the actual samples. (*Mr. Watts*): In the old days we used to have the actual list in front of us together with the articles.

4179. My point was, Do you have an opportunity of verbally explaining the matter, or is it all paper work?—(*Mr. Culross*): It is all paper work, because it is passed from us through the Secretary to the Box Trade Board, who passes it through to the Ministry.

4180. You never get a chance of a conversation to show the technical details, however complicated?—No, not with the Ministry. (*Mr. Watts*): Not exactly, but in the days under the old Scope Committee, for instance, when the question of attaché cases came up and the question of match box making and other things, we had the employers there to explain their own position. On the Scope Committee we had the employers together with the workers, and we thoroughly discussed the whole position and the method of working, and everything else.

4181. I mean you do not have opportunities of conversation between the Ministry and the Board?—No. It was always dealt with by the Scope Committee. We were practical people sitting on both sides of the Board, and we dealt with the matter from the practical point of view. These two points which Mr. Culross has dealt with were dealt with by the Scope Committee so far back as July, 1914. (*Mr. Culross*): And settled? (*Mr. Watts*): And settled, and printed, and issued to the members of the Scope Committee, and utilised for administrative purposes. I have the notices here.

4182. *Chairman*: You would like the power restored to the Board or to this Committee?—Most certainly.

4183. I suppose it is conceivable that the Board might desire to extend its territory too far, or to extend its powers to some employer who claimed to be outside the Board. Would you give an appeal of some kind on those cases?—There are many opinions shown here which are matters which were clearly outside the Board, and are stated so to be.

4184. But even Trade Boards are fallible. Supposing an employer thought he had been wrongly brought within the scope, whereas he was really not

6 December, 1921.]

Mr. C. J. WATTS and Mr. CULROSS.

[Continued.]

within; would you not give him some appeal to somebody?—(Mr. Culross): Yes, he has an appeal now, his appeal to the Court when he is prosecuted for paying less than the wages. It is not perhaps the most savoury form of appeal, I agree, but in the existence of this Trade Board we have had, practically speaking, no objection to the decisions of the Administrative Committee from the first until the Minister came to assume the right to send out this opinion himself and alter our opinions if necessary.

4185. And as regards enforcing the orders you seem to be of the same opinion as the other witnesses this morning?—There is not sufficient inspectorate at the moment.

4186. As to the constitution of the Boards you have nothing different to say. Have you tried a District Committee?—Yes, we have had them since the first.

4187. You, also, think they are not successful?—They have never been the slightest use. I personally tried in 1911 to get a vote from the Chairman, and the Chairman has always consistently refused to vote on any matter that is coming up before the District Trade Committee, with the result that if the sides did not agree all the District Trade Committee did was to send up a block resolution from one side that they did not agree with the increase, and a block resolution from the other side that they did agree with the increase; neither the Chairman nor the Appointed Members voted on any District Trade Committee.

4188. Did the Chairman of the Board preside over the District Committees?—In general—in the early days almost always.

4189. Mr. Layton: Do the District Committees now exist?—We have still got one. We unfortunately cannot get rid of it under the present Act except by dissolving the Board.

4190. Do you object to the machinery under which the Committee works at present, or do you object to the idea of district fixation of rates?—If I may say so they are two different questions. The district fixation of rates does not depend on the District Trade Committees. At the present moment they only report on a proposal to fix which is sent down to them to consider. As I say they report that one disagrees with it and the other agrees with it.

4191. You have no district variations?—No, we have a flat rate.

4192. Have the rates sent down to the District Committees been different rates suggested for the different districts, or have you always suggested one rate?—One flat rate.

4193. In fact, the District Committee has merely been asked its opinion on a rate already proposed?—That is so.

4194. The District Committees have no power to suggest a new rate?—They did, if I may say so. Up to the last meeting we were always on the up grade: the workers' side invariably suggested an increase in the proposal and the employers suggested that the increase was not justified. As a matter of fact at some of those meetings which I have unfortunately had to attend the time was obviously wasted time and it was wasted money.

4195. Does your Trade Board cover the whole country?—Yes, except Ireland. Ireland has a separate Board.

4196. Are there in fact local variations in the rates actually paid?—Possibly there are. There are no rates below the minimum rate, but there are possibly variations brought about by economic conditions in the standard rates.

4197. Chairman: Are there any trades which might be co-ordinated with yours?—Yes, the Tin Box and the Paper Bag, and if at any time they did come under the trade, the Printing Trade. Of course, we are allied to the Paper Trades generally.

4198. Does it happen in your trade that one firm may be affected by more than one Trade Board?—Yes.

4199. Have you known that?—Yes, they are.

4200. Does that cause trouble?—It causes a certain amount of difficulty, but the adjustment of it, up to now, has been that you have to pay wages according

to the minimum rate ordered by the Trade Board which gives the highest rate.

4201. That is to say people in the same factory do not care to be paid a less sum for work that is equally difficult?—That is so.

4202. Sir Arthur Pease: Presuming that it was advantageous to most of the trades to get a Trade Board decision, was not it because most of the contracts were fixed by the Government on the rates of wages in the district, therefore it was important for a rate to get the sanction of the Trade Board?—No, I do not think any of our Trade Board decisions ever depended on Government contracts.

4203. You charged for your goods according to the wages paid very often, did you not?—Undoubtedly.

4204. If the wages went up and were sanctioned by agreement between employers and employed generally, or under a Trade Board decision, then you could come on the Government for an increase in the price?—I do not think that ever actually occurred except perhaps in two factories which were controlled. There were only two factories in our trade which were controlled.

4205. The position was so abnormal during the war.—That is what one feels to-day, that one cannot generalise from the conditions which arose during the war. (Mr. Watts): Under the old Act you had to give official notice to the Board of Trade that you were prepared to pay certain wages. It is Government work I am referring to at the moment. I have a copy here of the letter which was given to us by the Trade Board Secretary at the time under Section 7 of the old Act. (Mr. Culross): That was because there was a period in which the rate was not obligatory.

4206. Chairman: You suggest, Mr. Culross, that there is want of elasticity in the working of the Acts?—Yes.

4207. You give as an instance the absence of the power to carry out any variations in proposals that may be necessary at the fixing stages?—That is the trouble to-day.

4208. And the difficulty of defining the terms "ordinary worker." There is a difficulty there?—There always has been a difficulty there. We adopted in the early days the basis that 15 per cent. of your employees were cut out as not being ordinary workers. That percentage to-day would be entirely useless to us, and to some extent the ordinary worker difficulty is to-day giving trouble on the question of unemployment, because our trade has been through almost as bad a time as any trade in the Kingdom, if not worse.

4209. Do you mean there is a tendency to get rid of the slow worker because he is not worth the Trade Board rate?—Yes, the majority of businesses in the trade during the past year have probably got down as far as half-time at least, even after reductions in the personnel, and therefore those reductions have been the elimination of the less efficient worker.

4210. Or putting the others on short time?—And putting the others on short time.

4211. Mr. Layton: At what date did unemployment begin in your industry?—Probably about June, 1920.

4212. What was the period of greatest prosperity?—I should think some time in 1918 to the end of 1919.

4213. And to the middle of 1920?—No, prosperity did not continue then. From the beginning of 1919 there was a gradual dropping off, but there was a good deal of work to fill up; there was a good deal of contract work.

4214. Unemployment did not begin until 1920?—Yes.

4215. I notice that your rate on your Schedule for women (and men follow the same course) was fixed at 8d. in November, 1919, and in November, 1920, when you say that you had already passed the peak, the rates went up to 9d., and remained there for 12 months, and it is only in the last month that they have dropped a fraction?—That is so. The employers thought, and they even went so far as to take up a trade deputation to the Minister to ask him to refer back to the Trade Board the increase in the rate

6 December, 1921.]

Mr. C. J. WATTS and Mr. CULROSS.

[Continued.]

which he authorised in November of 1920. It was entirely unjustified, but we had to sit under it. All these questions of unemployment were put up, but they were disregarded.

4216. Is it a fair conclusion from the figures that the Trade Board rate of wages has moved 18 months behind the course of trade or nearly?—I think that is so.

4217. That the downward movement of trade began not later than the middle of 1920, but the downward movement of wages began in November, 1921?—That is so.

4218. And then only to a small extent?—The application for the reduction started four months before November.

4219. I quite understand that, but the actual rates paid are in fact all that way behind the actual course of the industry?—That is so.

4220. That cannot surely be only due to the slowness of the operative machinery of the Trade Board?—It is due to the slowness of the operative machinery. Our rate was fixed in November. My trade did not rush to make alterations, and therefore we did not, till the middle of the year, see that the trade was not going to recover. In the early part of 1921 it was a little doubtful if we were not going to get some improvement in trade. Then there were certain circumstances which threw us back again. We did not therefore rush at once to ask for a reduction, possibly because the Trade Board had a tendency to take the index figures of the Board of Trade as their main guide in deciding questions of wages.

4221. At what date was the proposal that took place in November, 1920, originally made?—Some time in June the application was made; it came before the Trade Board in July, and then proposed to be fixed. It was eventually fixed in November.

4222. On the suggestion of the Trade Board it was actually adjudicated on just at the time when the trade was going downhill?—Yes.

4223. Nevertheless, you put the wages up because the Board of Trade index number went up?—Yes, the Trade Board put the wages up.

4224. The Trade Board recommended the Minister to put them up.—Yes, and the Minister eventually did put them up.

4225. Was that a proposition from both sides?—No, that was strongly opposed by the employers' side. We went to the Minister to ask him to either stop it or refer it back to the Trade Board, but he would not take any steps.

4226. I notice also that on the same sheet you refer to two increases that came in during the war, where the rates came into limited operation (this was an increase of both rates) on the 15th August, 1917, but were made obligatory by the Board in February, 1918. In fact, they came into operation six months before the Minister made them obligatory.—That is under the old Act.

4227. Why did that happen?—Under the old Act it was part of the procedure that a rate became obligatory at the end of six months. You could contract out of it under the old Act for six months.

4228. *Chairman*: Have you made comparison between the old Act and the new, the Act of 1909 and the Act of 1918?—Yes.

4229. The Act of 1909 worked well?—Yes.

4230. What do you say of the Act of 1918: has it worked better?—It is under that Act that we complain of the interference of the Ministry. It seems to us that from that time, the Minister having greater powers, there has been a greater interference with the Trade Board. Personally, except for that obligatory or contracting out period, we would just as soon work under the old Act.

4231. Do you think the criterion adopted by the old Act, that is to say, wages being exceptionally low, would be sufficient in deciding of whether there should be a Trade Board or not?—That is rather more a national question than a trade question. Our view is that the old Act gave the protection to the trades which were necessary to be protected.

4232. And to the workmen in those trades?—Yes, and to the workmen in those trades. The Act has done our trade good; there is no question about that.

4233. It has raised wages?—It has improved the conditions. It has eliminated the person whom all decent employers objected to; it has eliminated the person who sweated his workpeople.

4234. *Dame Adelaide Anderson*: And it has also brought the employers and the workers more in conference together?—Yes, undoubtedly. We have had practically no trade disputes since we have come under the Board. There have been some occasions at times of difficulty, but they have always been got over.

4235. *Chairman*: Has it worked well on both sides?—Not quite so well as it might, perhaps, but there are several organisations. The difficulty is that in certain parts of the country the trade is organised by an entirely outside union. For instance, in one part of the country the employees who are in a union are in the Seamen's and Firemen's Union, and in another part of the country in the Dockers' Union.

4236. *Dame Adelaide Anderson*: Even if it got better organised it would still not be able to do without compulsory enforcement?—I think it could probably be better kept under the Board because there is a large number of Jewish employers who require some supervision.

4237. Has it ever occurred to anyone that it would be possible to combine the rise and fall in the cost of living and the rise and fall in rates of wages in such a manner that you could automatically arrange the rise and fall in wages?—We have considered that, but there are difficulties. The Minister has been advised that he can only deal with a certain specified rise and fall, and a certain specified cost of living as against a rise and fall in wages. He cannot deal with any other circumstances which might be very relevant to an alteration in wages either way, in any sliding scale scheme.

4238. That would give the kind of elasticity you desire?—That is under consideration at the present moment. We are at the present moment in negotiation with the union with a view to considering whether something of that sort can be done.

4239. *Chairman*: Do you mean that you should consider with the rise and fall of wages also the question of whether the trade can pay the wages?—No. We wanted to do two things. We wanted to consider a sliding scale which would permit of our first considering the rise and fall of the cost of living index figure, and secondly, such other conditions as ought to be considered in connection with a settlement of wages. The Minister, as I understand, has been advised that it is impossible for him to go any further than dealing with the first point: he cannot bring any other point in. In other words, there can be no hypothetical proposal to alter; it must be a fixed determination that if A is so then B follows.

4240. *Dame Adelaide Anderson*: I was not thinking only of what the Minister had power to do, but the consideration of the whole situation, whether it would be a practicable idea if it could be put into an Act of Parliament?—I think it would be beneficial, but I am not quite sure whether it is practicable. There are so many factors that may have to be considered at any time.

4241. *Sir Arthur Pease*: Would you agree that a sliding scale of any kind was only a rough and ready way of adjusting wages for a limited period?—That is so.

4242. And that it must be open always to review at the end of every year or two years?—Yes, undoubtedly.

4243. Because the conditions in trade vary so much at different periods?—That is so.

4244. You could not be tied down to any sliding scale for any long period by Act of Parliament?—No.

4245. *Dame Adelaide Anderson*: I do not mean to suggest anything hard and fast; I am only asking whether it had been considered?—We have considered it.

6 December, 1921.]

Mr. C. J. WATTS and Mr. CULROSS.

[Continued.]

4246. *Mr. Layton*: Is your trade subject to severe competition?—Yes.

4247. What sort of competition?—From abroad—very serious competition from abroad.

4248. What effect did the higher rate that was fixed in November, 1920, have on employment?—It could not have any effect, of course, because there was a total prohibition of imports.

4249. You miss my point. You fixed the highest rates in November, 1920, when trade was already bad?—Yes.

4250. What effect did that have upon employment?—It reduced orders, and therefore reduced employment.

4251. Were you working short time in 1921?—Yes, the whole of 1921. (*Mr. Watts*): Immediately the high rate came into force from November, 1920, there has been a considerable amount of short time worked practically dating from the increase of the rate.

4252. Would you attribute much of that actually to the rate itself. Is it your opinion, without asking for figures, that you could have employed more people at a lower rate?—(*Mr. Watts*): Most certainly to-day you could. The serious part of that rate was this. Remember, trade was bad to begin with. The second step was that the wages were increased, which meant the third step, going to your customers and asking them for increased prices.

4253. *Chairman*: The fourth step was that the customer said: "I will not pay more"?—Exactly. That is really the reasoning of the effect of that raising of the rate at a most unfortunate time.

4254. *Mr. Layton*: Have the employees recognised that?—Yes. We had deputations from our own workpeople against it, and also against the previous rate.

4255. What did they propose?—They said it was a ridiculous rate.

4256. How was it, then, that for 12 months no proposal was made to lower that rate?—I am not on the Trade Board now. I would refer you to Mr. Culross. (*Mr. Culross*): I think the proposal was made six months afterwards.

4257. After the other came into effect, but it only came into effect 12 months afterwards.—You cannot propose to vary while you have another rate under proposal.

4258. But you were entitled to take it after that rate came into effect?—(*Mr. Culross*): We have never adopted a policy of jumping to that extent. One has to see how the thing works out. We have not rushed to the extent of at once demanding a reduction, otherwise we could—

4259. I think your previous answer really answered it when you said that you hoped 1921 would see a recovery of trade?—Yes. I think I am right in saying that in the early part of 1921 there was a slight

(The Witnesses withdrew.)

Mr. FRANK NUTTER HEPPORTH, called and examined.

The witness handed in as his evidence-in-chief a statement in agreement with that handed in by the witness of the Wholesale Clothing Manufacturers' Federation, Mr. D. Little.

4271. *Chairman*: You are Managing Director of Messrs. Hudson, Scott and Sons, Limited, who are tin box manufacturers in Carlisle?—Yes.

4272. Were you, until October last, Chairman of the employers' side of the Tin Box Trade Board?—Yes.

4273. I think you have also been, until recently, the Chairman of the British Tin Box Manufacturers' Federation?—Yes.

4274. Is that the recognised organisation of the employers in the tin boxmaking trade?—Yes, the only one.

4275. When was your Board formed?—In January of 1915, that is the first meeting.

4276. How many meetings have there been since then?—About 21.

revival in trade. Then the coal strike came which killed it.

4260. *Sir Arthur Pease*: Could you give approximately the proportion of the cost of the finished article which is wages?—(*Mr. Watts*): To-day?

4261. Supposing the finished article costs 1s. for so many, how much of that is wages?—It depends entirely what the finished article is. There is such an enormous variety in trade.

4262. Would it be 10 per cent., 20 per cent., or 50 per cent.?—(*Mr. Culross*): It might in some cases be 80 per cent. and in other cases it would not be 5 per cent.

4263. *Chairman*: It all depends on material.—(*Mr. Watts*): Entirely on what box you are producing.

4264. *Mr. Layton*: On the whole it is not an expensive material, is it?—(*Mr. Culross*): Yes, it is. It is not so bad now, but it has been as high as £100 a ton during the war. Before the war it was £3 15s. to £4 a ton.

4265. Including freight?—The freight was nothing.

4266. During the war?—It was only the freight from Holland. We were cut down to a sixth of our 1914 consumption. (*Mr. Watts*): To-day, roughly, the raw material is double what the pre-war figure was, but the wages are three times as much.

4267. *Mrs. Lyttelton*: And the work varies from the roughest to the most skilled, does not it?—(*Mr. Watts*): Yes, in different factories.

4268. *Chairman*: I would like to know the net effect of what you have said. You say the Trade Boards have done the trade good. On the other hand, you say that certain rates of wages have done the trade harm by making the production more expensive. What is your remedy for it? Obviously you do not want to abolish the Trade Boards.—(*Mr. Culross*): No.

4269. Do you want to reduce their operations in any way or to lay down certain rules to govern them?—I think on three grounds; we want greater elasticity in the working of the Act itself, a shorter period for such alterations as are necessary; we want to govern our own house without the continual interference (I use the word quite inoffensively) of the Ministry, subject, of course, to some ultimate control by the Minister, I quite agree; and it would be an advantage if we had some other words than "ordinary worker" in the Act. We want also some greater latitude in regard to the infirm person, because there are a very large number of infirm persons in our trade.

4270. I should have thought that as regards infirm persons—?—They must be so infirm that they are far removed from anything like an ordinary worker. There are plenty of people who would come into your category in assessing an ordinary worker who are not sufficiently infirm to be granted a certificate under the Trade Board Acts.

4277. Have you an Administrative Committee?—Yes.

4278. You have acted upon that also?—Yes, all the time.

4279. Your statement is also rather like the others. Do you happen to have Mr. Healy as your Secretary?—Yes, that is our good fortune.

4280. I can take some of these points more shortly. Do you agree with the last two witnesses as to scope?—Certainly.

4281. Do you think they should be dealt with by the Board?—I do. We had no difficulty during the period we were dealing with them in that way.

4282. Where the Board seek to bring persons within its scope who are not within it there must be some sort of appeal to somebody?—I certainly suggest that there should be, but I never found any anxiety to haul people in. I think there was as much anxiety to keep them out in some respects. We had the articles

6 December, 1921.]

MR. FRANK NUTTER HEPWORTH.

[Continued.]

in front of us and it was very easy for us to know about it.

4283. I think there have been questions of real importance. It does not affect you, but the tailors wanted to bring in the manufacturers of oilskins and mackintoshes. That would be a big question. One can understand that the manufacturers of oilskins and mackintoshes might have a serious point to raise?—Yes.

4284. You would not suggest that they should be absolutely bound by the decision of the Tailoring Board?—Certainly not.

4285. Upon the whole, Mr. Hepworth, do you consider that the Trade Boards Act has been beneficial to the trade?—Yes, I do.

4286. It has improved the conditions?—Yes, I think that it has in every way.

4287. Your suggestions are, to a great extent, the same. You agree that the time should be shortened?—Yes.

4288. You agree that the inspectorate should be increased?—I think that is important.

4289. You have not set up any District Trade Committees, I think?—No, we have only just had the Board.

4290. Mr. Layton: Is your trade localised?—No. My factory is in Carlisle. The nearest one would be probably in Newcastle, and, further south, probably, somewhere in Nottingham or Hull.

4291. Is there no local congregation of tin box factories in any district?—No, except London.

4292. Chairman: I suppose there are not a very large number of employers altogether?—I think there would be probably about 150.

4293. Mr. Layton: All of them in towns?—Yes, in towns.

4294. None of them in country districts?—No.

4295. Are there any in South Wales?—Yes, there are several in South Wales.

4296. Also in towns?—Yes—generally speaking near the tin plate works.

4297. Chairman: You were set up under the Act of 1909?—Yes.

4298. Do you find the Act of 1918 has made any difference?—Yes. I do not think things have worked out well under it. There has always been a feeling of injury, shall I say, in reference to the interference from the Ministry. One particular case I have in mind. It is not a question of scope so much as a question of definition in the Act. We had a deputation some months ago to the Ministry and nothing has been done yet. It is a question defined as making tin boxes out of tin sheets. Of course there is a black plate which is just the same exactly, only it has not been tinned, which is very largely used, and used in the same factories, which does not come under our regulations really. We have had a deputation to the Ministry to have it altered and nothing has come of it so far.

4299. You want the powers of your Board increased there?—We really want the definition to be a definition which really covers the trade.

4300. You do not contend that the present definition covers that work, but you think it ought to be enlarged so as to cover that work?—Yes.

4301. Mr. Layton: I would like to put the same point to you that I put to the previous witness. Has your trade been through a period of bad depression? It is in that period now.

4302. When did that depression set in?—It is very difficult to tell, but from my own experience I should say it began somewhere about June, 1920.

4303. That also is the date on which they fixed the rate at 1s. 3d., is it not?—Yes.

4304. That was the maximum rate?—Yes, that was the maximum rate. The cost of living number then was very high of course.

4305. The index number would be somewhere in the neighbourhood of 170, would it not?—That is right.

4306. Do you remember what the cost of living index number was in 1919?—I cannot tell you.

4307. The cost of living index number would be over 100; about the same level that it is to-day?—Probably.

4308. What was the current rate in 1919?—The one settled in December, 1918, was 5½d., the minimum rate for 52 hours.

4309. That is female?—Yes, and 9d. for males.

4310. That was for a period when the cost of living was about the same as it is now?—Yes.

4311. The present rate is what?—The rate just passed is 8d. for females and 1s. 4d. for males.

4312. That came into force about a fortnight ago?—Yes.

4313. How do you explain that when the cost of living is back at the level that it was in 1919 the Trade Board has just fixed rates which are about 50 per cent. higher than the rates which the same Board fixed when the cost of living was at that figure in 1919?—You can explain it probably in several ways. First of all it is never so easy to go down as it is to go up. That, I believe, is contrary to scientific reasoning, but it is much easier to go up than to come down in wages.

4314. Have you not used the cost of living index number as a test of your wages changing?—Not altogether. We find that when the cost of living comes down the Board of Trade figures are not accepted.

4315. The figures are 9d. in 1918 and 1s. in 1919, covering a period of the same level of cost of living as the present time. Have those figures been put before the Trade Board by the employers?—They certainly have been put before the Trade Union. We met them before we went to the Board this last time.

4316. The figures, as you put them here, look as though the Trade Board machinery for shifting wages certainly does not follow the cost of living figure very rapidly or closely?—I do not think it can be said to do so.

4317. What would you say is the predominant idea that the Trade Board endeavours to give expression to?—Undoubtedly, to a certain extent, the cost of living, but also a feeling, I think, which a good many people have that the rates paid originally were not reasonable rates, and with a distinct desire to improve conditions as far as possible. If you ask my own personal opinion about the present rates I still think they are too high. I do not think the reduction has been enough. It certainly was not what we proposed.

4318. Mrs. Lyttelton: Had you proposed a very big reduction?—It is 1d. reduction which has actually taken place.

4319. Mr. Layton: What is the meaning of this phrase, "1s. 2d. to 1s. 3d."? The figure you give us for 1920 is 1s. 3d. You now say the figure is 1s. 2d. to 1s. 3d.?—There are two rates if you look at them.

4320. It is 1d. reduction?—Yes, our proposal was to return to the previous rates when we made our proposal to the Unions, that is to say, to the rates that were fixed in November, 1919.

4321. That would be a reduction of 20 per cent.?—7½d. really for females.

4322. The male rate would be from 1s. 3d. to 1s.?—Yes.

4323. That would be a reduction of 20 per cent.?—Yes.

4324. Did you put this case before the Appointed Members?—Yes.

4325. And compare it with the cost of living?—We argued it out at great length with the Unions and they made a very strong appeal to us. They felt that the cost of living, in all probability, although it had shown some considerable drops, would go up during this back end of the year, as figures frequently had done. The Chairman in fact at the meeting, when the rates were proposed, only gave his consent to the proposal, which is actually the figures which are here now, on condition that he reserved to himself the right of reviewing the position in the light of the cost of living or the condition of trade at the time when we came to fix.

4326. Dame Adelaide Anderson: It is chiefly a home trade, is it; it is not so much for export as for home

6 December, 1921.]

MR. FRANK NUTTER HEPPORTH.

[Continued.]

consumption?—I think that is really one of the things that we are suffering from at the present time. The manufacture of tin boxes empty is not an export trade, but the number of articles that are exported in tin boxes is innumerable, and therefore a very big part of the trade of the larger tin box manufacturers, at all events, may be said to be an export trade. That, of course, has practically ceased.

4327. Do you agree with the previous witness that it would be advantageous to co-ordinate the tin box industry with the paper bag and cardboard box industry—advantageous to have a common Chairman for the group of kindred industries? Do you agree that they are kindred with yours?—I cannot see any relation really except that we do meet at one particular point which we have had many arguments about, that is, in reference to a box which is partly made of cardboard and partly made of tin. We have had many fights as to which Board it belongs to.

4328. *Mr. Layton*: Would you consider that the economic conditions affecting the tin box trade are such that the price of tin boxes should in ordinary times be held higher than in the past without prejudicing your consumers, that is to say, the food packing trades and such trades as that? What I have in mind is this, is it the case that the cost of tin boxes is a very small item in the price of the products that are sold in your boxes?—I can only say this, that when the rates did go up to these heights no end of people absolutely stopped using tin boxes because they said they could not pay for them, and they put their goods in paper packets knowing full well that their articles did not get to the public in such good condition.

4329. *Sir Arthur Pease*: I think we had it from a witness on the last occasion that 85 per cent. of the tinplate mills were going in South Wales. Why is your trade bad if the tinplate trade is more flourishing than any other of these kindred industries?—I think you will find that the amount of tinplates that are used in the tin box-making trade is a very small proportion to the South Wales output.

4330. The tin box definition is a very narrow one, is it?—Yes.

4331. *Mr. Layton*: Is it the case, generally speaking, that the cost of the tin boxes is a very small

item in the price of packed food?—I should say that it is normally, but I do not know anything about the plain tin boxes. It is not a business that I have anything to do with.

4332. *Dame Adelaide Anderson*: During the war there was a great use, apparently (one saw it advertised in Exhibitions), of containers other than tin. Did that permanently affect the tin box trade?—I think it is rather too early to say.

4333. *Mr. Layton*: Would you consider that this rate of wages would be a vital factor in the question whether the industry recovers the trade it lost in the way described by Dame Adelaide Anderson?—Yes, I should.

4334. You cannot give us a general idea of the ratio of wages to the cost of your product?—That again is a difference. There is the plain tin and the decorated tin. As to the decorated tin, on which you may have to spend £50 or £60 on so-called artistic work before you start on it, tinplates have gone down in twelve months from about 77s. to the present price, which is something just above 20s. So that the cost of raw material is about 40 per cent. and the rest labour. I give that as an offhand figure.

4335. At present over half the cost is labour?—Yes.

4336. *Mrs. Lyttelton*: I just want to ask a question about the desire you expressed for having powers of side voting. Do you not think that it would be likely to perpetuate deadlock in the voting?—I do not see how it could create a block unless I misunderstand your question.

4337. I only meant: Do not you think that that system tends to produce deadlock on both sides?—I do not think so.

4338. I do not quite understand what the advantages of side voting are, unless it is to get the dissentients in a side quiet, and therefore to get one side voting against the other. That is why I think it may produce deadlock.—I think you are right. The idea is that one manufacturer on the Trade Board could upset the whole of his fellow manufacturers.

4339. *Chairman*: You always have the appointed members to cut the knot?—Yes, there are always the appointed members.

(The Witness withdrew.)

MR. WILLIAM A. J. PITMAN, called and examined.

The witness handed in as his evidence-in-chief a statement in agreement with that handed in by the witness of the Wholesale Clothing Manufacturers' Federation, Mr. D. Little.

4340. *Chairman*: You are a partner in the firm of F. F. Day, Foley & Company, Collar Manufacturers, of London?—Yes.

4341. And of Ilminster in Somerset?—Yes.

4342. Have you been the employers' representative on the Shirtmaking Trade Board since it was established in August, 1913?—Yes.

4343. That is a Board established under the old Act?—Yes.

4344. Have you for the past two years been Chairman of the Employers' Side of the Board?—Yes.

4345. And also Chairman of the Shirt, Collar and Tie Manufacturers' Federation. That is the organ of the employers?—Yes, that is the employers' federation.

4346. You have an administrative Committee?—Yes.

4347. You first fixed a minimum rate for all workers, and it was only afterwards that you began to fix special rates for skilled workers?—Yes, last year or the latter part of the previous year.

4348. You agree very much with the last three witnesses on general questions?—As the previous witnesses have said, we have the benefit of Mr. Healy being Secretary of our Federation.

4349. You say you have noted the agitation in certain quarters against Trade Boards. What is your view, founded on your experience?—With reference to the Boards?

4350. Yes.—That the general result in our trade of the actual Trade Boards has been one of considerable benefit both to the workers and to the employers. It has brought about a much better feeling amongst the employers generally; they have got to know each other in another way than as just competitors, and it has also brought out the workers' side of many questions that before was not considered by employers as a body, and that the general result has been one of considerable benefit, I think, to the trade generally.

4351. Still, you think the Acts may be amended?—Yes, I think the new Act is trying to do too much.

4352. Will you expand that? In what way?—I should expand that in this way, that in endeavouring to set up so many different rates they are setting a problem for the Ministry for its inspectorate. That is just one side of it, that it is very hard to get efficiency, and that unless the Act is efficiently administered its usefulness is very small indeed. Under the old Act certainly there were fewer Boards and the inspectors, to a large extent, understood the work of the different industries comprised under those Boards, and the inspectorate was therefore much more efficient than later on, when the more efficient

6 December, 1921.]

MR. WILLIAM A. J. PITMAN.

[Continued.]

inspectors were distributed over a lot of Boards that they knew nothing about; and the inspection was generally totally inefficient. That is the difference between the new Act and the old, as far as inspectorate goes. As regards the definition under the new Act and under the old, it seems to me that all that was necessary was achieved in the old Act, and if the wages in a trade were too low, that was a sufficient reason for setting up a Board; but that they should import into this new Act want of organisation amongst the workers as being the reason seems only to give rise to trouble, which I think the Ministry are struggling and trying to get the better of now.

4353. *Mr. MacCallum Scott*: How does that affect your own trade? Is that inadequately inspected?—Certainly, our own trade is very inadequately inspected at the present time.

4354. Have you noticed a deterioration in the inspection?—It is insufficient altogether.

4355. Was it better at the beginning?—Surely.

4356. *Sir Arthur Pease*: Do you recommend inspection by trades rather than by industries?—I think that is much more efficient. An inspectorate to be really efficient needs to know something about the trade and the industry that is carried on in the place that they are visiting.

4357. *Dame Adelaide Anderson*: It is a question of degree, I suppose. An inspector could get to become very familiar with a few industries and might acquire the faculty of increasing the number. It is largely observation and study and consideration. In time, one or two inspectors might get to know nearly all the trades?—Yes.

4358. But the difficulty of the inspection is not one that is necessarily linked up with the Act of 1918: you can overcome that in time by building up your inspectorate.—My point was that under the 1918 Act they had set up so many Boards under the new condition which were hardly maintained in the old one. All the distributive Boards, for instance, which were set up under the 1918 Act are such a strain on the staff as to render the working of the Act generally inefficient.

4359. I suppose at the beginning it took the Inspectorate a little time to become efficient under the old Act?—Quite so.

4360. So that in both cases it is a question of time?—Quite.

Chairman: Time and numbers.

Dame Adelaide Anderson: Yes, time and numbers.

4361. *Mr. Layton*: I notice that in referring to district variations you do not use quite the same formula as the other witnesses, if I may say so. You say this, that committees have been of little practical good because they have no power to fix rates. Do you think that they should have such power?—No, I do not think so. I think the flat rate is better.

4362. You think there should be the same rate all over the country?—Yes.

4363. Do you think the flat rate is suited to Somerset and to London?—Yes.

4364. Would you fix the Somerset rate as a flat rate?—The conditions of carrying on the trade are practically the same whether they are conducted in London or in Somerset.

4365. Do you in fact pay the same rate of wages in your London factory as in your Somerset factory?—Practically. There is very little difference to-day.

4366. For unskilled labour?—We have practically no unskilled labour in our factory.

4367. Are these fixed here. Would you call them skilled workers which these are applicable to?—The male or female?

4368. The female.—Yes.

4369. You would call them skilled?—Yes. It is the custom in the shirt and collar industry to take the girls straight from school and then to apply them to the learning of their trade. As soon as they are proficient they go on to the piece-work rates, and those rates are calculated of course to yield the minimum rate or above.

4370. Do you submit that the earnings of work-people are the same in Ilminster as they are in London?—No, I do not think they are, because I do not think the Ilminster worker, to take her generally, is so proficient as the worker in London.

4371. Do you pay them the same piece rate?—No. They do not make the work in the same way. The country method of production is rather more comprehensive than the London. We sub-divide it into so many processes in London as compared with the method in the country that by their application to one process they become able to earn better money in London than they do in the country.

4372. But by the application of the same rates? Can you get that result by applying the same Trade Board rates?—Yes.

4373. Do you pay the Trade Board rate in London? You do not pay over the Trade Board rate?—Yes, the prices that we fix will yield above the Trade Board rate, of course.

4374. They do, generally speaking, in London yield above the Trade Board rate?—Yes. It depends on the proficiency of the worker.

4375. Broadly speaking, your piece list in London produces more than this figure here which is called the piece-work basis time-rate for the whole country; they will yield more than that?—That is a thing that varies in every factory, because the process is not standardised at all. Where one factory will be running and turning their work, the other one will be patent turning and stitching their work. They are processes which make all the difference in the rates fixed, and also in the ability of the worker to earn those rates. That is where the question of Inspectorate came in. It was essential that the Inspectors coming into a collar or shirt factory should know something about the method of that factory before they were able to go into the question. It took those early Inspectors a long time to get to master the different processes in working the different factories so that they could come to a conclusion as to whether the rates were adequate to yield the minimum Trade Board rate.

4376. My point is that they would, generally speaking, yield a good deal more in London than in Ilminster in excess of the piece-work basis time-rate?—It does not follow.

4377. I thought you answered me just now that the earnings in London, generally speaking, are higher than those in Somerset?—That is so, because the workers are more proficient in London and the work is carried on on what we conceive to be an improved system in London as compared with the country method of manufacture.

4378. Therefore, however you work out their piece rate, the piece-work earnings per hour which correspond to this piece-work basis time-rate are higher in London than they are in Somerset?—It yields a little more per hour in London than in Somerset.

4379. Therefore this figure is the Somerset rate?—No, we do not get at it in that way.

4380. I do not say you get at it in that way, but it is in fact the earnings of Somerset?—Neither is it, because this whole matter varies in every factory. It is apparent that I am not getting at what you are wanting me to appreciate. I am not getting your point, perhaps.

4381. You began by answering me that the earnings in London are higher than the earnings in Somerset?—Per individual head.

4382. Per hour, whether they are engaged on the time-rate or the piece-work basis time-rate principle?—Yes.

4383. I am only wanting to know how this figure is arrived at, and I suggest to you that if that is so, it must be a minimum suitable to Ilminster?—The way the figure there is arrived at is by conference with the Board. That is how the minimum rate is arrived at. Then as to how each factory can show that they paying the rate, it is arrived at by an examination of their work books.

6 December, 1921.]

Mr. WILLIAM A. J. PITMAN.

[Continued.]

4384. I will put it in this way, that if 9d. is a suitable piece-work basis time-rate for Ilminster, it is clear that London could pay a piece-work basis time-rate of 10d. or 10½d. or some other figure?—No, not at all. That does not follow at all.

4385. In fact the earnings are 10d., 10½d. or 11d.—The difference is not nearly so much as that, and these differences vary all over the country. You will probably find another factory in the south-west district where it is quite different. In fact when this matter was first gone into, the question of whether the collar-making section particularly should come under the Shirtmaking Trade Board, the collar-making section petitioned the Board of Trade to be excluded from the operation of the 1909 Act, and in support of their case they put certain average figures of earning power of different workers in different parts of the country before the Department. I have in my mind some figures which were produced by a firm in Bideford which showed that at that time—this is early 1914 or 1913—their workers working about 50 to 52 hours a week, were at that time showing an average of between 17s. and 18s. a week, to their female workers. Before we got inflated ideas that was considered to be a very fair wage for a girl employed in shirt and collar making. That is an

instance of a West of England place where the average wages were probably better than several places I could tell you of in London at the same time. So that the rate is not based on the ability of either the West of England, North of England, Scotland or any other district to pay that rate, but it is the outcome of negotiations between ourselves and the workers' representatives; the compromise is arrived at and the figure is submitted to the Board. That is how that actual rate was arrived at and the Board made it obligatory.

4386. You mean that there is very little difference in the average earnings in the different districts?—It is difficult to give you an answer that you can record which will convey to your mind exactly the position as it happens to be at the time, because there are no two factories working under the same conditions and doing the same class of work.

4387. Mrs. Lyttelton: Do you think the provision of a flat rate would be advantageous?—I do think so. I think it is the only practical system that we can work under.

4388. Dame Adelaide Anderson: The efficient and energetic worker will make out of that more than the inefficient or less strong?—Yes, surely.

(The Witness withdrew.)

(Adjourned to to-morrow morning at 11 o'clock).

ELEVENTH DAY.

Wednesday, 7th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (Chairman).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTTELTON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS, Mr. J. POLLITT, Mr. A. S. HUGGAN, and Mr. D. GARDINER, on behalf of the Parliamentary Committee of the Co-operative Congress, called and examined.

The witnesses handed in the following statements:—

The Parliamentary Committee of the Co-operative Congress is a Joint Committee composed of representatives of the Co-operative Union, Limited, the Co-operative Wholesale Society, Limited, the Scottish Co-operative Wholesale Society, Limited, and the Co-operative Productive Federation. It speaks, therefore, on behalf of the whole of the Co-operative Movement of the United Kingdom, the membership of which is approximately 4,500,000 adults. The Committee is unanimously in favour of the retention of Trade Boards, and submits herewith evidence in support of that position from:—

1. The Co-operative Wholesale Society, Limited.
2. The Scottish Co-operative Wholesale Society, Limited.
3. The Co-operative Union, Limited, of Great Britain and Ireland.
4. The Co-operative Productive Federation, Limited.

A. V. ALEXANDER,
Secretary.

1. CO-OPERATIVE WHOLESALE SOCIETY, LIMITED,
1, Balloon Street, Manchester.
Evidence of Mr. J. E. JOHNS.

C.W.S. views in support of the retention of Trade Boards and reasons advanced therefor:—

We are strongly of the opinion that Trade Boards should be retained and worked as national machinery for the regulation of wages, hours and conditions of

employment, particularly in those trades which are not sufficiently organised to demand adequate and reasonable remuneration and conditions of employment by their own efforts. If they were abolished we are of the opinion that the tendency would be to revert to sweating and long hours by unscrupulous employers, who would take the opportunity of adding to their profits at the expense of the worker. Wages would be left to bargaining between employers and employed; a method successful in the highly organised trades where the first necessity of fair bargaining—that of negotiations between equal powers—could be fulfilled, but hopeless where the power is on one side only, and the individual worker must accept whatever offer is made. Such conditions would call upon private charity and out-relief to supplement inadequate earnings. This would also create unfair competition, and those employers whose desire it is to treat their workers fairly would be compelled, in order to maintain their trade to offer wages which would be repugnant to their conscience; therefore it is highly important, in our judgment, that Trade Boards, both in the interests of employer and employed, should not be abolished.

From our experience of the working of Trade Boards, being as we are, engaged in a large variety of industries in which wages are governed by Trade Board Machinery, we firmly believe that they have been conducive to more harmonious working.

Speaking generally, they have, in no uncertain way, improved wages and established better conditions for workers, and, at the same time, put

7 December, 1921.]

MR. A. V. ALEXANDER, MR. J. E. JOHNS,
MR. J. POLITT, MR. A. S. HUGGAN and MR. D. GARDINER.

[Continued.]

employers of labour on one common basis so far as wages costs are concerned. Employers should introduce scientific management and use modern methods and machinery to enable them to compete in an open market. Efficient production is, without doubt, preferable to inefficient methods bolstered up by sweated labour.

Trade Boards have, to a large extent, eliminated spasmodic disturbances engineered by local Unions, but the fact must not be overlooked that the inception of the majority of the Boards came at a time when wages generally were being advanced. Time alone will tell whether the same degree of success will be achieved by future wage variations, as the opportunity arrives for working under normal conditions.

Suggestions for improved working.

(1) We would prefer an independent Chairman with the power of a casting vote. In our experience no decision would be arrived at without this power; also we do not think it necessary to have four or five appointed members.

(2) Trade Boards, in our opinion, should have full executive authority under the Acts of Parliament without interference from the Minister of Labour, seeing that the Minister is a political appointment, and represents party politics, which should, undoubtedly, be kept clear of trade.

(3) The Grocery and Provision Trade Board provides rates of wages for three areas. We suggest that it would be an improvement to extend such division to other Trade Boards, as the specific conditions obtaining, and cost of living could then receive due consideration for the various areas.

(4) We suggest decentralisation and the establishment of local Committees in, say, four or five areas, in order to afford better opportunities to practical people in the large industrial centres to express, or vote for, their particular views. The value of the vote should not be by the number of individuals attending the meetings in London, but the "Area" representatives' vote should also be given a specific value.

(5) We are also of the opinion that the provision made for Time Workers who are affected by any infirmity or physical injury which renders them incapable of earning the prescribed minimum Time Rates could be extended in order to include any worker over 60 years of age, who could be allowed exemption from the provisions of the Act on application being made.

(6) We think it might be an improvement if arrangements could be made whereby the expenses incurred by members attending Board Meetings should be borne by the trade with, say, accommodation for meeting and cost of Secretarial Staff to be provided by the State.

(7) In regard to the length of time taken between a proposal and the fixing of rates, we are of the opinion that two months is altogether too long for formulating and lodging objections, especially seeing that after the expiration of that time the objections have to be considered, which may easily take another two months. We suggest, therefore, considerable acceleration be applied in this direction, or, in order to avoid such delays, Trade Boards be constituted "fully representative," in which case it would not be necessary to wait for consideration of objections. A month's notice before the rate is applicable would be sufficient.

2. SCOTISH CO-OPERATIVE WHOLESALE SOCIETY, LTD.,
95, MORRISON STREET, GLASGOW.

(a) Evidence of Mr. A. S. HUGGAN.

I have been a member, on the Employers' Side, of the Grocery Trade Board for Scotland, since it was formed in the early part of last year.

Our first recommendation of minimum rates of wages was referred back to us by the Minister of Labour, and our second recommendation was confirmed by the Board a fortnight ago, and forwarded to the Minister, with the request that it should be put

into operation on the 2nd January next, and we are very hopeful that it will be duly ratified.

There have been differences of opinion between the sides constituting the Board, but there has been an atmosphere of goodwill, and a real desire to reach a satisfactory settlement at all our meetings, which augurs well for the success of the Trade Board system.

I think the object of the Trade Boards in seeking to secure and maintain industrial harmony is likely to be attained. The fact that representative men and women from the employer and employed classes are meeting together periodically, and exchanging views on matters of paramount interest to both, is likely to clear away differences before they become acute, and reach a stage when they would be more difficult to settle.

I have no fault to find with the constitution of the Trade Board with which I am connected. While its numbers are large, they could not very well be much less, if the various interests of the trade concerned are to find adequate expression. The appointed members, and particularly the Chairman, have rendered good service in exercising a moderating influence when widely divergent views are expressed. Nearly all our findings were unanimous, and only in one or two instances was a vote necessary. We have appointed an Executive Committee, composed of members drawn from each side, to deal with matters of minor importance, and its decisions, are, of course, subject to revision by the Board. This Committee will be of real service in facilitating the work of the Board.

I think, however, that there is a grave danger of our having too many Trade Boards, and that instead of having a Board for each trade, there should be a system of grouping trades that are correlated, or trades where the conditions of labour are somewhat similar, under one Board.

The primary object of the Trade Board system is to fix minimum rates of wages, or, in other words, a living wage, and not to regulate wages in the ordinary sense, and the hours of labour. It seems to me that this object could be attained more efficiently and more economically, by grouping kindred trades under one Board, and it would be a great convenience to many firms who have certain workers engaged in different operations, and who, under the present system, come under the control of different Boards.

I would suggest that some of the present Boards be merged in others, and that, before any new Boards are created, it should be considered whether the Boards already in existence could not, with some adjustment of personnel, be usefully employed in controlling trades presently out—with the Trade Board system.

The Grocery Trade Board for Scotland have fixed the working week at 48 hours, and these hours should also apply to small businesses carried on exclusively by the owner, or members of his family, otherwise shops coming under the control of the Board will be subjected to a good deal of unfair competition.

(b) Evidence of Mr. D. GARDINER.

Trade Boards, in the opinion of the writer, are of much service to both employers and employees, inasmuch as they protect the former against the competition of those who are inclined to pay sweated wages, and also the workers against sweated rates being imposed on them.

The abolition of Trade Boards would, in my opinion, result through time in a return to "Sweating," and all that the same means in the shape of unfair competition against fair-minded manufacturers and hardships on the workers.

The opinion advanced by some that Trade Boards tend towards unemployment has, in my opinion, little or no foundation in fact. Hardships may at times occur, particularly to those who have to go out to work as learners comparatively late in life, but an amendment of the regulation which fixes wages according to age and not according to ability, would, in my opinion, meet the case, i.e., pay them according to their ability and not according to their age.

The methods under which rates are from time to time amended are somewhat cumbersome, and slower

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

in action than they should be. Improvements in this direction are worthy of consideration, and in my opinion could be easily effected.

The differentiation in wages as between one part of the country and another ought to be avoided, and are uncalled for.

From the standpoint of national welfare, the abolition of Trade Boards would be a retrograde step. The force of law behind any regulation in regard to rates of wages is much more powerful than any regulation of Trades Unions, inasmuch as the former cannot easily be evaded, whereas in connection with the latter that is not difficult of accomplishment on the part of those who may set out to do so.

3. CO-OPERATIVE UNION LIMITED OF GREAT BRITAIN AND IRELAND, Holyoake House, Harrover Street, Manchester.

Evidence of Mr. JAMES POLLITT, Labour Adviser to the Co-operative Union.

The Co-operative Union which I represent here to-day is an organisation composed of 1,500 co-operative societies registered under the Industrial and Provident Societies Acts, and covering in their operations practically the whole of the United Kingdom. Of this number 1,379 are retail distributive societies and 122 productive and manufacturing societies.

At the close of the financial year, December, 1920, there were employed in the distributive side of the Co-operative Movement 114,500 persons, and on the productive side 87,000.

The distributive trade for the year 1920 amounted to two hundred and sixty-three millions six hundred and eleven thousand five hundred and sixty pounds, and for the productive societies, one hundred and forty millions five hundred and thirty-two thousand five hundred and ninety pounds, making a total Co-operative trade of £404,140,150.

The retail distributive societies are engaged in almost every branch of trade which can be brought under the head of "Distributive" and are, therefore, or will be, within the scope of existing or prospective Trade Boards for the distributive trades.

The productive societies produce or manufacture almost every class of goods used for domestic consumption and cover the operations of coal mining, weaving, boot and shoe making, sugar confectionery, ready-made tailoring, farming, etc., and they have in these services employees coming within the operations of about 18 different Trade Boards, viz.: (Appendix 1).

The Co-operative Movement as a whole is strongly in favour of the existence and extension of Trade Boards, particularly in respect to the distributive trades, and as an earnest of our support of them we have invariably sought representation upon all those likely to affect our employees in the various branches of service. In many cases this has been granted.

The rates of wages fixed under the Trade Board orders have had little or no disadvantageous effect up to now upon our societies, mainly because we pay higher rates (Appendix 2), but apart from this it is our opinion that the Boards have been of considerable financial and moral benefit to the trades concerned. We think they have been of benefit to the employer—especially the good employer—because he knows he cannot suffer from the unfair competition of other employers in the same business who would, if they could, pay lower wages. We are convinced also that the fixing of a fair minimum wage is conducive both to better service and improved organisation which benefit the employer and public alike. Again, we believe Trade Boards can be of great service in bringing about an improvement in the standard of work by including under their supervision, as they have power to do, the system of apprenticeship and enforcing rules for the proper training of apprentices. The advantage of the Board to employees lies in the fact that they improve Trade Union organisation while the material concessions such as shorter hours, a higher minimum wage, and

the absence of the fear of unemployment through undercutting in wages, are obvious.

Given a fair amount of goodwill on the part of the members of a Board, there is in fact still less likelihood of dislocations of labour, and, personally, we find from experience that the mere fact of the meeting together of representatives of employers and workers assists both sides materially in understanding and appreciating each others difficulties; consequently matters are not pushed to so extreme a point as when both sides meet under different auspices or strange conditions. The value, therefore, of the goodwill engendered under the Trade Boards cannot be overestimated.

In regard to the statement that the establishment of Trade Boards has resulted, or will result, in more unemployment, we have found no adequate proof of this in respect of industries governed by the Boards, and believe the charge to be one most frequently made by persons without knowledge and experience of the active working of a Trade Board, and, we fear, by those who are out for the destruction of the system.

If, for example, we take the grocery trade, it will be found that the objections lodged against the Board come under two heads, (a) inability to pay the rates proposed, and (b) the consequent dismissal of employees. In regard to the former complaint, may we take as a fair sample an objection lodged by a certain firm against the original Grocery Trade Board proposals? The objection was that the firm could not pay the Trade Board rates as they were 50 per cent. higher than the general rates in the town, and yet in the same streets of the same town the co-operative society was paying wages 3s. to 5s. per week for adults of 21 years of age higher than the Trade Board proposals. Not only was it paying such wages, but actually carrying on a successful business, as shown by the fact that the surplus for the year 1920, after meeting all expenses and paying 5 per cent. on capital, amounted to £23,712 17s. (Appendix 3). It is hard for us to believe that co-operative efficiency is better able, on the whole, to attain such results than that of private grocers!

Similar objections were lodged against the operations of the Milk Distributive Trade Board. The rate for adult males under the Board was 62s. Every co-operative society in Lancashire and Yorkshire, at least, were paying for the same class of labour 72s. to 80s. per week.

Again, under the Boot and Shoe Repairing Trade Board the same objections were made to the rate of 65s. for weekly wage workers. Co-operative societies in the area above-named were paying 80s. to the same class of worker. These are typical cases and largely refute, in our judgment, the statement that the industries cannot bear the rates proposed or put upon them. As before stated, we have no convincing proof that Trade Boards create unemployment, and indeed we cannot see how they can. The public require a certain amount of food, clothing, and other necessities, and if they cannot get them from one shop they will go to another. It can perhaps be admitted that some dislocation of labour will result—possibly a few cases of hardship in the case of the small business concern with one or two assistants—but surely, if trade is diverted from one place to another, it is obvious that increased labour will be required to deal with it in the place to which it has gone. Therefore we think that the question is not so much one of unemployment, but rather a transference of business—not of any considerable volume either—from one place where it cannot be adequately dealt with to another place where it can. Quite distinct from the action and influence of Trade Boards, this is an everyday event in commercial evolution wherein the customer is supplied from a well-organised business in preference to the small independent shop whose expenses and prices are higher.

Again, in respect of the question of unemployment it has been said that the fixing of minimum rates causes slow and inefficient workers to be discharged. We agree that it is possible this may happen in a

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GAR DINER.

[Continued.]

small number of cases, but, on the other hand, we consider there is a far greater danger in allowing the man who holds the purse strings to say whether a worker is inefficient or slow.

There is, indeed, grave danger here of unscrupulous employers exploiting the deficiencies of these workers and using it as a means to keep wages down. The only reason for employing deficient workers (except in a few cases of charitable intent) is that their labour, however deficient it may be, is profitable to the employer. Few employers would retain it if it were not. However, we do not believe that the fixing of a living wage under Trade Boards has resulted, or need result, in the dismissal of numbers of inefficient workers. Rather do we incline to the view that a living wage will tend towards greater efficiency if for no other reason than that the employer will concern himself more with obtaining efficiency after the enforcement of a legal minimum than he did before.

We have heard a good deal of agitation recently from certain sources against Departmental interference, and the cry is set up for complete freedom of action in regard to labour matters—of a desire to return to the bad old days of commercial "*laissez faire*" whereby labour would be completely and entirely at the mercy of the laws of supply and demand. It is to these conditions—the conditions of 1908-9, responsible for the introduction of the Acts which are on their trial to-day—to which these people want to get back. We state emphatically that the question of a legal subsistence wage is a question that cannot, that ought not to be, left in the hands of a single individual to determine.

It is not on account of the fact that the fixing of Trade Boards rates has had little effect upon our societies that we are strongly in favour of them; it is upon the broad grounds of their humanity and goodwill; their capacity for improving the relations between employer and employed, and their influence towards the progressive ideals of mankind. We can see no safer ground, no surer hope for a better understanding between capital and labour at the moment than in the provision of a common meeting ground such as these Boards assure. The employer saved from undercutting in wages, wants a better appreciation of his difficulties, the worker a better understanding of his social, educational, and recreative needs; what greater hope have we in any legislation at the present time for the crying need of industrial harmony than in these Acts?

The co-operative movement has always been a pioneer in the matter of hours of labour. The 44 and 48 hour week was put into operation long before they became general. Many of our productive societies are working on a 44 hour week and none of them above 48 hours.

In the distributive societies, with the exception of the Northern counties where the 44 hour week has been in existence some years, the 48 hour week is universal. If co-operative societies can work successfully in both town and country districts with these hours, it is difficult to see why other traders should not.

We would like here to draw attention to an important objection to the setting up of Distributive Trade Boards which has come to our knowledge. It is that a multiplicity of Trade Board Orders would become a considerable nuisance to firms dealing in several lines of business. We would like to point out that a large number of co-operative societies are, or will be, as the Trade Board system develops, in this position. In our Leeds society with 100,000 members and an annual trade of over five million pounds sterling, they have 2700 employees who come under 10 or 12 different Trade Boards and as many different trade unions. The society, however, finds no difficulty in complying with the requirements of the Boards. I think I am correct in stating that there are at least 100 of our societies whose employees come under six different Boards and almost all our societies are affected by the Orders of two or three. From hardly any of them have we heard of any difficulty in complying with Trade Board Orders. On the contrary,

there is a distinct desire to comply immediately an Order has been issued.

Again, we are not in agreement with those who prophesy trouble on account of various Boards fixing disproportionate rates of wages. We do not admit that such has been the result of the effects of the Boards already set up, nor do we think it will ensue in the case of the distributive trades. The difficulty of co-ordination in the work of the Boards is not an insuperable one and, moreover, we think if due care were exercised in fixing minimum rates for the early distributive trades, the rates under those to be yet set up would follow closely. Rates of wages in the various departmental businesses of our societies were at one time widely divergent; they have close similarity now, and there is no reason why that should not continue under prospective Trade Boards.

Turning to the desire for amendment of the existing Acts, apart from the agitation to abolish the Boards altogether, we believe from our experience as members of existing Trade Boards that there is room for improvement in the existing machinery. First of all, we should like to see the delay in the present adjustment of wages under the Boards done away with, and with this end in view we think the period of three months to allow of objections should be cut down considerably.

Our suggestion is, therefore, that in the case of first proposals the two months allowed for objections at present stipulated should stand, but that for all subsequent variations of the same Order two weeks only should be allowed for objections. This period would, in our opinion, give sufficient time for objections to be sent in, and at the same time meet one of the requirements of the Ministry, which is, that objections should, if possible, be personal objections. What happens now is that organisations representing both workers and employers meet to consider by what means their protests can be made most effective. A joint manifesto is drawn up to which each worker or employer, as the case may be, subscribes, often sinking his or her own personal views to conform to the majority. By these means it often happens that an inflated and totally misleading number of objections is arrived at.

It is our view also that a period of seven days might be sufficient for the Minister to put the rates into operation upon final confirmation by the Board. We believe these alterations in period to be very desirable, particularly in regard to the Boards for the distributive trades where, perhaps, the present rapidly changing economic conditions are keenest felt. Then we think the adoption of a definite standard wage under each Board upon which the rates might fluctuate according to the cost of living would be beneficial. Such a standard carefully fixed would sweep away much of the trouble and a great deal of the expense of negotiation for a considerable period of time, and relieve employers from the bugbear and loss of having wage questions continually on their doorsteps.

Another suggestion we deem of considerable importance is that every business coming under the Boards should be registered. We think this should be compulsory, the chief reason being to facilitate inspection. Under the legislation for the sale of milk the local authority must register every milk dealer, and we think this system might be extended to include all firms and businesses affected by Trade Board orders.

In setting up new Trade Boards, or in widening the scope of existing ones, we think it essential that the whole industry should be brought within the operations of the Board. We believe this to be generally desirable. Just as an instance of present inequality let us take the Milk Distributive Board. At the present time there are a considerable number of milk businesses which in the winter-time do a fresh milk business, and come during that period within the scope of the Board; but at other times these businesses are turning their attention to the manufacture of milk products such as cheese, powdered and condensed milk, etc., and are not, there-

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

fore, affected by the Board in these operations. The position thus created is a difficult one, and one neutralising to a very considerable extent the good work of the Board. Quite often it means that an employee is brought under the provisions of the Board for a certain portion of the year and excluded for the rest; it means sometimes that part of a staff in the same building are in receipt of wages fixed by the Board, and the other part, doing equally or possibly more skilled work, are not protected. Simply because, therefore, the sale of fresh milk in these businesses dealing partly with milk products, cannot be deemed a *distinct branch of business* owing to the fact that no separate accounts are kept, there is a danger of 80 per cent. of creameries evading the regulations of the Board. This, in our opinion, should certainly be remedied.

A further suggestion we desire to make is in regard to the relation of the Ministry of Labour to the Trade Board office. We are of opinion that the administration of the Boards suffers somewhat on account of the fact that certain functions are taken out of the hands of the Trade Board office by the Ministry, such as the control of inspectors and the work of carrying out the Awards after final confirmation by the Boards. We think, therefore, that the persons charged with the duty of dealing with practically the whole work of the Boards in their committee stages should also be given authority to carry out in their entirety the Awards themselves.

Similarly, in regard to the work of the Inspectorate, we think this should come within the control of the Trade Board Department and not, as at present, under that of the Ministry of Labour. We believe, also, that the work of inspection could be considerably facilitated by giving power, through local authorities, to district Shops Acts Inspectors to carry out the work of Trade Board inspection under the instructions of the Inspectors from the Trade Board office, among whom there should be a number fully qualified to deal with the technicalities of the various trades.

Our experience of District Trade Committees is confined to that of the Boot and Shoe Trade Board, and in this case they proved to be of little use except as a further cause of delay in varying the rate. The Trade Board remitted to the District Committees a proposal to alter rates. There are 14 District Committees, and the nature of the decisions of the District Committees were such as to give no definite information to the Trade Board. (See Appendix 4.)

The method of procedure is for the Board to formulate a variation, then for the Committee to consider the proposal, after which the Board meet to consider the decisions of the Committees. This covers a period of not less than two months. In the decisions of the Committee are such that nothing definite can be deduced from them, in that case the whole process has to be repeated, and, consequently, the variation of a rate becomes almost an impossibility. The Act, so far as it relates to District Committees, should be so amended that the Board when once it has consulted the District Committees should have power to proceed without having again to consult the Committee upon the same matter.

With these and other improvements upon similar lines we are convinced that the Boards will extend their sphere of usefulness for the national good. We in the Co-operative Movement are certain that the Boards have justified their existence, and we sincerely trust that the setting up of this Committee will result in a wide extension of the system. When we bear in mind that in the first nine months of 1921 alone, more than 84,000,000 (84 million) men's working days were lost to the nation through strikes and stoppages, and that a sum of £70,000,000 which would have been earned, and probably spent, was lost to the workers, we gather something of the great importance at least of having common ground where, such as under the Trade Boards, workers and employers can meet with reasonable hope of successfully averting a withdrawal of labour, and in a greater spirit of mutual confidence.

It is, however, as much upon broad humanitarian grounds, as well as upon those of commercial and economic interest, that the Co-operative Movement supports the existence and extension of the Trade Board principle. We believe this work to be a step in the direction of a higher civilisation, as well as a wider recognition of Christian morality, and we earnestly trust that the duty of rescuing the low paid, unorganised worker from the morass of indigence, where he has too long been a danger to the capable and efficient worker, will be faithfully carried out.

Evidence of THE CO-OPERATIVE PRODUCTIVE FEDERATION, LTD., Alliance Chambers, Horsefair Street, Leicester.

We have been in communication with our federated societies to ascertain if, and how far, there existed a consensus of opinion among them regarding the constitution and operations of Trade Boards. As a result we have to record a unanimous and emphatic view concerning the necessity for Trades Boards, or some similar machinery, in order to keep up the standard of wages in trades where labour is inadequately organised; and also to prevent inconsiderate employers of labour from lapsing back to the deplorable condition of "sweating" which obtained prior to the passing of the Trade Boards Act, and thereby placing better intentioned employers at a competitive disadvantage.

Whilst not resisting the criticism that Trade Boards are not swift in bringing new scales into operation, we urge, in extenuation of this, that most representative Boards of this description work rather slowly, and we feel that the Cave Committee could most usefully direct its energies towards finding ways and means of expediting decisions.

As a piece of industrial conciliation machinery, the Trade Boards Act is as yet in its experimental stages; its operations should be extended rather than restricted as more frequent periodical meetings between employers and employed are a necessary preliminary to mutual understandings and industrial harmony.

We have received expressions from societies in the boot trade intimating that they would welcome a Trade Board being set up for the boot manufacturing industry as it has been for the boot repairing industry, on the grounds that the present arrangements between manufacturers and the boot operatives by which a manufacturer who wishes to act dishonestly can get behind the agreement and employ cheap labour without suffering any penalties, at a time when it is not expedient for the Boot and Shoe Union to take drastic action, is far from satisfactory, and could not obtain under an agreement having the force of a legal enactment behind it.

We are quite unable, from our experience, to concur in the view that Trade Boards aggravate the problem of unemployment.

[Continued.]

by the Board to the District Trade Committee for their consideration and report:—

"That the general minimum time rates for male workers of 21 years of age and over, and for the female workers of 21 years of age and over specified in Section 1 (a) of Part II of the Notice D (4) be increased from 65s. to 75s. per week of 48 hours in all cases where the rate at present paid is below 75s. that the general minimum time rate for male workers of 20 and under 21 years of age (excluding apprentices) and for the female workers of the same age specified in Section 1 (a) of Part II of the Notice D (4) be increased from 45s. to 52s. 6d. per week of 48 hours; that the general minimum piece-rates (including extras) for repairing be raised $7\frac{1}{2}$ per cent. throughout; that the general minimum piece rate for making (including surgical work) be increased 10 per cent. on the ground work, no variation to be made in the extras for making; and that the overtime rates for the classes of workers referred to above be increased in corresponding proportions."

RESULTS OF CONSIDERATION OF ABOVE BY DISTRICT COMMITTEE.

Employers' Representative:

General minimum time rate of 75s.	(1)
" " " 72s.	(2)
" " " 70s.	(1)
" " " no increase	(4)
" " " defer	(6)

General minimum piece rates for repairing:

Increase of $7\frac{1}{2}$ per cent.	(2)
No increase	(4)
Defer	(8)

General minimum piece rates for making:

Increase of 10 per cent.	(2)
No increase	(5)
Defer	(7)

Workers' Representatives:

General minimum time rate of 80s.	(4)
" " " 75s.	(10)

General minimum piece rates for repairing:

Increase of 15 per cent.	(4); Increase of $12\frac{1}{2}$ per cent.	(1); Increase of $7\frac{1}{2}$ per cent.	(9).
--------------------------	--	---	------

General minimum piece rates for making:

Increase of 15 per cent.	(4); Increase of $12\frac{1}{2}$ per cent.	(1); Increase of 10 per cent.	(8); Increase for handsewn making 20 per cent.	(1).
--------------------------	--	-------------------------------	--	------

4389. *Chairman (to Mr. Alexander):* You are the Secretary of the Parliamentary Committee of the Co-operative Congress?—(Mr. Alexander): Yes, and if you agree, I should like to make a short opening statement.

4390. By all means.—In the first place I would like to refer briefly to a report in the "Westminster Gazette" of November 10th, in which a statement was made that Mr. Cahill, the Secretary, I think, of the Multiple Shops' Association, gave evidence which purported to represent the co-operative views. I simply want to say that that is not so. The fact that we are here to-day is sufficient evidence to counteract that.

4391. I had not seen the statement.—Then I would like to say that the evidence which you have already received, and which you have before you to-day, has been prepared on behalf of the Parliamentary Committee of the Co-operative Congress, and, as stated in my short opening statement, that Committee speaks on behalf of the whole of the movement. By reason of the very wide ramifications of the co-operative movement in this country there must necessarily be various experiences in dealing with a

matter like the Trade Boards, and we have thought it best to give the actual opinions of representative co-operative witnesses from important branches of the movement. The evidence which they will give, therefore, is of an independent character out of their own experience. It is perhaps necessary that I should at the outset explain that the co-operative movement as a whole is unanimous, and we have never received any opinions from within the movement against the continuation of the Trade Boards; the movement is unanimous in support of their continuance, and indeed of their development. In that connection we do not think that the powers under the Trade Boards Act of 1918, for example, have been too widely used, as one or two witnesses have stated. We think it is capable of still further development. I think that our last witness, Mr. Pollitt, will be prepared to answer questions under that head. Then I have to apologise that a statement from the Co-operative Productive Federation was only received by me this morning, but it has now, I think, been circulated to the members of the Committee.

4392. Yes.—If you would like me to do so, I will read that, as it has come at short notice.

4393. There is no need to read it, I think.—That will be part of the evidence.

4394. We will treat it as part of your evidence, and, if you please, we will print it as an appendix to your statement?—Thank you. There is one other matter: we have had brought to our notice a detailed report of the evidence which was given before this Committee and to two or three points in which we would like to draw some attention. With regard to the representation on the Trade Boards of co-operative societies, a statement was made last week that it was thought that at least only directors of co-operative societies should represent our movement upon Trade Boards. We desire most emphatically to say that as a democratic movement we must have the right to choose our own representatives to speak on our behalf on such Trade Boards. We ourselves are employers in a very large capacity; the number of employees in the movement, as you will see from the proof of evidence, is something more than 200,000; and we must establish the right first of all to be represented on Trade Boards and then to choose our own representatives. The directors of important branches of the movement themselves would on occasion prefer to elect a high official of their organisation, with technical knowledge of the particular trade, to represent them upon the Trade Boards. We feel that in view of the publicity given to the evidence laid before you last week, that position ought to be made clear.

4395. I think the point put to us was that the persons interested in the co-operative movement are partly employers and partly employees, and that therefore they did not always take either the employers' or the workers' point of view, and that there was some difficulty in ascertaining the general opinion of either one side or the other?—Our reply to that, of course, is that, so far as the representation on the employers' side of the Trade Boards is concerned, the representatives upon it are always representative of the employing interests—of the employers. That is always secure. Then having made that clear, I should like to say, with regard to a further statement made before this Committee, that we are of opinion that there should certainly be no suspension of the activities, for a limited period even, of the Distributive Trade Boards. In our view, in the present industrial situation, the functions and operations of Trade Boards are more necessary than ever. Then with regard to a further point, if there is no suspension of the Distributive Trade Boards we think that there ought certainly to be no removal from the scope of the Trade Boards (as was mentioned last week) of the bespoke dressmaking, millinery, and women's tailoring trades, because we feel that such a movement would bring back again underpayment of workers in the small workshops—the very small kind of workshop which exists in these particular trades.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4396. Are you in any way interested in those trades?—Certainly.

4397. There are co-operative dressmakers and milliners?—Yes. On that question we desire, of course, to protect the fair-minded employer who desires, as well as carrying out the desire, to pay a living wage. There is another point which was mentioned to which I ought to refer: there is no desire at all on the part of co-operators to support a system which arbitrarily interferes with the reward of merit. What we do stand for is the ideal which we think underlies the whole movement for Trade Boards, the ideal of a minimum living wage for the workers of the country; and it seems to us that there is no difficulty which would preclude us, after having secured the minimum living wage, from securing a reward to people who merit remuneration above the living wage secured. There is also a point upon which I think it would be useful if some member of the Committee would address a question to Mr. Pollitt later in the day, and that is on the point which has been made that there is disadvantage in the duplication of membership of Trade Boards, particularly with regard sometimes to appointed members, and sometimes to trade union members, of Trade Boards. I would like Mr. Pollitt to have an opportunity of replying to a question upon that point. That is all I have to say in the opening statement, except this, that Mr. Johns, our first witness, whose proof is No. 1, a director of the Co-operative Wholesale Society, attends to-day under a somewhat severe handicap. His wife died in the last few days after a long illness, and he has not been able to give as much time to the preparation of his proof as he would have liked; but we have persuaded him to come because of his long experience, and he will do his best.

4398. We are very much indebted to Mr. Johns for coming under those conditions.—(Mr. Johns): In my opening statement before you I have generally outlined what appear to me to be the remarks necessary to be made upon the Trade Boards generally. I myself have had experience of the Grocery and Provision Trade Board, and also of several Industrial Councils in connection with the flour milling industry, and so on, so that I know somewhat about the business and the wages paid and the arrangements made. With regard to the suggestions made, I wish to point out that these suggestions were made on my behalf by our office in Manchester, as I was unable to attend personally for the last three or four weeks, and they were made on my general instructions, but in one or two items I would like to correct them as not being just my own views as portrayed by my secretary in Manchester.

4399. You would like this statement put in as part of your evidence?—Yes.

4400. Subject to the corrections which you are going to make?—Yes, subject to one or two items which I wish presently to point out.

4401. May we take the paragraphs in turn? The first suggestion relates to the general question as to the functions of Trade Boards?—Yes.

4402. You are afraid that if they were abolished the tendency would be to revert to sweating and long hours?—Yes. These are general remarks, being my opinion on Trade Boards generally, and after that I make one or two suggestions with regard to the modification of their powers, and also with regard to the enlargement of their powers. Take the first suggestion: I have had some difficulty in reconciling myself to the question of long meetings, the superfluity of talking, and no action being arrived at; and I consider that to be entirely due to the want of what I call a business chairman. I make the suggestion that instead of having appointed members, say four or five, who are mainly academic—

4403. It is generally three, I think, not four or five?—I make the suggestion that in future the appointed members should not exceed three, that is to say, the Chairman and two assistants, instead of what obtains on the Boards that I have been on, where we have had three professors, one lawyer—

4404. There are only two Boards with more than three appointed members?—I am more particularly referring to the Grocery and Provisions Trade Board, if you will allow me to do so, of which I have had some experience.

4405. Yes, that has five appointed members?—I am not saying a word against any of them as to their being very nice, and so on, but I do not think it assists the business so much as it would if we had a clear independent chairman, a business man, necessarily not interested in the matter under discussion, and, if necessary, one or two other assistants, as I have seen on some of the courts; and the arrangement has answered very well. I do think that the numbers or appointed members have been too large, and that it has not led to that rapid dealing with business which could have been attained under a chairman of real business ability, without questioning what has gone before.

4406. *Sir Arthur Pease*: Do you mean that the assistants are to have votes, or are simply to be assessors?—I think they might have votes. I have nothing to quarrel about on that score. Let the three have votes, by all means. Personally I would prefer one strong man; I think we should get on better; but if it is thought advisable, I am quite prepared to waive that point and suggest that we have three, with power to vote and settle matters in a businesslike way.

4407. *Lord H'air*: With regard to that question, do you confine that suggestion simply to expediting business, or do you think that you would get better decisions?—I think we should get more expeditious performance and also more satisfactory performance. The second point is this: I mentioned the matter of the Minister being a political appointment, but that hardly conveys what I meant. Necessarily, where you have Government control and the Government has to find certain moneys, the Government must have someone to answer for them in the House of Commons in case of questioning, and I wish to alter that point just a little. What made our people put that in was the long time that it took to settle the award. When we have come to a certain decision, it takes too long to put it into operation. I want that time shortened so that the workers shall have the benefit of any increase or decrease, or whatever it may be—so that it should operate more quickly than it does at present.

4408. *Chairman*: You do not object to the Minister having power to consider the decisions of the Boards, provided he acts quickly?—Not at all. The time should be short. Too much delay brings up fresh evidence and fresh views, and everybody wants an alteration. For instance, in the case of the Grocery Board we have settled upon a certain wage, and before that wage could possibly become operative the cost of living has been reduced, and consequently the employers' side has wanted a reduction, but naturally the men's side voted against it and delayed the whole business. Then again there is one thing which I do not like, and that is that after the Board has settled a certain point and has agreed, either by vote or otherwise, upon a certain condition, one side or the other goes to the Ministry and brings pressure to bear upon the Ministry to prevent certain things coming into operation. I think that is very unsatisfactory, and therefore I think the Board itself should have more power, and the Ministry should act more quickly.

4409. Your third point refers to areas?—Yes. I do not mean the establishment of more Boards in different areas; what I mean is that greater consideration should be given to areas. As was pointed out, in the case of the Board I was on, take Cornwall in the critical position in which it is with regard to labour; yet under the three-scale system they were asked to pay the same amount of wages as a little town about 30 miles out of London; and the same with Cumberland. Special provision should be made, either by the setting up of sufficient Boards or by legislating specially for those areas. That is what I mean by that.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4410. *Sir Arthur Pease*: By the Central Board?—I thought the question under discussion was that you might possibly want to decentralise. I am quite prepared to leave it as it is for the central body to act.

4411. *Chairman*: How would they get their information and material?—The same as they got it before. They would send somebody down to collect it independent of those who supply it as interested parties.

4412. *Lord Weir*: Is there anything to prevent the Board doing that just now?—No, but I want to make that a very strong point, because great hardships were inflicted in that area by certain scales being introduced.

4413. *Mr. Layton*: You do not think the threefold arrangement proposed in the Grocery Board was adequate?—No, it was not adequate, and it was not the fault of the employers; the unions themselves wanted the flat rate, but we insisted upon what we have actually got now, A, B, and C scales; but that is not elastic enough to suit special circumstances.

4414. Then your suggestion that a similar arrangement should apply to other Boards would not meet the particular difficulty?—It may not meet it, but I think it would be of assistance towards solving the difficulty.

4415. *Chairman*: In the next paragraph, paragraph 4, you do recommend local committees?—Well, I have consulted with my colleagues, and they are against that sort of thing; but at the same time I do feel that as an alternative to a central authority local committees would know very much more about the local conditions than the central authority in London, unless, as I suggested before, due inquiry were made from the central office as to the conditions.

4416. *Mr. Layton*: Could you elaborate what you mean by the phrase, "that the area representatives' vote should be given a specific value"?—Yes. That was not exactly the question I raised in my office, and I cannot quite make it out. The statement only came to me to-day from Manchester. But the specific difficulty has been that on the Trade Boards one man may represent very small interests and another man may represent very large interests. For instance, I on the Trade Board represented 35,000 workers directly employed by my own institution, of which I am a director, and the little shopkeeper in the country district had the same power of voting as I had. That is what my people had in mind when they put that in, because they knew my opinion on that. I think it is a question that this Committee might make a little inquiry about and report upon, because there is a very vast deal of difference between a man who is a small grocer down in Norfolk and a great institution like mine. I have an individual in my mind at the moment who has just one country shop, and represents the country shopkeeper, and yet his vote counted the same as mine, with 35,000 or 36,000 employees.

4417. *Chairman*: Still, you must remember that he is a representative member, and he may be put there to represent the whole body of small shopkeepers?—Yes. I am not making a very strong point about that, but I think some scheme might be evolved which would meet that difficulty. The same thing applies to the unions—some have very large numbers and some are only small.

4418. Yes; but the man does not come there only to represent his own little shop; he comes there as being a selected person to represent the interests of small shopkeepers as a body?—I quite understand that.

4419. Therefore it would not be fair to give a big shopkeeper a larger vote than a man representative of a large number of small shops?—But I might also in the same way arrogate to myself the representation of the whole of the co-operative societies of England; but I did not do that.

4420. *Mr. Layton*: But you would not propose any modification which would limit the right of the Board to override the vote of, let us say, the Cornish repre-

sentatives on a question relating to Cornwall?—I should be the last one to make any such suggestion; I should not wish to limit anybody's representation. I do not know whether you desire to ask me questions upon the other points. What I feel about paragraph 5, about the old and physically infirm people, is this. The great argument has always been that if you fix such high rates you have got to get rid of the old people. Now my institution never gets rid of the old people so long as they can do anything at all, and I do feel that we ought to have some consideration, and the only way of dealing with that would be a greater power of exemption under the Act; that is to say, by making a list. At present you can get the consent of the employee and send it to the Ministry, and you may get the consent; they have power to give you that consent; but I should like to enlarge that power so that the thing should not hit old people. If a man of 60 is very infirm, he cannot earn the top wages, yet his union or the Act says: You shall pay him top wages.

4421. *Chairman*: Do you mean all men of 60 should be exempt?—No, my Lord, I am older than that myself. Some people are old at 50, and others are not old at 80. But where such a case does crop up, I think due consideration and sympathetic action under the Trade Board would save that man from being discharged.

Dame Adelaide Anderson: On his own application?

4422. *Chairman*: I want to know what change you suggest in the existing power; there is power already, you know?—There is power, but it should be made more elastic, without having to go a long way round. At present—you will pardon my saying so—you have to consult the union of which he is a member before you can operate at all.

4423. That is, of course, a matter with which this Committee cannot deal.—Exactly; I know that.

4424. Do you mean that the terms of the Section which gives power to exempt should be altered?—I would suggest that the local people should be appointed to go into the matter, and be able to give that sanction without having to wait for the authority from Whitehall.

4425. It is not Whitehall; it is the Trade Board, you know. You mean without having to wait for the authority from the Trade Board?—From the Trade Board or the Minister.

4426. It is not the Minister; it is the Trade Board.—The Trade Board, yes.

4427. *Lord Weir*: In speaking on that question of the infirm worker, you referred to the Trade Board rates as "such high rates" and as "top rates"?—Yes.

4428. Is that your interpretation of the words, "minimum rate"? You call it "such high rates," and "top rates"; that is the impression I got.—That is my impression. Then there is another point I would like to raise with regard to the length of time it takes for objection and confirmation by the Minister of certain rates agreed upon; I think the time is far too long. (*Mr. Alexander*): Might I ask Mr. Johns a question arising out of Lord Weir's question?

4429. *Chairman*: No, you had better not. (*To Mr. Johns*): Then you say something about expenses?—(*Mr. Johns*): I am not very strong on that. I think the country has enough expenses to meet without having to pay for every matter which comes along, and I think both employers and employed should be able to find the money to pay the expenses of people travelling from all parts of the country to attend these inquiries, and probably it might be the means of shortening the sittings a bit if they had to pay.

4430. Do you think the employed would be able to find those expenses?—Well, there has been a good deal of waste of time, in my opinion. Of course, I am in the habit of acting quickly or else I should never get through my business.

4431. I asked you do you think the employed would be able to find the expenses?—They would have to. Why not; they can find them just as well as the unions, and so on.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4432. You see we are dealing with trades which are not properly organised and which have no union representing the trade as a whole. How can you expect the individual worker who comes to attend a Trade Board to find his own expenses, or who would find those expenses for him?—I think you will find, my Lord, that most of the people represented on the workers' side, or on the employers' side, have some organisation who would pay the expenses. I have not found any people on Trade Boards who were not representing some union or association of masters.

4433. I am not speaking now of the masters, but of the workers, and surely there are workers on the Trade Boards who do not come there representing unions at all?—That would be a case of hardship that I have not thought about, because I have only met union representatives where I have been.

4434. *Sir Arthur Pease*: But it would be possible to have a system of collection from employees from their wages of so much a week to provide the funds?

(Mr. Johns withdrew.)

4437. *Chairman (to Mr. Huggan)*: You come here as representing the Scottish Co-operative Wholesale Society, Glasgow?—(*Mr. Huggan*): Yes, my Lord, and I should like to supplement this written evidence of mine by one or two remarks, if I may.

4438. Very well; we will put this in as part of your evidence to begin with, shall we?—Yes, if you please.

4439. Now you want to add to it?—Well, in the first place, I will just remark that the firm I represent is a very considerable employer of labour. We have about 11,000 employees. Our total trade last year was in the region of £30,000,000, and our wage bill for the same period approached £1,500,000. In addition to being wholesale merchants, we have several factories allied to our grocery department, the most important of which are preserve and confectionery, tobacco, coffee essence, and pickle works; three flour and three oatmeal mills; soap works; fish-curing works; four aerated water factories; a margarine factory; and we have several creameries in Scotland and in Ireland. Now, we do not fear the operation of the Trade Board system, and we do not think that any fair-minded employer does fear the Trade Board, but we think that all fair-minded employers ought to be protected from those who perhaps are less scrupulous in their dealings with their workpeople. I may say, so far as we are concerned, the rates which have already been proposed by the Scottish Grocery Board will not affect us at all, because at the present moment we are paying materially higher wages to our workers, and we are also working materially shorter hours. The clerks in our head office are working 38½ hours per week, while the warehousemen attached to our office are working 41½ hours. About 18 months ago we fixed the minimum rates of wages for our employees engaged in the wholesale trade, and these are very much higher than the proposed rates fixed by the Scottish Grocery Board. Speaking from memory, I think the minimum wage for a man of 21 years of age was 72s. If at the time of the increase he had been in our service for 12 months he got 10s. more than that, making it 82s. So far as the girls were concerned, the minimum 18 months ago was fixed at 56s., and there again, if the girls had been in our service for 12 months they got 10s. more, making 66s. So that you will see that, so far as the Scottish Co-operative Wholesale Society is concerned, our position is not likely to be in any particular affected by the wage scales passed by the Trade Board. In November of last year we produced our first proposals about wages. They were considerably higher than the proposals which we have made this time, and we had a good deal of criticism, and many objections were sent in amounting in all, I think, to about 2,500; but I think it was admitted on all hands that those objections were engineered by the trade. The wage scales which were proposed two or three months ago

—Certainly. If they felt strongly about getting some benefit by attending the Trade Board, I fancy they would find the money.

4435. *Mrs. Lyttelton*: It would probably prevent any representative of the workers except a trade union official from attending meetings?—That is what it is now. I do not see that it would. If they were duly appointed by someone and had the authority to go to the Trade Board, that would not prevent them as far as I can see.

4436. *Chairman*: I am not sure that you have fully thought this out, have you, Mr. Johns? You have not very fully thought this out; it is only a suggestion of yours?—It is a suggestion. Unfortunately, as has been explained, I have not been able to give personal attention to it, and I am not in a sufficiently good condition of health to go very deeply into it.

Chairman: Thank you. We are much obliged to you for attending.

are on a much more moderate scale, due to the reduction in the cost of living, and after the expiry of the two months, which was given for objections, we found that only about 100 had objected. Now we were told that if the higher rates were paid, it would mean wholesale dismissals and consequent unemployment. So far as the grocery trade for Scotland is concerned, we cannot say whether there would be anything in that, because as a matter of fact the scales are not yet in operation. My own feeling is that there would be no unemployment due to that cause on any large scale.

4440. I suppose if your first scales had been approved and made law, it is pretty plain that they would now be too high?—There is no doubt about that.

4441. At all events, during the period which it would have taken to alter them and reduce them, there must have been trouble, I do not say in the big shops, but in the smaller shops?—Well, there may have been something like that, and, of course, it might have operated the other way; when prices were rising there would have been the same delay in making a corresponding rise in wages.

4442. The evidence before us shows that the workmen do not wait for the Trade Board to get their wages raised, although, of course, the employers must wait for the Trade Board before they reduce them?—Yes; but I will just make this further observation on that point, namely, that the Co-operative Stores throughout the country have been paying the higher rate of wages all the time.

4443. I know you said that; I am dealing with the general position?—Quite.

4444. *Mr. Layton*: Has that rate varied with the cost of living?—So far as we are concerned, these minimum wages of which I have spoken were fixed 18 months ago, and there has been no reduction.

4445. No reduction at all?—There has been no reduction up to date.

4446. Do you negotiate with an organised body of your own workpeople?—Yes.

4447. And you negotiate independently of the Trade Boards?—Well, as I say, the scales approved by the Trade Board have not yet been put into operation for Scotland, so far as the grocery trade is concerned.

4448. But you do not contemplate that the Trade Board machinery would supersede your own arrangements for dealing with your own employees?—We are quite of opinion that we are always likely to pay higher rates than those fixed by the Trade Boards.

4449. And those rates will be fixed by?—?—We would still negotiate with the unions. My own personal view is, although I may be wrong, that the primary object of the Trade Board is to fix a minimum rate of wages—a living wage—and it is then for

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

the trade unions throughout the country to take the matter up and negotiate for a higher scale if they think such is justified.

4450. But you have no sliding scale in your arrangement with your union based upon the cost of living?—No, we have no sliding scale based on the cost of living.

4451. *Chairman*: I want to follow up your last observation. You think the function of a Trade Board is to fix a living wage?—Yes.

4452. And anything above that ought to be the subject of bargain between employers and workmen?—Yes, that is my opinion.

4453. *Mr. MacCallum Scott*: With regard to that question of the minimum rate, I was rather attracted by it in your opening statement. What exactly is meant by that: Would a minimum wage not be the same for all trades and all degrees of labour?—Yes, that is my belief, and our own chairman, Sheriff Fyfe, laid it down very clearly when we commenced our dealings with the Scottish Grocery Board that we were met for the purpose of fixing a minimum wage, a living wage; we were not there to regulate wages, but we were there to fix a living wage.

4454. *Chairman*: Do you think that that would be the same in all parts of the country?—Well, there might be little differences; in the country places I believe living is cheaper; they get the local produce more cheaply, house rents and rates may be lower, whereas in the larger towns there are expenses which the country people have not got to face.

4455. *Mr. MacCallum Scott*: It has been represented to us by some of the witnesses that instead of the machinery of Trade Boards there should be established a universal minimum wage for the whole country, graduated according to the districts, but one rate for the whole country; is that your view?—Well, in my evidence I think you will find that I suggest that we are likely to have a plethora of Trade Boards; we are going to have a good many of them, and if the function of the Trade Board is simply to fix the minimum wage or a living wage, I do not see why many of these trades should not be grouped together under one Board for that purpose.

4456. But you will agree that the Trade Boards at present are doing something different from that; they themselves, even the same Boards, have fixed different rates of pay for workers?—Yes.

4457. For adults, according to the degree of skill; but that does not quite correspond with your idea?—It is certainly a little variation of it. We have them also under the Scottish Board where we have skilled labour and unskilled or semi-skilled labour, such as porters, who are getting less wages.

Lord Weir: You suggest that the main object of a Trade Board and the main benefit of it is to fix a minimum. There might be a series of minimum wages in various areas—varying with the areas—but that that is much more important than the regulation of wages by the Board.

4458. *Mr. MacCallum Scott*: In some ways, not entirely, the Boards are approximating towards a system of regulating wages by more or less compulsory arbitration—just fixing standard wages. They are approaching towards that in some respects; you do not support that?—That is a national minimum wage?

4459. No, I say in some respects the Boards now in operation are approximating towards a system for regulating wages, not fixing a minimum wage, but for regulating wages generally in the trade and for fixing more or less a standard wage for the trade.

Chairman: In different grades?

4460. *Mr. MacCallum Scott*: Yes. (*To the witness*): You do not approve of that tendency; you would rather have the fixing of a minimum wage?—Well, I understood that that was what the Trade Boards were called into being for; but there is something to be said for a little variation in wages, even in the grocery trade. I am only speaking for the grocery trade.

4461. I was not putting forward a view; I was trying to ascertain yours?—If you consider for a

moment the man behind the counter* and the porter, well, the man behind the counter has to keep up a certain appearance; he has a little more expense. The cost of living in that man's case would be a little higher; therefore, I think, a little addition to his wages is quite justified.

4462. *Dame Adelaide Anderson*: Therefore you would have different minima; you would not have one minimum for a trade, but you would have different minima according to exertion and according to the cost of living of the particular grade?—I think that might be quite a reasonable proposition.

4463. *Chairman*: You are getting there beyond the minimum, do you see?—Yes, quite.

4464. I rather gathered that you said the minimum wage might be made compulsory and that everything beyond that might be made subject to bargain, having regard to the facts of the case?—I may be wrong, but I have the idea that that is what the Trade Board stands for, and I think if we are doing anything else now we are wandering away somewhat from the scope of the Trade Boards.

Mr. MacCallum Scott: It certainly was what the Trade Boards were set up for under the first Act, but under the Act of 1918 the conditions have rather changed a little?

Chairman: Well, of course, that is a question of law.

Mr. MacCallum Scott: Yes, perhaps it is. I was just merely getting the point as to whether that is what the Trade Board stood for.

4465. *Lord Weir*: That is the interpretation you have on your Grocery Trade Board just now, as to the meaning of the minimum rate?—That is right, yes.

4466. *Chairman*: Have you anything more to add to your statement?—Thank you; I have finished.

4467. *Lord Weir*: In the activities of the Scottish Co-operative Society do you produce much for export?—No.

4468. Have you any export business?—Well, we may have a little, but it is very little.

4469. That is to say, your competition is only domestic competition?—Yes.

4470. *Dame Adelaide Anderson*: I would just like to ask whether Mr. Huggan has any opinion to give as to the line on which amalgamation of the Boards might be made—the principles on which such amalgamation might be made?—That question is really bound up with the one we have just been discussing. I think you will find, if you take the soft goods trade, for instance, you have a number of Trade Boards already in existence. It seems to me that if the purpose of a wages board is to fix a living wage, I do not see why there should not be a grouping of some of these industries under the one Board; and then in the grocery trade (to a much lesser degree) we have one of our departments whose workers (and they are mostly girls) come under, I think, three different Boards, and these girls may be transferred from one class of work to another and come under the operation of more than the one Board, which is found a little bit awkward at times.

4471. *Mrs. Lyttelton*: I wanted to know whether, in your society, wages are ever calculated on any basis of percentage of profits?—No; they are fixed wages.

4472. It is pure wages?—Yes.

4473. And does anyone trading with the society have to belong to the society and pay a subscription fee; is there anything of that sort?—Well, our society, the Scottish Co-operative Wholesale Society, is a federation of the retail societies throughout Scotland. They are the members of the federation, and they contribute the capital for the working of the federation.

4474. I only wanted to get at the reason why you felt yourself able to pay higher rates of wages than the Trade Boards thought the trade should pay?—Quite so. I should imagine that possibly the private trader was anxious to get a little more profit out of the business.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGON and Mr. D. GARDINER.

[Continued.]

4475. *Chairman*: And the societies which make up your federation are not?—All surplus is returned to the members.

Mrs. Lyttelton: That is the point I wanted to get at.

4476. *Chairman*: So that a member is not really interested in the same degree in reducing expenses; he gets his profit back in the shape of a lower price for his purchases at the shop, and possibly in the surplus which he may share in at the end of the year?—Yes, but we must never forget that the co-operative store is in daily competition with the private trader and its prices have to correspond, otherwise it would lose trade.

4477. *Mrs. Lyttelton*: In no case are employees members of the society?—Yes, in many cases.

4478. But not the lower grades, I imagine?—Yes, in retail societies.

4479. They are?—Yes.

Mrs. Lyttelton: It affects the question of wages very much.

4480. *Chairman*: Anybody can join the retail societies, I suppose?—Yes.

4481. *Mrs. Lyttelton*: Is it possible for any one person to take out more than one membership? I am putting it badly, but I mean, is it possible for me, for instance, if I wish to trade with a co-operative society, to take several memberships in my own name?—No, not in your own name, but other members of your family might become members at the same time.

4482. Therefore you may get a largish corporate vote nominally in the names of other people, but practically in the hands of one?—In some cases, I believe, there is more than one member in the same family. (*Mr. Alexander*): I must correct that, if you will allow me. You cannot vote by proxy at co-operative members' meetings. There is no such thing as voting by proxy.

4483. Is that the case all over the country?—Yes.

4484. *Mr. Layton*: You referred at the beginning of your statement to the institution of the Grocery Board tending to promote goodwill. If I remember rightly, the representative who spoke for the private grocery employers put to us precisely the opposite point of view; he said that the institution of the Grocery Board had for the first time introduced an element of dis-harmony in the trade, and had started a very large number of controversies. When you said what you did say about goodwill, were you referring to your own relations?—(*Mr. Huggon*): No.

4485. Or were you referring to the relations of the Co-operative Wholesale Society, or what?—I am referring to the work of the Grocery Board as a whole. I strongly disagree with that statement which has been made previously.

4486. *Sir Arthur Pease*: In Scotland only?—In Scotland only. I am only a member of the Scottish Board. I think the individual referred to is also a member of the Scottish Board as well as of the English Board.

4487. *Mr. Layton*: You differ from his opinion?—Certainly I do. I think that these Boards are going to have an excellent effect on the industrial situation generally. I think they are going to perform good service, and in our opinion it would be a vast pity if anything were done to injure the work which they are likely to carry on.

4488. The previous witness may have been referring to what has happened during the last 18 months, whereas what you have just expressed is an anticipation?—I do not know. I have attended all the meetings that we have had; I have been on the Board since the beginning of the Board, and I do know that the greatest harmony has prevailed. There have certainly been differences of opinion, but as I say in my written evidence, the Chairman and the other appointed members have exercised a moderating influence throughout and there has been no ill feeling caused at all.

4489. The suggestion was not that there was any dis-harmony on the Board, but that the proposals made had given rise to a large number of controversies between the employers and workpeople in their own undertaking?—I have never heard of it.

4490. One other question. Would the rates which have been proposed by the Scottish Board substantially raise the rates actually current in Scotland among private employers?—I should say in a great many cases they would. I have always regarded the grocery trade as one of the poorest paid trades that we have.

4491. You would regard the rates as abnormally low?—Yes, in a great many cases.

4492. Do you consider that your organisation is handicapped very much by that state of affairs?—There can be no doubt that our working expenses are higher in consequence of the higher wages that we pay, but still we are able to bear the extra charge, and I do not see why the private trader should not be able to do it.

4493. *Mrs. Lyttelton*: But I suppose you would say, splendid as your system is, that it is not quite on the same level as the private trader, because your motive is different. You have not got to make profits, because if you make any you have to return them; you are a co-operative society, and therefore you really do not come under quite the same difficulties and disabilities as the private trader? All honour to you, but your position is different?—As a matter of fact we make profits. Every co-operative society in the kingdom, with one or two exceptions, is a dividend-paying concern.

Mrs. Lyttelton: Yes, I know they are, but the motive is different.

4494. *Lord Weir*: Of course, when you say the trade can bear it, it is really the consumer who bears it, is it not?—That is right.

4495. *Mr. Layton*: Are you speaking for the local associations federated to your organisation?—I am here as the representative of the federation.

4496. Are there wide local differences in the rates paid by the different retail societies throughout Scotland?—There certainly will be differences, but I do not think they are what you would call very wide. There was an award given by Sheriff Eyre about 12 months ago, and I think that that applied to pretty well the whole of the country.

4497. Your rates are at this moment, in fact, based on the principle of local variations?—Yes, there are certainly local variations.

4498. *Sir Arthur Pease*: There is an Appendix No. 2 to the statement which has been put in. Is that part of your evidence?—No, it is not mine.

4499. Is the Wholesale Co-operative Society mainly a manufacturing body, or a distributing body?—It is both. We both manufacture and distribute to the retail societies.

4500. Could you say what proportion in your manufacturing department the wages bear to the value of the article?—No, I could not give you that information offhand.

4501. But the proportion of wages in a manufacturing trade would be very much greater than it would be in the distributing branch, would it not?—Naturally.

4502. You could not give the proportion in the distributing side either, I suppose?—No, I have not got it. As a matter of fact I did not know until yesterday that I was to appear here to-day, so that if I am not prepared to answer some of the questions I hope you will excuse me.

4503. You would agree that in a manufacturing trade the wages might be a vital point, whereas in the distributing trade, even if they were too high or too low, they would not be of the same importance?—Your costs of production certainly have to bear a certain relation to the price of the goods, otherwise you will be up against competition which may overtake you; and that is the great advantage of the Trade Board system, and why we are advocating it: it would put us all on pretty much the same level.

(*Mr. Huggon withdrew.*)

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4504. *Chairman (to Mr. Gardiner)*: What is your occupation?—(Mr. Gardiner): I am Drapery Manager for the Co-operative Wholesale Society in Glasgow—the Scottish Co-operative Society. I have charge of their drapery business.

4505. That is the same society as Mr. Huggan represents?—It is the same society.

4506. You have given us a written statement which we will make part of your evidence. You expressed the opinion that the abolition of Trade Boards would, in time, lead to a return of sweating. You have got figures about unemployment?—Yes.

4507. You say that the opinion advanced by some that Trade Boards tend to unemployment has, in your opinion, little or no foundation in fact; hardships may at times occur, particularly to those who have to go out to work as learners comparatively late in life, but an amendment of the regulation which fixed wages according to age, and not according to ability, would meet the case. I suppose that the paragraph refers to the fact of which we have had a good deal of evidence, that if wages of learners are fixed to advance according to age only, that discourages the employment of learners of a fairly advanced age?—Yes.

4508. Because they may not be worth the wages which have to be paid to them?—I am strongly of opinion that that at times hinders individuals seeking work from getting a start because of the wage at which they would have to be started. In my own experience, a young woman, say, of 17 or 18 years of age, is not of much more value in a factory as a learner—perhaps sometimes less—than a young person of 14 or 15 years of age; and in that case, because of the wage having to be paid according to age and not according to ability, it hinders that person getting employment. I think, so far as I have any knowledge or am capable of judging, that is the only direction in which Trade Boards could tend to unemployment.

4509. How would you deal with that?—The only way would be to pay them according to the amount of work they do, or perhaps you could make it half way: part according to age and part according to ability, but not wholly, as it is now, on an age basis only. I think there would surely be ingenuity enough and ability enough to adjust that in a way which would meet the case to a large extent.

4510. When you say according to ability, do you mean according to length of employment?—No, I mean according to their ability. I am thinking specially of folk seeking work in textile factories; that is the only industry of which I have any special knowledge. They would be paid according to the rate that is ruling in the particular industry in which they were seeking work.

4511. I am wondering how in a Trade Board scale of wages you can deal with ability. That must surely be a matter for the judgment of the employer?—I am of opinion that that can be dealt with by applying the piece rate to some extent, at any rate, in the case of the folks I have instanced here, because in most factories there are both time rates and piece rates, and I think the piece rate to some extent could be utilised in connection with these young folks seeking work.

4512. *Lord Weir*: Is that prohibited now? Are you not allowed to pay the young folk, as you call them, a piece rate?—No, I think not.

Dame Adelaide Anderson: Is there any obstacle in the Act as it stands?

4513. *Chairman*: I suppose it is not everybody who cares to pay a learner a piece rate?—No, I am informed that it is quite permissible to pay them by piece rate, provided that their pay does not fall below their time rate.

4514. So that you get back to the old difficulty?—Yes.

4515. I do not quite understand yet how you get rid of the difficulty. You say, quite fairly, that learners ought to be paid according to ability, and not according to age?—Yes, that is so.

4516. I was wondering how you could secure that. Would you have a minimum rate for all learners and let the employers raise the learner according to ability, or would you put in your scale that the learner must be raised according to length of experience or something of that kind? Which solution would you recommend?—I certainly would recommend that the pay of the learners should always ensure them getting work and they should be paid according to their ability, that is to say, according to the amount of work that they can do.

4517. I am afraid that that does not solve my difficulty, but I daresay we can deal with the rest.—On this I am quite sure: many young people are hindered from getting work by the basis upon which they would be paid, and that is why I sought to draw attention to it in the evidence which has been submitted by me.

4518. Do you find less willingness to employ young people than there was before the Trade Board existed?—No. It increases the unwillingness to employ young people when they get to a particular age, because at that age they have to be paid a particular rate, and whenever a factory manager or a person engaging these folks knows that that rate has to be paid and that it means that they will not be profitable for the time being, they simply decline to give them a job.

4519. *Mr. Layton*: Are you still on the Scottish Drapery Board?—I was on it in the early days of Trade Boards, but I have not been for some time. I think the Board I was on has been abolished. There has been no meeting held for a very long time in Scotland.

4520. Is that the Drapery Board or the Dressmaking Board?—No, the Shirtmaking and Clothing Board is the Board I was on originally.

4521. When you say that there has been no unemployment as the result of Trade Boards, are you thinking of the employment in the co-operative organisation or are you speaking generally?—Generally speaking, I do not see how it can in the smallest degree create unemployment, and I have never been informed of any, but I have heard of instances of young people not getting a start because of the wage which under the Trade Board Regulations they have to pay.

4522. A good deal of evidence has been brought before this Committee indicating that there is substantial unemployment and the employers have urged that the high rate of wages and the failure of that rate to fall sufficiently rapidly has been an important cause of unemployment, particularly in country districts?—I am surprised to hear it. As a matter of fact I do not see how a Trade Board can create unemployment, that is, if there is work in the country for people to do, and for this reason: that everyone is put on the same basis in regard to the rate of wages to be paid.

4523. *Lord Weir*: It might be a case of transference of employment?—It might.

4524. *Mr. Layton*: You would agree that the rate, if it were sufficiently high, would probably cause unemployment?—It might depend. If it compelled the giving up of the usage of certain goods—if it injured the sale because of prices—it might; but I do not see wherein the Trade Board can cause unemployment so long as everyone is put on the same footing with regard to the wage which has got to be paid, piece rate or time rate. So long as that is imposed upon all manufacturers I do not see wherein it can create unemployment. I do not agree with it at all.

4525. Would you not agree that the high level of prices in the last 12 months has been one of the causes of unemployment just because people cannot afford to pay those prices?—I do not think that the Trade Boards are answerable for that at all.

4526. *Chairman*: You are not engaged in retail trade at all, are you?—No, wholesale trade only.

4527. *Dame Adelaide Anderson*: And not in export?—No, no export at all. I would like to say that the only export we have is in what are termed

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

by-products in connection with our various mills, which are sent to the Continent. That is the only thing.

4528. *Mr. MacCallum Scott*: The evidence which has been given to us already to the effect that the Trade Boards were causing unemployment has, I think, been evidence chiefly from the retail bespoke tailoring trade. Your evidence does not cover that?—My evidence does not cover that at all. I am speaking for the wholesale trade, in which I am engaged, but I wish to say this, that I have had a very long experience in the drapery trade, and I do not see wherein a Trade Board can be blamed for unemployment at all. Probably the general state of the trade in the country may be answerable for it.

4529. The suggestion which has been made is that the rate of wages which has been fixed in the bespoke tailoring trade—

Chairman: And drapery, too.

Mr. MacCallum Scott: Yes, but I am thinking specially just now of the bespoke tailoring trade as an example.

4530. The evidence was that the rate which had been fixed raised the cost of the material which had been ordered to such an extent that instead of ordering it locally the people were now buying ready-made articles from the wholesale firms, and therefore the bespoke tailoring trade was practically being extinguished?—I would like to say this, that I believe that the bespoke tailoring trade has been very adversely affected during perhaps the last 12 months, but in my opinion that is not due to the Trade Board at all, but to the fact that the tailors' union has raised the price of their work to such an extent as to make it in many cases prohibitive. People have unfortunately less money to spend now than they had during pre-war times or shortly after the war, and they cannot give the big prices which are demanded in the tailors' workshops for bespoke clothing. My opinion is that that is not due to the Trade Board at all, but to the union.

4531. I wanted to elicit your view upon it. The other point is this: It has already been suggested, and I think you rather confirmed it, that the operations of the Boards are having rather a detrimental effect upon apprentices and learners—that there were not so many being taken on. Is that so?—At a particular age, I wished to convey, it had a detrimental effect, because of the fact, in my opinion, anyway—I may be mistaken in it—that they had to be paid a wage according to their age and not according to their experience.

4532. Then you are not dealing with the younger ones, you are dealing with those who enter the trade at a later age?—Yes, that is right.

4533. You are not dealing with young people?—No, not with the general question.

4534. You do not think it has had a detrimental effect upon the young people?—No, I do not think it has.

4535. You are only thinking of exceptional cases of elderly persons entering the trade?

Chairman: Not elderly.

Mr. MacCallum Scott: I mean over the usual age.

Chairman: An old young person.

4536. *Mr. MacCallum Scott*: I mean over the age of 20?—17 or 18 years of age. I mean this, that in some families some circumstance overtakes them which lessens their income, and instead of being able to stay at home, as many young girls have done, and like to do, they have to go out and seek work, but because they go to a factory under the operation of the Trade Board to seek a situation or employment they are debarred from getting it because of the wage they have to be paid at this late start in life.

4537. Are they numerous cases?—They occur anywhere. I would not like to say whether they are numerous or not, but at the same time, I think if it is possible to prevent any hardship, even in a very small number of cases, it is as well that it should receive the attention of the Committee.

4538. When you suggest that they should be paid by ability, that is a general phrase, and it does not give any clue as to the particular way in which one should gauge ability?—The amount of work which they are able to do.

4538a. It is piecework without the time basis?—The time basis might, to some extent, be introduced. I do not think it is beyond the wit of people to do it, but they would require to be paid upon the production basis, and perhaps the time basis too, and the revision would have to be frequent in connection with them.

4539. But you mean a lower time basis than the one which exists at present?—Yes.

4540. *Dame Adelaide Anderson*: The whole difficulty there really arises, not with the young learner who is coming in at the earliest age at which she can come in, but a worker coming in rather later, who, through misfortune or accident, could not begin at the earlier age?—Yes, if the Trade Board rate to meet the Trade Board regulations does not prevent it. You are tied down.

4541. I understand that. I simply wanted to ascertain where the difficulty really begins. It begins at the older age only?—At the older age, not the young persons just leaving school at 14 or 15.

4542. You do not see any objection to a young person who has begun at the beginning rising according to age?—Not at all.

4543. Because she gains her ability and experience in the place?—Yes, that is right.

4544. And if she does not prove to have enough ability to earn her wage, it is open to the employer to dispense with her services?—Quite so.

4545. There is no increase in unemployment in that case, only there is a difficulty in beginning the employment of a learner at a later age?—Yes, that is right.

4546. If she is not really very quick?—Yes, that is it.

4547. That is the one point that wants consideration?—Yes. Of course, if the learner at the later age is put on to a piece rate then she gets what she earns.

4548. *Chairman*: I want to develop Dame Adelaide's point to see whether we understand your evidence. I suppose it might happen that the learner beginning at, say, 14 years of age does not learn very fast, and as she goes on she may not be worth the higher wage which has to be paid when she attains 16 or 17 years of age. In that case I suppose she does run the risk of being discharged?—She would run the risk of being discharged, because there is no other remedy for it, as far as I am aware, than discharging; but I think the factory people will support this view, that as a rule they get as good results with a young person going at 14 or 15 as with one of 17 or 18 years of age, and in some instances the young person of 14 or 15 years of age is more adaptable than someone starting at about 17 or 18 years of age.

4549. That I understand, and that is a point which has been fully brought out; but we were told—I do not know whether you will confirm it or not—that sometimes the learner does not learn quickly enough, and although she may be worth the small wage at 14 years of age, she is not worth the bigger wage of 17 or 18 years of age, so that she has to go. Do you think that that might happen?—I think paying them according to their ability and not according to their age is quite a reasonable and equitable position to put them into.

4550. But I want to know whether you apply that principle, not only to people who begin work at, say, 17 or 18 years, but to those who have begun rather earlier, but have not progressed in ability as was expected?—The only remedy for those who are not progressing as their age is going on is, I am afraid, to ask them to give up the employment.

4551. *Dame Adelaide Anderson*: Unless you can intensify the training and give them a better chance?—Yes.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4552. The fact that they have to be paid the higher wage is a motive for improving the training?—Yes.

4553. Is not the difficulty in the case of the young worker practically the same as that in the case of the older worker who is not very quick?—Quite so, it would be the same.

4554. It is essentially the same problem?—Yes, but in the case of the older workers being wholly upon piecework their earnings are in accordance with the efforts which they are putting forth. As we all know, the Trade Board wages are fixed on a basis both as to time rate and piece rate, and they are fixed for an ordinary worker, and a worker falling short of an ordinary worker's output would certainly have to be classed as a sub-efficient worker. That is the only way.

4555. *Lord Weir*: You had personal experience of one of the early Boards, had you not?—Yes.

4556. It was the Shirt-making Board, I think?—Yes, that is the one I had experience of.

4557. Have you found any particular benefit accruing to the operations of the new Board under the 1918 Act as compared with the old Act?—No, I am not prepared to say that I have.

4558. *Sir Arthur Pease*: I think you or the previous witness expressed the view that for learners there should be minimum rates so that there would be room for a specially quick learner to be paid above minimum rates?—(*Mr. Alexander*): I think I was the one who made a statement on the minimum wage. I think that is what you mean.

4559. Even for the learner the rate ought to be a minimum rate so that there is still room for a higher wage to be given to a specially quick learner?—(*Mr. Gardiner*): Yes, but with the qualification that the learner should do a certain amount of work satisfactory to some extent to the employer. It would scarcely be equitable to fix a minimum rate and attach no condition whatever to it, and I think an employer should, in cases where a learner is not coming up to his expectations, or rather to what is reasonable under ordinary circumstances, have the option of putting the learner on to piecework.

4560. Would you not agree that for a learner automatically to get these advances irrespective of the work he could do would have a very depressing effect on him as regards developing his full faculties; if he got it absolutely automatically he would not get on as well as he would otherwise; would you not agree?—I am a very strong believer in endeavouring to reward folk according to their ability. I know that in many quarters there are contrary opinions held, but I am a strong believer in piecework, and I think I would even try to pay it in the case of the young ones after, say, a short period—not at the very beginning; perhaps that would have to be conceded, but after a period.

4561. Of course, one of the points which have been made on the other side is that a new worker wastes

(*Mr. Gardiner withdrew.*)

4571. (*To Mr. Pollitt*): You are Labour Adviser to the Co-operative Union Limited of Great Britain and Ireland?—That is so.

4572. We have got south of the Tweed now?—Yes.

4573. How many societies are registered in your union?—1,500.

4574. They are co-operative societies in all parts of the Kingdom?—Yes.

4575. Of those, 1,379 are retail distributive societies, and 122 are productive and manufacturing societies?—That is so. I should also like to call your attention to the next figure, the number of employees in the organisation, namely, 114,500 on the distributive side and 87,000 on the productive side.

4576. *Mr. Layton*: Would the greater proportion of those 114,500 be connected with the Grocery Trade Board?—The majority certainly, but we embrace every phase of the distributive trade.

a considerable amount of material?—That may apply for a very short time, but as far as I am acquainted with it, that is to say in the textile trade, the making-up trades, there is not much of that happening, and then a manager who understood his business would not give to a learner work that she could spoil; he would select the work.

4562. *Chairman*: Thank you, we are much obliged to you (*Mr. Alexander*): Might I ask that Mr. Huggan from the same society should be re-examined upon that question of the learners? The point was not put to him.

4563. *Chairman*: Yes.—(*Mr. Huggan*): There is only one point which I think might have a bearing upon that, and that is that the grocery scale has been based upon a combination of age and experience, not age alone, and we make provision for late entrants. For instance, a man entering the trade at the age of 20 would not get the salary at the age of 20, but he would start midway between the commencing salary at 16 and the salary at 20, that is to say he would start at the rate operating for 18 years.

4564. Have you got your scale there?—Yes. (*The same was handed in.*)

4565. You set out the minimum rates according to age, and then you insert a proviso: "In the case of a worker entering a trade for the first time or re-entering a trade at or over the age of 18, the commencing minimum wage shall be that applicable under the above tables to a worker whose age is half-way between 16 and the age of the worker in question."

4566. *Lord Weir*: That is really basically an age scale, is it not?—Yes, but there is a combination there of age and experience which you cannot get away from. The assumption is that a man entering a trade a little bit later, two or three years older, will be able to pick up the trade more quickly than a young lad of, say, 16 years of age, and the result is that he is paid more than the rate applying to that age.

4567. You agree, though, that probably it would be necessary to consider the two questions differently—the distributive trade such as you are illustrating and a factory or workroom trade such as Mr. Gardiner was speaking of?—Yes, certainly, there is a considerable difference.

4568. *Chairman*: That is what you wished to add?—Yes.

4569. *Chairman*: Is Mr. Gilchrist here?—(*Mr. Alexander*): Mr. Gilchrist is not here. Mr. Gardiner deals with the same department at the Scottish Wholesale Society, and if you wish to ask any further questions upon it he will be prepared to answer, but it is not Mr. Gardiner's evidence, of course.

4570. *Chairman*: We had better not question him about it; he might not agree.—(*Mr. Gardiner*): Some of it I do not agree with.

4577. It would be more than half?—Yes, I should think so.

4578. And more than half of the productive side?—No, the productive side is not—

4579. I mean more than half would be engaged in food industries?—No, in clothing.

4580. The great majority are in clothing, are they?—Clothing, boots and everything of that description—as I said in my evidence, everything that is required in a domestic home they manufacture.

4581. *Chairman*: Then the figures in the next paragraph are turn-over, I suppose?—In the third paragraph, yes.

4582. You put the amount for the distributive trade at £263,611,560, and for the productive societies £140,532,590?—That is so.

4583. Making a total of £404,140,150?—Yes.

4584. Your view is in favour of the maintenance and extension of Trade Boards?—That is so.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4585. Including extension in the distributive trades?—Yes.

4586. Is it a fact that as a rule your societies pay higher rates than the Trade Board rates?—Yes. I may say that I deal with the whole of the co-operative movement throughout the United Kingdom, and I have to deal with the whole of the rates of wages that are paid throughout the area, and I can safely say that in rare instances—and they would be very rare—do we ever come down so low as any rates set forth by Trade Board Orders.

4587. So that the effect of the Trade Board Orders is not to affect the wages which your societies pay, but rather to bring up the wages paid by others nearer to your scale?—Yes; but that is not exactly our idea. We have a rather wider view than that. We hold the opinion which has been expressed by one or two of the previous witnesses that every worker should have a fixed minimum rate of wages, and that we think would be an immense advantage to everybody concerned, and speaking from my own experience as a member of two Trade Boards, I find that there is an amount of goodwill between employer and employed which is absolutely necessary if the Trade Boards are to be a success at all—that there is a feeling in favour of fixing a fairly decent wage for the workers.

4588. You mean that that promotes goodwill?—Yes, there is goodwill between the two. One of the points that I mention in my evidence is the great advantage of the Trade Board in improving the status of the trade. That is possible, and is being done in some cases.

4589. Have you any views about the question whether Trade Boards lead to unemployment in many cases?—No. I think you will find that I deal pretty largely with that, and although my duties take me all over the country I have not come across any cases where the introduction of Trade Boards has led to unemployment. In the distributive trades I cannot see how it can do, because, as I said in my evidence, people require a certain amount of food and clothing, and they have to be provided somewhere, and there is only a certain number of assistants to provide them; and if they are not provided in one shop they must be provided in another. There may be just isolated cases where, owing to the modern tendency of to-day towards concentration of businesses, it may lead to unemployment, but I do not think it can be attributed to the action of Trade Boards.

4590. It would not apply, would it, to the same extent to the productive trades, because there the consumer comes in, and he may elect to consume less, rather than to pay the higher price?—I have discussed this matter with a good many managers of productive works where Trade Board Orders do operate, and I cannot find even in those cases that it leads to unemployment. Unemployment is due to other circumstances outside the action of the Trade Board.

4591. *Mr. Layton*: But do you urge that unemployment has no relation to the rate of wages paid, or is your argument that the Trade Board rates have always been so low that they have not been an effective influence on unemployment?—Wages have been so low that they have not affected the question of unemployment, and I do not think the increasing of the wages affects it, because you are bringing up the level all over the country. If you were only bringing up a portion of the trade, then it might have some bearing, but, of course, you are bringing up the whole of the trade to one level. I cannot see how it can lead to unemployment, because the goods are required and a certain number of assistants are required to produce them.

4592. *Chairman*: That is in the distributive trade?—It is exactly the same in the productive trade.

4593. It does not apply to the productive trades, because goods are not required; there are some goods that people can do without.—Yes, but I do

not think that the effect of Trade Board rates has been such as to raise the prices so that people would not buy them.

4594. No doubt you have not had an opportunity of seeing the evidence which we have had before us; you are speaking now of your experience as representing the co-operative societies?—Yes, and, as I say, I meet a good many people outside the co-operative movement—managers of productive works—and discuss this question with them. I have read all the evidence that I could find that has been published, and a great part of it I entirely disagree with.

4595. *Lord Weir*: Were these people with whom you have discussed it people entirely engaged in domestic industry, or were they engaged in export trade?—Chiefly in domestic industry.

4596. The question of cost does not in the first stage affect you so much, because you pass it on to the consumer?—That is what everybody does.

4597. Yes, in the domestic trade.—The consumer pays everything in the long run.

4598. *Mr. Layton*: If he can?—He has to do without the goods if he cannot, and I do not think wages have—

4599. *Lord Weir*: You have no competition from abroad in distribution in your grocery trade, for example?—No, we have not.

4600. There is surely a vital difference between the two things?

4601. *Mr. Layton*: Has your turnover shown any tendency to fall off during the trade depression through which we have just been passing?—Very considerably. Many of our retail societies have fallen off at least 15 per cent.

4602. If you could have lowered your prices sufficiently, you might have saved some of that trade perhaps; do you not think so?—No, I do not think so. I do not think wages have that effect upon prices which is generally made out.

4603. I said: If you could have reduced your prices, the reduction in the turnover would have been smaller?—If we had done that then we should have been under-selling other people.

4604. Do you consider that improper?—To some extent, because it would have meant that the other people would have reduced their prices and taken it out of wages, which is something of which we do not approve.

4605. *Lord Weir*: Does that mean that you had it in your power to bring down prices?—No, we could not have reduced prices. I think I should point out this: we have reduced our prices somewhat; in accordance with the general fall of the market we have reduced our prices, but we have maintained our wages as high as we possibly could, with the result that our surpluses at the end of the year have fallen off very considerably.

4606. How much longer can that go on?—Of course, we can go on without paying surpluses.

4607. *Mr. Layton*: You do not wish us to assume that you refrained from lowering your prices for the sake of your competitors, do you? You said that you did not lower them because otherwise you would have taken the trade from your competitors?—No, we have not refrained from lowering on account of our competitors. As a matter of fact, we do not take a very serious view of the prices of competitors. Our endeavour is to put an article at the price at which we think it ought reasonably to be sold.

4608. Is that based upon the cost of production?—Undoubtedly, because we have to buy in the open market like anybody else, goods which we do not ourselves manufacture.

4609. Including your own wages?—Including our wages.

4610. *Chairman*: I am struck with a sentence on page 11 of your statement. You say: "It can perhaps be admitted that some dislocation of labour will result—possibly a few cases of hardship in the case of small business concerns with one or two

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

assistants." I want you to direct your mind, not to your big concerns, but to these small shops throughout the country?—Yes, I was referring to small shops here.

4611. Suppose wages are put too high—I ask you to make an assumption without saying that it is true—that must have the effect, must it not, that the trader will pass on his wages to the customer?—Yes.

4612. The point must come where if the article is something which the customer can do without he will do without it?—Yes.

4613. And then the trade falls off and the staff has to be reduced, and so unemployment results. I want you to direct your mind to that question, because that is the kind of evidence we have had. If you can criticise it I should be very much obliged to you.—I should look at it in this way. Taking the case of the people you are referring to, they already have a certain percentage of their expenses to pay in the form of wages. A Trade Board Order comes along which increases those wages; but in my opinion the percentage increase is not sufficient, even if added to the cost of goods, to prevent customers from buying them.

4614. We get traders coming here who say it is, and that they are losing their custom. Theory will not comfort them at all.—Following on your argument, if you will excuse me a moment, if the increases were such that they did increase the cost, then I can imagine a falling-off; but I cannot see, nor do I find, from any experience I have had, that the increases that any Trade Board has instituted are such as would seriously affect the purchasing power of the customers, even if added to the cost of the goods.

4615. That is what you referred to when you talked of a few cases of hardship?—The few cases of hardship I meant would be those. You might have a small shop where it might be a hardship in that case, because in a small shop the percentage of wages and other expenses to the prices, the general cost of groceries, are higher than in a more efficient establishment. But that is taking place to-day and causing unemployment. There would be a few cases when it might happen, but not very many.

4616. Apart from the hardship to the individual, do you think that a good thing?—Undoubtedly, I do.

4617. To shut up the small shops?—Personally, I think so, yes. I am not speaking now from a co-operative point of view, but I am speaking from the point of view of the consumer. You get better service, more efficient service, and I was going to say you get a better quality of goods, because these people have to compete with more highly-efficient places, and there are only two ways in which they can do it. If their other expenses are higher proportionately, which they undoubtedly are, they have either got to do it in lower wages or inferior articles.

4618. You think it is a good thing if a small shopkeeper goes to the wall?—To a certain extent there will always be an opening to the small shopkeeper, but for the small shopkeeper to deal in general business, considering the interests of the community, I should say sooner or later he will go out of existence even without Trade Boards.

4619. Dame Adelaide Anderson: Some of your stores locally. I suppose, are very much smaller than others?—Oh, yes. We have societies ranging from 140 members up to 100,000.

4620. But is the strain found to be greater in these small stores than in the larger ones as regards cost? Yes, undoubtedly it is.

4621. But they are all so strong that they are able to hold on, whatever the state of trade, however great the depression?—Oh, yes.

4622. They are backed, I suppose, by the larger stores?—No, each individual society is self-dependent.

4623. Do any of them carry on these retail productions, such as retail bespoke tailoring, retail dressmaking to order, and so on?—Oh, yes; I should think

out of the 1,300 I have mentioned, more than half of them at least carry on retail bespoke tailoring and dressmaking.

4624. Have you not experienced no unemployment there; have you not had to part with any workers?—No, not through the effects of Trade Board Orders.

4625. Are the numbers employed equal now to those before the depression set in?—Oh! no, because the general depression has affected everybody.

4626. And you attribute that shrinkage solely to general trade conditions and not to the rates you have to pay your workers?—Certainly I do.

4627. Is it your opinion that efficiency is a very important point, the maintenance of efficiency in the worker, for success in business?—Yes, it is, and speaking of the retail bespoke tailoring trade, in that case I think the small retail bespoke tailor will gradually be forced out of existence. There has been introduced during recent years what is known as the division of labour system into bespoke tailoring, which considerably reduces the cost, and makes it impossible for a small shop which cannot introduce the division of labour system to compete, so far as prices are concerned, with a larger establishment where that is introduced.

Chairman: You think we ought not to continue a nation of shopkeepers but become a nation of large stores?

4628. Sir Arthur Pease: Your stores are mainly confined, are not they, to large towns and to large villages; they do not go into the small villages, do they?—They go into the smallest villages practically in the country.

4629. Even in the rural districts?—In the rural districts, Devon, Cornwall, and even into the Isle of Wight.

4630. Then in some of your trades, productive trades, at any rate, the wages are fixed by the trade unions, are they not?—Yes.

4631. Do you follow those trade union rates when they are fixed, or do you give something in excess of them?—In every case we never pay less than the trade union rate. That is an axiom which we always follow, and in many cases we pay higher than the trade union rates.

4632. Do you make a practice of paying higher, or do you reckon to pay the trade union rate with a little variation?—I should say the general practice is to pay higher. We do not accept paying higher as a principle and say we will pay higher so far as the productive side is concerned, but we do definitely say we will not pay less than the trade union rates.

4633. Then with regard to Trade Board rates, you say that they have not affected you because your rates are so much higher?—That is so.

4634. But those you are paying now—10 per cent. above the Trade Board rates—if the Trade Board rates were to come down, would you not be probably still paying only 10 per cent. above the Trade Board rates?—In all probability, yes. Might I give you an illustration?

4635. So that your relationship with Trade Board rates would probably remain permanent?—Yes. I would give you another illustration, if you will allow me. Under the Boot and Shoe Repairing Trade Board in Lancashire and Yorkshire we have been paying all along 36½ per cent.—I think that really worked out on a previous log—we have been paying, at any rate, 28 per cent. higher than the Trade Board rate. There is now a disposition to come down to 20 per cent. above Trade Board rates, and in that instance I may say we have found no falling off in trade.

4636. Appendix 2 belongs to you, does it not?—Yes.

4637. You have found it necessary to vary your rates pretty considerably in different parts of the country?—We have different rates in different parts of the country, because in fixing up our rates they all had some bearing upon rates that were obtaining in other industries, and as the rates in other industries are higher in some parts of the country, so our rates are higher than in other parts of the country.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

4638. There has rather been a tendency to bring them all on to the same level, but that is going the other way again now, is it not? During the war there was rather a tendency to put all wages on to one national basis; but is not the tendency rather to go back again now to different rates in different parts of the country?—No, I think so far the general tendency is to come down more to one level. Speaking generally, I find that that is the tendency.

4639. I am not talking about the Trade Board rates; I am talking about the actual rates?—Yes, the actual rates.

4640. *Mr. Layton*: Would you say that is true to-day; is that tendency still operative to-day, or are you speaking of last year?—I am thinking of to-day, because there have been more rapid changes during the last six months than there have in any other previous two years, I think. We have had to deal with more changes.

4641. *Sir Arthur Pease*: Would you not agree that the actual quality of labour varied in the different parts of the country; that a man did more work in some parts of the country than in another?—That is true. A man does more work in the north than in the south.

4642. And, therefore, there ought to be a variation in the rates of wages?—There are variations in the rates of wages. I have copies of the wages we pay in different parts of the country, and in the northern counties we pay higher rates than we do in the south.

4643. And yet probably that labour does not cost you any more, because the man is doing more work? Proportionate to turnover it does not.

4644. *Chairman*: Are you a Northerner?—I come from Manchester; but even there we are only half way, because in the counties of Northumberland and Durham the rates are higher than in Manchester.

4645. *Dame Adelaide Anderson*: You would not say that the wages always are higher in the north because of the personality; there is probably some long historical reason for wages being higher in the north?—Well, I do not know.

4646. You think that maintenance of efficiency is one of the important reasons for a Trade Board minimum?—Yes.

4647. And provided you could keep up the wages you get greater efficiency?—Yes; but you cannot get as great an amount of efficiency in the south as you can in the north.

4648. No amount of gradually increasing the rate in the south would increase the efficiency at all?—Not at all; the climatic conditions are different.

4649. *Mr. Layton*: Has not this tendency to uniformity in your trade been affected by the recent tendency of the level of agricultural wages to vary in different districts?—I did not quite catch the question.

4650. It is a fact, is it not, that in the last few months there has been a tendency for agricultural wages to revert from a fairly uniform condition in which they were during the war to local variations again?—Yes.

4651. Has not that reacted upon wages in the different districts?—I do not think so.

4652. It is too soon to have made its influence felt, perhaps?—*Mr. Johns* perhaps could have answered that question more fully than I can, because his organisation already are farmers to the extent of 57,000 acres of land in this country, and they pay considerably higher rates of wages than the ordinary agricultural labourers get, and their employees work a less number of hours; but so far as I know it has not affected them at all in that direction. *Mr. Johns* might have been able to deal with that more specifically.

4653. Have your rates been reduced by collective bargaining—you have no form of sliding scale?—No. There have been proposals made for a sliding scale and in every case there was a proviso that wages should not fall below a certain percentage above the rates paid in 1914. I remember a case which we had

in the Midlands about three months ago, where the co-operative societies covering the whole area offered to the trade union a sliding scale with a proviso that wages should not fall below 50 per cent. over pre-war. The union would not accept it.

4654. You offered the 50 per cent.?—We offered a sliding scale with a proviso that wages should never fall below 50 per cent. over pre-war.

4655. What was the ground of the union's objection?—They do not want a sliding scale at all.

4656. Then every time you have to enter on a fresh negotiation—whenever you suggest a reduction?—That is continually going on, yes.

4657. You must have a very large number of negotiations under your supervision?—We have a complete organisation covering the whole of the country for dealing with these questions. We have a district covering a fair area where we have a negotiating body for the district, and then we have a larger one which covers a larger area. For instance, in London here we have an area which reached from Norfolk right down to Wiltshire. In that area we have ten smaller negotiating bodies, all linked up with the central negotiating body, and all of which, of course, are in touch with my department.

4658. And the function of your department is to co-ordinate the wage changes which occur right throughout?—Yes, that is so, from the employers' side.

4659. Can you say that there is any principle on which you have endeavoured to co-ordinate these movements lately; have you merely followed the cost of living index number, or what have you tried?—The index number has had some bearing, because when we were considering advances the index number had a bearing then, and consequently the index number has a bearing so far as reductions are taking place; but we do not strictly follow the index number.

4660. Although the employers' side of this bargaining is co-ordinated there is nothing in the way of national bargaining in respect of co-operative wages?—No.

What we have endeavoured to do has been this: Recognising that there are certain differences in different districts we have had this district negotiating body, but upon any question that affected more than one district then we have taken in the larger area and dealt with it on a larger basis.

4661. Have you never attempted to set up anything in the way of a Whitley Council for the co-operative movement?—Not a large Whitley Council. At the present moment we, in conjunction with the Trade Union General Council, are considering the question of creating a negotiating body for the whole of the area; but that is only in its initial stages.

4662. That is for the distributive side of the co-operative movement?—For the distributive side; and in all probability for the productive side as well.

4663. *Chairman*: Would there still be local differences?—In all probability, yes.

4664. You say something about the slow and inefficient worker; you say that the Trade Board rates may lead to hardship in a few cases of that kind?—Yes; that was the point that *Mr. Gardiner* mentioned, which I did not think he put forward as plainly as he might have done, or as he intended to do. Under the Trade Boards Acts we are limited in the area covered by the permits. Now we all know that in the distributive trade a certain appearance has to be kept up behind the counter. When a man becomes fairly old in years he has a difficulty in keeping up that smartness and that appearance, and, as a member of a Board, I do think that the permit system might be extended further than those limits which are set upon it by the Act at the present time. I think that the granting of permits should be left almost entirely in the hands of the Board, and should apply not only just to those two infirmities, but to other causes as well.

4665. Infirmities or physical injuries are the words in the Act. It is left to the Trade Board, is it not, at present? It is entirely in the hands of the Board

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER.

[Continued.]

or its Committee, but they are confined to those two categories, "infirmity or physical injury, which render him incapable of earning the minimum time rate." You think that might be extended?—Yes. From my experience on the Board, I should feel myself quite safe in leaving the granting of permits without any limitation entirely to the Board. I do not think any injustice would be done either to the workman or to the employer.

4666. *Sir Arthur Pease*: In fact, it would prevent people being thrown out of employment through not being quite up to the mark?—Yes. So far as my own experience goes, we are very careful indeed in granting these permits. If there is an application for a permit from anywhere within a fair distance of where I live, then on behalf of the Board I interview both the man and the employer individually and separately, not collectively, and form my own judgment upon the statements made by the employer, and the statements made by the workman, and if possible I try and see how he does his work and how far he is capable of doing it.

4667. *Chairman*: Do you think a man would be willing to admit that he was an inefficient worker?—In some cases, yes; in a great many cases, yes; in the majority of cases with which I have had to deal, yes.

4668. But you have only dealt with people with some physical infirmity?—That is so.

4669. I am speaking now of a man who is a slow worker, who really cannot work as fast as other men do?—I do not know whether he would be prepared to admit it or not. Certainly as one having experience I should be able to judge whether he could or not, and I take the other members of the Board to be in the same position.

4670. You mean that if he would not admit it, the employer would probably allege it and then you could judge?—Yes.

4671. *Lord Weir*: I should like to take you back for a minute to what Mr. Layton has asked about organisation. You say in your statement "The advantage of the Board to employees lies in the fact that they improve trade union organisation." Now, in what way has that been shown?—Well, I am only speaking of my experience.

4672. That is your experience, say, in connection with this grocery work?—No, I am not on the Grocery Board; I am on the Milk Distributive Trade Board and the Boot and Shoe Repairing Trade Board. My Assistant is on the Grocery Trade Board, and I am somewhat familiar with what takes place there.

4673. The point I want to get at is this. The 1918 Act was very largely based as regards conditions on one of the Whitley Reports. The Trade Boards were to be set up where there was inadequate organisation?—Yes.

4674. And the Whitley Committee indicated that later on these Trade Boards would become Whitley Councils when the organisation was improved?—Yes.

4675. Is that being demonstrated, the accuracy of that?—No.

4676. Is that what you mean when you say the trade union organisation is being improved?—Yes. I think the trade union organisation has been improved, but I do not think it is going to tend towards the creation of Whitley Councils.

4677. Let us take it stage by stage. On the employers' side do you believe the organisation is improved, or is improving?—I think it is improving, for this reason, that the employers' side have become quite aware of what is going on in regard to Trade Boards, and they have urged people who are outside their trade organisations to become members of the organisation, pointing out to them that the organisation would look after their interests on the Trade Boards.

4678. Then so far the forecast of the Whitley Committee is right, but you say that in spite of that you

do not think the Trade Boards tend to become Whitley Councils?—No, because my experience of Whitley Councils is that they are not so effective as a Trade Board because their decisions carry no penalty with them, and they are not looked upon in exactly the same light. I have been a member of the National Council for Administrative Clerical and Technical Staffs of Municipal Authorities, and we have had very great difficulty indeed; in fact, the National Council has broken up. There was also a Whitley Council for the baking industry. That has not met since April, 1919; that has practically broken up.

4679. But were these two comparable in any way; were they well organized?—Yes, undoubtedly.

4680. *Dame Adelaide Anderson*: It is really that power to maintain by legal force the lowest limit that a worker shall receive that is the real strength of the Trade Board?—That is so.

4681. And you are firmly convinced that there will be no bargaining as between an individual employer and the employee as to taking a less wage than is sufficient to maintain a worker in efficiency?—That is so.

4682. A wage sufficient to keep the body in working capacity?—That is so.

4683. *Chairman*: We have taken a good deal of your statement in the course of discussion. Might I pass now to your practical suggestions? The first proposal is as to time. You suggest that in the case of first proposals two months should be allowed for objections, as at present, but for all subsequent alterations of the Order two weeks would be sufficient?—Yes. Personally, I would have liked to shorten the time of the two months, but upon careful thought I do not see how it can possibly be done. There is a point half-way down in that paragraph which to me is a very important one, and that is where I say: "This period would, in our opinion, give sufficient time for objections to be sent in, and at the same time meet one of the requirements of the Ministry, which is that objections should, if possible, be *personal* objections." When the Ministry send out a Trade Board Order and for objections, they ask that they shall be *personal* objections. Now, we do not get *personal* objections to-day. What happens on both sides is this: that the organisation, the committee of an organisation, or the officials of an organisation, draft an objection which is their own *personal* objection. Many individuals would perhaps have no objection, but being members of the organisation they are afraid of taking any step that would be different from that sent out by the central committee, and as a result we get a large number of objections which contain word for word, and in the same paragraph, and in the same words, the same thing many times repeated.

4684. Every Member of Parliament has experience of that.—I daresay he has; but you see my point, that we do not get what the Ministry ask for, and what I think, we ought to have, that is to say, the individual objection, not the organised objection.

4685. Do you think if you shortened the time you would be more likely to get the individual objections?—Yes, because if the time were shortened the organisations would not have time to draft these circulars and get them all over the country and get replies. Further than that, there is the point that at the present time, when wages are changing so rapidly, the present time is too long. A different set of circumstances entirely has arisen between the time when a Board fixes a rate and the time when it can come into operation.

4686. Will you tell me another thing about the time; the two months run now from the date of notice of the proposal, I think?—Yes.

4687. Of course, that may be some time after the actual making of the proposal, because it takes time.—We generally find it takes about seven or ten days. After a Board has fixed up a rate it is seven to ten days before it is published.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER,

[Continued.]

4688. But it may be a good deal longer before it reaches the individual employer, may it not, when you have a large trade?—They are generally sent out by one post. It is about seven to ten days afterwards, I think.

4689. I had in mind the grocery trade, where, I am told, three weeks were taken, but no doubt that is exceptional.—Yes.

4690. So that you would not gain much by making the time run from the date of the proposal; you would only gain a week?—You would only gain a week there.

4691. Then, as regards the Minister you suggest that one week would be enough time in which to consider the matter?—I think it is sufficient. The point, to my mind, is that the Minister's position is certainly to consider what effect an Order may have, but if it is an Order that has been passed and agreed upon by the employers and workmen, both of whom have opportunities of judging how far it would affect the trade, I do not see that it should take much time for consideration.

4692. No, but I suppose the idea is that people who are not fully represented by the members who are appointed to the Trade Boards should have some opportunity of putting forward their views to the Minister?—Well, I do not think there are very many people who can say that they are not represented, because so far as I am aware the Ministry make very careful selection of the representatives, not only as representatives of organisations, but as representatives of districts. I might just give you an example. I know a Board which is at present being reconstructed, and there is a certain part of the country where there is no representative on the employers' side, and the Ministry are now asking, or practically stating, that from one part of the country where there are a number of representatives one representative shall be dropped and another representative from another part of the country brought in; so that you would get the other part of the country represented.

4693. I do not doubt that everything possible is done; but still there are people who think they have no real representatives on the Board. However, you do not think that is a serious matter?—No.

4694. Then you suggest that a definite standard wage might be adopted upon which the rates might fluctuate according to the cost of living?—Yes, something on the lines that I stated a few months ago, with the proviso that they shall not fall below a certain percentage over the 1914 rates.

4695. You would make it legal to fix a rate on those terms?—Yes.

4696. *Dame Adelaide Anderson*: There would not be opposition from the trade union to anything like a sliding scale—it is of the nature of a sliding scale?—Many of the trade unions have already adopted a sliding scale.

4697. *Chairman*: Do you think that an Act of that character would be thoroughly understood in the country?—Yes, I find so, speaking from experience. I travel all over the country dealing with these questions, and I find that a law of that sort would be acceptable and would be understood.

4698. Then you suggest that businesses coming under the Board should be registered?—Yes, Sir. I attach rather great importance to that. One of the difficulties that we have found, on the Boot Board, for instance, is the number of small places that there are in back streets and by-ways which it is very difficult to get to know, and we do not know anything at all about them; we do not know what rates of wages are being paid or under what conditions they are being carried on. Now the Boot Trade Board, both as to employer and employed, is constituted with the definite object of raising the standing of the industry and of the workman, and this is one of the main obstacles that we have. We have asked the Ministry to do this for us, that is, to bring in an Act that everyone should be registered. Our sole object there is not to prevent new businesses being opened, but when a person has

opened a business that he shall register with the local authority his place of business, so that it will always be open for anyone to obtain a list of the places where such work is carried on, and the inspectors would then know where the places were that they had to visit.

4699. It would impose a new burden on traders and cause some expense both to them and to the country?—I do not think there is much expense involved. In the milk retail business every retailer has to be registered. Of course, we know that is done from the point of view of health.

4700. *Dame Adelaide Anderson*: And every factory and workshop is registered compulsorily by notification?—All they would have to do would be to notify the authorities that they had opened a certain business at a certain place.

4701. You would not ask for a separate notification in places where they are already notified?—How do you mean?

4702. I mean a factory or a workshop always has to be notified; it is a punishable offence not to notify: the one notification could serve for all purposes?—Yes.

4703. For factory inspection or Trade Board inspection?—Yes. I look upon it from the point of view of inspectorship. We have had this question over many times with the Ministry, the inadequacy of the inspectors and the number, and we know they have a difficulty in finding out those places. I think it would help to a better service and better carrying out of the Orders if these places were registered.

4704. *Lord Weir*: Do you believe that many more inspectors will be required?—Undoubtedly, but I think you will find in my evidence that I make the suggestion as to how I think it could be done without any considerable expense.

4705. That is by using the Home Office inspectors?—By using the local authority.

4706. The Home Office inspectors?—No, the inspectors of the local authorities, not the Home Office inspectors.

4707. *Sir Arthur Pease*: What would you call carrying on a business? If a man repairs boots would that come in?—A man who employed labour. The unfortunate part—and I do not see how you are going to get out of it—as far as cutting is concerned is what is known as the one-man business. We have discussed that question for hours with some of the Trade Boards and tried to get at it, but we do not see how we can bring it under the Trade Boards. If it was possible it would be welcomed, but I do not myself see how you can do it at the moment.

4708. *Chairman*: You mean every man who employs labour in a trade?—Yes, in a trade which is governed by an Order.

4709. Then you say something about including the whole of the industry in the operations of the Board?—Yes, that is so, and here I give specific attention to the milk industry. We had some little difficulty there; in fact, it is not cleared up at the present time. I am of opinion that the milk industry as an industry—not just the retail of fresh milk, but everything that comes under the milk industry—should come under the Milk Trade Board.

4710. *Mr. MacCallum Scott*: Does that include agriculture?—No. Agriculture is the production of milk; I am dealing with the distribution of milk—dealing with it after it has left the farmer. It does not touch the production of milk at all, and the same thing would apply in a good many of the other trades, I think. Take the Grocery Trade Board: At the present time, for a shop to come under the Board, out of a given number of articles which they sell they must sell twelve of them to come under the Board, unless they are shops something like the Maypole, which deal in four or five specific articles only. In my opinion every shop that deals in groceries should come under the Grocery Trade Board.

7 December, 1921.]

Mr. A. V. ALEXANDER, Mr. J. E. JOHNS,
Mr. J. POLLITT, Mr. A. S. HUGGAN and Mr. D. GARDINER,

[Continued.]

4711. Do you mean that you do not quite agree with the definition of the milk trade as at present framed for the purposes of the Trade Board?—That is so.

4712. You want a different definition of it?—I want a different definition to include the whole industry. At present, the definition states that it is the retail sale of fresh milk where such is a distinct department or distinct branch of business. Well, if that was applied literally, and I think legally, according to the wording, then at present 80 per cent. of the creameries in this country which are at present working under the Trade Board Orders drop out.

4713. *Chairman*: Is there anything more in your statement to which you wish to call attention? We have the statement, of course—Yes, there is just a point on the question of the appointed members. I rather differ from my colleague, Mr. Johns, upon that point; that is, that you should have a business man as chairman. Personally, I should prefer a legal man from experience. So far as our Board are concerned we have had very great assistance from having a legal gentleman as chairman, which I feel certain, we should not have had, had it been a business man.

4714. *Sir Arthur Pease*: Which Board is that?—The Boot and Shoe Board, particularly. With regard to expenses of representatives I differ from Mr. Johns entirely there, because I think that if the representatives' expenses were to be borne, say, the employers' expenses by the employers' side, then you would get as representatives only people connected with big organisations. You would get on the workers' side only Trade Union officials. At the present time we do get workers as workers in addition to Trade Union officials, and having the two we get a fair idea of the business from their point of view.

4715. *Chairman*: You could not expect the worker to pay his own expenses?—No, and if he became a member of an organisation then the officials of the organisation would come as the representatives of the worker.

4716. *Lord Weir*: Do you support the extension of the Trade Board principle?—Yes.

4717. Can I take it from that that you believe there should be a Trade Board for every trade in this country; is that really what you mean?—Yes, I do. As to how it is to be done, I agree, is a matter for consideration. I remember two years ago last February, when the first conferences were held in Westminster, the old Assistant Secretary of the Treasury, Mr. Wardle, I think it was, at that time, stated that the Minister viewed with favour the idea of having one Central Board with panels for each different trade. That seemed to be the idea at that time, but, anyhow, it was changed. I do not know how far that would be successful. What happens at the present time, I think, is this: that there is a general tendency to make the minimum the same in all trades where no particular skill is required. There is another point I would like to emphasise, which I have put down in my evidence, and that is the effect of Trade Boards upon establishments where they have employees who come under a good many Trade Boards. I give the instance of our Leeds Co-operative Society, where they have a large number of employees—over 2,700, I think I stated—where they come under at least 10 or 12 different Trade Boards, and they find no difficulty whatever in complying with the Orders of the Boards.

(The Witness withdrew.)

(Adjourned for a short time.)

MR. JOHN CAMPBELL, called and examined.

4730. *Chairman*: You are a director of Messrs. Pettigrew & Stephens, Ltd., of Glasgow?—Yes.

4731. You come here to-day on behalf of the Scottish Retail Drapers' Federation?—I do.

4718. *Chairman*: We were told by some witnesses that where the rates differ and operate in the same place of business the tendency is for everybody to get the highest minimum rate—the men ask that they shall all be paid the highest minimum rates?—I do not think so. I think you might take, for example the rates which the grocery trade have fixed. They were based to a very large extent, so far as shop assistants in the grocery trade were concerned, on the shop assistants in the Milk Distributive Board, which Board fixed the rates before they did.

4719. But the grocery rates are not in operation?—They are proposals.

4720. There is no experience to judge by, I mean; but we were told by a gentleman who had personal knowledge of shops where there were different Trade Board rates in operation that the tendency was for the men who were on the lowest scale all to ask to be paid the highest of the minimum rates?—I do not think so.

4721. You say you do not think so, but have you any experience at all of the matter?—I have only the experience of our own movement. There used to be different rates of wages for different trades inside our own movement, so far as the retail side is concerned.

4722. Yes?—Well, there is a tendency at the present time to modify that and to bring them to one level, and not always to the highest level, as a minimum.

4723. Through the Trade Boards?—No; that is outside the Trade Boards. We have only two Trade Boards in the distributive trades at the present time, the milk and the grocery, and the grocery have come more nearly to those already fixed for the milk shop assistants than what they were before.

4724. You mean that the Boards will try to bring the rates to a level; that is your point?—Yes, and there is this point there, which I should like to mention. I have seen a statement somewhere that no one should be allowed to be a member of more than one Trade Board. Now, I think that tendency of which I have just spoken, the tendency to bring about a uniform minimum, is helped by the fact that a person is a member of more than one Board, because he can bring the experience that he has of one Board for the benefit of the other Board.

4725. Of course, a system of grouping Boards would tend in the same direction?—Yes.

4726. *Dame Adelaide Anderson*: I understood you to say in reply to Lord Weir that you would extend further than the Act of 1918 the Trade Board system?—Yes.

4727. Beyond the cases where there is no adequate machinery for effective regulation of wages?—Yes; my idea is this, as I stated, that every worker ought to be assured of a sufficient minimum rate of wages. To my mind the Trade Board is the best machinery we have at the present time for securing that, and that is why I should like to have an extension of Trade Boards covering all workers.

4728. But supposing you have adequate organisation, you would not force the Trade Board on an industry which preferred unanimously or by a great majority to remain outside?—Well, that is supposing something which I cannot suppose at the moment.

4729. But, at any rate, you are satisfied that it is necessary to apply the Trade Boards Acts to those cases where there is no adequate machinery for regulating wages?—Yes.

4732. What is your experience of trade?—I am, as you say, Chairman of the Scottish Retail Drapers' Federation, and also an ex-Chairman of the Scottish Garment Makers and Milliners' Federation. I am

7 December, 1921.]

MR. JOHN CAMPBELL.

[Continued.]

also an ex-Chairman of the Glasgow and West of Scotland Retail Drapers' Association, and of the Scottish Distributive Trades' Federation. I have been closely identified with all the movements in connection with the organisation of the drapery trade in Scotland.

4733. Have you something to say about special Trade Boards for Scotland?—Yes. I might explain, however, that the Scottish Retail Drapers' Association is a federation of retail drapery associations in various parts of Scotland, particularly in Edinburgh, Glasgow, Dundee, and Aberdeen, and also in other cities and towns in Scotland. The membership consists of about 750 employers, and they have in their employment somewhere about 10,000 employees. The Scottish Retail Drapers' Federation is the only body, so far as I know, that has sufficient authority to speak for the retail drapery trade throughout Scotland. We have no connection with any English association; we represent Scotland solely; and no English association can speak for the trade in Scotland. In connection with the Retail Drapers' Federation, I have, of course, been in close touch with the operations of the Dressmaking and Women's Light Clothing Trade Board (Scotland), and the Hat, Cap and Millinery Trade Board (Scotland), and I have followed quite closely the Trade Board movement since its inception, although I am not sitting on any Trade Board. I should like to say that in the beginning of 1919 a statement was circulated that the then Minister of Labour was about to create British Trade Boards for the distributive trades. This caused a considerable amount of apprehension in Scotland, and meetings of the various distributive trades were convened who were unanimously of the opinion that the system proposed was inexpedient and impracticable, and that the only practicable method of applying the Trade Board system to Scotland was by treating Scotland as a separate unit for Trade Board purposes. A large, important, and influential deputation from the various distributive trades waited on the Minister of Labour in London to represent their view and, as a result thereof, the Minister decided to give Scotland separate Trade Boards. We attach very great importance to this—many of us served on war committees having their headquarters in England, and our experience was that the time and expense involved in attending meetings, frequently with trivial results therefrom, and the difficulty of getting Scottish opinions made effective where they had varied from the opinions of the predominant partner, all alike showed the impracticability of this system. Further, the difficulty of getting suitable representatives to spend the necessary three days to attend each meeting in London, and the serious call involved on the time of those having charge of businesses (whether large or small) emphasise the importance of Scotland having a separate Trade Board system. Even with Scottish Boards established, the sacrifice of time is not at all inconsiderable. Then let me here state that, so far as the drapery trade in Scotland is concerned, we have no wage agreements whatever. The last agreement terminated at the end of 1920, so that there is freedom of action for employer and employee to negotiate individual wages. As a trade we (recognising that we are only partially organised) have accepted the principle of the regulation of minimum wages by a Trade Board with legal enforcement on all concerned. This attitude is somewhat different from that of many other retail distributive trades on the subject. I think the difference is accounted for because as a trade we have had the actual experience of these different Trade Boards, and as a consequence, and having regard to the fact that the Boards are comparatively new and have introduced a new principle, and feeling that any difficulties hitherto caused by Trade Boards have been due only to the lack of experience both of the chairman, the appointed members, and the Boards themselves, we are not seriously apprehensive of any particular danger arising in the application of the Trade Boards to the distributive trades.

4734. I did not follow that last sentence. Did you say owing to the want of experience?—We say that we, as a drapery trade, are in favour of Trade Board principles, but there is much apprehension amongst other distributive trades in Scotland. They are rather opposing the principle of setting up Trade Boards as applied to their individual trade. We think there is a good deal of apprehension on their part in regard to the consequences, and I think that very largely arises from a want of knowledge of the operations of the Act. We have had practical working experience of these Trade Boards as applied to the making-up sections of our trade, and while we do not agree altogether with their results, we are not scared by any means as to the consequences of the wages and conditions being fixed by the Trade Board. We feel that any defects are temporary in nature and are quite capable of being rectified. As I have said, it must not be assumed that we accept everything that has been done by those Boards as satisfactory. We, as a matter of fact, are very critical of the present working of the Boards, but we are, nevertheless, of opinion that the principle underlying the Trade Board system is sound, is calculated to be of benefit both to employers and employees, and their present defects (although in many cases serious) are capable of being remedied. Among the reasons for our acceptance of the principles are, first, that it is desirable to have the minimum wage scale set up; secondly, that we are, like all retail distributive trades, only partially organised. This may be said equally of employers and employees. Thirdly, that owing to its conditions, the trade necessarily includes a large number of businesses whose profits are very small and whose margins of existence are very narrow. Under these conditions, the tendency to pay low wages in such businesses is strong. On the other hand, the paying of low wages by some employers always tends to keep depressed the wage level all round. Fourthly, in country places, opportunities of employment are limited. Employees in such districts cannot organise; and as they are, in many cases, by their conditions, restricted to some kind of employment in the district in which they live, they are defenceless against unduly parsimonious employers; and lastly, so far as we can see, there is no way, other than by the Trade Board, of protecting a good employer desirous of paying a fair wage from the unscrupulous competitor paying low wages.

4735. *Chairman*: Have you had any experience in Scotland similar to that on which we have had evidence, of works being closed owing to the rise in wages?—Well, that applies, of course, to the making-up trades, and I understand there are two witnesses here this afternoon who are to speak on that subject. I am really dealing with the distributive side of the drapery trade, not the making-up side. I could, of course, give you some information, but I think it had better be left to the other two gentlemen.

4736. By all means.—Then we have considered the question of a universal minimum wage scale as an alternative to the Trade Board system. In our view it is impracticable, looking to the great differences in the conditions and cost of living, not only between different parts of the country, but even between different parts of a county area, where, for example, there are sparsely populated areas, and almost invariably one or two fairly large towns or industrial areas, so that the cost of living in the sparsely populated area would be out of all relation to the cost of living in the industrial area.

4737. *Lord Weir*: When you say universal minimum wage scale, do you mean by the word "scale" varying according to areas, or a scale over the different grades of labour in the trade?—I think, so far as the distributive trade is concerned, we should have to set up a wage scale based on age, say, from 14 upwards. That is what we mean by a scale of wages, applicable to persons of 14 years of age, and upwards, and we assume a national minimum wage scale would be a fixed scale for the whole country.

4738. For the lowest class of labour?—Yes. You would fix your minimum standard.

7 December, 1921.]

Mr. JOHN CAMPBELL.

[Continued.]

4739. A minimum standard?—A minimum wage. We do not propose to set up a standard wage; we propose to set up a minimum wage.

4740. *Chairman*: You are pointing out that that should not be fixed for the whole country, but for different areas?—The difficulty of applying a flat minimum wage to the whole of Scotland is this. We say there is a distinction between living in Glasgow and living in a village. A minimum wage which would be suitable for Glasgow would be altogether unsuitable for a village, or *vice versa*.

4741. *Mr. MacCallum Scott*: Would it be possible to have it graded in accordance with the area—a certain scale for large towns?—I think the difficulty would arise, if you fixed a county area, that almost inevitably in every county you would find a fairly populous centre where the cost of living was fairly high, while in other parts of the same county you would find sparsely populated places where the wage could not be supported. In our view it is impracticable to set up this national minimum wage scale as an alternative to Trade Boards, looking to the great differences in the conditions and cost of living, not only between different parts of the country, but even between two parts of a county area, where, for example, there may be sparsely populated districts and almost invariably one or more large towns.

4742. *Sir Arthur Pease*: How do you propose that the Trade Boards should get over that difficulty?—Well, I can give you an example of a recent decision of the Women's Light Clothing Trade Board. I am not a member, so that this is only information which has been passed on to me. They have now recognised the principle that there should be a distinction between towns of 12,000 inhabitants and over and places with a smaller population than 12,000. They make a distinction in the rate from 9½d. in the populous parts to 8½d. in the smaller towns. That is a simple way of getting over the difficulty.

4743. *Mr. Pugh*: Is that being done by the Trade Board?—By the Women's Light Clothing Trade Board.

4744. *Mr. MacCallum Scott*: Would not that apply also to the minimum wage?—It might, but what we want, of course, through the Trade Board, is a legal enforcement of this wage.

4745. I mean a legally enforceable general minimum wage. I thought your objection to it was that it would not be varied in accordance with the district?—There is another aspect of it, of course, and that is the ability of certain kinds of trades to carry a burden. I will put it in this way. It might be quite possible for the drapery trade to set up what was considered quite a fair minimum wage scale, based on age from 14 to 19, or any other age you like, and you might fix a progressive scale up to 24 years of age, but in the drapery trade there is a considerable degree of skill required. If you apply the same principle to a newspaper shop or a book shop where there is a lesser degree of skill required, if you apply the progressive rate up to 24 or 25 years, if you will find that the employer will say that a girl of 18 can as effectively hand out papers and books, and even serve confectionery and fruit, as a woman of 23 or 24 or 25 could; he would quite naturally say in that case that it was no use his paying a woman 5s. or 10s. a week more when he could get a younger person equally efficient for the purpose for which he wanted her. That is just one of the difficulties you are up against in fixing a minimum wage scale.

4746. Does not that apply to any rate that is fixed by any Trade Board?—Well, of course, you would have regard to the ability of the trade to pay a rate. For example, I do not think it is so very important to fix a low scale of wages for the distributive trades, but I can quite see the importance of fixing a low rate for a manufacturing trade which does an export trade. Even the rates between Great Britain and Ireland, I think, ought to be considered. There is a complaint made that handkerchief hemmers in Great

Britain have a wage scale of, I think, 10d. an hour, while in Ireland it is 7d., and they are doing precisely the same operation and exporting their goods to the same parts of the world. Now, I think it is quite a reasonable argument for the handkerchief hemmer in this country to say that he should have quite as favourable rates as those operating in Ireland. We think in the distributive trade that it might cause more serious unemployment if you were ruthlessly to apply a minimum wage to the country as a whole without very careful consideration.

4747. *Dame Adelaide Anderson*: When you speak of wage scale you apply it to Trade Board regulation just as to a proposed minimum for the whole country? By "scale," do you mean solely according to age; is that the sole test you would apply?—Yes, for a young person beginning at 14 the wage scale would be low.

4748. You would not take into account the scientific investigation as to the amount of support needed for harder work?—In the distributive trade it is fairly level, I should think.

4748A. But trades vary; a scale fixed only according to age might not take account of the need of greater efficiency for heavier work?—I do not think in the distributive trades there is a very serious difference in the amount of energy required. There is a varying degree of skill.

4749. But you are not proposing to fix minima for skill, but only for age. Am I right?—A little later I will advocate that the wage scale be applied from 14 to 19 years only—a progressive scale between those ages.

4750. *Mr. Pugh*: Do you propose saying what you will do with regard to the highest scale in the drapery trade?—I think I covered that in the course of my statement. I have stated our reasons for the acceptance of the principle of Trade Boards. We are further influenced in our objections to the universal minimum wage proposal by the great differences in the ability of different trades to carry the same burdens without serious dislocations to trade. I have indicated that in the fruit trade, the confectionery trade, and the newspaper trade. If a universal or localised general minimum were to be fixed, it would be fixed presumably by a Government Department, which in that case would have the whole responsibility of fixing the rate without the necessary organisation for undertaking the work. It would result in a general feeling that the Government Departments were interfering unduly in trade affairs. There is a very distinct prejudice against the interference of Government Departments. Personally, I do not entertain that view altogether, but that is the considered opinion of the distributive trades as a whole. In any event we do not think that a Government Department could do this without creating dissatisfaction either among employers or employees. We further consider that those who are to pay and those who are to receive the wages are the best judges of the rates to be fixed. The success of any scale of wages fixed by a Trade Board depends on its being passed by the agreement of both sides, and on its not being imposed by either side on the other. Then that brings us to the consideration of whether a Trade Board should be set up for each main distributive trade. That is the proposal of the Minister. While recognising the advisability of Trade Boards, we cannot approve of the Minister's decision to set up a Trade Board for each main distributive trade. This would include, for example, starting separate Trade Boards for the retail sale of the following: Men's clothing, umbrellas, hatters and hosiers, watchmakers, perfumery, hairdressers, china and glassware, ironmongery, furniture, furs, etc., women's clothing, fancy goods and stationery, boots and shoes, jewellers, chemists, optical goods, toys and games, household furnishings (such as carpets and linoleums)—these among others. We might explain that throughout, at least, a large

7 December, 1921.]

Mr. JOHN CAMPBELL.

[Continued.]

portion of Scotland we have a seven o'clock closing hour, applicable to most of these trades. They not only close at the same time, but start work at the same time in the morning. They have substantially the same working conditions as well as hours. The employees therein are drawn from the same class of the community, living in the same streets; their children attend the same schools; one member of a family is often employed in one kind of shop, and another member of the family in another. The social standing of the employees is practically identical. Is the Minister's decision to start up separate Boards for each main distributive trade, wise under these circumstances? I may say that in October, 1919, we had a general meeting of distributive and shop-keeping trades in Glasgow, representative of the whole of Scotland, and the view of that meeting was that it was desirable to have only two Trade Boards for the distributive Trades (particularly the retail distributive trades), one being for the perishable food stuffs and the other for furnishing and allied trades. This may be carrying the principle of cutting down the Trade Boards to the uttermost, and it might be found necessary to have more Boards than two. Is there any reason for setting up separate Trade Boards unless essential differences between the trades, in the matter of wages and working conditions, can be shown?

4751. *Chairman*: I dare say you have considered the point whether, if you set up one Board for a large number of trades, you would have to make the Board a very large one?—I think we should take the risk of that. We should cut down the numbers as far as we possibly could. We think it can be quite well done by grouping a good many trades.

4752. I dare say, it would be necessary either to have each trade represented on the Board or to have some system under which the Board could inform itself of the opinions of each trade?—Yes. We think that the Board with a reasonable grouping of these trades, should not exceed 30 on either side.

4753. You do not tie yourself to the two Boards only?—Not necessarily, but the principle is there that we think that the multiplication of Trade Boards is an exceedingly bad thing.

4754. *Lord Weir*: Do you propose these two Boards, the perishable and other things, in preference to the other proposal that was made—food, clothing and furniture; that is three Boards. Has that been before you?—I understand the Minister is going to set up a Trade Board for each main trade, that those trades which I have enumerated would each have a Board attached to it. We are opposed to that principle altogether.

4755. I am quite clear on that point. Your proposal was two Boards. Another proposal has been made for three Boards, divided into food, clothing and furniture. What is your view of that?—I think that clothing and furniture could quite well be grouped, furniture and furnishing I take it you mean. That would include necessarily household linen, a thing that every draper keeps; carpets most drapers keep; linoleums most drapers keep; and as I have indicated, the same class of employee is working in these establishments, the same class of people are working in drapers' shops and furniture shops.

4756. You draw the line at perishable foods, as being a different class of occupation?—Yes.

4757. *Mr. Poulton*: And in your practical experience you are quite satisfied you would be able to carry on the work efficiently by those two Boards?—You mean the food trades as distinct from the clothing and furnishing?

4758. Yes.—Well, that was our decision in 1919. I am sorry to say the distributive trades in Scotland have rather gone back on that principle and they are altogether opposed to Trade Boards now. I am simply relating what took place in 1919; but we do know that the Minister proposes to apply a Trade Board to the drapery trade, that is, to the women and children's clothing trade, and one for the men's clothing trade; I believe one for boots and shoes, I think one for glass, one for umbrellas. He has

already indicated his intention to apply a Trade Board to each of those trades, and we think it is simply ridiculous.

4759. And your practical experience shows you that that is quite unnecessary?—Absolutely unnecessary.

4760. *Sir Arthur Pease*: If you limit the members of your Boards to 30, having regard to the fact that you have to take into account areas as well as trades, would it not be very difficult to confine the numbers to that unless you allowed someone to attend the Board and put the case for that particular trade?—Well, I think the time is not very far distant when you may experience very great difficulty in getting representative employers to sit on Trade Boards at all, unless they are going to be more expeditiously conducted. That is our experience already, and I think that Trade Boards as a whole would be practicable if their federations could appoint two or three representatives to sit on the Trade Boards to represent their views.

4761. Yes; but the thing you want is a practical decision, and we have had a good deal of evidence stating that there was not sufficient representation from certain districts, and that the rates fixed are pressing very hard on certain districts?—Yes. It has been our view all along that it is extremely important that country areas should be well represented on these Boards, perhaps over-represented, shall we say, in comparison with the cities and towns, because up to now they have been fixing a flat rate applicable to the whole of the country. Now that we have introduced a principle of differentiation between town and country, I think the case of the country employee will receive more consideration, at least in Scotland; but I do not think it would be a very difficult thing to compose a Board of reasonable size from a very substantial group of those trades which I have mentioned. They are all correlated; the same class of employees are employed.

4762. *Chairman*: You would not have District Committees, I gather?—I think that is only making confusion worse confounded. After all they must report to the parent committee, and then the whole thing has to be considered afresh. I think there is something to be said in favour of a distinction being made between quite small towns, say of 5,000 inhabitants, or 3,000 inhabitants, and possibly 10,000 or 12,000, as we have done in the Dressmaking Trade Board, and cities with a larger population.

4763. *Sir Arthur Pease*: The Co-operative Society's witnesses who have attended this morning make a distinction between different parts of the country in their actual rates of wages, North and South and in the Midlands, and so on. Have you that in Scotland at all?—I think in Scotland Sheriff Fyfe issued a very fine Award about 6 or 12 months ago which was applicable to the whole of Scotland. I am not aware that there was any distinction between one part of the country and another, and for that reason I think that many of the country Co-operative Societies, while they were parties to the Award, would not put the scale into operation.

4764. Of course, if you have a general minimum rate, or nearly a general minimum rate, for certain classes or sections and so on, it is a comparatively simple thing, but if you begin to have rates which are graded according to classes of employees; then you must have somebody who thoroughly understands each section of trade on the body, must you not?—Oh, certainly.

4765. Or take evidence from somebody else?—Yes, but I think that so many of those trades which I have indicated are so similar that there would be no difficulty in getting a Board of 30 persons on either side to legislate for these trades with general acceptance.

4766. That is for the distributive trades?—Yes.

4767. *Lord Weir*: Taking Sir Arthur's point a little further, surely the small number of even large Boards dealing with a comprehensive group of trades would only be possible if you were going to fix real

7 December, 1921.]

MR. JOHN CAMPBELL.

[Continued.]

minimum wages, but not if you attempt to regulate wages in different trades?—Our proposal, of course, is that the function of the Trade Board is to set up a minimum wage scale applicable to age.

4768. The point is just what you mean by "scale"?—Well, we are talking of the apprentice up to the age of 19 years.

4769. And for all classes of labour in the trade, or only for the lowest paid class?—We do not attempt to set up a standard wage; we are not proposing to do that at all. We want a minimum wage fixed for each class of employee which will prevent anything in the nature of sweating conditions, leaving it to the employer, and if there be a trade union association, to that as well, to adjust the standard wages, or leave it to the individual bargaining as it has always obtained in the past between the employer and the employee. That is as far as we are prepared to go.

4770. *Chairman*: What do you mean by each class; that is what I want to know?—Well, there is the porter class, for example, in most places, delivery porters, or cleaners, or people doing more menial work than salespeople. The rate will probably vary for each.

4771. *Lord Weir*: You really mean you fix a minimum rate below which no one in the millinery or drapery trade shall be paid; is that your view?—We say that nobody shall be permitted to pay a wage less than that fixed by the Trade Board, but they may pay as much more as they please.

4772. But do you fix several in that trade?—No, we do not propose to do that, unless, of course, for smaller towns.

4773. You propose to vary that for smaller towns? Yes.

4774. *Mr. Pugh*: But would not there also be a variation with occupation? For instance, if you take a person, I will assume a light porter, at 19 years of age, and a person of the same age, say, in a distributing fruit shop; would the minimum be the same for both those persons at that age; is that the idea; or would you have variations in occupations, as well as your variations in districts?—In all probability we would have variations according to occupation.

4775. But in respect of that occupation, if he was a porter, whether in a drapery establishment or in a grocery or fruit establishment, he would still get that wage?—Yes. I think it would be quite possible to fix a rate which would be equitable and applicable to all branches of the distributive trades, just as at present they have in London a wage scale for drapers' assistants, men and women, they have a wage scale for porters, men and women; and a wage scale for cleaners, men and women. The same principle I think would apply if the members of the Trade Board so desire it, but of course it is up to the Trade Board to determine these things. The Trade Board, I presume, is there to function in harmony with the wishes of the employers and the employees, and no doubt the various types of people engaged in the distributive trade would be carefully considered.

4776. *Mr. Poulton*: You see no difficulty as a practical man in setting up those varying scales of minima?—No, none whatever; that is to say, of course, if you set out with goodwill on both sides.

4777. *Sir Arthur Pease*: But your main point is that these should be minima and not standard rates, is it not?—Yes, that is so.

4778. That there should be a margin above that?—For the recognition of ability and skill.

4779. And it is very important that the minima should not become standard rates, and that most employers should pay above them?—That is so.

4780. *Mr. MacCallum Scott*: In your own business do you come under one Board or several Boards?—So far as the distributive side of our business is concerned, there is no wage scale in existence, either through a Trade Board or a trade union. We have had agreements with the trade unions, but the last one lapsed a year ago, since when there has been none.

4781. So you have no experience in your trade, at present?—Except in the making-up section, that is in the dressmaking and millinery and ladies' tailoring.

4782. Do you come under several Boards there?—Three Boards already—in fact four, I think, including corsets.

4783. Do you experience any difficulty owing to these Boards fixing different rates for labour which is fairly similar?—Yes, it causes a degree of jealousy among the employees.

4784. What do you do in these circumstances? From some people we have heard that the simplest way out of it was to pay the higher rate?—Our organisation is sufficiently large to provide separate workrooms for each class of worker, so it is not so acute in our business; but I can understand that it is an extremely difficult thing when workers in the dressmaking, tailoring, and millinery trades, which have different rates, are working in the same room.

4785. Do you experience any cases where the same individual, such as a porter, may be working in these three different departments during one week and may therefore come under varying scales?—No, porters are legislated for under these Trade Boards.

4786. There was a case of a porter which was quoted to us.—I imagine in the handkerchief hemming trade there is a trade union wage for a man doing ordinary portering work in a business of that kind, and he may be employed in the morning at that particular kind of portering work and in the afternoon he may be asked to handle the hemmed handkerchiefs, or something of that kind, when his wage would have to be adjusted in harmony with the higher Trade Board rate.

4787. Do you experience any difficulty in that?—We do not. We do not do that kind of work; but it has been reported to me.

4788. In your own business, do you in fact pay the Trade Board rates, or do you pay in some cases higher than these rates for the labour?—The principle we apply is that we must pay the minimum. If there are people who are more highly skilled, if one individual is more skilled than another, then they are to be rewarded accordingly.

4789. What I want to find out is whether the wage fixed by the Board in your business comes to be the actual standard wage, or whether it is a minimum above which you do pay in many cases?—It is not the maximum; it is only recognised as a minimum, and we do pay people, in many cases, considerably higher than the Trade Board rates. Well, we were dealing with the decision of the distributive trade as a whole in Scotland, and advocating the principle of the two Trade Boards, one for the food and perishable trades and the other for drapery. That, of course, was a decision taken in 1919, and the conditions have altered considerably since; so that I am afraid to-day that is not quite representing their views.

4790. *Chairman*: What is their view to-day?—Well, it is somewhat mixed. I think the majority of them would like to be left severely alone to negotiate their own wages. The drapery trade is unique in differing from that in advocating the opposite view. We have asked the question: Is there any reason for setting up separate Trade Boards unless essential differences between the trades, in the matter of wages and working conditions, can be shown? If that can be done, then, of course, there may be some justification for it, but our contention is that there are many trades where the working conditions are practically identical, where the employee is drawn from the same class, they live in the same streets, and their children attend the same schools, and, in effect, that one Trade Board could quite well apply to them all, thus simplifying matters and making for a very distinct economy, which is a thing we must not lose sight of. It is certain that different Trade Boards would create varying rates, and varying conditions of employment, not because of there being any necessity for

7 December, 1921.]

MR. JOHN CAMPBELL.

[Continued.]

such conditions, but merely because of the regulations being separately dealt with by different persons. This would result in a constant agitation among employees for uniformity, and more particularly so, because of the fact that the rates of pay would be public property. We incline to the view that such a solution would tend to form social unrest among shop-keeping employees as a whole. We consider it unwise to set up separate Trade Boards for each main distributive trade not only from the point of view of the trade as a whole, but also from the special conditions of our own trade. It is well known that a comparatively small business starting to sell drapery, frequently adds to its activities, as the business develops, the sale of millinery, dressmaking, men's wear, umbrellas, sunshades, fancy goods, toys, stationery, boots and shoes, ironmongery, furniture, china and glassware, and furnishings. In every town of any size, shops at all stages of this development can be seen, due to the increasing volume of trade in large centres of population. Even in a business of a very moderate size, several Trade Boards would, under this decision of the Minister, function. For instance, in a moderate sized shop selling men's wear, women's wear, umbrellas, furnishing and furs, you would have no fewer than five Trade Boards—in larger emporiums, of course, the number of Trade Boards would be indefinitely increased. I think in our business with which I have the honour to be connected, we would come under some 36 different Trade Boards. This would apply still more strongly in the case of the village shop which sells everything, and consequently the application of the principle of a separate Trade Board for each main distributive trade creates very considerable apprehension in the minds of those who are carrying more than one class of merchandise. With regard to the retail sale of clothing in drapery shops, we are informed that we are to have two Trade Boards for this class of trade only, namely, one for women's and children's wear, and the other for men's wear. Two Trade Boards for the retail sale of clothing are quite unnecessary. In addition it is proposed to have another Board for the sale of house furnishings, which would include household linens, a class of merchandise which has always been sold by the draper. The following difficulties occur in connection with this multiplicity of Trade Boards: Firstly, assistants usually handle more than one class of goods, and there would be great difficulty in determining under which Trade Board such assistants fall to be classed. Secondly, assistants are frequently transferred from one department to another for a half day or some such short period. Again the difficulty of the rate of payment arises, should Trade Boards with varying rates be involved? Thirdly, under the Act employers are under obligation to keep records to show that the Trade Board Acts have been complied with, and failure to do so is treated as a criminal offence. Then again, the difficulty of inspection and of enforcement of rates under these conditions, in our opinion, is almost insuperable. These considerations make it clear that some other solution than a separate Trade Board for each trade will have to be found. We, therefore, consider that the solution of all the difficulties involved will be found in grouping trades between which there is, for Trade Board purposes, no essential difference. To sum up, we put forward the following recommendations: First, that the Minister of Labour should apply the Trade Board to our or any other trade only if he is satisfied that the rate of wages prevailing is exceptionally low as compared with other employments. The mere fact of a trade not being organised does not seem to us a final reason for the application of a Trade Board.

4791. *Chairman*: That is going back to the 1909 Act?—Yes. Secondly that any arrangements made in connection with the Trade Board system as a whole, or in connection with its application to a particular trade, should be on broad lines, and should be such as can be easily understood, that is to say not involved. Thirdly, that every effort should be made, if necessary

by warning and advising members of Trade Boards, to avoid the mistake of having an elaborate wage scale and, in particular, a wage scale fixing "standard" instead of "minimum" wages. We are of opinion that much of the agitation against Trade Boards has arisen from the fact that standard wages instead of minimum wages have been fixed. Many of these rates were fixed in a period of expanding trade. In a period of diminishing trade they, naturally, have to be diminished. Trades then find that it takes about six months to make any alteration in them, and employers and employees consequently suffer alike—the one through having to pay too high wages, and the other through unemployment. The cure for this is to fix minimum wages which will allow for sufficient elasticity with regard to the actual or standard wage to meet any variations in trade conditions.

4792. How would you enforce that on the Boards?—I think that any alteration in the wage scale should be carried through in two months.

4793. That deals with time. How would you compel a Board to fix a minimum wage which is not a standard wage?—We are fixing minimum wages which would be enforced, of course. Everybody would have to pay the minimum, but it is not in any sense the maximum. Is that the point you want?

4794. I know that, Mr. Campbell, but you are recommending, I dare say very wisely, that the Board should fix minimum wages and not standard wages. I suppose in order to bring that into practical effect you would have to put something in an Act of Parliament, on your definition, or somewhere, which would show them that their duty was to fix a minimum only. Have you any suggestion to make of words other than those which are to be found in the Act already?—I have not, but I think every Trade Board announcement sets out quite clearly that this is a minimum wage scale.

Lord Weir: It does not give any interpretation of what a minimum is; what do you mean by a minimum?

4795. *Chairman*: They call it the minimum?—The lowest scale wage which can be paid by employers.

4796. *Dame Adelaide Anderson*: By any employer?—For that particular class of labour.

4797. *Mr. MacCallum Scott*: But they might in effect pay a standard wage?—Well, I dare say there are some people who shelter themselves behind paying the minimum, and looking upon that as a maximum; but if you want in our particular business to get the best class of worker, it is necessary to pay more.

4798. I do not think you have quite got the difficulty. You said previously that some of the Boards had fixed wages which were, in effect, standard wages?—Yes; I am thinking of the Tailoring Board at the present time.

4799. According to the definition you have given just now, these really were minimum wages, because nobody was allowed to pay less?—Yes.

4800. What exactly do you mean by a minimum wage?—Well, the lowest wage which anybody would be allowed to pay that particular class of worker. It may be fixed by the Board in harmony with the cost of living, and very likely it would be.

4801. Supposing I took double the present rates and said nobody should be allowed to pay less than that, would that be a minimum wage?—Yes, if a Trade Board so decreed.

4802. What do you mean by saying that in effect they were standard wages?—Some of the Boards have fixed a rate which is really the highest standard which can be paid in the particular kind of business. You have had an agitation in England against the rate fixed by the Dressmaking Trade Board. I think of 10½d or 10½d. per hour. Happily in Scotland we have ordered things better, and we have not felt the consequences that the English higher rate have had.

4803. How would you suggest that the Trade Board should be bound down to fix rates which were really minima, and which were not in effect standard; must that be left just to common sense?—To common

7 December, 1921.]

Mr. JOHN CAMPBELL.

[Continued.]

sense and experience, of course, and if your Appointed Members and your Chairman are really conscious of the possibilities of setting up too high a rate, I do not see any danger. I will put it in this way. If you need to get the services of a carpenter you must employ a carpenter at the standard rate of wages. If you want a plumber you must pay him the standard rate of wages, and so on, for any particular class of labour; but if a lady wants a dress it does not follow that she must have one made to order; she can get a beautiful thing readymade. The effect of fixing too high a rate for a handicraft like dress-making has a tendency to send people to the ready-made article, which to-day is produced very beautifully indeed. The tendency, therefore, is to destroy the handicraft, and to foster the machine-made article, and the gniding man on the Board, the Chairman, and the Appointed Members on the Board must be people who are very carefully selected, and who will take into account the consequence of fixing a rate too high for that particular industry to carry.

4804. *Mr. Pugh*: I think I quite follow what you mean by the minimum; you simply say, "Here is a rate below which no one shall pay a porter," or whatever he is. That is not necessarily a standard rate. You agree that for skill, or perhaps for service, or perhaps for certain conditions of employment, a higher wage should be paid. How are you going to enforce that higher wage? You would be able to enforce your minimum wage under the Trade Boards Act, but you do not propose applying the Trade Boards Act to wages above the minimum?—If there is no organisation to effect a higher standard wage, then it must be left to the employer and the worker to negotiate.

4805. That, of course, so far as a good employer is concerned, might be all right; but if you cannot enforce it either by trade union machinery or by legislation, would not the tendency be in a very large number of cases that the minimum would become the maximum?—It has that tendency, but at all events the worker is protected up to a point, which is better than the present condition where there is no protection.

4806. There is protection with the Trade Boards?—Where they exist, where they operate; but they do not apply to the distributive drapery trade, for example, to-day.

4807. But of course we are discussing Trade Boards?—Yes.

4808. And at the present time the Trade Boards do fix wages which are not necessarily permanent minima?—Each Trade Board can function for itself, I quite understand that; but I see the possibility of very serious dislocation of labour if these rates are fixed too high. I am not out to pay a small wage; very far from it; but I am sufficiently interested in the employee to advocate that nothing of a drastic nature be done which will cause unemployment.

4809. And then, of course, your minimum would have to be sufficiently low to cover that, and I am anxious to find out how, as a trade, you are going to arrange as a trade to enforce higher wages which would admittedly be paid for skill, for service, and so on, unless you have some means of enforcing it; whether your low minimum, which would be sufficiently low, would not tend to become the maximum, and there would be no protection to the worker?—Well, I think there is always a demand for the higher grade of employee. You would only get the lowest grade for your minimum rate, and if you want a better type of person, a higher degree of service, you would have to pay for it. The law that operates at present I am afraid must continue to operate, with this difference, that the worker would be protected by the minimum wage.

4810. It is simply to prevent a sweated wage, that is all?—That is so.

4811. *Dame Adelaide Anderson*: If in effect you have to take into account the small employer who could not make a profit if a minimum rate were fixed such as to yield the same amount of subsistence as you get in a factory, you would continue to say

that it must be the employer's power to pay, rather than the subsistence wage needed for the worker? You spoke of a tendency of the hand work to go into the factory?—Yes.

4812. You would fix that minimum so as to keep matters standing where they are?—To keep the trade alive; you must have regard to that.

4813. Rather than that the standard of what is necessary for the efficiency and well-being of the worker?—No, I should think your minimum wage would ensure, at all events, a living wage.

4814. *Mr. Poulton*: You would start from that; that is the basis?—Oh yes; legislation without providing a decent standard of living is, in my opinion, useless.

4815. *Dame Adelaide Anderson*: But then if you take the worker, who has to spend more to comply with the conditions of his occupation, the minimum for the one would not be a sufficient minimum for the other?—You mean in the distributive trade, or the making-up business?

4816. Well, any industry.—I have pointed out, of course, that in the distributive trade it does not seem to me to be so very essential to keep the wage low, because you are not suffering there from the competition of other people, from abroad, for example, like a manufacturer. The dress and millinery trades do, however, suffer to a certain extent from outside competition and also from the factory principle.

4817. But in so far as the subsistence wage does reduce the trade of the occupier of the small places, you would let the subsistence wage operate even if it was adverse to the small employer?—Oh, I think any trade which cannot maintain its workers in common decency should not exist. It may be a very serious hardship even to the person who is receiving the very low wage. You take, for example, a small dressmaking organisation in a town of, say, 3,000 inhabitants, where the choice of employment is extremely limited. If you fix a fairly high Trade Board rate and apply it, it may be that the employer cannot pay that wage, and he simply closes down his place. Well, one has to ask oneself the question whether you are doing the worker a kindness in imposing that rate. She may have no alternative employment in a town of that size.

4818. The moment may come when she may have to migrate?—That is just the difficulty; so that our advice is to "Gang wairly" as we say in Scotland—to go cautiously in all regulations so as not to create unemployment—not with a desire to have low wages; far from that; that is not my point of view at all, but to serve the trade.

4819. *Chairman*: You have given us three recommendations. Are there any others?—We also recommend that a wage scale should be fixed to cover only the period of five years from the time of the assistants joining the trade. We assume that they begin at fourteen years of age, and we recommend that a wage be arranged until they are nineteen.

4820. *Lord Weir*: That, of course, only applies to your particular trade?—Yes.

4821. *Mr. MacCallum Scott*: What happens after that?—We think that that is a big rough step to take in the first instance, suitable adjustments being made for late entrants. That is a very important thing, as was mentioned this morning.

4822. There should be no rate fixed for adults?—No. There should be the first step. We also recommend that there should be no extension of this until the trade has fully adjusted itself to the wages scale; and we further recommend that for the purposes of Trade Boards a universal forty-eight hours' week be adopted, to save an interminable discussion as to whether it is to be a forty-four, forty-six, forty-eight or fifty hours' week before overtime is paid. It does not follow that they are going to work forty-eight hours.

4823. *Chairman*: They may work more, but they would be paid overtime?—Yes, or they may work forty-four hours or forty-two hours; but we say that overtime should not be paid until forty-eight hours have been worked.

7 December, 1921.]

Mr. JOHN CAMPBELL.

[Continued.]

4824. *Lord Weir*: As a matter of fact, is there any variation in the hours, for example, in the four Trade Boards under which you work?—Forty-six hours has, I think, been approved. As a matter of fact, a good many of us work forty-four hours. I am told that it is forty-eight hours for the tailors and forty-six hours for others.

4825. *Dame Adelaide Anderson*: With regard to those forty-eight hours, there would be some hour in the day at which overtime would begin. It is not only a weekly maximum but there is some daily maximum?—So far as the distributive trade is concerned we have the Shops Act, which limits the number of hours to be worked per day. There is a Closing Order, say, for seven o'clock for three days a week; there is the weekly half-holiday at one o'clock; there is permission to keep open until eight o'clock on Friday and nine o'clock on Saturday, or something like that.

4826. Does that now limit the productive department?—Not the productive department; that is in the distributive department.

4827. Then in the productive department you would need a daily limit?—That would be advisable.

4828. In addition to the forty-eight hours' maximum weekly limit?—Yes, there should be some regulation so that the day would not be excessively long.

4829. *Mr. Poulton*: To be settled by the Board?—Yes.

4830. *Mr. MacCallum Scott*: You did express strong approval of the principle of Trade Boards?—Yes.

4831. I was not quite sure whether you were in favour of them being applied to your own trade or

not?—Yes, the drapery trade of Scotland is distinctly in favour of it.

4832. I just want to mention two points that strike me. The first was that you suggested definitely that Trade Boards should be limited to those trades in which the rate of wages was excessively low?—Yes.

4833. Would that admit your trade?—The Minister would need to satisfy himself from evidence submitted that the wages were excessively low. I am not prepared to say that they are; I do not think so at the present time.

4834. Would that exclude your own trade or not? I want to know whether that opinion which you have expressed is one which would exclude your own trade?—So far as the masters in the federation are concerned I should say yes; it would mean that we would not have a Trade Board applied; but then I have only access to our own employers' figures. I do not know anything beyond that.

4835. Then the other point which seemed to me to limit your approval of it was that you were not in favour of Boards fixing the rate for adult labour, that is to say for ordinary labour, but only for learners during the first five years?—Yes, during the first five years; then a minimum adult wage, and then leave the Board to determine whether there is to be an extension.

4836. You would leave it to the Board to determine that?—Yes, certainly.

4837. You seem to me to be following the maxim "Gang warily."—We are doing that as much in the interests of the employees as of the employers. We think that they are more likely to suffer than the employers.

Chairman: We are much obliged to you.

(*The Witness withdrew.*)

(*Lord Weir took the Chair.*)

Mr. ARTHUR BALFOUR, J.P., called and examined.

The witness handed in the following statement:—

Proof of evidence of Mr. Arthur Balfour, J.P., Deputy President of the Association of British Chambers of Commerce, Chairman and Managing Director of Messrs. Arthur Balfour and Co., Ltd., Sheffield, Chairman of High Speed Steel Alloys, Ltd., Director of the British Trade Corporation, and Local Director of the National Provincial and Union Bank of England, Ltd. Member of various Government Commissions.

1. Witness attends on behalf of the Executive Council of the Association of British Chambers of Commerce, which comprises 116 Chambers, with a total membership of over 45,000.

2. The following two resolutions were unanimously adopted at the Annual Meeting of the Association on the 16th June, 1921.

(a) "That this Association views with grave apprehension the multiplication of Trade Boards and the large increase in officialism and expenditure, and emphatically protests against the action of Trade Boards in fixing rates which become practically minimum rates of pay and also in the fixing of wages according to age. Further that the action of Trade Boards is disastrous in creating unemployment, and in killing many valuable crafts.

(b) "That this Association strongly urges the Minister of Labour to limit the application of the Trade Boards to those trades in which they already exist until the suggestions of the Council of this Association have been acted upon by the Ministry of Labour."

3. The suggestions of the Council referred to in Resolution (b) were contained in a resolution passed at the quarterly meeting of the Association on November 10th, 1920, urging upon His Majesty's

Government the necessity for an immediate inquiry into the administration of the Trade Boards Acts and the general policy of the Ministry of Labour in connection therewith.

4. The Executive Council of the Association have had under consideration summaries of the views expressed by the individual Chambers of Commerce as to the working and effects of the Trade Boards Acts and the following is a general summary of the views of Chambers of Commerce.

5. The fixing of the so-called minimum time rate, which has become, in practice, the standardisation of a maximum rate, has inequitably benefitted the inefficient worker at the expense of the highly efficient, with consequent detriment to the industry.

6. The method prescribed by the Act for the payment of piece-workers is wholly antagonistic to the principle of payment by results the only method of obtaining economic, and encouraging increased production. This method also provides an equivalent (Section 8 of the 1918 Act) for the payment of "waiting time" a Trade Union demand which has been successfully resisted wherever directly made in connection with piece-work employment.

7. The operations of the Acts have restricted the employment of competent operatives, limited and discouraged the employment of less competent operatives, prevented employment in many instances, and deprived employees of continuous employment on agreed terms, thereby enlarging the category of casual or intermittent workers.

8. In establishments where more than one Trade Board operates dissatisfaction conducive to industrial discord is created by reason of the fact that in the same workshop one particular section of operatives engaged on work necessitating no higher skill than that required on the part of another section, on other work is paid at higher rates.

7 December, 1921.]

Mr. ARTHUR BALFOUR, J.P.

[Continued.]

9. Rates fixed by Trade Boards are enforceable on employers; they are not enforceable on employees. Cases are known where employees under threat of strike demanded and secured rates much higher than those adjudged adequate by the Trade Board.

10. The fixing of rates according to age ignores the ability and worth of the individual operative and thereby penalises efficient workers.

11. Learners' rates have been fixed at too high a standard, with the result that employers are compelled to engage only the minimum number and employment and training is accordingly restricted.

12. Experience has shown that the inspection by Trade Board inspectors is in the main confined to well-organised establishments, where proper records of wages and time are kept. Refusal or neglect by smaller employers to keep such records has been ignored, and the scale of wages paid by those who keep no records is unknown, to the prejudice, as it is believed, of the honest employer.

13. The Trade Board system has fostered amongst workers the spirit of competition for higher wages irrespective of the class of work involved, and has directly contributed to the increased cost of living and unemployment.

14. Trade Boards have not stimulated any increased zeal on the part of the operatives, who look upon the wage conditions regulated by the Boards as something totally independent of their own exertions and worth.

15. There is no justification for the suggestion made by the Ministry of Labour that consequent on the extension of the Trade Board system industrial disputes have decreased. Disputes have decreased owing to the extent of unemployment.

16. While data illustrative of the actual cost of the Trade Board system is not available, it is authoritatively estimated that on the average each Trade Board meeting costs £100. In March last, it was officially admitted that Headquarters' cost of Trade Board officials amounted to £45,000. This sum is exclusive of the cost of part-time services of officials in other Government Departments who do certain work for Trade Boards. It is also admitted that up to the present each Trade Board, of which there are 63, involves an annual expenditure of at least £1,000. These figures are the extreme minimum. There is substantial reason for the belief that the system even in its present state imposes a much heavier burden on the Treasury and on industry.

17. There appears to be very little objection to the Act of 1909, which was enacted for the purpose of remedying the evil of "sweating" and limited to the four industries scheduled thereunder, namely:—

- (1) Ready-made and Wholesale Bespoke Tailoring and any other branch of tailoring in which the Board of Trade consider that the system of manufacture is generally similar to that prevailing in the wholesale trade.
- (2) The making of boxes or parts thereof made wholly or partially of paper, cardboard, chip, or similar material.
- (3) Machine-made lace and net finishing and mending or darning operations of lace curtain finishing.
- (4) Hammered and dollyed or tommied chain-making.

18. In the Act of 1909 it was laid down that the Act should not be applied by the *Board of Trade* to industries other than those specifically scheduled *without the consent of Parliament*, whereas under the Act of 1918, the application of the Act to other industries is not subject to the consent of Parliament and confers on the *Minister of Labour* the power of making a Special Order applying the principal Act (that of 1909) to any specified trade if, *in his opinion*, no adequate machinery exists for the effective regulation of wages throughout that trade.

19. The Amending Act of 1918 was not the result of any public demand. It was projected by the Ministry of Labour and rushed through the House of Commons at a time when the attention of the whole nation was concentrated exclusively on the war, and it became law before anyone realised how dangerously it contributed to the development of bureaucracy and unemployment. By removing the application of the Trade Board system from Parliamentary control and giving a free hand to the Minister of Labour, this Act legalised a new departure in State interference with industry, for which no demand had been made by any section of the community.

20. Up till 1918 the Act was only applied to five industries, but since the passing of the Act of 1918 some 54 Trade Boards have been set up, and it is understood that the Ministry of Labour has in contemplation the establishment of an additional 170 Boards.

21. In the opinion of this Association it is not sound policy that such unrestricted powers as those given under the 1918 Act should be vested in the Minister of Labour, and the general opinion of the Chambers of Commerce is that the 1918 Act should be repealed or drastically amended.

22. Capital for industry cannot be raised freely if the industry is controlled by a Trade Board.

23. Time has shown that wages decisions imposed by Government on either employees or employers often break down owing to the operation of the economic law of supply and demand.

24. Competition between Trade Boards and Whitley Councils and deliberate interference in settled trades by the Ministry of Labour.

4838. *Lord Weir*: You are the Deputy President of the Association of British Chambers of Commerce?—Yes.

4839. You are the Chairman and Managing Director of Messrs. Arthur Ballin & Co., Ltd., of Sheffield?—Yes.

4840. You are the Chairman of High Speed Steel Alloys Ltd.?—Yes.

4841. You are a Director of the British Trade Corporation and local Director of the National Provincial & Union Bank of England, Ltd.?—Yes.

4842. You have been a member of various Government Commissions?—Yes.

4843. You attend to-day on behalf of whom?—On behalf of the Association of British Chambers of Commerce, and that represents 116 Chambers with 45,000 members.

4844. I understand that certain resolutions were unanimously adopted at the Annual Meeting of the Association?—Do you wish me to read those? I think every member has a copy of them, and I think you may take those as read.—The first view of our Chamber was that it was unnecessary for the Association of Chambers of Commerce to give evidence because we thought that each Trade had better come before you and give its own evidence; but when we found that every one of our Chambers had reported to us that they were against Trade Boards, or criticised them in some way adversely, we thought that it was better for us just to come before you and tell you of that fact and of course let them deal with their detailed criticisms as they come before you as Trades.

4845. So that you only want to emphasise certain general points, probably?—That is all. I propose with your permission just to take three or four points out of my statement and not to read the whole document, which you have before you. I thought I would take paragraph 5 first, if you are agreeable. The feeling seems to be that you cannot fix a minimum wage without it becoming the standard wage or the maximum wage or whatever you like to call it; and the difficulty is that when you have once fixed a wage the experience of our Chambers seems to be that it is impossible after that to pay for extra efficiency on the part of workers—that the moment you commence to pay for extra efficiency of workers

7 December, 1921.]

Mr. ARTHUR BALFOUR, J.P.

[Continued.]

you are immediately met, and I think quite reasonably when you have got the thing so controlled by Trade Unions, with an attempt to increase the minimum to the wages which you pay to the most efficient.

4846. I take it that that does not mean that you object, for example, to the 1909 Act?—I am entirely in favour of the 1909 Act and I think that in any industry where it can be shown that there is sweating you must have something like the 1909 Act; but I do not think that you can apply it generally and set up Trade Boards for every trade in the country. I think that you get into an impossible position if you do.

4847. *Mr. Pugh*: But if in the case of the higher wage that tends to become the maximum would not your minimum based upon sweated conditions tend to become the maximum?—I am afraid it does. That is why I am against setting it up except in a trade where there is real necessity.

4848. You are in favour of the 1909 Act applied to sweated trades, but would not your argument equally apply there?—I think it does apply there: I think that is one of the difficulties in attempting to legislate by Government or by anything controlled by Government between employer and employee.

4849. It hardly disposes of your difficulty, does it, because that is surely an argument against the 1909 Act?—I agree that it is. I think that these things ought to be settled between employer and employee better than by any interference of the Government; but on the other hand you have to meet the point which was raised in some of these Trades in the 1909 Act and you have to do something, and I think it is better to do that than to do nothing. That is my view. Now, if I may, I will take paragraph 8 of the statement.

4850. *Lord Weir*: Perhaps there is a point on paragraph 6. You might develop that a little.—Paragraph 6 says "The method prescribed by the Act for the payment of pieceworkers is wholly antagonistic to the principle of payment by results, the only method of obtaining economic, and encouraging increased, production." I have really touched upon that already. It is the difficulty of getting increased efficiency and paying for it in relation to what you get.

4851. *Mr. Poulton*: What do you mean when you say "The method prescribed by the Act for the payment of pieceworkers is wholly antagonistic to the principle of payment by results"?—Because it fixes the wage.

4852. Payment by piecework is payment for the piece of work done, which is surely payment by results?—It is, that is true; but several of our Chambers have raised this point and they object to the waiting time connected with the piecework rate.

4853. That is entirely a separate question, I suggest.—It comes into the same question, surely.

4854. A portion of my own trade comes under that principle of waiting time and as I understand it, it is because the employer insists upon the pieceworker staying on the premises and will not let him go because some work may come; and the argument is that if the employer wants the man there surely he should pay him something for keeping him there.—There might be some justice in that except that it is increasing the piecework rate really by paying for waiting time, is it not?

4855. If the man is there at the express wish of the employer surely he is liable to pay the man for keeping him?—Is that always the case?

4856. Well, that is the basis of it.

4857. *Mr. Pugh*: It is not an uncommon practice in industry to pay for waiting time?—It may not be in some industries but it does not apply in most industries. I will take paragraph 8: "In establishments where more than one Trade Board operates dissatisfaction conducive to industrial discord is created by reason of the fact that in the same workshop one particular section of operatives engaged on work necessitating no higher skill than that required on the part of another section on other work is paid at higher rates." Some of our Chambers do find

that where two Trade Boards or three Trade Boards are working in one concern under the same roof, the higher rates fixed for one class of the trade which is no more skilled than another class of the trade do cause discontent. Paragraph 9 is "Rates fixed by Trade Boards are enforceable on employers; they are not enforceable on employees. Cases are known where employees under threat of strike demanded and secured rates much higher than those adjudged adequate by the Trade Board." That is considered a serious grievance.

Lord Weir: Can you give us any suggestion as to that?

4858. *Mr. Poulton*: That is dealing with minima?—Yes, but still you are holding the employer to pay the wage, but you are not holding the worker to receive it.

4859. No, because it is a minimum. If you held him to that you would hold everybody down to the absolute minimum.—I have already dealt with that point. I have told you that the moment you go away from those Trade Boards wages you have the difficulty that an attempt is made to raise the whole wage to the higher rate; and I think that is an inevitable result of attempting to fix a wage.

4860. *Mr. MacCallum Scott*: Do you suggest that it should be made a maximum?—It becomes a maximum.

4861. But do you suggest that it should be made a maximum beyond which it would be a legal offence to go?—I do not think you can fix it at all—not generally, except in sweated trades.

4862. *Mr. Poulton*: Although the trades of the country have been doing it for a quarter of a century?—Yes, between themselves, but that is a totally different thing. Take the Union which any of you gentlemen represent and, for instance, my trade; we can come to a conclusion together and we can both carry it out because we have come to that conclusion, but if that is forced upon us by a third party, if it is uneconomical, it will not hold water; and if one side says that they will not work under it what is the good of having fixed it at all.

4863. Again I suggest to you that it is only the minimum, and you will have the same difficulty in your voluntary agreement: if a man considers that he is worth more than the minimum he refuses to work at the minimum.—Yes, but you can fix more detailed rates in negotiations between employer and employed than you can by negotiations between a Trade Board and a Trade. You can select groups of workmen for certain work and fix their wages, and you cannot attempt to do that with a Trade Board.

4864. They do.—You cannot possibly cover the trades in this country on those lines without having a mass of Trade Boards, which would cost the country much too much money.

4865. *Mr. Pugh*: Surely we have the same principle operating in the trades which you and I understand. Our standard rates are the minima which the employer is compelled to pay, and he recognises that he is compelled to pay the minimum, but it is quite open for the workman to apply for higher wages and for the employer to refuse and so on; but you have the same principle operating even under our voluntary arrangement.—No, I do not think so. I think you can pay a man much more in detail under our voluntary arrangement than you can under a compulsory arrangement.

4866. The objection is to compulsion, surely?—Yes.

4867. *Dame Adelaide Anderson*: Even if you had a very wise Trade Board thoroughly representative of the industry and the rates were very wisely fixed?—It depends. If you have a very wise Trade Board I do not think they can fix a rate covering a trade in detail. They have got to take a wide view of the thing and they cannot take a detailed view. I feel that the only way in which we shall get the trade in this country back is by every man working to his full capacity and being paid for the efficiency which he shows; and I do not think you will ever do it under Trade Boards.

7 December, 1921.]

MR. ARTHUR BALFOUR, J.P.

[Continued.]

4868. Not even in the trades where they are thoroughly satisfied with the Trade Boards?—I find very few trades that are thoroughly satisfied amongst our members. There may be some, but I do not know of them. I am leaving each Chamber to give the details as to its trade, because I am not competent to speak of each trade.

4869. *Lord Weir*: What is the next point that you want to emphasise?—Number 10. There is a strong feeling against fixing rates according to age, because "The fixing of rates according to age ignores the ability and worth of the individual operative and thereby penalises efficient workers." It is really the same point as I have already dealt with.

4870. *Mr. MacCallum Scott*: According to what would you fix it?—I do not want to fix it in that way at all. I only want to fix it to the extent of stopping sweating where sweating exists, that is all.

4871. Would not the objection which you intend to express then be that you object to fixing it at all?—I object to fixing it at all in a compulsory way; I do not object to fixing it at all with a Union.

4872. But what I am wondering is why the word "age" is brought into that paragraph?—It is brought in because we find that the rate which is specified for a boy who becomes eighteen years of age is too high, and the consequence is that a boy just in his best learning years from eighteen to twenty-one is very often let go on account of the fact that you can employ a man for the same wage, and it is better to employ a man.

4873. Would you fix it at nineteen years? Do you mean that the age is too small?—I think the age is too small.

4874. That is not an objection to fixing it according to age?—It is an objection to fixing it according to age, because one man at nineteen may be worth a good deal but another man at twenty may be worth much less. If you have got to pay him according to the Trade Board decision you have to pay him as a man.

4875. Are you not suggesting that the wrong age is taken?—Yes, I think the basis of the objections which we have had given to us is that the wrong age is taken.

4876. Then that is not an objection to fixing it according to age; you would just simply substitute another age?—I am not very fond of fixing on age really.

4877. That is what I want to find out. If it is fixed at all, on what principle would you suggest that it should be fixed?—They think as a whole that twenty-one years is the old age at which a boy becomes a man and that it should be something like the age; but eighteen years is much too low.

4878. That is fixing it according to age?—It is, I agree.

4879. Then the objection is hardly correctly expressed there?—That is the wording of our Chambers; that is the view of the whole of the Chambers on age. We find that there is no objection at all to the Act of 1909 or the principles of the Act of 1909 and all our Chambers seem to be in sympathy with the idea of that Act. I will take paragraph 21. The Chambers feel that the unrestricted powers which are given in the 1918 Act to the Ministry of Labour are too wide and the general opinion of the Chambers of Commerce is that the 1918 Act should be repealed or drastically amended.

4880. *Lord Weir*: When you say "unrestricted powers," what have you specially in mind?—The Minister of Labour has very wide power under that Act to enforce a Trade Board on to a trade.

4881. As compared with the 1909 Act?—Yes, as compared with the 1909 Act, he certainly has.

4882. *Mr. Poulton*: After full enquiry?—Yes, I agree.

4883. *Lord Weir*: Do you submit that it is a very unrestricted power which gives the Minister power to impose a Board on a Trade where there is inadequate organisation? That is the only difference from the other Act?—That is the difference from

the other Act, I admit, but the general view of the Chambers is that the Minister of Labour has too much power upon this question.

4884. *Mr. MacCallum Scott*: What is the suggestion that lies behind that? Is it simply that the 1918 Act should be repealed or is it that in certain respects the power of the Minister should be limited?—I think that on the whole the 1918 Act should be repealed. Other Chambers think that it might be drastically amended but generally they think that it should be repealed. With regard to paragraph 22, there is a very strong feeling that anybody who applies for capital for an industry, if they advertised in their prospectus that the industry was controlled by a Trade Board, would have very great difficulty in attracting capital to the business.

4885. *Lord Weir*: Have you any definite evidence upon that?—No, we have no definite evidence except the statement of the Chambers. I am only giving you the boiled down evidence of about 29 or 30 Chambers.

4886. *Mr. Poulton*: May we expect any evidence upon that?—I hope so. I have impressed upon the different Chambers that when they come before you they ought to try to back up the evidence which they have put before us as a whole. Then paragraph 23 is "Time has shown that wages decision imposed by Government on either employees or employers often breakdown owing to the operation of the economic law of supply and demand." I have, of course, already dealt with that. With regard to paragraph 24, we find that there is a certain amount of competition between the Trade Boards and the Whitley Councils. I have some information which was given to me in Sheffield in relation to the silver trade. A canvasser was sent down from the Department of Trade Boards to try and foist a Trade Board on the Silversmiths' trade in Sheffield, which was absolutely unnecessary, as they had worked amicably together for twenty-five years. Nobody had asked for it, but a canvasser is sent down, and one of the arguments is, "If you do not have a Trade Board you may have a Whitley Council." On the other hand, we have people sent down from the Whitley Council Branch of the Ministry of Labour who say, "Look here, if you do not have a Whitley Council soon you may have one of those dreadful things called a Trade Board." It does seem to me that if you have in one building here two staffs competing with one another there is something wrong. We also feel that perhaps in the case of the Silversmith Workers' trade, where there is no reason for it at all, you are really stirring up trouble where it does not exist, and also causing enormous expense to the taxpayers of this country.

4887. *Mr. Pugh*: Has there been any representation from the workmen's side to the Department, or do you suggest that they have initiated the thing?—Absolutely. In the case of the Silversmiths' trade they initiated it absolutely. There was no representation from the workers' side at all. It was a lady canvasser who was sent down by the Ministry of Labour.

4888. They have already got good machinery of negotiation, have you?—Absolutely. They have worked smoothly together for twenty-five years, and I have never known them to have a really serious difficulty which they have not settled themselves, and both employers and employed wish to continue.

4889. *Dame Adelaide Anderson*: The whole object of Whitley Councils is to encourage co-operation and communication between the two sides, is it not?—I think it is.

4890. This investigation was rather an investigation than a proposition, was it not?—No, I do not think it was an investigation at all. It was merely that a lady canvasser was sent down by the Ministry of Labour to try and impress on the trade the desirability of having a Trade Board.

4891. Of having some sort of organisation?—Which they did not need. I think that covers all the information that I can give.

4892. *Mr. Poulton*: I should like to ask one or two questions, because there are some very extraordinary statements here, and I think we ought to have the

7 December, 1921.]

Mr. ARTHUR BALFOUR, J.P.

[Continued.]

evidence of them. In the resolution (a) in paragraph 2 it says: "The action of Trade Boards is disastrous in creating unemployment, and in killing many valuable crafts." I suggest that, when we have a statement like that as to killing many valuable crafts we ought to have the evidence here?—I will certainly ask the Chambers to give you that evidence. I will communicate with them. I think the previous witness rather referred to that, did he not? Did he not point out that that was killing the small crafts?

4893. *Lord Weir*: I take it that we will have evidence from the Chambers of Commerce supporting this statement?—That is quite right. We shall be putting before them the evidence which we are now giving, which is based upon their evidence, and asking them when they come here as, for instance, the Boot and Shoe Trade, and when they come here as different trades to back up those statements.

4894. *Mr. Poulton*: Are we really to have this kind of statement put in and no evidence adduced, but to wait for somebody on the assumption that they will come along? Because, of course, the Boot and Shoe Trade is coming along to ask for the Board to be continued because it is so beneficial?—I mentioned the Boot and Shoe Trade as the first that came into my mind. They may. There may be others that will not.

4895. *Lord Weir*: It is not quite so satisfactory as if we could have the details first and the generalisa-

tion afterwards?—I agree, but you will agree that I could not possibly give evidence for all the trades of the country, and that is why, in the first instance, we did not intend to come to you at all. It was only on getting these unanimous opinions over such a wide range of trades of the country that we thought we ought to come and tell you in this form what the conclusions are.

4896. *Mr. Pugh*: I take it that the Association does not want us to regard this as merely a pious resolution?—No, I do not think they do. That resolution was passed with all present; it was at an annual meeting.

4897. So that they will be giving us evidence?—Yes, they must give you evidence. I have asked them to give you evidence.

4898. *Mr. Poulton*: As you have no evidence upon that point I should like to ask whether you have any evidence upon paragraph 7, that: "The operations of the Acts have restricted the employment of competent operatives"?—I think that the Chambers have put up cases to us where that has been the case, but I have not got them and I cannot give you the details of them. I will mark it so that somebody does give you a reply.

4899. *Lord Weir*: *Mr. Poulton* points out that those are very strong statements?—I agree that they are, but they are taken from the views of each of the Chambers as expressed to the Association.

(The Witness withdrew.)

(Adjourned to to-morrow morning at eleven o'clock.)

TWELFTH DAY.

Thursday, 8th December, 1921.

PRESENT:

The RIGHT HON. the VISCOUNT CAVE,
G.O.M.G. (Chairman).

The RIGHT HON. LORD WEIR OF
EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

The Hon. Mrs. ALFRED LYTTETTON,
D.B.E.

Mr. W. T. LAYTON, C.H., C.B.E.

Mr. E. L. POULTON, O.B.E., J.P.

Mr. A. PUGH.

Mr. A. MacCALLUM SCOTT, M.P.

Mr. H. D. HANCOCK (Secretary).

Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE, called and examined.

4909. *Chairman (to Mr. Maxwell)*: You are a director of Messrs. John McIntyre and Company of Edinburgh, and I think you have come on behalf of the Scottish Garment Makers' and Millinery Trades' Federation?—(*Mr. Maxwell*): That is so.

4901. What is your own occupation?—I am a director of Messrs. J. and R. Allan, Limited, which incorporates John McIntyre and Company.

4902. What is your position in the Federation? Are you Chairman of the Federation?—"I am Chairman of the Scottish Garment Makers' and Millinery Trades' Federation, which is a Federation of trade associations in various parts of Scotland, and which includes the Glasgow and West of Scotland Association, the Edinburgh Association, the Dundee Association, the Aberdeen Association, and also the Ayr Association. The Federation, accordingly, includes members in most districts in Scotland, excluding, however, Orkney, Shetland, Stornoway, Ross-shire, Caithness, Argyllshire, and the Hebrides. So far as I know this Federation is the only organisation in Scotland that can speak for the dressmaking and millinery trades in Scotland.

"It may here be explained that we have no connection with any English association, and represent Scotland solely. No English association can speak

for the trade in Scotland. The Association comprises, roughly, 300 employers, in whose service there will be approximately 7,000 employees.

"Our trade as dressmakers and milliners is dealt with by two Scottish Trade Boards, namely, the Dressmaking and Women's Light Clothing Trade Board (Scotland), and the Hat, Cap and Millinery Trade Board (Scotland). I am a member of the Dressmaking and Women's Light Clothing Trade Board (Scotland), and have been since its inception. I have, therefore, practical experience of the working of the system at first hand.

"I might further explain that as a trade we are not at all interested in piece rates; we are concerned only with time rates. This has been the basis of remuneration in the trade all along."

4903. As to what you said about time and piece rates, do your members not give out work to be done at home?—Very seldom, but that would not be paid by the piece. In the handicraft trade you cannot work to advantage by the piece. It would be a very different thing if we were wholesale manufacturers, whose work is practically repetition work, but with regard to dressmaking, that is done to measurement and to order. Many times ladies require little alterations after they have in the first place decided.

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

Those have all got to be taken down, and it becomes a very awkward business to deal with your workers on piece-rates when you have to take down and make to meet the tastes of the customers.

4904. At all events, that is your practice in Scotland?—That is the practice in Scotland.

"Importance of forming Scottish Trade Boards.—In May, 1919, we took part in a deputation from Scotland to the Minister of Labour, urging the importance of giving Scotland separate Trade Boards from England. We have to express our satisfaction that the Minister of Labour agreed to form Scottish Trade Boards, for we are certain without a special Scottish Board it would be quite impossible for Scotland's position to receive reasonable attention.

"Our experience during the war of Committees having their headquarters in England, the time and expense involved in attending meetings, the trivial results frequently thereof, and the fact that the Scottish representation on any such body must necessarily be small, resulted in our conviction that for us the only workable plan was to have Scotland make a separate unit of organization. My experience of the Trade Board has confirmed this opinion, for reasons which I shall explain later."

We come to the principle of wages regulation by Trade Boards, and we approve of them. "Generally speaking, our trade in Scotland, contrary, perhaps, to the majority of trades, and certainly contrary to the trade in England, is in favour of the general principle of the regulation of wages."

4905. *Chairman*: Do you mean you are in favour of the regulation of wages for each class of worker, or only for the minimum wage to be regulated?—For the regulation and fixing of minimum rates.

4906. I want to be clear about that. Do you mean fixing the minimum rate for the lowest class of worker, or do you mean that it is desirable to fix minimum rates for every class of worker?—Personally, I say that the minimum rate should be fixed at a rate which would produce a reasonable sustenance wage for, say, the least efficient worker.

4907. *Lord Weir*: The least efficient worker in each class of worker employed in that trade?—Yes.

4908. That is full regulation—minima for all classes of workers in the trade?—For all classes of workers in the trade.

Dame Adelaide Anderson: One fixed minimum for the whole, or for main classes.

4909. *Mr. MacCallum Scott*: You have different ranks of skilled workers. Do you mean one minimum for the lowest class, or do you mean different minima for each of the ranks of skilled workers according to the degrees of skill?—As far as dress-making and millinery is concerned, we would fix minimum rates for the learners up to the age of 19.

4910. *Mr. Poulton*: Not beyond?—Not beyond. At 19 years of age then the minimum would be fixed whereon you could work for your experienced workers.

4911. *Chairman*: For adults?—Yes.

4912. Men and women?—We have only women employed in the trade; there are no men employed in it. It is all female labour. "*Reasons for approval of Trade Boards.*" We are in favour of this for various reasons, namely: (a) A more highly-organised community necessarily must mean the extension of the principle of collective bargaining in place of individual bargaining. We shall not be able to avoid this in the future—it is a necessary development; (b) these trades consist of a large number of small employers who have never hitherto been organised. Many such businesses do not have any employees at all, while in many cases dressmakers go out by the day to work in the houses of private persons. In view of the humble conditions of the businesses of many of such, the narrow margin of profit, and the nature of the occupations, it is very difficult to say if they ever can be fully organised; (c) these conditions result in a tendency, in many cases, from economic pressure to pay low wages. This tendency to pay low wages will be permanent

in the trade unless some State regulation takes place."

4913. *Mr. Poulton*: Is not that over 19 years of age?—Yes.

Chairman: I see that your scale does include workers of adult age.

Mr. Poulton: I understood the witness to say a moment ago that they were not in favour of any regulation over 19 years of age.

4914. *Chairman*: No.—That is so—not over 19; we are in favour of a minimum rate to be fixed at 19.

Chairman: I did not understand that.

Mr. Poulton: He says so now.

4915. *Chairman*: I have your scale, and it does fix a minimum rate for adults, does it not?—That would be the scale between us and the Union. (*Mr. Crosthwaite*): No, the Trade Board scale went to 20 years of age. (*Mr. Maxwell*): That went to 20 years of age, only one year further than I am suggesting now; it was 9½d. at 20 years of age.

4916. The scale which I have is the Dressmaking and Women's Light Clothing Trade Board scale. Is that the Board?—Yes.

4917. I see a heading: "General Minimum Time Rates for Male Workers: male workers of 22 years of age and upwards, 1s. 2d."—We have only female workers.

4918. The scale provides for male workers.—That is for the wholesale sections, which are on the same Trade Board.

4919. Is it confined to wholesale workers?—The male workers. We have no male workers in the dressmaking and millinery retail branch of the trade.

4920. I beg your pardon, I see it is only Part 1 of your Trade Board scale which applies to the retail branch; is that so?—Yes.

4921. And that does seem to be confined to learners; it runs up to 19 years of age?—That is quite right. After that the qualified worker is to get 9½d.

4922. Then you get female workers other than learners?—Those are the qualified workers.

4923. At 9½d.?—Yes.

4924. That would include adults, I suppose?—Yes.

4925. That is where I think there might be a misunderstanding?—That was the minimum for the adult workers, which I maintain is too high for them.

4926. *Lord Weir*: Just to be clear, the point which I tried to make was that above the 9½d. you did not attempt to regulate wages?—No, I do not believe in any regulation of wages beyond that.

4927. *Mr. Poulton*: Not by the Board?—Not by the Board. We believe in payment according to the ability of the worker.

4928. But that is to be by voluntary agreement?—By voluntary agreement.

4929. *Dame Edith Lyttelton*: But you admit that collective bargaining is impossible in the trade at present, owing to its unorganised state?—It is impossible in an unorganised trade.

4930. In the unorganised state of your trade you admit that collective bargaining is impossible?—It is impossible in the unorganised part of the trade.

4931. I only want to get it quite clear; yet you wish to leave anything above 9½d. to the individual employer to arrange with his workpeople?—Yes.

4932. *Mr. Pugh*: Then in that case how are you going to enforce your arrangements over the whole trade? Will you not have a case where a good employer will pay a high rate, and another employer will tend to make the minimum the maximum?—Wherever the trade is organised the trade union will look after that.

4933. But where it is not organised, what will happen?—Where they are not organised you must leave it to competition.

4934. Then the good employer will be at a disadvantage as against the less satisfactory employer?—There always will be anomalies created, as far as I can see, in whichever way you take it, and I think the best way is to take it in the way which creates the least

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

4935. *Chairman*: I suppose there is competition for skilled workers?—There is great competition for skilled workers at the present time; they are very short.

"(d) In order to prevent this tendency it is desirable that some kind of minimum wage should be compulsorily and statutorily established. The Board seems to us the best method of doing so.

"(e) It has to be kept in mind that the payment of low wages by one employer tends to result, through competition, in the payment of low wages by others. The Trade Board system seems the only way of preventing this. It protects the good employer, paying reasonable wages, from the employer who pays a sweated rate of wages.

"(f) Further, in country districts the opportunities of shopkeeping employers are necessarily restricted, and employees have not, as in towns, the possibility of organising to secure reasonable wages. The Trade Board system seems the only method of safeguarding employees in country districts whose wages, through the operation of economic circumstances, may tend to become unduly low.

"(g) While, in trades highly organised into federations of employers, it may be possible to arrange questions for the whole trade between employers and employees direct, this system is not practicable in the case of trades wholly consisting of small businesses up and down the country, owned by those who, in many cases, have little or no trade consciousness.

"(h) The Trade Board system, therefore, offers in our case a preferable method to that of fixing trade wages between the employers' federations (which, in the circumstances of our trade, can never include all employers) and the Assistants' Union (which, for similar reasons, can never include all the assistants).

"(i) Although our experience, unfortunately, has been to the contrary, the probability is that the system may tend to diminish strikes, as it affords a means of exchanging opinions and settling disputes and, at the very least, gives employers and employees an opportunity of hearing each other's points of view."

4936. Have you had strikes?—Yes.

4937. How did those come about?—There was a strike at the very commencement of the Dressmaking and Women's Light Clothing Trade Board in Scotland; I think it was about the month of April, 1920, when we sat first. Previous to that we had had an arrangement with the Union on which we worked.

4938. What Union?—The Shop Assistants' Union. In those days we negotiated with them, and we were in the midst of bargaining when the Trade Board was set up. When we decided to fix the rates up to 20 years of age, fixing 9½d. at 20 years, we agreed with them that instead of waiting for the specified time until the rates had been passed by the Minister, we would bring them into operation on the 31st of the following May, which we did.

4939. What was the strike?—Immediately after that they insisted upon higher rates, 11d. and 1s. 1d. for the adult workers, with which we disagreed, and the consequence was that we had a strike, which I am coming to immediately.

4940. *Mr. MacCallum Scott*: The point is that there was a strike for a higher wage than was fixed by the Board?—A higher wage for the adult workers.

4941. *Mr. Poulton*: That is for those over 20 years of age?—Yes.

4942. *Mr. Pugh*: How did the 9½d. compare with the proposals that were before you in your negotiations with the Union?—They wanted 1s. 1d.

4943. The Union wanted that?—Yes. "(j) As a trade we see no other method of satisfactorily regulating wages in the trade."

4944. *Chairman*: Before you go to the next head, tell me about the learners. You say that your scale fixes rates for learners rising every six months according to age.—Yes.

4945. It has been suggested to us that that system may discourage the learner from improving herself as she ought to do. Do you find that at all?—No, I do

not see how that can. In fact, I should think it would rather have the opposite tendency. The rates are minimum.

4946. *Mr. Poulton*: It would act as a spur?—Yes.

4947. *Chairman*: It is suggested that if a girl knows that whether she works hard or not she will have her wages raised every six months, she may tend to become less diligent.—Of course, those are minimum rates. If there were one particular worker in the trade who shines and is brilliant, I should never hesitate about giving that girl more than the minimum rate which is fixed. I should give her a rate according to her ability, even although she was a junior or a learner.

4948. No doubt, but supposing a girl is not brilliant and does not do her work well, and her wages nevertheless rise, is there not a risk that she may be discharged and lose her place?—Yes, another trade might suit her better.

4949. I do not doubt that, but the point put to us—and I want to get your opinion on it—is this: that supposing a learner does not improve herself as she ought to do, as her wages under the Trade Board scale rise, the time may come when she is not worth the minimum wage, and then she is turned out?—I quite follow you. There might be a case of that description arising, and she should find work more congenial to her.

4950. I am putting to you cases which, so we are informed, have arisen in England to a very large extent, and I wanted to know whether you had any experience of that?—We have had no case of that description brought before us. The difficulty of which I have heard complaints in Scotland, has been as to girls entering the trade, say, at 17 or 18 years of age. Dressmakers, in the country districts very particularly, maintain that those rates are too high for a girl at that age to commence at. The consequence is that I myself know of many people who have brought their daughters to get engaged as learners at about 18 years of age, and when I have explained to them the position they have been very sorry, because they have kept their girls at school for considerably longer than they would have done for the purpose of giving them a good education, and then they find when they come to about the age of 18 that they are really too old to start; although we have provided for that in this way, that a girl starting at 14 years of age comes on to the higher minimum at 19 years of age—after five years or when she becomes 19 years of age—and the same thing with a girl starting at 15; she comes on the higher minimum after four years, when she becomes 19 years of age, and so on up to the scale.

4951. *Lord Weir*: Before this Trade Board rate for learners was fixed, how did you deal with the learners, for example, in your own business? You gave them a starting rate, and promoted them as they got older, or was it in accordance with their ability?—We promoted them according to their ability to work.

4952. Quite. So far as this constituted a definite change, have you approved of that change?—That constituted a definite change, but personally I prefer the other method. I would prefer myself to start with a minimum at 14 years of age, and then go right onward according to their ability. That is as far as I am concerned myself.

4953. That is not the general view in the trade, is it?—No, I could not say it is the general view.

4954. *Dame Adelade Anderson*: You think that under this plan of promoting the girl as she rises in years, you do get fairly good results?—You get better results by paying according to merit.

4955. By promoting according to age?—No, by promoting according to ability, not according to age.

4956. I see; but you said a little while back that the rising scale according to age worked quite well?—That is with regard to the juniors, the learners only.

4957. With regard to the juniors, but not those who come in at a later age?—It would have worked very much better if the scale had been lower. The scale was fixed too high; but I am coming to a point

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

presently where I will explain to you exactly why that scale was so high.

4958. But still it encourages the normal girl to rise after a time?—The fixed rate?

4959. The minimum rate rising according to age?—It does not, it encourages a can-can.

4960. It does encourage the girl?—I beg your pardon, not according to age—according to ability it encourages the worker to work.

4961. But I thought I understood you to say a little while back that the rising according to age worked quite well for the juniors?—It has worked fairly well for the juniors, but it might work better if it was the other way.

4962. It might, but is there something also in the method of teaching?—Yes, there is a great deal in the method of teaching.

4963. There is something in the method of teaching which carries on a girl, gives a girl good instruction so that she may earn her wage as she advances?—Yes, but if you have not got the girl with the taste and inclination for dressmaking, it does not matter what kind of a teacher you give her; you will make nothing of her.

4964. And after a time, if you make nothing of her you part with her?—Yes, undoubtedly; there is nothing else to do.

4965. Mr. Poulton: Take the case of the girl you have just mentioned, say, at 17½ years. I can understand it when a girl comes in at 14, because she starts when she leaves school, and the scale works satisfactorily, because every six months there is an inducement; if she does her work well she will have a rise?—Yes, that is right.

4966. Could not something be done with the girl who comes in at 17½, because, as you say, the parents have kept her at school so that her education is better; could not something be done by some elasticity which would allow for those special cases?—That is met in this way, that a girl who comes in at 17 has only two years to serve and comes in at a higher rate.

4967. I understood you to say that the higher rate is acting as a deterrent when you explain to the parent that the girls must come in at the earlier age?—Yes, but we have provided for that since: "16 and under 21 years of age"—that is for the girl starting from 16 and under 21 years of age—the first six months of employment after the age of 16 there is 2½d.—that was at the very commencement of the Trade Board—and the second six months she gets 4d., the third six months she gets 5½d., the fourth six months 7½d.; during the third year, 8½d., and the fourth year, 9d.

4968. Chairman: What are you quoting from?—I am quoting from the first scale that we fixed.

4969. Mr. Poulton: Has that scale on the whole worked satisfactorily? Have you had sufficient experience amongst those girls who come in at that later age to form an opinion upon the working of it?—Well, it has not proved quite as satisfactory as it might have done, and here is the latest one which I can give you.

4970. Chairman: Are you quoting from some scale which has been superseded?—I have been. I am now going to quote the present scale.

4971. That is what I have before me.—Starting at 17 and under 19 years of age the girl enters for the first six months at 2½d.; the second six months, 3½d.; the third six months, 4d.; the fourth six months, 6½d.; and then the third year she gets 8d., and in the fourth year, 9d.

4972. Mr. Poulton: Have you had sufficient experience of that scale to form any opinion of the girls who come in at those later ages?—We have not had sufficient experience of this scale yet, but this will undoubtedly help the position very considerably, because the girls are getting a much more reasonable rate.

4973. Now let us take the opposite girl to the one you have stated—the girl who comes along and just for a start she would like to take up dressmaking, but then she has no adaptability. Let us take the other girl who has been kept at school until she is

17 and who has adaptability; does not the fact that she is kept at school for the longer period and comes along with a better education, with an inclination for the work, and with a determination to pick up the trade, does not that help her in picking it up more quickly than otherwise?—That is what we have arranged for.

4974. Lord Weir: You arranged that by the shorter term?—The shorter term.

4975. Mr. Pugh: The point is that you have been able by means of Trade Board machinery to adjust that matter in a way satisfactory to the trade.

—Well, I would not like to say that it is satisfactory to the whole trade; it is not satisfactory to the whole trade. I do not think the trade have yet got quite accustomed to it; in fact, in many districts in Scotland, the great bulk of Scotland, they know nothing at all about the Trade Boards. That is the position, but it is the Ministry of Labour which is to blame there, because they do not notify them all. If they do notify them they take no notice of it.

4976. Chairman: What I want to understand is this. Where in this scale is the scope for recognising the ability of the learner?—Well, it is here, that you do not necessarily require to stick to those figures. Those are minimum rates, or should be, and if you have an exceptionally smart girl, well, pay the girl accordingly, and you get your results.

4977. That must be by some payment above the Trade Board rate?—Above the fixed Trade Board rate. There is nothing to prevent anybody doing that.

4978. Dame Adelaide Anderson: It is a real minimum?—It should be a real minimum.

4979. And the mere fact that the girl who is brighter or more diligent gets better pay is a spur to the others?—When I say it should be a real minimum, in many cases in the trade I should say that it has become a standard, for the simple reason that the minimum is fixed too high to begin with, and it does not allow for expansion. I mean by that that you cannot pay the best workers better, workers to whom you would like to pay more money, because your pay sheet is already burdened with minimum rates that are too heavy.

4980. Mr. Poulton: So that during the period of learning, on the whole you think the rate is so high that you do not in very many cases exceed the amount to the individual?—In many cases they will not be exceeded; there are exceptions, but the exceptions are only in the larger cities.

4981. Chairman: Now you are going on to another point?—"Unemployment and Trade Board Rates." A good deal has been said recently as to the extent of unemployment due to Trade Board rates. In our case we think that is justified to some extent in Scottish country districts, owing to the failure of the Trade Board to differentiate the rates, and it possibly also has caused unemployment in Scottish towns among the humbler classes of business. We, however, are of the opinion that the real causes of unemployment in our trades are much wider and more deeply rooted. Some of these causes exist in the trade itself, such as the rapidly increasing tendency towards the selling of ready-made garments. Many employers blame the Trade Board, however, as the sole cause of unemployment, because of the natural and human irritation at being subjected to fresh regulations, which may involve some little adaptation of their ordinary business activities, an irritation with which we have all full sympathy." Then I deal with "Amendments proposed in connection with the Inauguration of Trade Boards."

4982. Just before you go from that, I gather your view is that the working of the Trade Boards, although it is not one of the main causes of unemployment, has contributed to unemployment?—I believe in many districts that it has to a certain extent, but not anything like to the full extent.

4983. And you put that down as one reason, failure to differentiate between the different areas?—I do. It is not consistent with common sense to impose the same rates on a place in the North of

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

Scotland that you would impose in Edinburgh, or Glasgow, or Aberdeen—you could not reasonably apply the same rate in a small country village or town.

4984. *Mr. Poulton*: Are you now talking of Boards in general, or are you confining your remarks on this point to the millinery?—I am sticking to the one I know something about.

4985. How has it caused this unemployment, seeing that you have a rate only up to 19?

Chairman: I thought we had got rid of that.

Mr. MacCallum Scott: There is a rate for over 19.

4986. *Mr. Poulton*: But I understood Mr. Maxwell explicitly to say in answer to that, that at any rate there is no rate over 20 in their trade.—That is so—no statutory rate.

4987. *Chairman*: I do not understand this. I thought there was a misunderstanding there, and that we had corrected it. I have got your scale, Schedule, Part I, "General Minimum Time Rates for Female Workers in the Retail Branch of the Dressmaking and Women's Light Clothing Trade: Section 1, female workers (other than learners, as defined in Section I, part vi, of the Schedule): 9½d. an hour." Then you come to learners; but does not that first section, Section I, apply to adult female workers?—Yes; 9½d. an hour.

4988. And to all adult female workers?—All above 20 years of age. That is the minimum.

4989. That is what I thought.—That is so.

4990. *Dame Adelaide Anderson*: Without differentiation for different classes of worker?—That was the minimum; 9½d. was the minimum without differentiation for the whole of Scotland—the small villages and the large cities. Now we have differentiated, as I will presently tell you.

4991. *Lord Weir*: Put it in this way: That is the protection which the Board have given to workers over 20?—That is so.

Mr. MacCallum Scott: There has been a little confusion about this, because yesterday I asked a question about this, and I was assured that they only regulated for the first five years.

4992. *Chairman*: There has been some confusion; that is why I was anxious to clear it up and to look at the document.—I may explain that to you in this way. When the Trade Board first sat, and up to a certain period, we went up to 20; but I am coming to something which will explain the whole thing. Now we are regulating the workers up to 19 instead of 20.

4993. And you are also regulating the wages of workers over 19?—We are creating a minimum for workers over 19, for them to start off with. Then "Amendments proposed in connection with the regulation of Trade Boards." We, however, do suggest the amendment of the Trade Board legislation in connection with the circumstances under which Trade Boards are to be brought into existence. Wages: The mere fact that no adequate machinery exists for the effective regulation of wages is no reason why a Trade Board should be called into being, unless it can be shown that 'sweating' exists (or tends to exist) to a considerable extent in the trade or sections thereof. The expression 'having regard to the rate of wages' is much too indefinite, and probably some words, such as 'in view of the exceptionally low rate of wages prevailing' should be substituted. As regards a definition of 'sweating,' we do not propose to attempt this, but we recognise that in our trade, in those districts which a union never can touch, and will never be able to organise, 'sweating' may exist, and we accordingly raise no objections to the application of the Act to our trade." Then we come to "Notice of proposed formation of a Trade Board."

4994. *Mr. Pugh*: On that point, before you leave it, you appear to hold that Trade Boards should apply themselves to dealing with sweated workers. Is it not a general experience that entirely unorganised trades tend to pay very low wages, and that consequently there is a necessity for making some provision for negotiating machinery where trades are not or-

ganised?—I quite agree with you. "Notice of proposed formation of a Trade Board." Prior to the establishment of a Trade Board, more notice should be given than merely the laying of a special order by the Minister of Labour before Parliament." There are many people in the trade who do not get the notices at all. I do not think they can have a full list, and I would suggest that they should apply to the Factory Inspectors. The Factory Inspectors ought to be able to furnish them with a list of those.

4995. *Chairman*: I am told that the Ministry do apply to the Factory Inspectors; but that would not give them a full list, would it, because the Factory Inspector would not have the small people who do not come within the Factory Acts?—Well, he should have the small people who employ a few hands, who occupy workrooms.

4996. Yes, but some employers, I suppose, do not come within that category?—Oh, yes, there are many who do not come within that category. "A formal notice of this sort does not bring the matter before the notice of the trade, particularly an unorganised trade. Individual notice should also be statutorily given to those in the trade, and any associations connected with the trade. As business men, we think the old legal fiction of publication in a document like 'The Edinburgh Gazette' (which nobody reads) being sufficient, will no longer suffice for a business community where a suggested change is going to interfere with the delicate mechanism of trade." We should suggest that is should be advertised in the "Scotsman," or something of that kind, or the "Glasgow Herald."

4997. *Lord Weir*: Would you consider that sufficient—to advertise in the newspapers?—No, I would not consider it sufficient; but I should recommend a popular paper that is read by the people.

4998. Suppose you are unable to find all the employers, suppose you are unable to get a list of them all, then would newspaper advertising help?—It would undoubtedly help to a very large extent, because the majority of people read the papers. An individual notice is not given just now to many of those people in the outlying districts.

4999. *Chairman*: I am told that the Ministry does advertise in most of the trade Press, and also in the general Press?—I have never come across any of them in the "Scotsman" or the "Glasgow Herald." At all events, my point is that the thing is not made sufficiently public, and wherever it is possible at all individual notice should be given.

5000. *Mr. MacCallum Scott*: It has been suggested that a great deal of delay takes place in finding out the names of individuals and circularising individuals about this, and that that delay in effecting changes was prejudicial to the working of the Boards; and it has been suggested that some other method of communicating with the trade, other than individual communications, should be found, such as publication in newspapers or by public notices exhibited in the Post Offices?—I think they ought to have individual notice.

5001. *Chairman*: You are speaking now of the original formation of the Board?—Yes.

5002. *Mr. MacCallum Scott*: Do you think the same notice is desirable for alterations in the rates after the Board has been formed?—I do not follow you.

5003. When it is proposed to make alterations in a rate, to vary a rate, do you think it is necessary to give the same notice to individuals?—The notice is too long by half.

5004. Then you think individual notice is as necessary then?—Yes, decidedly. "It has to be observed that forty days are statutorily allowed for lodging objections to the formation of a Trade Board, whereas two months are allowed for lodging objections to a Trade Board rate. There is surely some want of proportion here! The erection of a Trade Board should not be lightly embarked upon, as so many feel it is at present. The present procedure is very suitable for rushing a Trade Board through before anyone has awakened to the gravity of the

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

situation. If only a formal notice as at present is given, the real objections against a Trade Board being formed are much more likely to be overlooked. If personal notice of the formation of a Trade Board is given, the time for lodging objections at present allowed is not unreasonable, otherwise this probably is too short." Now we come to the personnel of the Trade Board.

5005. *Mr. Pugh*: On the point of notice, having got your Trade Board established, do you think that the present period allowed for notice should be curtailed where it is only a matter of varying the rates?—Yes, I do.

5006. We have had a good deal of complaint of delay in getting variations. You think that could be curtailed?—Considerably curtailed, and it would be better for both. "*Personnel of Trade Board: Appointed Members: General objections to the present method of appointment.*" The method of appointing the Chairman and the Appointed Members is seriously open to objection. So far as can be seen, the system seems to be to appoint a K.C. as Chairman, a Professor of Political Economy, and a lady with some record of public work. It would seem as if the one essential qualification of an Appointed Member of the Trade Board was a lack of personal trade knowledge. The result is, that our statements being made from either side, there is no first-hand knowledge by which to check them, and the votes of the Appointed Members are accordingly lacking in the authority which comes from real knowledge."

5007. *Chairman*: There would be some difficulty, would there not, in appointing either an employer or a worker in the trade as Chairman?—I quite agree.

5008. It might be suggested, I dare say unfairly, that he might have some bias on one side or the other?—I quite agree with that.

5009. Therefore you must search amongst the persons who have no interest in the trade to find a suitable Chairman?—Yes, my Lord. I will follow on with an explanation of that. "*Chairman—importance of having capacity to conduct a Meeting.*" The Chairman, so far as can be ascertained, is frequently an individual with no knowledge or experience in the conducting of meetings, and with little capacity for deciding questions of precedence in motions, amendments, counter-amendments, etc. This results in a serious waste of valuable business time."

5010. You are speaking now of your own Board?—I am speaking of my own Board—at least, the one I sit on. "The capacity of a Chairman to conduct the business of the meeting and his tactfulness and ability to create the right harmonious atmosphere is most important, and should be considered before he is appointed. *Waste of time through inefficient Chairmanship.*" We have, in our trade, frequently seen two days, and even three days, wasted on business which, properly and tactfully managed, should have been overtaken in a third of the time. A meeting, to be properly conducted, requires previous preparation, particularly by the Chairman, to save waste of time. In view of the loss that this represents to employers, we strongly think that the weakness thus experienced by us must be corrected if the Trade Board system is to survive. We have at times had our members so disgusted with the waste of time through inefficiency of management of the meeting, that we have had difficulty in persuading them to attend further. On one occasion, for example, a Chairman stopped the whole business of a meeting in order that a trade union official might 'in perfect silence' draft a resolution (of which notice had been given at a previous meeting). After waiting about 15 minutes, the employers' representatives protested against the waste of time, and left the meeting. One of the drawbacks of appointing a K.C. to be Chairman is that he is apt to forget that the making of trifling points either for the one side or the other, has, as a rule, very little to do with the broad decision of the question at issue. *Appointed Members.* In our opinion, it is essential that Appointed Members have either industrial, commercial,

trade or financial experience, or at least some personal experience of the fixing of wages and the practical results thereof on business and on over-turn. Otherwise the amount of time involved in explaining what should be elementary points is quite out of all proportion. The lack of any real knowledge of the subject will be fatal to the Trade Board system. Our experience of Appointed Members is that their usefulness is seriously limited without some knowledge of the business. Unfortunately, our experience of Appointed Members has been unsatisfactory, but we cannot see any method of doing without them. In all cases the Trade Board concerned should have the right of veto with regard to the Appointed Members proposed to be selected. *Employees—should be engaged in the Trade.* Employers and employees should be so chosen as to represent all sections of the trade and all districts in the country. The present system of appointing practically all the employees' representatives from the trade union involves the non-representation of non-organised workers, and particularly of workers in country districts where trade unions have few members. In the Dressmaking Board, for instance, we have, so far as we know, only one non-union member. We quite recognise the practical difficulty of securing non-organised employees from country districts, and the objections which many employers may have of giving an assistant leave of absence for this purpose, but that is a problem for the Ministry (if necessary with the help of the employers) to solve."

5011. *Mr. Pugh*: On that point, how are you going to arrange for collective representation of the non-trade union workers? An individual appointed from a particular establishment would represent himself only, would he not? What means do you propose to adopt whereby the non-trade union members may be represented collectively? How are they to be given a voice in their representation? Is not that the difficulty?—The unions, of course, ought to do their best to organise the whole of Scotland.

5012. Quite, but they are not organised. How are you going to improve on the present position? That is what I should like to know. Can you help us in that respect? When you get better representation, you get it principally through the workers who are organised, and therefore can express themselves collectively?—If the Minister has a full list of the trades in Scotland, I do not see any difficulty whatever in getting representatives from the unorganised portion of the trade. They could be invited direct by the Ministry.

5013. But they would then have to be appointed, say, from an establishment. There would have to be some collective points expressed, surely, if they were to be representative. Do you suggest you can take a vote of the establishment and send some individual to represent them?—Well, of course, in a small country place there is no reason why the people should not meet together, as we do in the larger towns, and discuss the problem, and send a representative from there.

5014. Would you have a form of district committee: would that be your means of getting collective opinions?—No.

5015. *Mr. MacCallum Scott*: But there are many small towns and villages; are they all to send representatives?—Not necessarily. We have only so many representatives allowed on the Board, but still those people living in the outside districts could speak for possibly a portion of the county, or all the county. I do not see any difficulty in getting someone to speak for a county, possibly, such as Perthshire: it is not very thickly populated.

5016. *Mr. Pugh*: By what means would you appoint them; how would the person be appointed? Who would appoint him or her?—By notification through the Ministry of Labour.

5017. Oh, yes, but this individual has got to represent a large number of workers in a given district. How is he going to be appointed?—It might possibly encourage them to organise. That is what we want.

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITHE. [Continued.]

5018. *Mr. MacCallum Scott*: If they are organised there is no difficulty; but the point is that they are not organised. How are you going to appoint someone to represent them?—We would do our best to encourage them to organise. It might encourage them to organise.

5019. Does not the present system encourage them to organise, because they know if they organise they could have a representative from that organisation? What more can one do to encourage them to organise?—Well, we are doing our best.

5020. I am sure that, but what more can the Government or the Ministry do?—Show that it is to their advantage to be fully organised so as to defend themselves.

5021. *Chairman*: I thought you told us that the workers in this trade never could be fully organised?—It would be difficult to organise them in places like Orkney, Shetland, and the Hebrides, but we suggest that those places should be left out altogether.

5022. At all events, until there is good organisation, have you any method by which representative non-union workers may be selected? That is the point put to you. You say that there is no difficulty, but we would like to know what your suggestion is?—That is a difficulty, of course, and a very serious one, and the only way that I can see in which to meet it is for the association and federations which are in existence to spread out as widely as ever they possibly can, and to do their best to get to those places and get them organised. It might be necessary to do that.

5023. *Dame Adelaide Anderson*: You think it is better that the organising should be done by the workers or by the federations themselves, rather than by the Government?—No, I do not think it is, in these widely scattered districts.

5024. *Mr. Pugh*: Until you can get them organised, you are rather dependent for your representation, are you not, upon the body of workers who have made provision whereby they can speak collectively, and, therefore, in that case you are bound to have a smaller proportion of unorganised representatives?—That is quite right, but still we can improve very greatly upon the present state of affairs, and in time we might get a little bit nearer perfection.

5025. *Chairman*: With that pious hope we will go on to the next subject.—“*Professional Representatives of Employers and Employees*. Great care should be taken when employers’ representatives are being appointed to see that these representatives are workers actually engaged in the trade, and acquainted with its practical details. The swamping of Trade Boards with trade union officials is objectionable from every point of view. Not more than one professional representative on the Trade Board should be allowed on either side for each trade. In view of Appointed Members being without knowledge, confusion becomes worse confounded when the employees’ representatives are also without practical knowledge of the trade. We have no objection, however, to a professional representative being a member of several Trade Boards. In fact, it may be an advantage. *Employers—Importance of appointing representatives of small businesses and country districts*. The remarks in the foregoing section with regard to employees’ representatives apply equally to the selection of employers’ representatives. It must not be forgotten that, while the well-known names in the trade are those of large important businesses, these, after all, represent only a small minority in the trade. The great majority of individuals in the trade are in small businesses, a large proportion of whom come from country districts, and one of the most clamant necessities of Trade Boards, in such trades as ours, at present is that small businesses not only in the urban, but also in the rural districts, should receive just representation on the Trade Boards.”

5026. Has your federation endeavoured to secure that?—We are endeavouring to secure it as far as we possibly can.

5027. I think you nominate for 11 seats on the Board?—Yes.

5028. No doubt in choosing those 11 you do endeavour to get the country districts represented?—Yes, we have done so. I will explain that in a moment.

5029. *Lord Weir*: I am sorry to interrupt, but I think it is pertinent to that point: Since the Board has been established, has your federation developed its activities very largely? Has it had the effect of developing organisation among the employers?—Yes, we have added to our members.

5030. Has it acted as a spur? Comparing it with the normal progress which you were making, did the Board cause you to go at it harder than ever?—It has acted as a spur, and has brought in people who would not have been members of the federation. “While advocating strictest economy in administration, we think that a grant in aid of small country employers who have to face the loss entailed in leaving their business to attend Trade Board meetings might be well-spent money.” That is speaking about small businesses in urban and rural districts.

5031. *Mr. Poulton*: By that means you could, in your judgment, get wider representation?—Yes.

5032. That is the view you would put upon that?—Yes.

5033. And that is the reason for that statement?—Yes, that is what we want.

5034. *Chairman*: The position now is, it is not, that the workers’ representatives get an allowance which covers subsistence and loss of time?—Yes, the workers’ representatives do.

5035. While the employers’ representatives get a grant which covers only subsistence?—That is all. “*Co-operators as Employers’ Representatives*. We, as private traders, strongly object to co-operative societies being represented on the employers’ side. It may seem at first sight unreasonable to do so in view of the co-operative movement having a large organisation covering the whole country. The following points, however, have to be kept in mind in connection with this:—(a) Co-operative societies claim as their virtue that they do not carry on trade on the lines of the private trader. In particular, they do not carry on trade for profit. Profits are divided among their own members from among whom the workers are very largely selected. They are exempt from Income Tax and Corporation Tax. The State accordingly allows them to retain about 50 per cent. more profit than the private trader. (b) By the co-operative system of quarterly dividends, members are in a manner ‘thirled’ to the society, so that they have much greater difficulty in going elsewhere for their purchases. Co-operative societies, therefore, do not sell goods under the competitive conditions that the private trader does. It is well known that prices can be secured by co-operative societies impossible to the private trader, and that members of co-operative societies will submit to inefficiency and inadequacy of service which they would not tolerate from a private trader. (c) The co-operative movement is closely associated with, and almost indeed incorporated with, the labour movement, so that they are much less independent towards the trade unions than is the private trader. They are, indeed, largely subject to the demands of the Labour party and the trade unions concerned. This is almost the necessary result of the directors of Scottish retail co-operative societies being artisans and members of trade unions. (d) An employers’ representative sitting on the Trade Board is himself an employer, and understands the difficulties with which the employers are faced. The co-operative society representative on the Trade Board is, however, himself an employee, and owing to the co-operative method of doing business, is not specially interested in the employers’ standpoint. He cannot be considered as an employers’ representative in the same sense as his colleagues. The curious situation may, and I believe, does, arise where a trade union member or official who is a director or a member of the committee of management of a co-operative society sits on a Trade

8 December, 1921.] MR. R. M. MAXWELL, MR. CHARLES WATT, and MR. J. M. CROSTHWAITE. [Continued.]

Board as an employees' representative, while the manager of the society (who is his servant) sits among the employers. The system is anomalous from every point of view. We, therefore, suggest that co-operative societies (if they desire this) have a separate Trade Board for themselves. I understand they are well organised on both sides, and so perhaps they ought really to have a Whitley Council."

5036. *Mr. MacCallum Scott*: Is that difficulty obviated to any extent by side voting?—It would enable the Minister of Labour, of course, to see exactly how those decisions were arrived at. Under the present system he does not know who has voted for or against; it merely states "12 for, 16 against," or whatever the numbers may be. It would not be dissected in the Minutes.

5037. Some of the Trade Boards have a regulation whereby the employers' vote is given as one single vote. Even supposing that there are some dissentients among the employers, the dissentients are not counted; they vote as a side?—Yes, that is what we would like.

5038. That prevails in some of the Boards. The Boards can adopt that system themselves, and some of the Boards have adopted it; is not that so?—(*Mr. Crosthwaite*): Yes, some of them have.

5039. I just wanted to see whether your recommendation was that side voting should be adopted on the Board?—(*Mr. Maxwell*): Yes, that is what we are in favour of.

"The sacrifice entailed on employers by the Trade Board system. The Government must face the fact that it is a great sacrifice to employers who have businesses to manage, attending Trade Board meetings. A meeting in London will, in the case of those from Scotland, involve three days at the least; a meeting even in Scotland means, in many cases, two days in the case of those coming from the north for a one-day meeting in Edinburgh or Glasgow. In the case of those who are personally concerned in attending to customers (as dressmakers are in connection with the fitting on of garments) it often means a stoppage of trade for the time being, or, in many cases, a piling up of arrears to be overtaken. We have, for example, found it most difficult to secure a lady representative on the Dressmaking Trade Board for this reason. It has also to be kept in mind that each Trade Board meeting also involves a preliminary meeting of employers' representatives to decide as to their joint views and policy to save the time of the meeting, as well as probably a federation meeting to be attended in connection therewith.

"If these are all added up, and account is taken of odd meetings of Administrative Committees of the Trade Boards, or conference in London, the sacrifice involved to employers, in accepting a post as employers' representative on the Trade Board, is very great, and tends to become greater. Some method of diminishing this hardship will have to be found."

5040. *Chairman*: Have you found one?—We have not found one.

5041. *Mr. Pugh*: Will that difficulty be any greater in trades where there are Trade Boards than it will be in trades which have voluntary machinery of negotiation? Is it any greater in Trade Board trades than in trades which are outside the Boards where there is proper machinery or negotiation?—Yes, it is greater than the methods of procedure before the Trade Boards were set up—very considerably greater. We dealt directly with the union, and we had not to attend the same number of meetings, or anything like it.

5042. Then you dealt with it as individual employers, did you not?—Collectively.

5043. *Mr. Poulton*: The procedure was simpler?—It was simpler.

5044. *Lord Weir*: Do you not think that you had more meetings, taking it all over the country? Think of all the meetings that were necessary all over the country to do the work which is done at the Central meeting.—Well, they still have them.

5045. To the same extent?—Possibly not to the same extent.

5046. It is rather a difficult thing to assess, surely?—I quite realise that there might be difficulties, but still at the same time I think they ought to be endeavoured to be got over.

5047. Is it not really that the work has been concentrated on a few people who feel it, whereas previously it was distributed over a very large number of people all over the country?—Of course, those associations in the various parts of the country are federated with the central body, but the associations require to have their meetings just the same as before.

5048. *Mr. Pugh*: It is something which is not peculiar to the trades covered by Trade Boards, is it not?—It has very largely increased the number of meetings, and the loss of time to the employer.

5049. Do you do any of your work through a sort of standing committee of the Board?—We do the work through our associations and the federation.

5050. But have you got standing committees, or a smaller body representative of the Board, which can act without the full Board having to meet?—We have the Administrative Committee. "This emphasises the importance of reducing the number of meetings and of having the business at these meetings efficiently attended to by the Chairman, and prepared for by employers, employees and Appointed Members." It would save an enormous waste of time if the Chairman were thoroughly posted in the work before he came, and the employers and employees likewise were prepared for the meeting. "Our recent experience in having the question of differentiation for country districts carried forward to three meetings, illustrates this point."

Now I come to the constitution of Trade Boards. "Practice of combining Manufacturing, Wholesale, and Retail Sections in one Trade Board. The practice of including wholesale, manufacturing, and retail sections of a trade in one Trade Board, while having at first sight something to commend it, has with us been found impracticable. Under this system one half of the Board are attending to the affairs of their section, while the other half are inactive and uninterested. This should be corrected by a general grouping of Trade Boards together, retail trade with retail trade, and wholesale trade with wholesale trade. To split the Trade Board into different sections, each of which would legislate for itself, subject to the approval of the whole Trade Board, is not an expedient mode of rectifying this defect. It leads to more meetings instead of less, as, under the regulations, only the whole Board can finally decide rates and conditions for the trade. As the system stands at present, one half of the members vote on matters in which they are not interested, and have neither responsibility nor knowledge. We have been told that the explanation of this is the difficulty in definition. We, however, in Scotland do not have that difficulty, but because the trade in England desire matters to remain as they are, we have to take the same. The system is not desirable."

5051. *Mr. MacCallum Scott*: Before you leave that question: are you suggesting the grouping together of Trade Boards?—Yes. For instance, take the Dressmaking and Women's Light Clothing Trade Board; one half is retail, and the other half is wholesale—manufacturing. The same thing applies to the Hat, Cap, and Millinery Trade Board: one half is retail, and the other is manufacturing. We suggest that the two retail sections should be put together, for the simple reason that milliners and dressmakers are practically on a level and in the same retail trade, and that the same wages should apply to both.

5052. Are you confining that to the sewing trades, or do you mean that all retail trades should be grouped together?—Dressmaking and millinery—the sewing trades; that is the retail manufacturing section of the trade.

5053. Of the sewing trade?—Yes.

8 December, 1921.] MR. R. M. MAXWELL, MR. CHARLES WATT, and MR. J. M. CROSTHWAITE. [Continued.]

"The scope of the Board should be defined by the Trade Board itself. The Trade Board itself should decide the definition of the trade, and the scope of the Trade Board—subject to adjustment thereof by means of conference with any other Trade Board, who may be affected thereby. The Minister should have the right to decide only in case of difference."

5054. *Chairman*: Would you leave the Trade Board absolutely free to say what occupations come within its scope?—Certainly; I think so.

5055. Is there not some danger that the Board may have a tendency to enlarge its jurisdiction beyond the proper limits? For instance, may I put an instance which was given to us the other day: the Tailoring Board strongly held that its scope would include the making of waterproofs and mackintoshes. Of course, there was grave objection by the waterproof and mackintosh people outside the trade, and in the end it was held that that was beyond the scope of that Board. In a case like that, it would be rather dangerous, would it not, to leave it entirely in the power of the Board to say who it includes and who it does not include?—We do not suggest that it should be entirely in the hands of the Trade Board, but it should be in the hands of the Trade Board to recommend the Minister.

5056. *Mr. Poulton*: I take it you mean that the men and women who have practical knowledge of the trade should define what is meant by the trade?—That is exactly the point.

"Danger of using undefined terms—'tailored'; 'non-tailored.' It is necessary, before dealing with Trade Boards, to understand the terms that are being used. At present we suffer very much from the Ministry of Labour's use of the words 'tailored' and 'non-tailored,' which cannot be defined. We contend that the definition of such terms should be under the control of each Trade Board, and, in the event of clashing of the interpretations of separate Trade Boards, the matter should be decided by a conference between them, with the Minister of Labour as the final arbiter in the event of a difference of opinion." That answers the point which was put to me.

5057. *Chairman*: How does this point about "tailored" and "non-tailored" arise? Is it a question of scope?—It is a question of scope.

5058. The word "tailored" occurs in your definition, I suppose—"Non-tailored garments," and the question arises as to what is a non-tailored garment.

5059. That would be a question between the two Boards, would it?—To consider, and if necessary refer to the Minister.

5060. *Mr. Poulton*: And when they have decided what they mean, that would have the force of legal opinion behind it?—Yes.

Chairman: I thought you said that it should be referred to the Minister?

5061. *Mr. Poulton*: For confirmation?—Yes, if they could not decide—or for confirmation.

5062. *Chairman*: You mean that those gentlemen who understand the trade should first consider the point?—Yes, they should consider the matter.

"Objections to multiplicity of Trade Boards. The tendency to create a multiplicity of Trade Boards is objectionable, owing to the differentiation which this brings out. At present, most of the larger retail houses employ both dressmakers and milliners who have different rates of wages in Scotland. This tends to dissatisfaction among the workers, and leads to trouble in businesses. The remedy on which we have resolved is to join them in one Trade Board, and have only one rate of wage. We are of opinion that the totally unnecessary multiplication of Trade Boards with which we are threatened will involve an amount of time, and will create differentiations causing industrial unrest which will ultimately make the system unworkable, if continued."

5063. Following that out, you suggested that millinery and dressmaking might be combined?—Yes, retail dressmaking and millinery.

5064. Is there any other trade which you think might be combined with those two in one retail

board?—Those are two trades which are carried on in retail establishments. Wherever you come to the manufacture of garments for wholesale, then that is a different matter altogether, and they are not reasonably workable together.

5065. There is no other trade which occurs to you at the moment which might be combined with them?—There is no other trade which we can combine with the millinery and dressmaking.

5066. *Lord Weir*: You have two Boards now?—Yes, we have.

5067. And you object to the multiplicity of Boards, yet you are suggesting that you should still have two Boards?—Yes, we should have two Boards, but we should have two Boards which would be much more satisfactory, and would save a very great deal of time, because the one Board would be entirely retail, and the other would be entirely wholesale—manufacturing. One meeting would do for both.

5068. *Mr. MacCallum Scott*: That does not get rid of your objection to a multiplicity of Trade Boards. Have you any suggestion for reducing their total number?—I am rather referring to the Trade Boards which are looming in the distance—that care should be taken with regard to the setting up of those Boards, to see that they are not multiplied any more than is necessary.

5069. Does not the demand for separate Trade Boards come very largely from the trade itself, who are objecting to being grouped with other sections of the trade?—Possibly it may. I have not come across that. That comes from ourselves.

5070. *Mr. Poulton*: That may have been so in the earlier days, but has not the experience of the Boards, now that they have had some working of them, brought them round to the view that the fewer Boards they have consistent with efficiency, the better?—I believe so.

"Necessity for Simple Regulations. Undue elaboration in the number of Trade Boards, their classification of work, wages or ages, is to be discouraged in view of the fact that these regulations have to be acted on by many persons with little skill to interpret complicated rules—Trade Boards should proceed on broad outlines. Simplicity in regulations is essential. It must not be forgotten that small retail businesses have not the organisation of large factories for dealing with complex regulations. Failure to observe those regulations may involve prosecution at the hands of an inspector with more zeal than discretion, and a conviction means guilt of a criminal offence, and, in many cases, involves a very serious reflection on the character and reputation of the employer.

"Trade Board regulations should be on 'broad' lines. We are of opinion that the affairs of a Trade Board should not be regulated minutely by a Trade Board, but only 'broadly.' If this is not done there is lack of that elasticity which is so essential in Trade Board matters."

5071. *Chairman*: Will you give an instance of that last observation. In what way should they operate more broadly?—Take, for instance, the creation of minimum wages—the creating of a minimum wage instead of a scale of wages according to the age of the worker, and many things of that description. That gives breadth and latitude to their work.

5072. *Mr. Poulton*: The Boards can decide, can they not, on having broad regulations, but you want the Board to decide whether that is the best way of doing it?—Yes.

5073. *Lord Weir*: Surely that is for the Board to settle for themselves now? You are not told to do all these different things; you can settle them if you wish to. Why do you not?—With a Board constituted such as ours is—

5074. That is what we want to know about. What stands in the way?—With a Board constituted such as ours is with two co-operative society representatives sitting on the employers' side, and with the labour side of the house almost wholly composed of Trade Union officials, it is a very difficult matter. We

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

are voted down every time, with the assistance of the appointed members.

5075. *Mr. MacCallum Scott*: What exactly do you mean by acting more broadly in the sense of having a minimum wage?—I say that the creating of any minimum is acting more broadly.

5076. I want to see what that means. Take your own case: You have a minimum of 9½d. for workers over 20 years of age—for adults?—Yes.

5077. That is acting broadly. It may be the wrong minimum which is selected, but that is acting broadly?—That is so.

5078. What do you suggest below that? Do you suggest that there should not be anything at all done below that for learners?—The younger minimum is already fixed up to 19 years of age.

5079. I know, but I want to know what you mean by acting more broadly than they are acting now?

5080. *Chairman*: You mean that other Boards should act as broadly as yours does, I think; that is what it comes to. So far as the minimum goes, you mean that other Boards should follow your example and confine themselves to fixing one minimum?—Yes, that is quite right.

5081. *Lord Weir*: You talk about the necessity for simple regulations. Who, as a matter of fact, makes those regulations? It is the Board, is it not? Is it not in your power to do that, and are you not yourselves the people to do that?—Yes, that is quite right, but if you are in the hands of an impossible Chairman—that is why I maintain that great care should be given to the selection of the Chairman and the appointed members.

5082. *Mr. Poulton*: You appear to have an autocrat?—I would not like to say he knows very much about the job he is at.

5083. *Chairman*: You have a very distinguished Chairman. If you say very much more about him, we shall have to ask him to come and defend himself.—I quite agree that he is a distinguished Chairman, and in his own line I have no doubt has great ability.

“Cost of Trade Board system to the Trade Associations fall entirely on the public spirited section of the trade, but should be spread over the whole trade. Reference has already been made to the sacrifice of time involved to employers in connection with the

Trade Board system. No trade can support a Trade Board system unless it has a vigorous, active and vigilant employers' federation. Our experience in connection with the Scottish Retail Garment Makers' and Milliners' Federation is that practically the whole expense involved to the Federation is in connection with the two Trade Boards. We have local associations and a joint federation, involving the payment of four secretaries in different parts of the country, and considerable outlays. None of these associations is able to maintain itself entirely by its ordinary subscriptions. All have to rely from time to time on forced levies from their members or particular individuals among their membership. This work is entirely performed for the benefit of the trade as a whole and for the better organisation of the country generally.”

5084. This is an appeal, is it not, to other people to join your association? We are not much concerned with this part of your evidence.—That is quite right. “The trade, of course, derives the advantage of also being better organised. We think, however, that the cost has now reached a figure as high as we can possibly go.”

5085. Why are you saying all this? This point does not concern this Committee, does it? You are just making an appeal to traders to join your association. This is not the proper place for that.—Very well. That finishes all that I have to say.

5086. We are much obliged to you for your comprehensive statement?—I have here a short Memorandum, if you would like to see it, on the working of the Trade Board, and the business which has been conducted since we set up the Trade Board.

5087. What is that intended to show?—To show how little business we can get through in all that period of time.

5088. *Mr. Poulton*: Then you have got through a minimum?—Yes, a minimum, and a very low one.

Mr. Poulton: I should like to have that in.

5089. *Dame Adelaide Anderson*: But none the less if your machinery and all the arrangements could be improved, you heartily approve the principle of State regulation?—I heartily approve the principle of Trade Boards.

Chairman: We are much obliged to you for coming here and giving us your statement.

(*Mr. Maxwell withdrew.*)

5090. (To *Mr. Watt*): I daresay you have heard Mr. Maxwell's statement. Are you in agreement with him?—(*Mr. Watt*): Not entirely. It may be said that I am representing the minority of the federation. I have been appointed because I come from the smallest town that takes an active part in it, and we differ to a certain extent from our colleagues in the South.

5091. *Mr. MacCallum Scott*: What town is that?—Aberdeen. We are entirely against all methods of Government control of business; we would much rather be free from any control whatever. If that is not thought wise, rather than such a small grouping of Trade Boards as we meantime are under, my local association thinks that something in the way of a national minimum scale for all girls engaged in the sewing trades might well be discovered, fitted to various districts throughout the country.

5092. *Mr. Poulton*: When you say “country,” do you include Great Britain, or are you confining it to Scotland?—To Scotland. We in Aberdeen cannot see why a girl who sews a shirt need be paid a different rate of wages from the girl who sews a blouse, or a girl who is engaged in making caps.

5093. *Lord Weir*: You mean a different minimum?—Yes.

5094. *Dame Adelaide Anderson*: Would you distinguish learners from adults?—We would suggest that if you take it, for argument's sake, that a girl of 19 should be paid 8d. per hour, that is all that requires to be fixed; the machinery that we have is sufficient to adjust from that. I do not suggest the age of 19; I say take a certain age—

5095. Say 18?—If you like.

5096. *Mr. Poulton*: You simply give that as an example?—Yes. If you say 18, I should say 8d. per hour, and if that is fixed for a girl whether she sews pillow-cases, blouses, shirts, carpets, or upholstery, or anything, then there is sufficient organisation to work either up or down from that.

5097. *Lord Weir*: That would be a flat minimum for the whole of Scotland?—No. Take, as an example, Shetland; I take that as a minimum, because a girl can perhaps live most cheaply there. If she is paid 8d. per hour a girl in a comparatively small town like Inverness might need to be paid 8½d.; a girl in a town like Aberdeen might need to be paid 9d.; in Edinburgh perhaps 10d., and in Glasgow, if it is decided that the cost of living there is higher than in Edinburgh, 10½d. or something like that.

5098. Would these variations from the minimum be statutory?—Yes.

5099. Then how would you arrive at them?—I understood that there was some such arrangement existing amongst the postal servants in pre-war days, and that at one time worked quite satisfactorily and with equity to the postal servants?

5100. *Mr. Pugh*: It is an occupational rate with district variations?—Yes.

5101. *Dame Adelaide Anderson*: Then you would leave workers below the age which you suggest—say, 18, 19, or 17 years of age, or whatever it was—to private bargaining between the parents and employers?—And we have a sufficiently strong union throughout the country with the exception of the country districts.

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

5102. *Mr. Poulton*: But you would not have all this statutory regulation of your wages for the young people?—No. Our feeling is that the circumstances vary so much. To give a personal example, a mother may come into my place and say: "I very much want my girl just to be taught to sew; can you have her for a year?" I mean apart from the age at which she may be; she may be 16 or 18 years of age. We say: "We do not want a girl who is going to be here a year; we shall be quite pleased to take her and give her such and such a sum per week, if you are going to take her away, because we want a girl to stop on, and we will lose money with her the first year." We used to make arrangements of that kind which were not inequitable.

5103. *Lord Weir*: Does that apply generally; would it cover a good number of people?—It would not cover many people, but many times we are tied down. You have to say to Mrs. Smith if she brings in her daughter: "I am sorry, but I cannot afford to do it." With these remarks I am entirely in agreement with the federation proposals if the present system of Trade Boards continues, and I would suggest some improvements on the present system. Mr. MacCallum Scott asked a question as to side voting. Our Federation considers that that would be very desirable indeed, as you may have instances of a co-operative representation or someone who undoubtedly upsets the prevailing feeling of the employers' representatives sitting on the Board, and may lead to a decision being very far out of what is the general feeling, or a feeling so very much whittled down that you do not get by any means the employers' opinion as to rates or conditions.

5104. *Chairman*: Would not that rather tend to suppress individual opinion?—It does.

5105. Is that altogether a good thing?—What we do find in the working of our own Board is that we may have an instance of 9 employers who are perfectly willing to support a certain rate of increase, or desire a certain rate of decrease, and three employers may differ from them. If the 9 men or women are absolutely disregarded, it does not give the view of the majority of the trade from the employers' point of view, it all goes back to the point that, as at present constituted, in theory a Trade Board should be a very excellent thing, but in practice it has not proved so.

5106. *Mr. Poulton*: In addition to the danger mentioned by the Chairman, is there not another danger, that if you want to depend purely upon side voting you have to get the whole of the vote? Supposing an individual took up an obstinate position—if he said, "No, we have agreed upon side voting, and I do believe in this, and therefore I shall stick out," and he would not give way at all, despite the pressure of his colleagues, and they thought that he was adopting an unreasonable and unreasoning attitude, what would you do then?—The majority in a sense are represented. I quite agree with what you say that even side voting is illogical; I quite admit that. If you have a minority of 25 you want to carry your proposal by 13 to 12, because every vote ought to be worth the same as the others.

5107. *Chairman*: Of course, under side voting the majority on one side would overrule the minority on that side?—That is so.

5108. That is carrying the party system further than it is carried even in the House of Commons?—Yes, it is not a logical system.

5109. *Mr. Poulton*: No, I thought possibly that you would see that it is not.—My statement says: "It is recommended that the Minutes of a Trade Board meeting should show: (a) The number of employers; (b) The number of employees; (c) The number of appointed members, respectively, voting for or against the various motions and amendments." We have found in practice that sometimes the appointed members decline to vote. "This information is essential for the Ministry of Labour, and should not be left to inference. We endeavoured to have this proposal carried at our Trade Board, but it was defeated by the appointed members' votes."

The impression of our Board seems to be, rightly or wrongly, that the appointed members do not wish the Ministry to know their opinions. I may be wrong in making that statement, but that is the impression which is held on our side of the table.

5110. *Chairman*: With regard to the part of your statement which appears under the heading "Work of Trade Boards," the first point about trade union representatives has been dealt with by Mr. Maxwell. Have you anything to add to that?—No.

5111. The feeling is that they rather tend to legislate for the large industrial centres?—Yes. I appreciate the difficulties that must exist in getting out-of-the-way districts to be represented, both as regards employers and employees.

5112. Then Mr. Maxwell mentioned the tendency to buy ready-made garments instead of ordering them, and he emphasised the importance of differentiating wages in town and country. You agree with that?—Yes, that is very important indeed.

5113. Then as to district committees, I would like to know what you say about that?—It seems perfectly feasible that advisory committees might be got together, but we have not so far had district committees. Really the people who are working the trade in Scotland had enormous trouble in securing on the Trade Board a differentiation for country districts. "We believe that by keeping the wages at a reasonable minimum, and by having a differentiation between large industrial areas and other districts, the full requirements of the trade will be met." We are inclined, as a Federation, to recommend that Edinburgh, Glasgow, Dundee and Aberdeen, from whence the union members are mostly drawn, should be at a rate perhaps 15 per cent. above the rest of Scotland. At present the proposal passed by the Trade Board is a reduction of 10 per cent. on the scale of wages favourable to the country districts and boroughs of 12,000 inhabitants and less. That is quite an arbitrary ruling. The employers' side, as a matter of fact, put up a suggestion of 20,000, and the employees' side suggested 5,000, and this is a compromise which is quite a fair method of arriving at a result. "The most serious criticism of district rates is that even in the one district you often find side by side the great industrial centre and the sparsely populated country district." That applies to some of the little country towns round Edinburgh and Glasgow.

5114. *Mr. Pugh*: If you had district committees they would be in an advisory capacity only, to advise the central body as to the local conditions, and so on, and make recommendations, I suppose?—Yes. We have not been able to get really good representation, from the employers' side even, outside Aberdeen, Dundee, Edinburgh and Glasgow, and it is going to be very difficult. Personally, I have gone round some of the Aberdeen country towns, and you cannot find any people taking an interest in it. We suggest that places such as Orkney, Shetland, Caithness, Sutherland, Ross-shire, and the Hebrides, should be left outside Trade Board rates, as we cannot see how they are ever going to be enforced in such districts with a reasonable inspectorate.

5115. That might lead in some cases to the payment of exceptionally low wages in those districts?—Agreed, but unless one is going to have an enormous inspectorate we do not see how the King's Writ is going to run there.

5116. Still, you are no worse off as a trade because they are inside; there is a chance that you may be able to maintain a somewhat better standard of wages than if they were left indefinitely outside to have their own free will?—Naturally, but to our own personal knowledge at the moment, at all events, the Trade Board is absolutely inoperative in those districts.

5117. If those places were left free from the operation of the Trade Board, would you not anticipate a transfer of labour to those places?—No. It would be very difficult. A girl will work in a little village dressmaking two or three days a week, and she will work for what she can get. The tendency, of course,

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

is for dressmaking to flow to the bigger centres, like other things, probably.

5118. You believe that if they were left out no particular harm would result?—I do not think so.

5119. Not so much harm as would be done if it were attempted to drop the rates?—I believe not.

5120. *Dame Adelaide Anderson*: I suppose you know that in those outlying districts the truck system survived longer than it did in Scotland, on the mainland?—It did in Shetland.

5121. Do you really think that it would take such a very large amount of inspection reasonably to control the paying of a minimum wage?—Travelling and one thing and another is so slow up there.

5122. You know that it is covered by the Factory Department?—Yes, it is covered in a way.

5123. In a way, yes?—Of course, the tendency to offend against the Factory Acts would be very slight. The tendency even in a town such as Aberdeen to get into trouble with the Factory Acts is very low indeed.

5124. Would not a visit, say, once in two years help to maintain observance of a minimum rate?—I doubt it.

5125. *Mrs. Lyttelton*: One prosecution might?—Yes.

5126. *Dame Adelaide Anderson*: Prosecutions have been taken there by the Factory Department.—In the North of Scotland?

5127. In Shetland.—It is not within my knowledge, but that is quite probable. We think that the period taken to bring a Trade Board alteration into operation or to alter an existing rate (at present about four to six months) is out of all reason.

5128. *Chairman*: There has been a good deal of evidence upon that.—“We suggest that to vary a rate the period of one month or, at the most, six weeks is quite ample.” That applies to the same thing. “It sometimes happens that both sides are agreed about the variation of a rate. Where this is so, and it is desirable to bring the rate into operation at once, a very much shorter notice for variation might be agreed to.” That is to say, when there is absolute unanimity on a Board we suggest that a period of 14 days or less should be sufficient.

5129. Even in that case there might be objections outside the Board?—There might.

5130. *Mr. Poulton*: Still, the Board is supposed to be representative of the trade, is it not?—“The Ministry of Labour should not, as provided by Section 3 (5) of the 1918 Act, have a veto on all alterations made on Trade Board rates within six months. The rates should be changed when and as the trade finds necessary. In times like the present, where fluctuations may for a considerable period to come be both violent and frequent, this is important. It may also be emphasised that many trades are largely seasonal, which may require a rapidity in the alteration of rates.”

Limit of wage scale in the case of wages fixed by age.—An idea seems to have arisen in the minds of employees and appointed members that an individual at age 18 years ought to be self-supporting. We do not think there is any justification for a generalisation of this kind, and we do not think that any age can be mentioned as one at which an individual should be self-supporting. We do suggest, however, that the wage scale should cover a period of apprenticeship of, say, five years, and should then fix a wage for age 19 or, at the highest, 20 years. The wage thereafter should not be statutory and should be according to merit and capacity.”

5131. When you got to that stage, although there might not be a statutory wage for those over that age, would you fix a minimum below which no one should be allowed to go?—The suggestion is that when a girl had arrived at this stage of 19 or 20 years, that should be the statutory minimum.

5132. So that you would maintain a legal minimum at any rate?—Yes.

—*Danger of extending wage scale on basis of age.*—The result of fixing a wage scale for a long period of years on an age basis is that if an individual enters

a trade who, for any reason, is not adapted to the trade, and is not economically productive at the higher rate of pay, then such an individual may not be employed at all. We do not think this is in the interests of the country, and are strongly of opinion that it tends to hardship to employees, to employers, and to industrial unrest and its corresponding troubles. For this reason we do not think it is wise to fix a wage scale by age for more than five years after an individual has joined the trade”—that is, on the assumption that the average age of joining is 15, then the average age of fixing would be 20.

“*Results involved to these trades should the rates of wages be too high.*—The Ministry of Labour and Trade Boards should recognise that wages unduly high or much in excess of rates hitherto prevailing in handicraft, such as dressmaking or millinery, tend to raise the cost of goods to a point at which a demand is created for machine-made articles. This in turn tends to destroy the handicraft, and this is happening to-day in many districts in our trades, with resultant unemployment.” I can give you some actual money figures of what has happened in the last two years in Aberdeen, if that interests your Committee.

5133. *Chairman*: Yes, the Committee would like to see those.—The figures I give you represent the difference between the amount charged to customers for making dresses, and the wages paid out for making garments. I have got four firms. In the year ending January last, one firm lost £379 on its workroom, and it had been getting worse, so they closed last year. Another firm in the year ending 1919 made a difference of £387, employing 48 girls.

5134. Made a difference?—They had more for their makings than they paid out in wages.

5135. *Mr. MacCallum Scott*: They made a profit?—No, this is not a profit, because none of these figures cover overhead charges; so that you may conclude that the loss was in some cases much bigger than indicated by the figures I am giving you.

5136. *Lord Weir*: It is the difference between the account rendered to the customer and the gross wage cost during the year?—Yes. This firm in 1919 made a difference of £387, employing 48 girls. In 1920 the difference had dropped to £180. This year up to date they have dropped their work from 46 to 23 girls, and they show a loss to date or, rather, a difference to date, of £225. Another firm in the year ending January last dropped £667.

5137. *Mr. MacCallum Scott*: Lost that? Do you mean the amount received was less than the amount paid in wages?—Exactly. This year they estimate by the end of January they will have lost £1,200. To-day that firm is employing 97 less girls in its dressmaking department than it did in 1914. The fourth firm in 1920 failed to meet its wages by £409, and this year actually to the end of November they had failed to make their wages by £312. It is a pretty serious state of affairs, because goods to our Aberdeen firms are very large.

5138. *Dame Adelaide Anderson*: That is, they are making garments for their customers partly as a present?—Yes.

5139. *Mr. MacCallum Scott*: Why do they do that?—I am doing it myself.

5140. Why? Is it to keep together the custom, to prevent it going somewhere else?—You keep together your clientele to a certain extent. You cannot say to a lady, “I cannot make you a dress, madam.”

5141. For the present you are selling goods in some cases under cost price?—It would not necessarily follow. If you take a dress divided up into materials and makings, I am not going to allege that the firm lose on the dress; it may get sufficient profit on the materials composing that dress to level up the loss in its actual workrooms. But, so far as the makings themselves are concerned, they are certainly being run at a loss.

5142. *Chairman*: I suppose also you may make up the profit in the sales department?—If you are lucky enough to get a large profit on, say, your silk department, it may weigh up against your other costs, but it would be done by the support of some other

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

department—the support of a merchandising department as against a manufacturing department.

5143. *Mr. Poulton*: Has this difference arisen because of reduced output, or in what way has it arisen?—It has arisen more particularly, I should say, in the last few months, because of reduced output. I should say that the output last year was satisfactory. I do not for a moment state that this is entirely due to Trade Boards, I do not suggest that at all.

5144. Of course, you are aware, are you not, that many of our wholesale firms in all kinds of industries are running their industry at a loss at the present moment, because of the crisis through which the whole nation is going?—I do not pretend for a moment that this is entirely due to the Trade Boards.

5145. *Dame Adelaide Anderson*: They want to keep their staffs together, in the hope that times will improve?—That is so, but you can only do that to a certain point.

5146. *Mrs. Lyttelton*: And your point is that the rates are too high to enable that to go on?—Yes. We are paying in Aberdeen the same rate as they are paying throughout the rest of Scotland.

5147. *Mr. Poulton*: You mean for the learners the rates are too high?—Yes. In Aberdeen we pay the experienced girls much above the Trade Board rates, and we feel that they pay us. It is not they that we are losing money on.

5148. *Dame Adelaide Anderson*: Although those figures are so high now, are they unprecedented? Have you had this kind of difference between the wages costs of the garments and the receipts before?—Roughly speaking, in Aberdeen just now our wage bills per average girl in the workroom is approaching 3½ times what it was in 1913.

5149. The remuneration per work girl?—Yes. If you have a workroom of 30 girls the average rate to-day is nearly 3½ times what it was in 1913.

5150. And does that make the difference?—That accentuates the difference.

5151. But you have had these differences in the past?—Oh, nothing approaching them. We have had bad seasons, perhaps.

5152. *Lord Weir*: How much of that is hours? How much of the 325 per cent. is due to the change in hours?—To the best of my recollection we were working perhaps four hours more per week in 1913. It is a 44-hour week now. I think, probably, in 1914 we worked 48 hours. I would not state it as a fact, but I think that is so.

5153. *Dame Adelaide Anderson*: But has that affected output or efficiency—the reduction of hours?—We do not calculate very much increased efficiency, but the change of the hours was quite a voluntary arrangement.

5154. *Mr. Poulton*: If the wages have gone up 350 per cent., or whatever it is—and we have had the wages stated here this morning; I think they worked out at about 3½d. per hour—how does that work out at all in that kind of way? What wage did they receive?—Our young girls received a very low rate of wages. Apprentices were poorly paid in 1913; there is no doubt of that. The girl who to-day, we will say, is getting 50s. a week would have been probably getting 25s. or 26s. in 1913. She has perhaps had her wage doubled. The girl who was getting nothing at all in 1913 may be getting 7s. 6d., 8s. 6d., or 9s. to-day. That is where the cost has jumped enormously.

5155. That would be practically the newcomer?—Yes.

5156. So that that is on the basis of the commencement of the trade?—Yes; that is where we have been hit.

5157. *Chairman*: Then will you proceed to your next point?—“Another effect of extending the wage scale over a long period is that directly a worker falls below the normal capacity she is permanently unemployable. This, in turn, leads the dressmaker to offer her services to private employers direct at reduced rates. The result is that these too

high rates tend to produce too low rates. In the Glasgow evening papers at present advertisements are appearing offering services as dressmakers in private homes at 5s. per day—less than a charwoman's wages. This is bound to result if an unemployable class is thus created whose competition tends further to reduce wages. If Trade Boards are to survive, they must fix minimum and not standard wages. Only thus can they have the necessary elasticity to meet changing trade conditions.” In Aberdeen girls are accepting employment in ladies' own homes at 4s. 6d. per day. I do not say that all are for a minute, but they are offering their services as low as 4s. 6d. per day, and, of course, it is impossible under the present arrangement to enforce any payment to such girls. It is getting accentuated very much by the slackness in businesses.

5158. *Dame Adelaide Anderson*: How would that work out, the 4s. 6d. per day or 5s., as compared with what the girl is earning in the workroom?—If she gets two meals a day—

5159. Which she certainly would get?—Which she certainly would get—she is not badly off; but if I had a girl at 6s. a day, say 36s. a week, that is not what she costs me. In the first place, I have got to give her 14 days' holiday every year, and pay her for it. I have got to employ a dressmaker to look after her, and there are all the et ceteras connected with it; so that she is very much under-cutting me.

5160. *Mr. Poulton*: You mean that your overhead charges and everything connected with a business are saved by that method, and to that extent they become what you would call unfair competitors?—Yes. “At present the trade suffers from the fact that private employers may employ dressmakers and milliners direct and may pay them any wage they like, as the private employer engaging a dressmaking assistant direct is not doing so by way of trade, and is thus outside the scope of the Act. We think that it should be equally obligatory on the private individual as on the dressmaking business to pay the statutory wage, and that the Act should be amended accordingly.”

“Subnormal Workers.”—The present system provides for reduced rates being permitted by the Trade Board to those having mental or physical defect. It has to be noticed that this does not, and cannot, provide for the worker without any objective physical or mental defect, who suffers from some defect in capacity or temperament and so falls below the normal in efficiency. We think this is an added reason for Trade Boards fixing really minimum wages so that a sufficient margin is left below the standard wages to such cases.”

5161. *Chairman*: Could not such cases be otherwise provided for by, say, allowing some local committee to give a permit covering persons who are below the normal capacity?—It cannot be done at the moment. The Act only provides for the sub-normal.

Chairman: I am aware of that, but I had in mind a possible amendment of the Act.

5162. *Mr. Poulton*: Do you not think that that is quite a practical proposition? Under the Agricultural Wages Board that was done officially; that is to say, the employer and the workman occasionally used to agree upon what they considered a fair rate for the inefficient or the slow worker; rather than dismiss those workers they would send them in to the Board, and the Board would endorse that, and that was the legal wage they were entitled to?—Yes; all of which leads to a tremendous lot more meetings, and so on.

5163. No, no; because I was sitting on one of the Boards, and they used to come along *en bloc* and we simply put them through. They were agreed statements.—Well, some such method would meet the case, only if the wage fixed is not so high as to become, in fact, the standard wage—

Mr. Poulton: Oh, yes, that is another matter.

5164. *Chairman*: It would not be right to fix the minimum wage by reference to the sub-normal

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

worker?—No, it should be fixed with reference to the average worker, of course. We suggest that the working week should be 48 hours, and that that should be a statutory working week throughout the country. In our own trade we work as a rule only 44 hours, but we have a busy season very often varied by a stagnant period. We all like to keep our workers throughout the year, and we would rather not employ seasonal hands. If, of course, we have the right to work 48 hours without paying overtime, it is a great help and it helps us to carry the burden of the slack season. This is a statement in connection with our own particular department: "Owing to our having admitted on the Trade Board that our normal working week was 44 hours, the appointed members were most unwilling to fix any higher number of hours than this, and, ultimately, the difference was split at 46 hours for the working week, although the English Trade Board have 48 hours for their working week. This, of course, is merely another illustration of the difficulty in making appointed members, without knowledge of the trade, appreciate the practical details of the trade. In watering places and districts with a specially seasonal trade, an adjustment of working hours per week to suit their short season is reasonable and expedient.

"Enforcement of Decisions.—It is notorious at the present time that no serious attempt is made to enforce Trade Board rates of wages, with the result that even in large centres many employers pay no attention to Trade Board scales. In country districts they are, as a rule, ignored, even in cases where they are known, which is by no means universally. A system of inspection to secure payment of the scales should be efficient and adequate. Unless Trade Board rates are enforced universally, it is obviously unfair to employers who are paying the rates that others should be allowed to ignore them, and is bound to result in dissatisfaction throughout the country.

"Why not Use the Factory Inspectors for Enforcement of the Rates in these Trades?—It is suggested that the inspection required could be adequately done (in terms of the powers given in Sections 14 and 20 of the 1909 Act) by the factory inspectors with very little additional cost or trouble. These inspectors at present are, generally speaking, acquainted with all the factories and workshops to which the Trade Boards Acts apply, and they naturally should be the organisation by which the rates laid down by the Trade Board should be enforced. At present, owing to recent changes in trade, their duties are not so onerous as formerly." That, of course, only applies to our own particular trade. Naturally, a factory inspector cannot inspect a milk shop.

5165. *Lord Weir*: Do you think there is much evasion?—A great deal. We hear of it, but, of course, facts are difficult to get. The general impression seems to be that there are lots of women conducting the smaller private dressmaking shops who are evading the Act. In large establishments, naturally, there is no evasion, because it would not pay to risk it even if we wanted to; but in the smaller establishments there is a great deal of evasion. The Trade Boards Office has not a complete list of employers in the country, as Mr. Maxwell has already brought to your notice, and it would seem at present that employers are only liable for non-payment of the rates if they have received the statutory notice.

Chairman: I do not think that can be so.

(*Mr. Watt withdrew.*)

5166. *Mr. Poulton*: I presume you mean that in several cases which have been before the Courts they state that they have had no notice, and therefore it has been dealt with as if the disobedience was more or less accidental?—Yes.

5167. *Chairman*: You mean that the magistrates might take a lenient view in a case where the man had no notice?—Yes. Mr. Crosthwaite advises me that under the Act notice must be sent to everyone. "No further extension of Trade Boards should be made until the system has been brought into proper working order with reference to those trades to which the system has been already applied. This would both tend towards economy and efficiency, and would remove the widespread apprehension which prevails in connection with Trade Boards." We find that the Minister of Labour does not quite recognise some of our trade questions which are raised as being quite so urgent as we think they are. The experience of many in dealing with the Ministry of Labour is that the delay there is greater than even in some other Government Departments, and in all questions of anything approaching a trade dispute it is naturally undesirable. Then we say that the official notices as to the Trade Board's decisions should, as far as possible, always be absolutely inclusive. "We would suggest that these notices should, as far as possible, be inclusive of all rates up to date. The practice of sending out separate notices for a decision affecting the wholesale trade only, and another notice for a decision affecting the retail trade only, is objectionable. For example, a notice affecting the wholesale trade has to be sent to everybody falling under the Trade Board, whether in the wholesale trade or the retail trade. The result is that retail traders get notices concerning the wholesale trade which have neither interest nor applicability to them. This illustrates one of the disadvantages of combining the wholesale and retail sections of the trade. To remedy this we suggest that all notices of revision of rates should, as far as possible, be all-inclusive, and give the whole rates up to date. Otherwise confusion is caused.

"Display of Notices. With regard to the obligation to display the notices in prominent positions in the factory or workshop, etc., we would point out that the size of the notice is unreasonable, as is even the size more recently introduced. The notices are unsightly to stick up on walls, and they would be quite unsuitable for displaying in a shop. We would suggest that a much more reduced size of notice would equally well serve the purpose." There is a great improvement now, but even the present poster is a pretty large one, especially when you have several in your factory; sometimes one begins to have the room pretty well papered nowadays.

5168. *This is the present reduced size? (indicating poster).*—That is a great improvement, my Lord. The posters used to be very big. You get the notices to vary, which you also have to stick up, and the notices were beginning to go right along the work-room. "Registration of Learners. We have all along been opposed to the registration of learners, as being unnecessary, cumbersome and productive of considerable avoidable expense to the State. We think there would be little trouble in ascertaining the period that an employee has been engaged at the trade in any case of doubt, and the expensive system of registering each change of employment during the learnership of everybody who falls under a Trade Board (which in course of time would mean a very large proportion of the total workers of the Kingdom) is quite unnecessary. A certificate by the employer of the period of employment would meet the necessities of the case."

5169. *Chairman (to Mr. Crosthwaite)*: You are Secretary, I think?—(*Mr. Crosthwaite*): I am Secretary of the Scottish Retail Drapers' Federation, and the Garment and Millinery Federation, and also of the Glasgow and West of Scotland Retail Drapers' Association,

as well as of various other Retail Trade Associations in Glasgow, and I have been engaged in all the wages negotiations, and I am fairly closely acquainted with the opinion in the drapery trade generally. All that I wished to bring before you are one or two

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

practical considerations in connection with the fixing of rates by a Trade Board. There is no doubt that there is a very wide apprehension, just now, regarding Trade Boards, and the general complaint is that the rates fixed have been far too high. Now, I think, it is quite a fair observation to make with regard to that, that after all, the Trade Board consists of an equal number of employers and employees, and therefore employers have had an equal share in the fixing of the rates as the employees have had; and therefore they have themselves to some extent to blame for the rates fixed. I think, however, there are one or two considerations which tend to explain why those rates have been fixed at too high a figure. In the first place, of course, employers have a great many more considerations to keep in mind than the employees in the fixing of rates. They have not only the condition of the trade at the time to consider, but also what the condition of the trade may be six months or twelve months or eighteen months afterwards. They have also to consider the question of variations in the trade during that period. They have to consider the questions of supply of labour to the trade, and any special condi-

tions affecting the trade. Employees, on the other hand, have merely to consider what is the highest wage that they can extract from the employers under this Trade Board system and go straight for it. Now the question then arises: Why should the employers have fixed wages which do not meet with the approval of the trade as a whole? I think that one reason is that it is very important in entering upon negotiations of that sort to have precisely in your mind what is the maximum to which you are prepared to go and beyond which you are not going to compromise. Now, I very much question if employers as a rule have given that matter full consideration before they enter the Trade Board meeting. Yesterday we had some evidence with reference to the Grocery Trade Board of Scotland. I was told, for example, by one member of that Board that although it consisted of a great many different sections of the trade, wholesale, retail, eggs, provisions, and groceries as a matter of fact those sections never had had a meeting prior to going into the Trade Board.

Chairman: You are rather dealing with what the members ought to do, which is a bit outside our scope.

(Adjourned for a short time.)

5170. Chairman: You were making a statement as to the dilatory nature of the transactions of the Trade Board?—Yes. I thought I would just endeavour to give you from my point of view what seem to me to be some of the practical difficulties in the actual working of the Trade Boards themselves, which form the explanation of a good deal of the discontent and apprehension which the Trade Boards have aroused.

My first point was that it was very essential that the employers, before going to the Trade Board, should know exactly what was the maximum to which they were prepared to go.

5171. Yes, we follow that; that applies to all public gatherings of every kind.—That is so. It has to be kept in mind that individuals who have fixed those Trade Board rates, which have caused the discontent, have been very largely inexperienced in Trade Board matters, and in many cases have appeared at Trade Board meetings with out having given reasonable consideration to the rates that ought to be fixed, and have in many cases, probably, been rushed into rates which are not agreeable to the trade. I might say that in our Federation we have meetings of the retail section of the employers' representatives, meetings of the wholesale section, meetings of the Federation, all before we go to the Trade Board meeting at all, and I think that that has perhaps kept us to some extent from some of the failures which have occurred on other Boards. Another cause is that of the personnel of Trade Boards. When we were first appointed we as a Federation were asked to nominate representatives from about half-a-dozen of the largest towns in Scotland. Well, of course, we were new to the game, and we naturally appointed our most important men; that is to say, the men in charge of the most important businesses in those centres. We had only been at one Trade Board meeting when we realised the folly of this. The men should have been appointed from the smaller businesses and from the country districts. What happened was that employees asked for a rate higher than they expected to get. The men in the larger businesses found that they could stand the rate up to a certain point, and were prepared to agree to that, and the consideration of how this would affect the smaller businesses of the country was not, probably, so much before them as it should have been. We certainly tried from the very outset to secure differentiation for country districts, but we were unsuccessful in getting the appointed members to agree to that. I think that one serious cause of discontent is the fact that the Ministry themselves have not had before them the importance of having the small men in the trade represented. A rate, of course, which will suit the small man in the trade naturally will suit the man in a bigger way of business; but the converse does not hold.

5172. Mr. Pugh: How are you going to provide for the small man to be represented?—I think it is entirely for the Minister of Labour to see that that is done. In our particular case, as I say, there was no attempt made towards that.

5173. Chairman: You could have nominated small men from your Federation if you had wished to do so?—Yes, and if we had known at the outset what we know to-day, we should have done so.

5174. It is easier to get the small employer represented than to get the non-union worker represented?—Yes, I quite agree. I should say that after the first meeting of our Board we realised the mistake we had made, and at the next meeting of the Board we got a unanimous resolution passed urging the Minister to see that country districts and small employers were represented on the Board, and it is only right to say that he at once did that. Then another reason which I think has led to rates being fixed higher than they should have been is the fact (if you consider it) that at a Trade Board meeting, having been engaged all day trying to fix a rate and not being able to get it, you arrive at a point when there is a rate suggested which will suit some individuals on the Board and will not suit others. There is then a tendency for the better class of employers whom the rate suits to exercise a degree of pressure on the others whom the rate does not suit so well, and the result is that these men, from that psychological pressure, may be led to vote for a rate which their later judgment does not approve of. I have seen that tendency at Trade Board meetings, and it is one that is inherent in the system, which cannot really be got rid of other than by greater experience of the Trade Boards. Another consideration is that of sheer weariness. If you have been two days at a Trade Board meeting, speeches have been delivered on both sides, you have had meetings with the appointed members, you have had personal meetings with the employers' representatives, and you get to a point at which you are prepared almost to agree to anything in order to be finished with it and get on with your business. Now, always keeping in mind that the Trade Board rates which have been fixed have been fixed by inexperienced Trade Boards, largely, by individuals who have been inexperienced in negotiations, you can understand that many of them have just been led into agreeing to rates from sheer weariness and through lack of experience in negotiation, which greater experience of Trade Boards will doubtless give them. I might also say that perhaps the fact that employers' representatives have rather more discretion given to them as a rule than employees' representatives may lead to that discretion being used where otherwise it would not be. I do not suggest there should be any alteration in that, because I think it is most important that both

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAYTE. [Continued.]

sides should have full power of negotiation; but I think perhaps employees' representatives do not have that discretion to quite the same extent as employers' representatives have. Then there is the further cause of difficulty which is due to a rate being quite suitable for the time at which it is passed, but is perhaps unsuitable six months afterwards, or even four months or five months afterwards, particularly if the rate has been right up to the standard. Now, under those conditions, at present you cannot alter a rate for six months without the Minister's consent; and, as a rule, I think, appointed members do not care about variations in any shorter period than six months, and I think that also has tended to create a good deal of discontent when you take into account the diminishing volume of trade in the course of the past year.

5175. *Mr. Pugh*: That, in normal times, would cut both ways, would it not? It is rather an abnormal condition that has created a feeling of that kind. I mean to say, if it takes six months one way, it will also take six months the other way, and over that period of six months the thing would probably adjust itself?—No, I think not, because the tendency in most Trade Boards, if the rate is rising, is for the employers to agree to an increase right off; but the employees cannot agree to a decrease. Then you have heard referred to in connection with the dressmaking and millinery trades the practice of mothers bringing their daughters to have a year or two's experience of the trade, and perhaps not being paid any wages at all for some time on account of their only being temporary hands. Of course, the Trade Board rates have altered all that; you cannot engage girls in that way now, and naturally that creates amongst those who may have depended to some extent on that class of labour big discontent, and the blame of course falls on the Trade Boards. I might say that in connection with Trade Boards there is a very useful and a very reasonable precaution taken to avoid the fixing of rates that are unsuitable for the trade, by giving the right of lodging objections within two months. Now that is a very valuable right, but we must not ignore the fact that very few people have sufficient public spirit, even where they are personally affected, to go to the trouble of lodging an objection, of writing a letter and stating what their objection is. I have a considerable amount of experience of the organising of trades, and I know the great difficulty in the case of employers of getting them to take an interest in anything outside their personal trade affairs of the moment. It is very difficult, for example, to get them to join an association; it is very difficult to get them to take a public point of view with regard to any matter, and that also obtains even in the case of lodging objections. My point here is that you cannot rely on the lodging of objections as an absolute safeguard against the fixing of rates at too high a figure.

5176. What is your remedy?—I am afraid there is no remedy for that other than time and experience. We had a very curious illustration of that in connection with the employees. We fixed certain rates to start with in the month of May, 1920. The objections to these came up for consideration in the month of August. I think I am right when I say that we had only one objection from an employee; at any rate, if it was not only one it was a very small number indeed; but, notwithstanding that, between May and August we had had a strike of employees because of the fact that the rates did not go up high enough; and yet they did not go to the trouble of lodging an objection to the Trade Board.

5177. *Mrs. Lyttelton*: The employees?—The employees' side. I merely mention that to illustrate that you cannot depend on the lodging of objections as an absolute safeguard against wages being fixed too high.

5178. Or too low?—Or too low, yes. Now the only other point I wish to mention is that in Trade Boards, as in all other human affairs, the method of compromise is the usual way of reasonably settling a dispute; but we must not neglect the fact that a

compromise in connection with a matter of wages, or such matters as are dealt with by a Trade Board, is somewhat different from compromising a single transaction where, if you are suffering any loss, the loss is finished and done with. The compromise in Trade Board matters is a continuing business, and if the compromise is not a wise and a just compromise essentially, then you may have a grievance which continues on for a matter of six months. My point about it is this. Supposing the employees will not go below a certain figure which is obviously too high, the employers, say, have indicated what their maximum is, and have agreed to go the length of their maximum. The appointed members come along and say, "Well, now, we must try to get a settlement of this, and so we will arrange a compromise; we will split the difference." Well, there may not be any difference to split; that is to say, the employers may have gone to their uttermost, and the compromise made may be really too high for the conditions of the trade. There, again, I have no practical remedies to suggest except greater experience on the part of the employers, and holding something in hand to ensure that the compromise is a right and fair one. Some of these difficulties, of course, can be statutorily remedied, such as the question of personnel. Some of them can only be cured by the greater experience of Trade Board members.

5179. *Chairman*: Perhaps there will not be a cure as long as human nature remains as it is?—That is so, and I think that that probably makes for a good deal of discontent.

5180. *Mrs. Lyttelton*: In fact, your statement is not really a criticism of the Trade Boards, but is an apology for employers who do not get the best out of them?—Yes—well, really an apology for both sides. I am trying to look at the matter quite philosophically.

5181. There are reasons why they do not work it well?—Yes. My federation is in favour of Trade Boards, but that does not cause us to shut our eyes to the fact that there are inherent working difficulties in them which may make them not a perfect instrument for fixing wages.

5182. *Mr. Poulton*: I should like to put one point which I was going to put before lunch with regard to one statement you made, in which I was very interested, and that is in regard to fixing the rate too high. You said you thought it had a detrimental effect—I do not think you went any further than that—but you went on to mention, and you have amplified that now, the difficulty you found in trying to organise employers, even in your own Federation, because they will not come outside their own business. Now, if there is any foundation for that belief of theirs, does not it arise partly from the fact that they do not go into these questions seriously until they are brought right dead against them for the first time at a Trade Board meeting with the employees' representatives, and then they have to face what the cost of living is to keep a home going? Is not that one of the reasons for that kind of thing? The employer is quite new to them; he has never been used to negotiating in a collective capacity; just in his own little business, probably, he has, but not more?—Yes, I quite agree. Although we as a Federation have members in all parts of the country, with the exception of those outlying districts like the Hebrides, the Orkneys and the Shetlands, I very much question whether our executive had, to start with, as full and as correct a view of the requirements of the whole country before the Trade Boards came into operation as they have now. It has taught us really to consider things from a great many more points of view than we were prepared to consider them from previously.

5183. And there really was on the trade a greater obligation than they imagined?—That is so; and unless the employers are prepared to recognise that it is a very responsible matter to fix wages for the whole trade, and that it is a matter necessitating very careful and anxious deliberation beforehand, then I do not think you will have anything except

8 December, 1921.] Mr. R. M. MAXWELL, Mr. CHARLES WATT, and Mr. J. M. CROSTHWAITE. [Continued.]

dissatisfaction. But, of course, if you had greater power to vary rates quickly, it would make it possible to correct mistakes a little more easily.

5184. That is all a question of elasticity, is it not, of varying modes of procedure?—A greater elasticity is a cure for the defects of the Trade Board system as it is at present, I think.

5185. *Chairman*: What you have just said really applies to all members of the Trade Boards, whether they represent employers or workers; they should be very cautious in fixing any rate which applies to the whole trade?—That is so, my Lord, and I think that probably both employers and workers do not sufficiently realise that if the rate that is fixed is not right and just it affects both sides injuriously. If it is too high, it causes unemployment to the employee; if it is too low, then it drives workers out of the trade and leaves employers without a sufficiency of labour to carry on trade properly. It is to the interests of both that the rate fixed should be a right and just one.

5186. Of course, if it is too low there is a remedy, namely, in paying wages higher than the wages fixed by the Trade Board; but if it is too high, there is no remedy until the rate is altered?—That is so.

5187. *Lord Weir*: Your remarks should also extend, I take it, to the appointed members?—Well, of course, it has to be said on behalf of the appointed members that they are as new to the game as we are, and know no more about the difficulties and troubles with the fixing of those rates than we did. Of course,

their energies are naturally going in the direction simply of finding a compromise, but, as I have pointed out, that is not always the proper solution, unless both sides are an equal distance away from the point where the compromise should be struck.

5188. *Dame Adelaide Anderson*: Are the appointed members not trying to inform themselves more and more on the trade details from both sides?—Well, I do not notice a great deal of difference between the information of the appointed members regarding Trade Boards than what I did at the beginning, I must say.

5189. Is there willingness both on the side of employers and of workers to put all the information at their disposal?—I think anything that is likely to affect their judgments, anyhow.

5190. *Mrs. Lyttelton*: I gather that you think the presence of the appointed members, if the thing is going to work properly, would mean that both workers and employers should keep back part of their bargain so that when the time comes neither are committed too far?—I would put it this way: I think they should negotiate wisely.

5191. It is not that you do not wish to have appointed members at all?—Oh, no; I do not see any way of avoiding appointed members.

5192. It is only that you would advise your Federation to keep back their offer?—No; I am merely saying that if you negotiate you ought to negotiate wisely.

(*Mr. Crosthwaite withdrew.*)

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT, called and examined.

5193. *Chairman (to Mr. Stableforth)*: What is your position in connection with the Milk Distributive Trade Board?—(*Mr. Stableforth*): I am general manager and director of a company which has businesses in at least 60 of the largest areas in the country.

5194. Milk companies?—Yes. I am a member of the Trade Board, and have been from the commencement.

5195. On the employers' side?—On the employers' side. My friend Mr. Scott is on the employees' side, and we were appointed by the Board to give their views upon certain points that we want cleared up, because I may say, as far as our Board is concerned, I do not think there could have been a more unanimous Board. We have never even got to a division yet, and we have been able to settle all our points very amicably between ourselves. Unfortunately for us, we have had a splendid chairman—

5196. Unfortunately?—Unfortunately for us, we have had a splendid chairman, and we have just got him perfectly educated up to all the needs of our trade, when the Home Secretary has appointed him as a stipendiary magistrate, so we lose him after all our training.

5197. You will have to begin again with another chairman. Then what is your first point?—The first point is this. We feel from an administrative standpoint that the work of enforcement is absolutely neglected by the powers that be. We have reported, ourselves, from the Administrative Committee of our Board, at least 20 cases where we know there has been a gross breach of the orders made by the Board. We have had a report, after pressing for it several times, which is numbered 1, 2, 3, up to 20, giving us what course had been pursued. Well, we know that in at least 50 per cent. of those cases a prosecution ought to have ensued. We have supplied them with the evidence, and there was no "but" or question about it; there were clear cases established; so much so that if we had known that the Ministry were not going to make a prosecution we should have assisted the employees who were concerned to have gone for a prosecution themselves and helped them to pay the expenses. Now we did feel, as far as the inspector is concerned, that he is very deficient. I may read this: "We realise that

if the Trade Board orders are to be properly carried out a larger inspectorate staff would be necessary, but owing to the present economic conditions we feel that it would be unwise to press that point just now." This is signed by both Mr. Scott and myself as representing the views of the Board. "In view of the above fact"—probably you had this before you yesterday—"we suggest a good deal of useful work can be accomplished if some method was adopted of linking up Inspectors appointed under the Shop Hours Act and these Inspectors were given power to investigate under the Trade Board (at any rate, in the Distributive Section) so that they could carry out the more formal examinations that are necessary and prepare the way for a full-time Inspector taking up any important case that may be found." Now these shop inspectors, as far as our trade is concerned, have to visit at least 90 of the shops of the dairy trade, and are already familiar with all the circumstances surrounding them. It would have been no difficulty for them to investigate as to whether an employer was paying the proper amount of wages—

5198. Are those inspectors appointed by the Health Authority?—No, by the Local Authorities, and there are inspectors in every village.

5199. That is what I was putting to you; I mean by the Health Authority the Local Authorities?—Yes. Then there is another point, that the inspectorate is too remote to be of very much use to the Trade Board. Assume that there are half-a-dozen inspectors appointed, one, say, for the Northern Counties, one for the Midlands, one for London, one for the Eastern Counties, and one for the Western Counties, they could then, with the assistance of the Shop Hours Inspectors, have a check right through, and it would not mean a large inspectorate, and we believe, and we judge this from our experience of our own Board, that those inspectors ought to be at the office of the Trade Boards themselves, under the Secretary of the Trade Boards, so that we should have an intimate connection with them, and could get at them at any time we wanted and know exactly what had been done with each case that had been reported to them. That is unanimous as far as this portion is concerned, as far as my Board goes, both employees and employers; and we feel that the great deficiency—

8 December, 1921.]

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT.

[Continued.]

and I have no hesitation in saying this as far as our trade is concerned—is that 50 per cent. of the trade are not carrying out the regulations, and are not paying the wages. I say that fearlessly.

5199a. *Mr. Poulton*: Is that due, do you think, to the fact of their not knowing the regulations, or is it due to wilful evasion?—As far as our trade is concerned, you will remember that under the Food Control everybody had to get a licence, and, therefore, when this Board was set up there were notices sent out to practically 60,000 dairymen throughout the whole of the country, and they had no difficulty in getting at the dairymen; and they would have no difficulty even to-day in finding anybody connected with the trade, because every one of them has got to be registered by the Medical Officer of Health in each of the districts.

5200. *Mr. MacCallum Scott*: Is the trade largely in the hands of small people?—I should say that 75 per cent. is.

5201. You say that the big firms?—The big firms are paying it, because you can get hold of our accounts at any time, and, seeing that the managing directors and the general managers are personally responsible and may get three months' imprisonment, they are very careful to see that it is carried out.

5202. Take the smaller people; of what sort of size would their business be? How many people does a small average employer employ?—I should say from three or four up to ten.

5203. *Dame Adelaide Anderson*: In the shop and distributing?—Yes.

5204. *Chairman*: Apart from such work as could be done by the Shops Act inspectors, you suggest, I understand, that there should be six inspectors connected with the Milk Distributive Trade Board?—Or connected with Trade Boards; because they all come under the one Trade Boards Office, and they could do the whole of the work.

5205. That is what I was going to put to you. Do you mean that all the inspectors could be connected with the Trade Boards Office?—Yes; our idea is that there should be one inspector responsible for a certain district, say, the Northern Counties—Northumberland, Durham, Westmoreland, Cumberland, and Yorkshire; then one for London; then one for the Home Counties and one for the Western district.

5206. *Lord Weir*: Do you mean for milk?—For the whole of them—for the distributive trades, at all events.

5207. Would those be adequate?—Yes.

5208. Have you not more than that number now?—We have not got them; and you can get no report, and you can get nothing done. I am certain that if out of twenty cases which you sent them there had been half-a-dozen prosecutions, instead of 50 per cent. of the dairymen not paying the wages, there would probably be 95 per cent. paying them.

5209. *Dame Adelaide Anderson*: You think that the inspectors under the Shop Hours Act would report to these inspectors under the Ministry?—I am quite satisfied that they would do it. It is only a question of arrangement, and they are in close touch with them at the present time.

5210. *Lord Weir*: When you say that there is 50 per cent. of evasion, do you mean 50 per cent. of the workers in the milk trade are underpaid, or do you mean that 50 per cent. of the firms underpay their employes?—I say that 50 per cent. of the firms, or of those engaged in the milk trade, are not carrying out the regulations or paying the wages.

5211. What kind of percentage of the workers would that represent?—It would not amount to 50 per cent. of the workers, because the larger firms employ so many more than the others. I should say that about 25 to 30 per cent. of the employes are today not being paid the wages.

5212. *Mr. Pugh*: What sort of organisation have the workers got? Cannot they do anything in this matter by their trade union?—Of course, my friend Mr. Scott knows more about it; he is a trade union official. I will say this, to give you an explanation of the working of our Board: We have been very

fair with exemptions; when we have had cases of infirmity or cases in which through old age it was impossible for a man to get round in his time, we have taken this course; we have asked whichever member of the Board has been nearest to the district, whether he was an employer or an employee, to make an investigation and report to the Administrative Committee, and in every case without exception, whether he has been an employer reporting or a representative of the employees reporting, we have accepted that report as genuine and have dealt with it. With one or two exceptions, I do not think we have refused an exemption. We need not give all that is asked for, and we have varied them, but we have been fairly liberal where exemptions have been asked for, and therefore if employers have a difficulty in connection with the matter, there is no reason why they should not come to the Trade Board and tell them, and apply for exemption and have the case investigated and settled; and settled by men on both sides, because do not forget that throughout the trade in this country, even in the large firms, there is not a responsible manager, managing director or general manager but at one time was an employee in probably a very small way, and we have been able through that fact to put our feet into other people's shoes. I understand everything; I started in this trade when I was 13 years of age, and I know everything from start to finish; and we do take credit on our Board—I have been told that, to some extent, it is an exception—that we have got a mutual respect for each other, and we have faced all these difficulties because we knew both sides of the trouble.

5213. *Chairman*: Do you make special rates for country districts, or do you have one rate applying alike to both town and country?—No, there are three rates—one for London, one for larger towns, and one for places under 10,000 inhabitants.

5214. Do you have many complaints from farmers or landowners as to the cost of selling milk in country districts?—No, I do not remember one; I do not know whether my colleague does. When the Agricultural Wages Board was in existence we made arrangements with them for them to take over those particular classes and to deal with them themselves through their own inspectors, and there we would not interfere. Now, of course, that has come to an end, and we have got to deal with it again.

5215. You have to fix the rates, at any rate?—Yes, we have to fix the rates.

5216. We have had brought before us a case in which we were told that the landowner sold his milk to his neighbours and under the Trade Board regulation he had to pay one of his roundsmen £3 11s. per week and the other £2 14s. per week, whereas the agricultural labourer in the same district was getting 36s. per week?—If he had applied to our Board it would have depended very much on the number of hours for which he was engaged. Supposing a man is engaged three hours in delivering, we say that that man for those three hours during which he is engaged shall be paid our Trade Board wages. If during the rest of the hours he is filling in his time with other work on the farm they can pay him according to the agricultural wages.

5217. But these men, I understand, are entirely engaged in delivering milk.—Of course, if they are entirely engaged in that—there are going to be anomalies always and I do not see how you are going to get over them.

5218. *Mr. Poulton*: What is the Trade Board rate in the lower paid districts?—The rate for the country is £2 15s.; the B scale—that is for towns of over 10,000 inhabitants—is £3 2s. 6d., and the London scale is £3 5s. Those are the minimum rates for roundsmen.

5219. *Chairman*: The country scale then is 55s., is it?—Yes.

5220. Comparing even that wage of 55s. with the agricultural wage of 36s., I suppose a roundsman does not want more skill than an agricultural labourer?—No, I would not say he does; but at the time these rates were fixed agricultural wages were much higher than they are now.

8 December, 1921.]

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT.

[Continued.]

5221. But these rates have not been changed now, have they?—Yes, that is one point which we deal with later on. We have agreed on a reduction, but we have got to wait probably three or four months before it becomes effective.

5222. To what do you propose to reduce the wages?—They will be reduced practically 5s. per week on all the three scales, and then the junior rates fall in proportion.

5223. Passing from the question of inspectors, you want to refer to the question of scope, I understand?—Yes. We suggest that the present arrangement whereby questions of scope should be submitted for the opinion of the Trade Board prior to the expression of any opinion thereon by the Minister of Labour should be continued. We have had cases in which the Ministry in reply to inquiries made to them have given expressions of opinion which in our opinion were entirely wrong. Let me give you an instance.

5224. This matter has been dealt with, has it not, and the practice has been established of consulting the Board before giving a decision?—Yes, they do now, but we want that to be continued.

5225. I understand that. Then as to the period of notice, you think that that should continue as regards newly established Trade Boards so far as their first proposal is concerned?—Where a new Trade Board is created we think it ought to continue; that is to say the two months' notice and a month for the Minister to give his decision; but that in the case of any subsequent proposal of any Board the period allowed for objections should be reduced from two months to 14 days from the date of publication thereof to the trade, and that in the case of all proposals other than the first one the time allowed to the Minister of Labour for consideration as to whether he should confirm the rates varied, fixed or cancelled by the Trade Board should be reduced from one month to 7 days. We feel, as I have heard one of the witnesses express himself here, that as far as our Board is concerned if we come to a unanimous decision either to raise the wages or to reduce them, it ought not to go on for three or four months before that can become effective. We think a month ought to be the outside. It is published, everybody gets a notice, and they can make an objection; and surely if a Board is established by the Minister and has been established for some time, and they come to an agreement, as we do, either to reduce or to increase wages—in this case it is a reduction—a month should be quite sufficient; and it ought to be just as effective if it is going to be a rise in wages. We think that there is a serious waste of time if we have to wait for four months and in some cases over four months.

5226. *Mr. Poulton*: Do you think, having regard to the time and the notification, that every individual upon the occasion of any variation should be notified, or would you make it a public notice, say, through the Press and on the church door or in the post office?—Of course it would leave them an excuse that they did not get a notice and they did not know there had been any variation; but as far as the dairy trade is concerned it is fairly well organized. I mean this: we have got a National Federation, we have got an Area Federation in every district in the country, and it could be very effectually done by being published in the way which you suggest and also by notice going to our central Federation so that they delivered the notice to each of our areas. I do not see any difficulty. To my mind this sending of 60,000 huge posters—they are very much smaller now—seems to be a great waste of money once the thing is established and once the thing is well known; and it is well known to-day, and the people who are evading it are evading it deliberately.

5227. *Mr. Leyton*: What proportion of people are in your organisation, do you suppose?—I should say 70 per cent. of the trade. You see we have all our local areas and they are all affiliated with the central Association, and it is now rather a huge thing.

5228. Did it come into existence as the result of the Trade Boards Acts?—No, it came into existence first as the result of the food control. We had a big fight with the Food Controller over various things, and we could only do it by making ourselves as strong and as noisy as possible.

5229. *Lord Weir*: You wish to speed up the variations. You are, I think, the first distributive Trade Board for a staple article?—Yes, that is so.

5230. Your rates came into operation on 8th November, 1920?—Yes.

5231. And up to now they have not been varied?—They have not been varied.

5232. There has been a very big change in the cost of living since that time. In your industry you have nothing equivalent to the influence of foreign competition; you have simply competition between one dairyman and another?—We have very strong foreign competition now.

5233. In milk distribution?—Yes.

5234. How does that operate?—In the form of milk powder, and in the form of, I will not say the original condensed milk, but the very huge quantities of condensed milk which are now coming into the country from America in consequence of what occurred during the war, and a large quantity of milk is being distributed in that direction which previously went through the hands of the retailer and wholesaler in the form of liquid milk.

5235. A substantial proportion of your trade has been changed?—A substantial proportion, and a growing proportion too.

5236. To what would you ascribe that?—In the first instance during the control these supplies were brought in to supplement our short supplies, and people have got used to them and they have remained.

5237. Are they cheaper?—No, they are not cheaper.

5238. So that it is not a question of price?

5239. *Mrs. Lyttelton*: They keep longer?—They are handier, I should say.

5240. *Dame Adelaide Anderson*: Has there not always been a shortage if you measure the needs of people for milk?—No.

5241. Do you mean that every child can always have enough milk?—I have no hesitation in saying that at the present moment there is a surplus of at least 30 per cent., and we are making, and so is every large dairy firm at the present time, tens of thousands of gallons of milk every day into cheese at a very serious loss simply because in the present state of unemployment there is not the money to purchase it.

5242. *Lord Weir*: What influence causes you to consider a reduction in the minimum rate? I believe you are considering it now?—I do not quite understand your question. If you will make it clear I will answer it.

5243. Your rate was fixed and the existing rate was operative from 8th November, 1920, until now?—Yes.

5244. Would you not have expected that that rate would have been queried and questioned and discussed during the last 12 months?—Because of the difference in the cost of food?

5245. Because of the general deflation in prices and wages?—What really happened was this: as far as the employers' side was concerned we were convinced months ago, even so far back as last August, that we ought to ask for a reduction. We did not ask for a reduction because when the application to fix the rate was first made by the employees last February or last March the cost of living was at a certain rate—I forget what it was—but it went up very considerably, at any rate to about 175 per cent. above the pre-war level, and we felt that at the time that they applied the cost of living was only 135 per cent. up—I am not exact to a decimal point or two—and it then went up to 175 per cent. before they got any fixed wages, and our feeling was that they had gone on for so many months without getting any increase and we must let it go on for a certain time before we asked for a decrease.

8 December, 1921.]

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT.

[Continued.]

5246. *Chairman*: So that even the six months period is insufficient?—Yes, in that particular case it was.

5247. *Mr. Layton*: Did the rates which you paid not go up? Did you keep down always to the Trade Board level?—No, as far as the Trade Board rate is concerned, as you know, it is a minimum wage. In a large number of firms they pay a man a certain wage and they pay him so much commission, and invariably that man's wage and his commission works out to very much higher than the Trade Board rates. I have men earning as much as £5, £6 and £7 per week.

5248. Did you never vary the rate of commission so that a man could increase his earnings while the rise in the cost of living was taking place?—Yes, at the time of the rise in the cost of living I should say that the wages of 1913, say, up to the time of Trade Boards coming into force, had gone up at least 30 per cent. to 40 per cent.

5249. You have not quite got my point. After the Trade Board rate was fixed you say that the cost of living continued to rise?—Yes.

5250. Were there no means by which any of the employees during that period could have increased their earnings?—No. We knew it was increasing when we agreed with my friends on the other side, and we took that into consideration in the amount we compromised upon.

5251. *Mrs. Lyttelton*: You mean that you knew that the cost of living was going up?—Yes, and we agreed, and I think my friend will agree that we very fairly agreed, at the amount we did.

5252. You anticipated the rise?—Yes.

5253. *Mr. Layton*: If you anticipated the rise in the cost of living, then I do not quite see the force of your answer to Lord Weir's question when you said that it ought to remain for a certain period above the present cost of living before it falls?—As far as the larger employers were concerned they had taken that into consideration. As far as the larger employers were concerned, they had increased their men's rates proportionately right the way through; but there was another class of employer, for which class I am very pleased that the Trade Board came into force, who were not doing so.

5254. *Mr. Pugh*: You made provision?—Yes, we made provision.

5255. *Lord Weir*: So that you consider that you have fulfilled your responsibility under the Act of fixing a minimum rate of wages?—I do.

5256. What is your interpretation of "minimum wage"?—The wage upon which a man can reasonably live and provide for his wife and bring up his family.

5257. So that if your idea of the interpretation of "minimum" is 25 per cent. or 30 per cent. or even 40 per cent. higher than other Trade Boards, then you say that their interpretation is wrong?—Yes, but as far as our trade is concerned we did not employ people for a couple of years and pay them nothing or keep them for a number of years at 9s. or 10s. per week. We paid them a fair rate to start with.

5258. That is not quite the point.

5259. *Chairman*: It is not an answer to the question.—I do not quite see your point, then.

5260. *Lord Weir*: My point is this: you have given an interpretation of the minimum rate and you say that you have fixed the rate upon that interpretation. If that rate is—and you can take it from me that it is—approximately 40 per cent. higher than other Trade Board rates fixed at the same time, then their interpretation must be quite different from yours?—That may be.

5261. Assume that that particular Trade Board dealt with an export trade subject to keen foreign competition, while yours is essentially a domestic trade, would that explain it?—I cannot discuss that. As far as I am concerned I only know my own trade. I do not know and do not pretend to know anything about any other person's trade. I know my own trade, and I thought, and I think everybody agreed

with us at any rate on our Board, that we had fixed a fair and reasonable wage as a minimum.

5262. *Dame Adelaide Anderson*: On what principles did you base the scale for the women?—We did not fix them at the same scale, although there was a very serious argument as far as we are concerned: if a woman was doing equal work why should she not be equally paid; but their side was very well represented and to a very great extent we took their recommendations and accepted them, and I think you will agree as far as that as the majority of female wages here are concerned they are a very considerable advance on some other trades.

5263. *Chairman*: I should like to know how it is that you fixed your rates. Take your lowest rate for adult men, 55s. Do you say that that is the lowest sum upon which a roundsman or an ordinary worker can live in a country district?—I would not like to say that as far as some country districts are concerned, but this applies to places with under 10,000 inhabitants, and in some places under 10,000 inhabitants—

5264. It is country districts?—Yes.

5265. The agricultural labourer in the same district working perhaps in the next field manages to live on 36s. per week now. I want to know whether you considered the general cost of living in districts like that, or whether, as is quite possible, you rather considered what the trade could afford to pay than what a man could manage to live on?—No, what we felt in fixing rates for those country districts—say it is now fixed under the new wage at 50s.—was this: that if there was any case such as your Lordship mentioned of persons who had somebody doing dual work, the case could always be dealt with by an application to the Trade Board, who could consider whether there was any justification for them to be exempted.

5266. You do not follow me. I do wish you would listen to the question a little more carefully, and then you would be able to give a more appropriate answer. I did not put to you any point about one man doing two kinds of work. It has been represented to us by people who know what they are talking about that if you have a roundsman paid, say, 55s., and a labourer on the same farm paid 36s., it does create a good deal of discontent, which is quite natural.—I quite agree.

5267. Therefore I want to get at the view on which you do fix your minimum of 55s. Is it based on the cost of living in those small country districts or is it based on something else?—I could hardly say. As far as I personally was concerned I certainly thought that the rate was fairly excessive in comparison with some of the others, and we did try originally to get the agricultural wages and these wages upon the same rate; but then there was going to be such a wide difference between those country districts and towns just above 10,000 inhabitants that there had to be a compromise upon it.

5268. It is an instance of compromise such as we have heard of. Perhaps it might be met by making a further sub-division of areas and dividing the real country districts from the towns?—I quite agree that it could be done.

5269. *Mr. Poulton*: As a matter of fact when these rates in this schedule were fixed were not the agricultural wages 46s. and 50s.?—That is so.

Mr. Layton: Perhaps they are based on what the trade could afford to pay.

5270. *Chairman*: I have no doubt that they were but the point is the rate to-day.—We had a conference with the Agricultural Wages Committee and agreed to transfer these particular cases to them and to let them deal with them. That was the agreement, and if that Board had been continued they would have taken care of that particular class of work and we should have gone just a stage further.

5271. How could you do that?—There was an agreement between the two Boards, and it was agreed to by the Ministry of Labour.

5272. Then you agreed to exclude these people, roundsmen and so on working on a farm, from your

8 December, 1921.]

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT.

[Continued.]

jurisdiction and leave them to be dealt with by the Agricultural Wages Board?—Yes, that is so. That was an agreement which was arrived at before the Board was disbanded.

5273. Did that apply to all roundsmen or simply to men who were partly roundsmen and partly agricultural labourers?—Partly—just where it was either on that side of the fence or on this side of the fence—just something very near it.

Mrs. Lyttelton: Of course there are very few men on farms who are entirely roundsmen. It is only in a very big establishment that a man is employed as nothing else but a roundsman.

Chairman: I do not know; we have had letters here giving instances.

Mrs. Lyttelton: I should have thought that almost all of them had other work as well.

5274. *Mr. Layton:* Perhaps Mr. Scott will answer this question. I would like to know whether the coming into operation of these Trade Board rates had the effect of raising the earnings of any substantial number of people in the trade, or whether these rates represented their then earnings?—(*Mr. W. T. Scott.*) Not so far as large towns were concerned.

5275. It did not raise the rates?—Not a great deal.

5276. It was in fact fixing the current minimum rate?—That is all.

5277. And the Trade Board had the effect of increasing the degree of organisation in the trade?—Slightly.

5278. What is it now, do you think?—I reckon that we are organised now to about 65 per cent.

5279. Do you not think that that is sufficiently strong for the Union to be used as a means of enforcing a rate?—In some places the Union is quite strong enough to carry its own position, and does so.

5280. It sees that these rates are enforced throughout the trade?—Yes.

5281. *Chairman:* But not everywhere, I suppose?—Not everywhere.

5282. *Mr. Layton:* You agree that there is a large percentage of evasion—that there are 50 per cent. who are evading the rates?—Yes, so far as employers are concerned.

5283. But a much smaller percentage as regards employees?—We are in a unique position in the milk distributive trade. There are as many employers as there are employees, I think you will find, if you look up your returns.

5284. As many employers as employees?—There are as many employers as there are employed, because there are so many running a business of their own.

Mr. Poulton: One-man businesses?

5285. *Mr. Layton:* Do they put in more work for the amount they earn, do you think? Is it the existence of the one-man business that makes it difficult to enforce the Trade Board rate?—I do not think so. I think that what is really happening is that it is almost impossible adequately to inspect the various places with the present staff.

5286. But in the one-man business there is no need for inspection.

5287. *Chairman:* What do you mean by a one-man business—a man with one employee?—No, a one-man business I take it means an employer only.

Mr. MacCallum Scott: An employer on his own.

Chairman: That is outside the Act altogether.

5288. *Mr. MacCallum Scott:* I understood him to say that there are a lot of such employers?—There must be a good number of them if there are as many employers as there are employees.

5289. *Chairman:* Those people are not employers?—They are not employers, but they are in a sense employers.

Mr. Poulton: They call them one-man businesses.

Mr. Layton: They are men engaged in the milk business who have not sufficient business to enable them to employ assistants.

Chairman: They are not within the Act at all.

Mr. Layton: No, but the point I put to the Witness was whether the existence of that kind of trade was

one of the factors that made it difficult for small competing businesses where perhaps there may be a person with one employee who finds it difficult to compete against the one-man business opposite.

Mrs. Lyttelton: Because he is not under any regulation?

Mr. Layton: Yes.

5290. *Lord Weir:* The point is, when you talked about 50 per cent. evasion that was exclusive of one-man businesses?—(*Mr. Stableforth:*) Absolutely exclusive of one-man businesses. Of course the one-man business is a very serious item, because that man can work as many hours as he likes.

5291. *Mr. Layton:* Has that a very serious effect in causing this evasion?—In some districts it is a serious factor.

5292. And there is no possible way of dealing with that particular kind of business?—We have not been able to devise any yet.

5293. *Dame Adelaide Anderson:* Is he, as a small dressmaker can be, sometimes employing and sometimes employed?—This is a case where men are working their own rounds absolutely, and are carrying on a business, and they are not subject to any hours or any regulations or anything; and this, too, is a serious item against other men who are probably employing three or four men and have got to pay the full Trade Board wages.

5294. *Mrs. Lyttelton:* On the other hand such a man as that can never make a big business?—I do not know. I know some very substantial businesses.

5295. I mean he has not the physical strength.

Dame Adelaide Anderson: He must be Herculean in strength.

Mrs. Lyttelton: He really could not compete with a man who was employing two or three people.

5296. *Lord Weir:* You used to term "Full Trade Board wages." Just make it clear to me whether the minimum is as a matter of fact the standard or not?—No, it is not—not in the firms about which I know particularly.

5297. So that the evasion is an evasion not only of the minimum but an evasion below the minimum?—Yes, absolutely below the minimum—paying below the minimum.

5298. And as a matter of fact considerably below the minimum, because the minimum does not represent the standard?—That is so; and another feature in connection with this is: we have got to pay overtime after 48 hours, and one of the biggest evasions is in the hours. Men work 60 hours, and I know one case in particular, which has been reported, where 66 hours were worked and no overtime paid.

5299. Has this definite fixation of the hours created an increasing amount of overtime in your trade, or has it reduced overtime?—It has reduced the overtime considerably.

5300. They can no longer afford to pay overtime?—That is so.

5301. *Mr. Layton:* You said that there was a considerable amount of evasion, and Mr. Scott added "In all districts." In what kind of district is this evasion most marked?—(*Mr. W. T. Scott:*) Small places, villages and towns.

5302. It is in fact in the districts which are most hardly hit by the fact that you have only three gradations in the rate of wages?—Yes. In reply to that question which you were putting, my Lord, I should like to say that I think the 55s. was previously fixed for the very definite reason that in the great majority of cases to which that rate would apply it would not be a question of 55s. per week but rather 48 parts of 55s., the hourly rate. We made a stipulation and an agreement, and it appears in our Minutes, that where a man is employed by any employer for at least one hour per day distributing milk, as applicable to our particular Board, he must be paid the rate of wages as we have fixed it, and, therefore, I do not think the farmers have any right to complain, as evidently they are doing with regard

8 December, 1921.]

Mr. C. T. STADLERFORTH and Mr. W. T. SCOTT.

[Continued.]

to the 55s., for the simple reason that cases such as you cited where a man might be in one field earning 36s. per week while a man in the next field might be earning 55s. per week would not arise as a matter of fact, because if he is getting the 55s. he is away in the town delivering milk; and we always made an arrangement that it must be a case of going away from the farm and he must be away at least a solid hour.

5303. *Chairman*: The case I had in mind was a case put to us where a man employed two men whole time; they were all their time on milk distribution, and it was said to us that those two men were not the least better in skill or anything else than the agricultural labourer and that the fact that they were paid 55s. led to a great deal of grumbling by other labourers on the farm?—But granting that, cases can be cited in almost every class of employment where you have two classes of people working side by side for the same employer, but they are doing two different classes of work; and I want to show that our rates were fixed on two principles, first the value of the labour given by the servant, and secondly the question of how to live and what you required to live; and the 55s. in our opinion was not excessive. We fought strenuously for a 60s. wage; we had a possible 36s. put up against us at the last revision and we fought it and we won on the 55s. basis being quite low enough. As far as we are concerned we are not willing to agree to anything less.

5304. That is a statement which I understand, but then you have put it in quite a different way. You took into account not only the cost of living but what you considered to be the value of the service rendered. You took the two matters into account.

5305. *Mr. Layton*: What proportion of your people who are awarded the 55s. are earning the whole of it, because if I understand you that rate only obtains for the length of time during which they are distributing milk, and therefore it may be 48 hours or any number of hours. On what is the 55s. calculated?—I think it would be very difficult to give any definite answer to that question, for the simple reason that in the main the workers are largely centred in large towns, and the few cases bear a very small proportion indeed to the total that would be affected in that particular way.

5306. So that you mean that the fixation at 55s. was not due to the fact that many people would not be earning it?—It was not due to that fact, but that is the way we met the argument which was put up against us as My Lord has put it to me to-day.

5307. It was taken into consideration, was it?—It was taken into consideration. As a matter of fact two members of the Board were specially appointed to the Board because of their farm interest, one on each side of the Board, and the farmer and the labourer who represented the two parties on the Board were actually there and took part in the discussion and voted in favour of the fixation of this rate.

5308. *Mr. MacCollum Scott*: I understand that in your experience the number of men who are employed on a farm for the distribution of milk and who are employed whole time is very small?—Very small indeed.

5309. Insignificant?—Then again we claim that the farmer is not a farmer when he comes to distribute milk, he is a milk distributor.

5310. You would say that the number of people who are employed whole time in distributing milk is insignificant?—Very small.

5311. And that where men are employed it is generally for an hour or so, and that they are employed not on the farm or not exactly in the neighbourhood of the farm, but in a small town in the neighbourhood distributing there?—No, I do not think I would put it in that way. They are certainly employed by the farmer as a part of his staff, and for a certain portion of time they are engaged dis-

tributing milk, and they must leave the farm to distribute that milk, and they must either go to the station to take it there or deliver it direct to the customer, either wholesale or retail, so that as soon as they commence distributing milk they come under the purview of the Milk Distributive Board.

5312. *Dame Adelaide Anderson*: Can you throw any fresh light on the principle which led to the fixing of the lowest wage for an adult woman at 32s. 6d.? Did you enforce the same principle in their case, namely, the value of the work as well as subsistence?—Yes. Our first principle was that where a woman was doing similar work to a man she should have the same rate of wages. I say similar; I do not say exactly the same work. We secured that principle in particular for the roundswomen. When we came to the girls in the shop and the girls doing ordinary general work in the factories we were forced up against the position of what was obtaining elsewhere, and we had to strike very largely a happy medium.

5313. So that in their case it is simply what you believe to be a subsistence wage?—We certainly wanted the value of the labour recognised, but we were not quite as successful as we were for the men.

5314. *Chairman*: With which Union are you connected?—The National Union of Distributive and Allied Workers.

5315. Have you joined the Board recently?—No, I have been on the Board since the beginning, and I am acting as Secretary for the workers' side.

5316. Has the name of your Union changed?—Yes, it has.

5317. What was it called before?—It used to be the Amalgamated Union of Co-operative Employees. We changed the title at the beginning of this year. There is just one case that we ought to raise, and that is the question of scope. We have a case now where a wholesale milk distributor has actually become too big for the operations of our Board. We have this under review just now by the Ministry of Labour; I do not know whether it is opportune to mention it here. The fact of the matter is that this particular dealer distributes at least 3,000 to 4,000 gallons of milk per day, yet in spite of the fact that he does so much, it is now found out that it is not the principal or main part of his business, and because of that fact he comes out of the Trade Board. He originally paid the rates, then he stopped paying the rates and we sent an Inspector after him, and that was his excuse. His books were so kept that the Department could not prove that his business was mainly milk distributing. We want if possible an alteration in the scope of the Board, so that it will not be confined purely by that particular wording, "The main or principal part of his business."

Chairman: That is a detail with which we could not deal. No doubt the Ministry will deal with that.

5318. *Mr. Layton*: I understood you to say just now that if a man took milk to the station he would have to be paid the Trade Board rates. That is what you said, is it not?—Yes.

5319. I think you said if he was engaged in distributing it or taking it to the station?—Yes, if he took it regularly for at least an hour per day.

5320. If a farmer engaged in general farming sends a certain amount of milk daily to the station, has the employee who takes it to the station to be paid the Trade Board rate while he is doing that job?—It will entirely depend upon whether that milk is the only thing that is going to the station, or whether it is part of a general cargo. If it is part of a general cargo and we could not prove that he was doing the work for at least an hour, then he would be outside the Board.

5321. *Lord Weir*: In the case of the ordinary farmer who sends a milk cart or a milk lorry every morning to the railway station, is the man who drives that cart or lorry under the Trade Board?—Yes, if he drives it for one hour per day.

5322. *Mr. Layton*: But if during the next hour he takes wheat or anything else to the station, he gets

8 December, 1921.]

Mr. C. T. STABLEFORTH and Mr. W. T. SCOTT.

[Continued.]

the agricultural carters' rate, I suppose?—That is the way it would operate.

5323. *Lord Weir (to Mr. Stableforth)*: Can you tell us the degree to which the cost of distributing milk has gone up since 1914?—(*Mr. Stableforth*): I am afraid it is rather difficult to get at. I did not come prepared to answer that. I could have got it exactly.

5324. I wonder whether you would let us have that information?—I could let you have it. I could get it cut exactly for that matter, as far as we are concerned.

5325. I want the cost of distributing milk in 1914, and the cost of distributing it now?—It has gone up very considerably.

5326. *Mr. Layton*: Would it be correct to say that the fact that the Trade Board rate has not been changed during the last 12 months has been a factor in preventing the retail price of milk from falling as much as it otherwise would have done?—No.

5327. Why not?—I do not think it would affect it to that serious extent. The price of milk has fallen; it is at least 8d. per gallon less than it was at this time last year.

5328. Following the wholesale price?—Yes.

5329. But you do not think that the cost of distribution could have been reduced by a more rapid change in wages?—No, I do not think it would have made very much difference, for the time being at any rate. It does affect it, only, of course, you have got to work on a narrower margin until such time as it is done.

5330. Do you mean that the trade is now working on a narrower margin of profit than it was?—Yes, and one of the reasons is this, that there is such a surplus of milk that we have got to manufacture thousands of gallons per day into cheese, at very serious loss, so serious a loss that it would be a surprise to people outside—a loss which is nearer 1s. per gallon than anything else, and that over tens of thousands of gallons of milk per day.

5331. *Lord Weir*: The milk consumer would bear a certain amount of that?—Certainly. It is part of our current charges. For instance, during the summer we have got to manufacture all surplus stuff into either butter, milk powder, or cheese. If that goes at a loss we are certainly going to put it into the common pool and try to get it out of somewhere.

5332. *Dame Adelaide Anderson*: Has the difference between those rates for the women workers at all tended to affect the number employed?—Nothing whatever.

5333. They remain at the same proportion?—Our original contention as far as the roundswoman was concerned, was that she was entitled to the same wage, but they cannot do the same work, there is no doubt about that.

5334. That is the only point where they have touched, is it?—That is so.

Mrs. Lyttelton: The clerks' wages are extraordinarily lower for the women than they are for the men.

5335. *Dame Adelaide Anderson*: Are the women clerks and the men clerks doing different work?—Yes, principally just checking.

5336. *Mrs. Lyttelton*: Are there no women sterilizers?—Very few.

5337. They cannot do that work?—No.

5338. What is the proportion of women employed; is it large or small?—Small.

5339. It has not increased during the war?—It has not increased. In fact it has decreased very considerably.

5340. That is curious, because we put such a lot of women into the trade?—There were a tremendous lot during the war, but they have gradually got out of it. In fact one good woman is as good as two

indifferent men on a milk round, but she has got to be a good woman. There are exceptions, but they are very few and far between, and then from the physical standpoint—well, a churn of milk weighs 2 cwt.

5341. It is very hard work?—Yes, it is very hard work.

5342. *Dame Adelaide Anderson*: But it is in fact a real minimum which is paid to the women?—Yes.

5343. And in the case of the men it is something rather more?—Yes.

5344. *Mrs. Lyttelton*: May I ask one question about milking. Has that gone more into the hands of women since the war?—Yes.

5345. Considerably more?—Considerably more.

5346. What is their rate of pay compared with the men's rate?—I cannot tell you. It has nothing to do with this Board at all.

Mrs. Lyttelton: No, this is milk distribution.

5347. *Mr. Layton*: When you get a good useful woman worker, do you pay her the rates that you pay to a man?—No. There is a minimum wage.

5348. You just said that you did not pay them the minimum; you pay a higher rate?—We have a rate. As far as regards the business with which I am personally concerned, we take a certain standard and we say to any of our managers: "You cannot pay less than the minimum." If we have a certain man or woman who is doing well, and is selling a certain quantity of milk—I do not want to give you the quantity, because that is private business—then we give him or her a certain commission for every 10 gallons, or portion of 10 gallons, above that. We have got cases where women are earning almost double this wage, and we have certainly got cases where men are earning three times this wage—two cases.

5349. It is a piece rate, in fact?—Yes. It all depends on the men themselves. One man can sell where another man cannot do anything.

5350. *Mrs. Lyttelton*: Of course the minimum for the women is much lower than the minimum for the men. That you start with?—Yes, that is so. There is a difference in the work, and they cannot do the same amount of work, nor yet can they do the same districts.

5351. *Mr. Pugh*: Your Board has been very successful?—It has.

5352. And your principal objection is that there is certain delay in giving effect to the Board's decisions?—That is so. That is the general feeling on our Board, and an absolutely unanimous feeling.

5353. You base that upon the fact that a good many of your decisions are unanimous, and there is no necessity for delay?—That is so.

5354. *Mr. Poulton*: With those general alterations which you have suggested, do you think that the Board would become still more efficient in the interests of the trade?—I do. I think with more elasticity so that we might move, and move rapidly, as the trade is affected, either up or down, it would be satisfactory not only to the employees, but to the employers—to both sides. (*Mr. W. T. Scott*): I quite agree.

5355. *Lord Weir*: With regard to the system of payment by results which you have indicated, has it been developed to any extent?—(*Mr. Stableforth*): We have always done it previous to the Trade Board, and so far as I am concerned, except that we have got to take into consideration the abnormal state of unemployment, and our businesses cover most of those districts at the present time, if a man cannot get commission—if he is content with his £3 2s. or his £3 5s. per week—he is no use to me, and I do not want him. I only start to make money after he is making his commission.

5356. Are other employers developing that spirit also?—I think so.

(The Witnesses withdrawn.)

8 December, 1921.]

Mr. G. R. DONALD.

[Continued.]

Mr. G. R. DONALD, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

1. The Trade Boards' Act of 1909 was established to deal with "sweated industries." To the principle of that Act the Chamber has no objections.

2. The Trade Boards Act of 1918 was an extension of the 1909 Act, and departed from the principle of that Act. The principle involved in the 1918 Act was apparently that the regulation of wages and conditions in industry, apart from the question of sweating, should come more under State control, especially in industries where organisation was poor or non-existent.

3. Up till 1918, the Act was applied to only a few industries, and the fact that it was found unnecessary to apply the Act beyond these few industries proves that there was no public demand or legitimate reason for such promiscuous interference with mutual wage arrangements as has occurred since the passing of the Act of 1918.

4. The amending Act of 1918 was not the result of any public demand. It was projected by the Ministry of Labour and rushed through the House of Commons at a moment when the mind of the nation was almost exclusively concentrated on the war, and the Bill had become law before it was realised how dangerously it contributed to the development of barencency.

5. The Act of 1918, by removing from Parliament control of the application of the Trade Board system and placing it in the hands of the Minister of Labour introduced and legalised a new departure in State interference with industry for which no demand had been made by any Section of the community. Since the passing of the Act of 1918 over 50 Trade Boards have been set up and it was announced by the Minister of Labour that he has or had in contemplation the establishment of an additional 170 Boards or thereabouts. In this connection we respectfully suggest for the consideration of the Committee the chaotic conditions which will govern labour in many textile factories if the Act of 1918 is to stand, and if its application be reduced to its logical conclusion. As a matter of practical working it is quite impossible to conceive of the maintenance of such a multiplicity of authorities as would be set up, each affecting small sections of workers, and each laying down with the force of law, such conditions regarding rates of pay, hours of work, etc., as may seem best to itself. At the present time, even in the particular trades forming the staple industries of this district, certain firms have workers engaged in the same room on identically similar work who come under different Trade Boards, and to whom a different set of minimum rates apply.

6. However well intentioned were the aims of the Act it is maintained that it was passed without due consideration of the possible consequences that might ensue to industries placed under its scope. This Chamber is convinced that the autocratic application of the Acts since 1918 has been attended with consequences prejudicial to trade and prejudicial to industrial concord, and that the 1918 Act should now be repealed.

7. There is a strong reason why the industries in this district should not be under the Act and that is the character of these industries. They are very largely of an export nature and are very different from other trades regulated by Trade Boards in so far that practically all the other trades which come under the Act can pass on increases in cost to the consumer. The case of 'staple industries' here is entirely different, as the competition met with is not only local or insular, but is chiefly from our Indian Dependencies and from Continental and other foreign countries.

8. With regard to the effect of the working of the Boards, the following are points which this Chamber considers should be noted:—

(1) The delay which takes place in varying rates by reduction even when good cause can be shown for immediate reduction. This delay in the case of an upward variation

does not arise as rates can be promptly varied upwards without contravening the Acts.

(2) Owing to the fixing of wages according to sex and age in a trade where many of the jobs in the preparing department are performed equally well by women and young persons of either sex as by men, men who had to get the largest wage were either not taken on or were dismissed and their places filled by the cheaper women or young persons. The workers' representatives who had been warned of the probable results of the rates fixed were themselves complainers when the probabilities became actual facts.

(3) The fixing of rates for special classes of workers which are really operative rates and should not be within the province of the Board.

(4) The tendency of the Board to develop into a Court of Arbitration with the Appointed Members as Arbiters in which each side of necessity places its demands at a maximum. This leads more and more to want of confidence between the two sides and does not improve relations between them. It does not lead to successful work as either side will give away as little as possible and the Appointed Members in actual practice have to decide all questions, including those of a purely technical nature of which they have no experience.

9. The following is the only change which could adequately meet the situation of the industries in this district:—

The repeal of the 1918 Act and the reversion to the principle of the 1909 Act which confines the interference of a Trade Board to a trade in connection with which the rate of wages prevailing is exceptionally low as compared with that of other employments, and that the other circumstances of the trade are such as to render the application of this Act to the trade expedient.

5357. *Chairman.* You are the Secretary of the Dunde Chamber of Commerce?—Yes.

5358. You have a statement to make to us with regard to the Trade Boards Acts?—Yes. Shall I read it?

5359. If you please?—" (1) The Trade Boards Act of 1909 was established to deal with 'sweated industries.' To the principle of that Act the Chamber has no objections. (2) The Trade Boards Act of 1918 was an extension of the 1909 Act and departed from the principle of that Act. The principle involved in the 1918 Act was apparently that the regulation of wages and conditions in industry, apart from the question of sweating, should come more under State control, especially in industries where organisation was poor or non-existent. (3) Up till 1918 the Act was applied to only a few industries, and the fact that it was found unnecessary to apply the Act beyond these few industries proves that there was no public demand or legitimate reason for such promiscuous interference with mutual wage arrangements as has occurred since the passing of the Act of 1918. (4) The amending Act of 1918 was not the result of any public demand. It was projected by the Ministry of Labour and rushed through the House of Commons at a moment when the mind of the nation was almost exclusively concentrated on the War, and the Bill had become law before it was realised how dangerously it contributed to the development of barencency. (5) The Act of 1918, by removing from Parliament control of the application of the Trade Board system and placing it in the hands of the Minister of Labour, introduced and legalised a new departure in State interference with industry for which no demand had been made by any section of the community. Since the passing of the Act of 1918 over 50 Trade Boards have been set up, and it was announced by the Minister of Labour that he has or

8 December, 1921.]

Mr. G. R. DONALD.

[Continued.]

had in contemplation the establishment of an additional 170 Boards or thereby. In this connection we respectfully suggest for the consideration of the Committee the chaotic conditions which will govern labour in many textile factories if the Act of 1918 is to stand, and if its application be reduced to its logical conclusion. As a matter of practical working, it is quite impossible to conceive of the maintenance of such a multiplicity of authorities as would be set up, each affecting small sections of workers, and each laying down with the force of law such conditions regarding rates of pay, hours of work, etc., as may seem best to itself. At the present time, even in the particular trades forming the staple industries of this district, certain firms have workers engaged in the same room on identically similar work who come under different Trade Boards, and to whom a different set of minimum rates apply. (6) However well-intentioned were the aims of the Act, it is maintained that it was passed without due consideration of the possible consequences that might ensue to industries placed under its scope. This Chamber is convinced that the automatic application of the Acts since 1918 has been attended with consequences prejudicial to trade and prejudicial to industrial concord, and that the 1918 Act should now be repealed."

5360. Will you tell me what you mean by that last sentence?—Do you mean that it is prejudicial to industrial concord?

5361. Prejudicial to the trade?—It is prejudicial to the trade in this way, that it keeps up the cost of production. The Trade Boards which apply to the staple industry of Dundee are two, and in a smaller degree a third.

5362. That is jute?—That is jute, flax, and, to a very much smaller degree, rope and twine. Those staple industries are engaged in a trade which is an export trade. They have foreign competition; they have competition against India, where, of course, they have Indian labour; they have competition with the Continent, including Germany, which is not subject to State interference at all; and it is the impression, and in fact it is the strong belief, of our Chamber, that the maintenance of these Trade Boards is simply adding a link to the chain which is hanging the taxpayer, for the purpose of keeping afloat the Ministry of Labour. That is the belief of our Chamber on the subject. There is again no elasticity in meeting fluctuations of the foreign market, with which you have to deal. With regard to the question of industrial concord, I refer you to section 8, sub-section iv, of this statement, which I will read now: "The tendency of the Board to develop into a Court of Arbitration with the Appointed Members as Arbiters in which each side of necessity places its demands at a maximum. This leads more and more to want of confidence between the two sides, and does not improve relations between them. It does not lead to successful work, as either side will give away as little as possible, and the Appointed Members in actual practice have to decide all questions, including those of a purely technical nature of which they have no experience."

5363. You are speaking there of the Jute Board, are you?—Of the Jute Board, yes, and also the Flax Board.

5364. Are you a member of those Boards?—I am not a member of those Boards. To resume my statement: "(7) There is a strong reason why the industries in this district should not be under the Act, and that is the character of these industries. They are very largely of an export nature, and are very different from other trades regulated by Trade Boards, in so far that practically all the other trades which come under the Act can pass on increases in cost to the consumer. The case of staple industries here is entirely different, as the competition met with is not only local or insular, but is chiefly from our Indian Dependencies and from Continental and other foreign countries. (8) With regard to the effect of the working of the Boards, the following are points which this Chamber considers should be noted:—(i) The delay which takes place in varying rates by reduction, even when good cause can be shown for

an immediate reduction. This delay in the case of an upward variation does not arise, as rates can be promptly varied upwards without contravening the Act. (ii) Owing to the fixing of wages according to sex and age in a trade where many of the jobs in the preparing department are performed equally well by women and young persons of either sex as by men, men who had to get the largest wage were either not taken on or were dismissed, and their places filled by the cheaper women or young persons. The workers' representatives who had been warned of the probable results of the rates fixed, were themselves complainers when the probabilities became actual facts. (iii) The fixing of rates for special classes of workers which are really operative rates, and should not be within the province of the Board."

5365. No. (iv) You have dealt with?—No. (iv) I have dealt with already. "(9) The following is the only change which could adequately meet the situation of the industries in this district: The repeal of the 1918 Act and the reversion to the principle of the 1909 Act, which confines the interference of a Trade Board to a trade in connection with which the rate of wages prevailing is exceptionally low, as compared with that of other employments, and that the other circumstances of the trade are such as to render the application of this Act to the trade expedient."

5366. That is a very general statement. Have you anything at all to add to it?—Nothing.

5367. Lord Weir: I should like you to explain how efficacious that change would be, because so far as I see under both Acts the same duty is laid on the Board with regard to rates. Practically you complain that the rates are too high, but in both Acts they are called on to fix a minimum rate.—That is so, but the 1909 Act applied to sweated industries, and under no circumstances could the trade in Dundee be called a sweated industry. The 1909 Act, as is well-known to the Committee, was brought in to prevent advantage being taken of individuals, either on account of their influence, or on account of their poverty. Such does not apply to the trade in Dundee. It is very well-organised, both on the side of the employees and also on the side of the employers.

5368. Chairman: Were not the wages in the Jute trade very low indeed before the Act of 1909?—They were regulated by the competition in the Indian trade, as well as by foreign competition.

5369. But they were extremely low, were they not?

5370. Lord Weir: That might make them unreasonably low, might it not?—We were not brought under the sweated industries before that. There was no question of sweated industries at all under the 1909 Act.

5371. Chairman: I asked you whether, as a fact, the wages in the jute industry were not exceptionally low? I have a table before me. Taking the full-time earnings of adult men, 49 per cent. of the men employed were receiving wages under 20s. per week, and 36 per cent. were receiving over 20s. and under 30s. So that you see 85 per cent. were paid less than 30s. per week. Then taking the women, 72 per cent. were getting less than 15s. per week, and a further 25 per cent. were getting less than 20s., so that you had, therefore, over 90 per cent. of the women receiving less than 20s. per week. These were very low wages, were they not?—Those are low wages, but it must be kept in mind that jute workers are, to a large extent, unskilled workers, and a man's job is really not a man's job, in the ordinary sense of the term, because a woman can do it.

5372. That may be so, but they are lower wages, I am told, than were being paid in some of the trades which were brought under the Act of 1909, such as tailoring, certainly?—It was open, then, for those in authority to bring us under the 1909 Act, if that were the case.

5373. I daresay it was. I only asked you that because you were asserting so emphatically that wages in this trade were not exceptionally low.—Considering the competition. That is the whole point.

8 December, 1921.]

Mr. G. R. DONALD.

[Continued.]

5374. *Lord Weir*: The Act does not say anything about competition; the Act simply says "exceptionally low." Presumably your trade would have come under the 1909 Act. Do you not feel that yourselves?—No, considering the nature of the trade itself, and knowing the conditions of the trade.

5375. One can only consider the terms of the Act?—Yes, I quite understand. Had we come under the 1909 Act we should have been prepared to have met the case then.

5376. Then the repeal of the 1918 Act would really make no difference to you?—Not if we are a sweated trade, which we are not.

5377. *Dame Adelaide Anderson*: Industries were being slowly brought under the Act of 1909 stage by stage before 1914?—We were never brought under the 1909 Act.

5378. I understand that, but I put it to you that it would have come to you in due course had not the war intervened?—I cannot say that.

5379. When there was a greater differentiation made between the wages of men and women, was it in fact followed by a net decrease in the number of men employed?—It was, as a matter of fact, yes.

5380. Because it was frequently stated formerly, was it not, that one of the causes of the unsatisfactory social conditions in Dundee was the fact that the women were to so very large an extent the breadwinners of the town?—I would rather not answer that question. The Jute Spinners and Manufacturers' Association are to give evidence immediately following me, and they will answer that question in detail.

5381. But there was always a very large proportion of women employed in the jute industry?—Yes, because the jute trade is largely women's work.

5382. Can you say what was the proportion of the decrease of the employment of men?—I think you had better put that question to the next witness, who comes from the jute spinners.

5383. *Mr. MacCullum Scott*: I will ask you this one question: You suggest that foreign competition or Indian competition would justify exceptionally low

wages. How far would you carry that? I am not suggesting that it prevails in the jute industry at all, but would you suggest, for instance, that sweating conditions should be tolerated here in order to meet foreign competition?—By no means, no.

5384. *Mr. Layton*: You say in your fifth paragraph that there was no demand for the extension of the Trade Board principle in the Act of 1918. On what do you base that statement?—On the fact of the introduction of the Trade Boards to employers and trades throughout the country who were not aware of the formation of the Act at all.

5385. The Act was not introduced on the Government's own initiative. It was introduced as the result of the report of a Committee on which employers and employed were both represented, the Whitley Committee, was it not?—Yes.

5386. Also, is it not a fact that at the National Joint Industrial Conference which met in the Spring of 1919, after the Act was passed, the conception of applying Trade Boards to industries which were not fit for Joint Industrial Councils, was accepted by both sides?—That is quite true, but you must keep in mind that the intention of the Trade Boards Act was that it was entirely to be applied to trades which were not highly organised.

5387. I put this point first: Was it not the general opinion of both sides, of employers and workpeople, that the whole industrial field should be covered, either by the one form or the other?—Not so far as I know.

5388. Was your trade not represented at that Conference in London?—No.

5389. I will take your other point: Did a discussion not take place which was intended to lead to the appointment of a Joint Industrial Council in Dundee, but the negotiations broke down?—There was a discussion, but that is covered by the evidence of the Jute Spinners' and Manufacturers' Association.

5390. That will be dealt with by them?—Yes, they will give you the whole information as far as that is concerned.

(The Witness withdrew.)

SIR WILLIAM HENDERSON, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

1. The Trade Boards Act of 1909 was established to deal with "sweated industries." To the principle of that Act we have no objections. At a conference held in London on 3rd December, 1918, Sir David Shackleton, in opening the proceedings, stated that from the information the Ministry of Labour had collected they were satisfied that the Jute Trade could not be classified as a sweated industry.

2. The Trade Boards Act of 1918 was an extension of the 1909 Act and departed from the principle of that Act. The principle involved in the 1918 Act was apparently that the regulation of wages and conditions in industry, apart from the question of sweating, should come more under State control, especially in industries where organisation was poor or non-existent.

3. Up till 1918 the Act was applied to only a few industries, and the fact that it was found unnecessary to apply the Act beyond these few industries proves that there was no public demand or legitimate reason for such promiscuous interference with mutual wage arrangements as has occurred since the passing of the Act of 1918.

4. The amending Act of 1918 was not the result of any public demand. It was projected by the Ministry of Labour, and rushed through the House of Commons at a moment when the mind of the nation was almost exclusively concentrated on the war, and the Bill had become law before it was realised how dangerously it contributed to the development of bureaucracy.

5. The Act of 1918, by removing from Parliament control of the application of the Trade Board system

and placing it in the hands of the Minister of Labour, introduced and legalised a new departure in State interference with industry for which no demand had been made by any section of the community. Since the passing of the Act of 1918 over 50 Trade Boards have been set up, and it is announced on good authority that the Ministry of Labour has, or had, in contemplation the establishment of an additional 170 Boards, or thereabouts. In this connection we respectfully suggest for the consideration of the Committee the chaotic conditions which would govern labour in many textile factories in our trade if the Act of 1918 is to stand, and if its application is to be extended to its logical conclusion. As a matter of practical working it is quite impossible to conceive of the maintenance of such a multiplicity of authorities as would be set up, each affecting small sections of workers, and each laying down, with the force of law, such conditions, regarding rates of pay, hours of work, etc., as may seem best to itself. At the present time, even in this trade, certain firms have workers engaged in the same room on identically similar work who come under different Trade Boards, and to whom a different set of minimum rates apply.

6. However well intentioned were the aims of the Act we maintain that the Act was passed without due consideration of the possible consequences that might ensue to industries placed under its scope. We are convinced that the autocratic application of the Act since 1918 has been attended with consequences prejudicial to trade and prejudicial to industrial concord, and that the 1918 Act should now be repealed.

7. With regard to the position of the Jute Trade, it is advisable to state the circumstances which led

8 December, 1921.]

Sir WILLIAM HENDERSON.

[Continued.]

up to the establishment of the Jute Trade Board. In the summer of 1918 a meeting was held in Dundee of all parties interested in the trade with a view to forming a Reconstruction Committee or Industrial Council for the Trade. Strong objection was taken to the fact that the Government Department concerned insisted on certain Trade Associations who had no interest in the question of wages and conditions of employment being represented on this Committee or Council. These Associations represented dealers in fibre, and Dundee and Calcutta goods, some having their headquarters in Dundee, others in London and Liverpool. The Department would not agree to these Associations not being represented, so the matter was dropped.

8. A point that weighed with the employers in deciding to have no more to do with the suggested Reconstruction Committee or Industrial Council was the fact that it was possible for the Ministry of Labour to place the trade under the Trade Boards Act, 1918, whether the trade had an Industrial Council or not. Owing to the extraordinary powers vested in the Minister of Labour under the 1918 Act, and it seemed certain that sooner or later a Trade Board would be imposed upon our trade. We ultimately acquiesced in the establishment of the Jute Trade Board in December, 1919, and agreed to give the system a fair trial notwithstanding that we considered direct negotiations between employers and trade unions the right method of adjusting relations, and that both parties were sufficiently organised to manage their own affairs.

9. We would point out that negotiations were conducted between the Employers' Associations and a Joint Committee of Workers' Organisations dealing with relative rates for different classes of work done, and these culminated in the signing of an agreement in 1915 affecting about 60 per cent. of the workers employed in the industry. This work of negotiation was broken off during the war period, wages being regulated by Courts of Arbitration.

10. It is a complaint by the workers' representatives that the employers refused to grant any increase of wages unless under the compulsion of a Court of Arbitration such as the Committee on Production. This is true of the war period and the reasons for this attitude on the part of the employers are as follows:—First, the trade was partially controlled by Government, and later entirely controlled, in that the raw jute was supplied by the Controller of raw materials at a fixed price, and practically the Government was the only buyer of manufactured articles at a price determined by the price of raw jute plus the cost of manufacture and a small profit. As the price at which the Government requirements were supplied was thus affected by any increase in wages, it seemed right that a committee in which they had confidence should determine what, if any, increase should be given. Second, increases in wages were chiefly based upon the increased cost of living, and were regulated not by the work done but by the age and sex of the worker. The Boards of Arbitration had full and special knowledge of the increased cost of living, and it seemed right that demands for an increase of wages should be determined by such a Board. The last arbitration took place in December, 1919, about the time of the establishment of the Trade Board.

11. Notwithstanding the fact that the industry was under a Trade Board several adjustments of conditions of employment and rates of wages were brought into operation by agreement. These were:—

(a) The establishment of a 48 hours working week with the same pay as for the old 55 hours week.

(b) Special rates of wages for all classes of spinners.

(c) A scale of rates for Hessian weavers.

Of these, the altered hours of work and the scales for spinners were adopted after a considerable lapse of time by the Trade Board, while as regards the weaving scale, which has been in operation through-

out Dundee since June, 1920, the Trade Board has not yet been able to arrive at a decision.

12. In addition to the results already enumerated as arising from direct negotiations between the parties, arrangements were also similarly carried through by which the flat War Arbitration Awards to piece workers were compounded in a series of pure piece work rates.

13. These negotiations and results show that the trade is sufficiently organised and capable of conducting its business without a Trade Board, and that the Minister's reasons for placing the trade under the Act were not justifiable.

14. There is another very strong reason why the jute industry should not be under the Acts, and that is the character of the industry. It is very largely an export one, and is very different from other trades regulated by Trade Boards, in so far that practically all the other trades which come under the Act can quickly pass on increases in cost to the consumer. The case of the jute trade is entirely different, as the competition it meets with is not only local or insular, but is chiefly from our Indian Dependencies and foreign countries.

15. With regard to the effect of the working of the Board, the following are points which we consider should be noted:—

(1) The delay that takes place in varying rates by reduction even when good cause can be shown why they should be immediately reduced.

This delay in the case of an upward variation does not arise, as rates can be promptly varied upwards without contravening the Act.

(2) Owing to the fixing of wages according to sex and age in a trade where many of the jobs in the preparing department are performed equally well by women and young persons of either sex as by men, men who had to get the largest wage were either not taken on or were dismissed and their places filled by the cheaper women or young persons. The workers' representatives, who had been warned of the probable results of the rates fixed, were themselves complainers when the probabilities became actual facts.

(3) The fixing of rates for special classes of workers which are really operative rates, and should not be within the province of the Board.

(4) The development of the Board into a Court of Arbitration with the appointed members as arbiters, in which each side of necessity tends to place its demands at a maximum. This leads more and more to want of confidence between the two sides, and does not improve relations between them. This does not result in successful work, as either side will give away as little as possible, and the appointed members generally have to decide all questions, including those of a purely technical nature, of which they have no experience.

16. From our experience of the last two years we are strongly of the opinion that the jute trade should not have been placed under the Act. The trade is fully organised. Almost every employer in Dundee is a member of the Association of Jute Spinners and Manufacturers, the latter being representative of 97 per cent. of the total workers employed in Dundee and 88 per cent. of the workers employed in the industry in Great Britain. The employers in Forfar and Kirriemuir situated within 20 miles of Dundee, are members of an Association of their own. Outside the city of Dundee this is the only important centre in the jute trade. The trade unions claim to have practically all the workers in their organisations. It will thus be seen that the trade is not only fully organised, but also highly localised, and that it is

8 December, 1921.]

Sir WILLIAM HENDERSON.

[Continued.]

in a position entirely different from any other industry which has been put under the Trade Boards Acts. Few industries, if any, under the Acts can claim to be as highly organised as ours, and, further, these other industries are widely distributed over Great Britain.

17. The following is the only change which would adequately meet the situation of our industry:—

The repeal of the 1918 Act and the reversion to the principle of the 1909 Act, which confines the interference of a Trade Board to a trade in connection with which "the rate of wages prevailing in any branch of the trade, is exceptionally low as compared with that in other employments, and that the other circumstances of the trade are such as to render the application of this Act to the trade expedient."

18. If, however, the weight of evidence given before your Commission does not support our very strong contention that the 1918 Act should be repealed, then we would suggest that at least the following modifications should be given effect to:—

- (1) Any trade where 50 per cent. of the trade is organised on both sides should not come under the Acts.
- (2) Any trade of which 75 per cent. is localised in a reasonable area should not come under the Acts.
- (3) That much more elasticity should be given to vary rates in accordance with sudden changes in trade.
- (4) That the powers of delay now vested in the Minister should be much curtailed.
- (5) That Boards should only have power to fix general time rates for the lowest class of work done.
- (6) That the fixing of special rates, which are really operative rates, for special jobs be prohibited.

19. The suggestions made in the preceding paragraph (No. 18) must not be read as in any way weakening our declared belief, as recorded in paragraph No. 17, that the repeal of the 1918 Act is the only action which will meet the conditions of the jute trade. We believe, indeed, that the continued application to it of the provisions of the Act of 1918 can only be disastrous in their results.

(Signed) Wm. HENDERSON
(Chairman),

The Association of Jute Spinners
and Manufacturers.

5391. *Chairman*: I think you are the Chairman of the Association of Jute Spinners and Manufacturers of Dundee?—Yes.

5392. You have been good enough to give us a statement. I see the first few paragraphs are general, and are really in accordance with what Mr. Donald has just said?—Yes. The first paragraph is, I think, the only one of the first five which I might read, with regard to the position under the Trade Boards Act of 1909. With reference to some of the questions which have been put to Mr. Donald, I think it well to point out to the Committee that at the Conference which was held in London on December 3, 1918, Sir David Shackleton, in opening the proceedings, stated that from the information of the Ministry of Labour, they told him they were satisfied that the jute trade could not be classified as a sweated industry.

5393. Is there anything wrong in the figures which I have just given: that of the men 50 per cent. received less than 20s. per week, and of the women 72 per cent. received less than 15s. per week?—Speaking from memory I should think that the rate of wages which you mentioned is correct. I am not in a position to say offhand that the percentage is as you have stated it. I am not questioning it; I do not know.

5394. Those are taken from the Report of the Earnings and Hours Inquiry in 1906.—Then that is probably to be accepted as correct, of course.

5395. *Dame Adelaide Anderson*: Perhaps "sweated" was there used in the sense of not only low wages, but long hours and bad sanitary conditions?—Bad conditions altogether.

5396. *Mr. Layton*: Would it not obviously be true that the trade was not sweated during the war, and that wages in fact rose in unison with munition rates of pay generally, and that Sir David Shackleton was speaking of the position at the close of the war?—I fancy that is the case.

5397. And that, therefore, what he said would not necessarily apply under peace conditions.

Lord Weir: You see the figures are given for 1914, and Sir David Shackleton's statement is in 1918.

Mr. Layton: In December, 1918.

Lord Weir: The conditions were probably different.

5398. *Chairman*: I think that clears up the point. You make the same criticisms on the Act of 1918 as Mr. Donald made. Will you begin at paragraph 7 of your statement?—"With regard to the position of the jute trade, it is advisable to state the circumstances which led up to the establishment of the Jute Trade Board. In the summer of 1918 a meeting was held in Dundee, of all parties interested in the trade with a view to forming a Reconstruction Committee or Industrial Council for the Trade. Strong objection was taken to the fact that the Government Department concerned insisted on certain Trade Associations who had no interest in the question of wages and conditions of employment, being represented on this Committee or Council. These Associations represented dealers in fibre and Dundee and Calcutta goods, some having their headquarters in Dundee, others in London and Liverpool. The Department would not agree to these Associations not being represented, so the matter was dropped."

5399. *Mr. MacCallum Scott*: What Associations were those?—The London Jute Association was one, and the Liverpool Gunny Brokers' Association was another.

5400. *Mr. Layton*: Purely merchanting Associations?—Purely merchanting Associations. Some of the Liverpool Gunny Brokers' Associations had sack-sewing establishments on a small scale in Liverpool, where they sewed into sacks the Calcutta goods which they imported, but their main business was simply that of importers of yarn or cloth.

5401. And I suppose in the ordinary way manufacturing associations do not have any close liaison with the merchanting bodies?—Not at all.

5402. Was this difference of opinion on the employers' side the cause of the breakdown in the proposal?—Yes; the members of the Jute Spinners' and Manufacturers' Association refused to have anything to do with the Committee or Commission if these members were forced upon them as fellow members; and, of course, there is the Manufacturers' Association of Dundee, which was by far the most important body of the lot, and they refused to go into it on those terms, and the negotiations fell through.

5403. That was during the war?—That was in August and September of 1918.

5404. There was no further attempt made to form a Reconstruction Committee or Industrial Council?—No further attempt was made.

5405. *Chairman*: Then came the Trade Board in 1919?—Then came the Trade Board.

5406. I think you did not actually object to the Trade Board being formed?—Yes, we objected to the Trade Board.

5407. But you did not lodge objections?—No. When we heard the views of the Department, we thought that it was more or less likely that the Trade Board would be forced upon us. I will deal with that a little later on. We agreed to submit to a Trade Board.

5408. *Mr. MacCallum Scott*: What is the meaning of "with a view to forming a Reconstruction Committee or Industrial Council"? Is that a Committee for trying to put the trade on sound lines again after the depression?—Yes, I believe that was the intention. There were at that time Whitley Councils and also this new kind of Council called the Interim Reconstruction Council.

8 December, 1921.]

SIR WILLIAM HENDERSON.

[Continued.]

5409. This is more than a Whitley Council which is meant here, is it?—I cannot be sure. There was a description of it given in a pamphlet which was issued, and it seemed to cover practically all the ground which was covered by a Whitley Council.

5410. *Mr. Layton*: But presumably to be set up pending the final settling down of the industry into its peace organization?—Yes.

Mr. Layton: It is really a temporary Whitley Council.

Mr. MacCallum Scott: What I was wondering from the description given here was whether it was not a Committee to investigate the whole of the industry, foreign trade as well, and if that was so it seems reasonable that importing and exporting firms, people who are dealing with the purely commercial side of it, should be represented. I do not know whether they are represented.

Lord Weir: That was to do with reconstruction.

Mr. MacCallum Scott: Yes.

Witness: I have a copy of the pamphlet here which was issued. I do not suppose you wish me to read it.

Mr. MacCallum Scott: No, but I should like to see it. (*Document handed to Mr. MacCallum Scott.*)

5411. *Chairman*: It is rather old history now, is it not?—It is rather old history now.

5412. And in the end the Board was formed in December, 1919, and you agreed to do your best with regard to it?—That is so.

5413. Then we may go to No. 9?—No. 8, I think.

5414. I thought that was dealt with, but please continue where you like.—“A point that weighed with the employers in deciding to have no more to do with the suggested Reconstruction Committee or Industrial Council was the fact that it was possible for the Ministry of Labour to place the trade under the Trade Board Act, 1918, whether the trade had an Industrial Council or not. Owing to the extraordinary powers vested in the Minister of Labour under the 1918 Act it seemed certain that sooner or later a Trade Board would be imposed upon our trade. We ultimately acquiesced in the establishment of the Jute Trade Board in December, 1919, and agreed to give the system a fair trial, notwithstanding that we considered direct negotiation between employers and trade unions the right method of adjusting relations, and that both parties were sufficiently organized to manage their own affairs.”

5415. *Mr. MacCallum Scott*: Have you been accustomed to settle these matters with the trade unions?—Yes.

5416. Are they well organized?—Very well organized.

5417. *Mr. Layton*: Including the women?—Including the women; in fact, they are mostly women. The largest Associations of workers are the Dundee Jute and Flax Workers' Union and the Mill and Factory Operatives' Union, and these are very largely composed of women. The men are, on the other hand, more closely connected with the Calenders' Association, because it is in the calendering department that men are mostly employed.

5418. Are the unions sufficiently well organized to speak for and represent the whole industry?—Oh! yes, they maintain that they have practically all the workers in Dundee; in fact, the largest union has stated that they have over 20,000 members and the other union has—I am not very sure how many—the last figure I heard was about 5,000, and the men who are employed in the calendering and finishing department are very well organized in the Calenders' Union. Then the power loom tenters are also very well organized.

5419. *Mr. MacCallum Scott*: I had the impression that the relations were rather strained between the employers and the unions?—At times you get that, but until the prospect of the Trade Board being formed arose we had managed to get along very well by conferences and adjustments of wages. Several instances of that are mentioned in this evidence.

5420. *Dame Adelaide Anderson*: Are the manufacturers more fully organised than the workers?—Well, the manufacturers are all in one Association; the

workers are in four Associations. There are two Associations, the Jute and Flax Workers' Union and the Mill and Factory Operatives' Union, which comprise mostly the women, and these form by far the largest Associations.

5421. Is it possible to state it in a proportion showing the number organised?—With regard to the number of women, do you mean?

5422. The number of women in the industry, and the number of women in the organisations?—No, I could not give definite information, but they claim to have practically all the workers in their organisations.

5423. *Mr. Layton*: Before the war was that the case?—They were very well organised before the war, but they have improved very much, I believe, during the war.

5424. Did you fix your wages by collective bargaining before the war?—Yes.

5425. *Chairman*: We have this in writing, Sir William, so perhaps we may take the next paragraph as read. It is rather giving your reasons for not joining?—Then I will proceed to No. 11. “Notwithstanding the fact that the industry was under a Trade Board, several adjustments of conditions of employment and rates of wages were brought into operation by agreement. These were: (a) The establishment of a 48-hours working week with the same pay as for the old 55-hours week; (b) Special rates of wages for all classes of spinners; (c) A scale of rates for Hessian weavers. Of these, the altered hours of work and the scales for spinners were adopted after a considerable lapse of time by the Trade Board, while as regards the weaving scale, which has been in operation throughout Dundee since June, 1920, the Trade Board has not yet been able to arrive at a decision.”

5426. *Lord Weir*: Are you a member of the Trade Board yourself?—Yes.

5427. *Mr. Layton*: I understand that (c) refers to (b), that the reference to the scales of spinners refers to (b), that the Trade Board adopted the scale that you had arranged by collective agreement. Was that the case?—Yes; they were put into operation in March, 1920.

5428. You mean by voluntary agreement?—By voluntary agreement.

5429. And adopted by the Trade Board at some later date?—I think it was in September of that same year.

5430. You had an agreement with the weavers which has not yet been adopted?—Not adopted by the Trade Board, but it also has been in operation by agreement since March, 1920.

5431. What has been the difficulty of having it adopted by the Trade Board?—Well, it has been crowded out of the agenda for about eight months. I think.

5432. But it is not because of the unwillingness of either side to adopt it as the legal basis of the wages?—There are two reasons. There are two objections which are being discussed probably to-day. They were discussed at the Trade Board meeting a fortnight ago, and they come up at a Trade Board meeting which is being held to-day. On the part of the workers there is objection to certain details of that scheme which has been in operation. On the part of the employers there is this objection, that we are opposed to the fixing of any more rates by the Trade Board. We maintain that the Trade Board has done all that it is required to do in fixing minimum rates, and we have already done more than that.

5433. So that neither side wishes really to embody this Agreement as to Hessian weavers in the Trade Board Regulations?—Both sides have objections to it.

5434. Is it necessary to do anything further than you have done in regard to that class of worker?—No, it is not necessary.

5435. Have you ever suggested fixing a sliding scale in the jute industry, or embodying it in a collective agreement?—No.

5436. Is it a practicable proposition in the jute industry?—No, we think not. I may say that it was suggested by one of the Appointed Members two months ago, but after a very full discussion and consideration, which extended over two meetings of the Trade Board, it was turned down.

8 December, 1921.]

Sir WILLIAM HENDERSON.

[Continued.]

5437. I was thinking, not of the sliding scale on the cost of living, but of the sliding scale on the margins or some other trade factor.—No, those have never been considered.

5438. You have never considered that possibility?—No.

5439. It has at various times been in operation in the cotton industry, has it not, as an agreement based upon the margins, as they are called?—I think it has been in operation in the cotton trade, but I do not think it would be possible in the jute trade.

5440. *Chairman*: It is on a most elaborate scale which depends on the number of spinners?—That is for the Spinning Department, yes.

5441. *Mr. Layton*: Are the collective agreements very elaborate, more elaborate than those?—Some of them are very elaborate; the variety of the yarn spun and the cloth woven is very great, and the variations in the rates are therefore very considerable. In addition to that, there is a very great variety in the quality of the jute spun, the various qualities of yarn, and these things all add very considerably to the difficulty of arranging such scales as we know exist in the cotton trade. But we have been working at it, and these spinning rates, which I think the members of the Committee will have before them, indicate some of the difficulties that we have to deal with in arriving at rates.

Chairman: They are very complex.

5442. *Lord Weir*: This spinners' schedule, I imagine, would never have been adopted by the Trade Board, or created by the Trade Board, if it had not been in existence as an agreement between you and the workers?—No, unless we had, after we had been formed into a Trade Board, set ourselves to do the same thing.

5443. But you consider, on the Trade Board, that having settled the minimum rates, you had fulfilled your obligation under the Acts?—That is our position, but the spinners' rates are more than minimum rates, and that is one of the objections that we have to the Trade Board—that it has fixed not minimum rates but operative rates.

5444. Is this really in essence a series of standard rates?—Yes, these were fixed as a series of operative rates, and the Trade Board has adopted them as minimum rates, and we object to that.

5445. *Mr. Layton*: Was this schedule brought forward by the operative side of the Board?—I think it was brought forward by the operative side, it being the standard rates, the rates which have been agreed upon between us voluntarily, and then, of course, it was to their advantage to have these rates fixed by the Trade Board.

5446. *Chairman*: You all agreed to that, I understand?—We agreed to that.

5447. It was really over the flat rate, the time rate, that you had a good deal of discussion?—Yes.

5448. Then you get to No. 12?—Yes. "In addition to the results already enumerated as rising from direct negotiations between the parties, arrangements were also similarly carried through by which the flat war arbitration awards to pieceworkers were compounded in a series of pure piecework rates."

These negotiations and results show that the trade is sufficiently organised and capable of conducting its business without a Trade Board, and that the Minister's reasons for placing the trade under the Acts were not justifiable.

5449. *Lord Weir*: You mean, not justifiable so far as they related to adequate organisation?—That is right. There is one very strong reason why the jute industry should not be under the Acts, and that is the character of the industry. It is very largely an export trade, and is very different from trades regulated by Trade Boards in so far as practically all the other trades which come under the Acts can quickly pass on increases in cost to the consumer. The case of the jute trade is entirely different, as the competition it meets with is not only local or insular, but it is chiefly from our Indian Dependencies and foreign countries.

5450. How would you suggest that the character of the industry should be taken into account in Trade Board legislation?—Well, we do not think it would be a good thing for this country if the jute

trade were crowded out of it altogether. We do not suggest that our wages should be brought down to anything like a parity with the wages of an Indian coolie; that is not in our mind at all. For many years we have succeeded in retaining a portion of our trade, even though our costs of production are very much higher than in India. That is largely due to the fact that we do better work than the Indian coolie, and then there is a great deal of the trade of finer qualities which the Indian native has not yet learnt to do sufficiently well to find a market for the goods. Then we have a good deal of home trade in which the quality of goods is of considerable value. For instance, the backing for linoleum and floorcloth would, I suppose, amount to perhaps 10 or 12 per cent. of the production in Dundee, and that is a trade which the natives in India have not yet managed to do satisfactorily, and any goods which are required in a hurry are ordered from Dundee. Then if merchants want comparatively small quantities of anything special, these again are all Dundee-made goods. The Calcutta mills turn the things out by hundreds of thousands and will not be bothered with a special kind of cloth or a cloth with some special stripe in it which various consumers might want. These things come to Dundee. Then again the carpet trade takes a very large quantity of Dundee yarn, of jute yarn in the form of twist for the backing of carpets. Now that yarn needs to be well spun and of good quality, and the Indian spinning is not sufficiently reliable to enable the merchant to buy that with any freedom or assurance. These parts of the trade will, we hope, remain in Dundee for a long time to come. But Dundee has not grown; the jute trade in this country has not grown as it should have done if we had been able to hold our own in what we call the ordinary goods of the trade. Dundee now, or at least up to 1914, consumed probably one-eighth part only of the raw jute grown. 40 years ago Dundee used to control the market. Now our position is a very small one; we have increased by about 50 per cent. in the consumption of raw jute since the year 1874. Calcutta has increased between eight and ten times. I am simply giving these as illustrations of the growth of the trade outside the United Kingdom, whereas if conditions had been more equal we might have expected a very much larger development of the trade.

5451. I take it you do not suggest any question of inefficiency in Dundee; it is really the cheap Indian labour that has caused it?—Yes, that is what has caused the great difference.

5452. *Mr. Layton*: Has Dundee lost all the lower-quality trade?—Almost; the low-quality trade is a very small proportion now of the Dundee trade.

5453. And there is practically no direct competition between the two, the Calcutta industry having taken the low grades?—Oh! there is very large competition. The importation of Calcutta goods into this country is enormous of the ordinary kind, and in many cases we should compete against that for the commoner quality of bags and sacks.

5454. But where you are making the same kind of goods, is the output per head much greater in this country than in India?—I think it is greater; not very much greater; because although the Indian works well it takes a larger number of Indians to produce a unit of jute goods in India than it does in Dundee or in Great Britain.

5455. *Lord Weir*: But, of course, the rates being very much worse the wage cost per unit is much less?—Oh, very very much less, because they pay their people very little. The day's pay of an Indian coolie I suppose to-day might be 7d., or, say, 3s. 6d. or 4s. a week. We are paying our people 25s. to 30s.

5456. *Mr. Layton*: Is the mechanical equipment comparable?—The mechanical equipment out there is very fine indeed, and they employ native mechanics, of course; but the supervisors and heads are practically all Dundee-trained men.

5457. *Lord Weir*: Of course, there is very little transfer of labour from Dundee to India; there is almost no labour transferred?—No.

8 December, 1921.]

Sir WILLIAM HENDERSON.

[Continued.]

5458. It is simply the supervisors?—Yes.

5459. *Chairman:* Dundee is not asking for protection yet?—If we got rid of the Trade Board I think we could fight on our own.

5460. *Dame Adelaide Anderson:* There has been, in fact, a great decline in the number of sack makers in Dundee?—That is a comparatively small thing.

5461. Was it not once a large thing?—Well, with regard to the sack making, there used to be a great deal done in hand-made sacks. That has almost entirely disappeared.

5462. We hear from time to time that the wages were going down in sack making amongst the women out-workers?—It was not a desirable trade to encourage.

5463. So that you develop the special lines in Dundee that are not carried out in India, such as the coloured carpets, linoleum backing and the others you mentioned?—These are things that have been general in Dundee, of course.

5464. And have increased?—Have increased, to a certain extent. They form probably now a larger proportion of the whole trade, but that is because those engaged in the trade in this country have been obliged to devote themselves more to special lines because the ordinary lines were being taken from them by Calcutta; that is to say, that these specialities form a larger proportion of the Dundee trade now than they used to do.

5465. And Trade Board or no Trade Board you would not wish to keep the trade at the expense of insufficient wages for the workers?—Oh, no! We quite recognise that.

5466. *Lord Weir:* There are some branches that it is no use attempting to keep, because it would mean a wage which would offend the public conscience altogether.—Oh, yes! We would never think of suggesting that.

5467. *Chairman:* With regard to the working of the Board, you make some suggestions which I think agree with those put forward by Mr. Donald this morning?—Yes.

5468. I think we may take those as read. Then we come to 16.—“From our experience of the last two years we are strongly of opinion that the Jute trade should not have been placed under the Act. The trade is fully organized. Almost every employer in Dundee is a member of the Association of Jute Spinners and Manufacturers, the latter being representative of 97 per cent. of the total workers employed in Dundee, and 88 per cent. of the workers employed in the industry in Great Britain. The employers in Forfar and Kirriemuir, situated within 20 miles of Dundee, are members of an Association of their own. Outside the City of Dundee this is the only important centre in the Jute trade. The Trade Unions claim to have practically all the workers in their organisations. It will thus be seen that the trade is not only fully organised, but also highly localised, and that it is in a position entirely different from any other industry which has been put under the Trade Boards Act. Few industries, if any, under the Act can claim to be as highly organised as ours, and further, these other industries are widely distributed over Great Britain.”

5469. You did apply to the Minister, I think, to exempt you?—Yes, we have done so.

5470. But he has not seen his way to comply with that request?—No, he has not.

5471. Is the Workers' Organisation an effective one; is it well-managed?—It is a very effective one, and I do not think I exaggerate when I say that the largest organisation is a very aggressive organisation.

5472. *Mr. MacCollum Scott:* Is that the one of which Mr. Sime is secretary?—Yes.

5473. *Mr. Layton:* And do they differ from you radically on the question of the Trade Board principle?—They highly approve of the Trade Board while it assists them to get their wages up, and they do not approve of the Trade Board at all when it sides with the employers in thinking that the time has come for a reduction.

5474. *Chairman:* But they opposed the dissolution of the Board, did they not?—Yes, because at that

time it was going in the way in which they wanted it to go; increases of wages were being given.

5475. *Mr. Layton:* Are the workpeople in Dundee not alive to the difficulty with which their industry is faced, which you have been pointing out to us?—I believe the workers are very keenly alive to that.

5476. *Lord Weir:* If that is the case, and you have this degree of organization on both sides, surely the Board offers a very good opportunity for coming to very sound decisions?—Well, that leads to a rather personal remark and to a difficult experience that we have had. We feel that one of the greatest drawbacks to the harmonious working of the Trade Board has been the attitude of one of the principal leaders of one of the workers' organizations, whose attitude evidently is this, that he wants always to be antagonistic to the employers. His desire is evidently always to have a fight rather than to cultivate better relations between the employers' and the workers' organization, and we find it exceedingly difficult to come to agreement over wages or anything else on that account. Even if it has been decided that something should be done, and we know that the majority of the workers' representatives are in favour of that, this leader will never agree to it.

5477. Would not that happen, perhaps in a more acute degree, if you had ordinary meetings, not Trade Board meetings but negotiatory meetings—simply between yourselves and the leaders?—Well, I do not think it would happen more acutely. The only difference it would make would be that we would have, and sometimes do have, the support of the Appointed Members in carrying what has been agreed upon.

5478. *Chairman:* Then we come to your final paragraph—No. 17.—Yes. “The following is the only change which would adequately meet the situation of our industry: The repeal of the 1918 Act and the reversion to the principle of the 1909 Act, which confines the interference of a Trade Board to a trade in connection with which ‘the rate of wages prevailing in any branch of the trade is exceptionally low as compared with that in other employments, and that the other circumstances of the trade are such as to render the application of this Act to the trade expedient.’”

If, however, the weight of evidence laid before your Commission does not support our very strong contention that the 1918 Act should be repealed, then we would suggest that at least the following modifications should be given effect to: (1) Any trade where 50 per cent. of the trade is organized on both sides should not come under the Act; (2) Any trade of which 75 per cent. is localised in a reasonable area should not come under the Act; (3) That much more elasticity should be given to vary rates in accordance with sudden changes in trade; (4) That the powers of delay now vested in the Minister should be much curtailed; (5) That Boards should only have power to fix general time rates for the lowest class of work done; (6) That the fixing of special rates, which are really operative rates, for special jobs be prohibited.

The suggestions made in the preceding paragraph (No. 18) must not be read as in any way weakening our declared belief, as recorded in paragraph No. 17, that the repeal of the 1918 Act is the only action which will meet the conditions of the Jute trade. We believe, indeed, that the continued application to it of the provisions of the Act of 1918 can only be disastrous in their results.”

5479. *Lord Weir:* Would you make that just a little clearer, that the only action which will meet the conditions of the Jute trade will be the repeal of the 1918 Act; that would leave the 1909 Act. Do you mean that the Jute trade would not therefore come under the Act at all?—That is our belief.

5480. On account of its being fully organized?—Fully organized, and not classifiable as a sweated industry.

Dame Adelaide Anderson: Not classifiable as having exceptionally low wages.

8 December, 1921.]

Sir WILLIAM HENDERSON.

[Continued.]

5481. *Lord Weir*: In your view the wages would not come under the term "unreasonably low" if you were outside the Act?—That is our contention.

5482. You would only retain such business in jute as would enable you to pay fair minimum wages?—Yes.

5483. *Dame Adelaide Anderson*: Would 50 per cent. organized in the trade be sufficient to help to keep up that level; you might have pockets of low wages?—But that does not merely apply to the Jute trade, of course; it would apply to any trade which had 50 per cent. organized. That is to meet the contention of the Minister that the trade is or is not sufficiently organized. There is no basis by which to measure what is sufficiently organized. We suggest 50 per cent. as being a degree of organization which would exclude any trade from the category of unorganized trades.

Lord Weir: Would not it be rather difficult ever to define organization in actual figures? You say organizations on both sides; do you mean a percentage of the employees or a percentage of organizations? Surely it would be very difficult to apply to figures?

5484. *Mr. Layton*: Might I also ask why you think that a highly localised industry is less in need of a Board than one which is not localised?—Because there is the local competition. When a trade is as highly localised as the Jute trade is in Dundee, there is no chance for one employer, or a few employers, to pay much less, if indeed anything less, than the common standard of pay. If that is so, if any employer offered much less than was recognised as the standard pay, he simply would not get the workers, because there may be a dozen other mills just as close to that worker's home as the one he is working in.

5485. But, on the other hand, is it not a fact that, broadly speaking, those industries are the industries which are subject to peculiar depressions of trade in bad times, and that in such times there is a very large surplus of labour seeking employment, and that, therefore, you are liable to get in all times very, very low wages paid if the wages are unregulated?—Yes. The alternative, of course, would be that they would not get any wages at all. Now that is the position which is occurring to a certain extent to-day. The only way we have of trying to increase trade when times are bad is by lowering our prices.

5486. There is a difference between lowering your wages or your prices on some methodical plan, and simply having an unregulated competition to get the low figures, is there not? Is not that the experience of the Trade Associations in regard to their own prices?—Yes, but what I was going to say was this, that the prices are regulated to a certain extent by the cost of production, and the cost of production contains as a very important factor the wages paid to the operative; what we call operative wages.

5487. Would you not say that in an Association which is dealing with prices, provided you can get agreement on the reduction of prices, that is as satisfactory a method of adjusting prices to a new level as unrestricted competition in cutting prices, and that the analogy might be applied to wages?—If we only had ourselves to consider, and the competition amongst ourselves, then that might be; but we have got to face the competition which comes from India, and at present, for instance, is coming very largely from Germany.

5488. But your argument really is in favour of having unregulated wages under such conditions, is it not?—Well, we find that the regulation which is imposed upon us now is very detrimental to us in meeting the competition with which we are faced.

5489. But with the union under the leadership which you described to us do you think you would get much greater elasticity of wages by bargaining with your workpeople?—Yes, we think that the workers themselves recognise the seriousness of the business, and we are quite convinced that, for instance, in the present crisis in the trade, our workers are prepared

to work for lower wages than they can get just now, because the alternative is that a certain number of them will continue to get the comparatively high rate which is paid, but a large proportion of them will not get any wages at all because of unemployment.

5490. Are you referring to the leaders or to the workpeople themselves?—To the workpeople.

5491. Are the leaders prepared to make an agreement with you for lower rates of wages?—My point is that the workpeople are more inclined to be reasonable than the leaders.

5492. But my question was whether you would hope to get a more satisfactory adjustment in wages by collective bargaining?—We think so.

5493. You think you would, in spite of the leadership which you have mentioned?—Yes.

5494. *Lord Weir*: There is one point arising out of that: It has been suggested to us that the wage cost in your trade is a very small part of the total cost; therefore, big fluctuations in the wage rates has a comparatively small influence on the total price.—I have no idea what you have in your mind, or what has been suggested to you as to wage cost. I think, without asking you to state yours, I am quite prepared to state what we find to be a general figure. The cost of our operative, that is productive, wages varies from 50 to 60 per cent. of the cost.

5495. *Mr. MacCallum Scott*: There is no object to the 1909 Act?—No, we think there is some justification for that Act.

5496. It applied to industries like chain-making, in which very low wages prevailed?—Yes.

5497. Was that not a localised industry, the chain-making?—I believe it was.

5498. Would not the provision that you suggest, exempting localised industries, shut out an industry like chain-making?—No, we suggest that organization should also be a condition of it; the localisation is only one of the factors.

5499. *Lord Weir*: I should just like to have that figure confirmed. You say that operative wages constituted something in excess of 50 per cent. of the gross costs of production?—That is right.

5500. *Mr. Layton*: Including the cost of material?—No, no; the cost of production only.

5501. You mean your factory costs?—Yes, the costs of production do not include the cost of the raw material.

5502. *Lord Weir*: But surely you sell the material?—We sell the finished article.

Lord Weir: It is rather hard for me to believe that the total cost of production does not include material.

5503. *Mr. Layton*: What ratio does your wages bill bear to the value of your output, the gross value of your output?—(*Mr. Prain*): May I answer that question? That, of course, obviously depends upon the cost of the raw material, and if I may say so, it is a fallacious way to state costs. Costs are what it takes to transform the raw material into the finished article, on to which you add the fluctuating cost of your raw material. It is impossible to speak in a percentage, because jute might be at £20 or at £70.

5504. *Lord Weir*: I quite understand that point, but I want to take it at any particular time, for example, just now?—It has been suggested that there are figures in being. Well, it would be necessary to find out what the cost of the raw material was when those figures were taken.

5505. *Mr. Layton*: But you could give two figures; you could give the ratio of your wages cost to the value of your output at the top of the boom, and you could give it to-day?—It could be got, but I am not prepared to answer that just on the spot. I will merely point out that, with figures in being, our statement can be checked if the cost of raw material is ascertained when those figures were made up.

Mr. Layton: As, of course, it must be in any such statement; you could not make the statement without it.

5506. *Lord Weir*: We do not want to be misled: we want to keep ourselves right?—Quite.

(The Witnesses withdrew.)

(Adjourned to Tuesday, December 13.)

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

THIRTEENTH DAY.

Tuesday, 13th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE,
G.C.M.G. (*Chairman*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Alderman HENRY ROBSON, J.P., called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

1. *Status of Witness.*—Witness is President of the Federation of Grocers' Associations. Has twice been Mayor of Bournemouth. Has had over 40 years' practical experience of the Retail Grocery Trade. Has been appointed by the Parliamentary Committee of the Federation as its witness.

2. *Constitution of the Federation.*—The Federation was established in 1891. It consists of some 240 local Associations and District Councils of Associations, with a total individual membership of about 16,000 members owning 40,000 shops and estimated to employ over 100,000 workers. This covers more than half the Grocers' shops in which workers are engaged. The Federation does not include or represent Departmental Stores, Co-operative Societies, nor Multiple Shop Businesses in which grocery and provision businesses are conducted.

3. *Federation connection with the Trade Board Question.*—In February, 1919, the Federation was invited by the Ministry of Labour to send representatives to a "Conference" at Montague House to discuss the application of the Trade Board Act, 1918, to the distributive trades. At that "conference," at which many of the distributive trades were represented, a statement was made by an official of the Ministry that the Ministry of Labour had decided to set up a Trade Board for the whole of the distributive trades. No information was then given as to the grounds upon which the Minister had arrived at that decision. We are of the opinion that there was no adequate demand from the public, employers or employees, for the extension of the 1918 Act to the Grocery Trade. The Shop Assistants' Union, who we understand did apply, only represent 10 per cent. of the employees and it is to meet such an insignificant demand that all this cost and trouble has been occasioned. Those present were invited to express their opinions as to how such a Board could be established. The Grocery and Provision representatives urged that one Board for the whole of the distributive trades was not a practical proposal. When the question of Whitley Councils being more effective for the distributing trades was raised, the official gave the reply that in the opinion of the Minister the distributive trades were not sufficiently organised to effectively set up Whitley Councils and that therefore he had decided to set up a Trade Board. A conference of representatives of all sections of the Grocery and Provision Trades was called at which an Advisory Committee was formed, numbering 47. That Committee immediately urged that a separate Board for their trades was necessary and that the number of employers engaged in them and the magnitude of the trade done warranted this claim. After various deputations and conferences with the Minis-

ter of Labour he announced that he had not power under the Statutes to set up one omnibus Board for the whole of the distributive trades and that he would, therefore, proceed to set up separate Boards for each trade. The Advisory Committee gave the Ministry of Labour every possible assistance for forming the Board. The various sections of the Advisory Committee—wholesale, secondary, wholesale and retail—on the invitation of the Ministry nominated representatives for selection by the Minister as members of the Board. Eleven were chosen from the Grocers' Federation to represent the Retail Trade from both large and small traders in the metropolis, the large cities and towns, the small towns and the villages.

4. *Friendly relations between Employer and Worker.*—The Federation wishes to point out that the Grocery and Provision Trade could in no way be described as a "sweated industry." Whilst in that trade, as in every section of the community, there are doubtless some "black sheep," generally speaking, the employers are not "bad payers" to their workers. There has been and continues a personal and friendly relation between employer and worker which precludes "sweating." In the ordinary retail grocery business there are abundant opportunities for the advancement of the worker through the various grades with consequently increased wages. In many cases the employer has set up his best worker in a business on his own account. In a very great number of cases the energetic young worker decides for advancement to start business for himself. To one or other of these conditions is due the establishment of the great majority of retail grocery and provisions businesses throughout the country. This state of things is an indication that prior to the war the trades were not filled with "sweated" workers. If a further proof of this were necessary it will be found in the fact that among the traders represented by this Federation, strikes and similar labour disputes are almost unknown. Most employers now allow holidays at full pay. Situations are kept open during illness and pay in most cases made up. Occasional days, half-days and hours off are allowed without loss of wages. In many businesses, a system of bonuses based on the success of the stock-taking periods obtains and other amenities and privileges are enjoyed. Under Trade Board conditions all the above customs must be altered and staffs must be timed in and out by a Time Recorder or Time Keeper.

5. *Friendly attitude to Board.*—Though this Federation has never agreed that the Trade Board is necessary for its workers, when the Minister of Labour decided that such a Board should be set up (on what grounds the decision was made we have never learned) our representatives gave such help as

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

was possible. On two or three occasions Mr. John Turner and his colleagues of the Shop Assistants' Union were invited to discuss the whole matter with the Committee of the Federation. At the annual Conference of the Federation at Bournemouth in July, 1921, at which witness presided, Sir Montague Barlow, the Parliamentary Secretary of the Ministry, at the invitation of the Federation kindly addressed some 600 delegates on the subject. At the largest meeting of grocers which has been held in London for many years Dr. Macnamara, in September last (at the invitation again of the Federation), explained in the Agricultural Hall, Islington, the working of the Board. In this and other ways, whatever was in the power of the Federation to do has been done to facilitate as far as possible the smooth working of the decisions of the Board if and when they were made.

6. *Collective bargaining*.—No opposition has been offered to the principle of collective bargaining even under a Trade Board if that principle could be worked on a mutually satisfactory basis. But in the opinion of the Federation there must be alterations and modifications of the methods and machinery which are suggested if the existing Board is to become an effective institution for the mutual benefit of worker and employer. Among these there must be the following:—Elasticity to meet changing commercial conditions; a great reduction or simplification in the official regulations and machinery which appear at present to tend to the destruction of that good feeling between employer and worker which now exists. For example, it is felt that six months is too long a period for rates of wages to be in operation without opportunity of revision. Again, a Trade Board cannot vary its proposals to meet objections which may be made without a delay of two or three months for re-advertisement which induces appointed members to be unsympathetic to a motion to vary a proposal. A method of providing for the worker who either on account of age or infirmity is unable to render the efficient service which must be demanded for the schedule wage required. The present proposed form of "exemption" for such is too difficult and complicated to be made effective.

7. *Definition*.—The definition of the scope of the Grocery and Provision Trade Boards, despite its complexity and the time occupied in framing it, is thoroughly unsatisfactory and will be disastrous to bona fide grocers and provision merchants unless amended. A shop-keeper whose main business is other than that of a grocer or provision merchant may sell any number less than twelve of the staple articles common to the trade without coming under the decisions of the Board. Thus the opportunities of unfair competition would be greatly multiplied.

8. *Street Traders*.—The numbers of these have enormously increased since the Armistice, partly due to ex-Servicemen taking up this means of earning a livelihood. Those who do not employ workers would not come under the orders of the Board, but many do employ staffs and would be difficult to control.

9. *One Man Shops*.—It is estimated that one-third of the grocery and provision shops in this country do not employ assistants other than members of the owner's family who are not paid wages but receive board and lodging and pocket money. In the event of a Board adopting unduly high rates these two classes of traders would set up injurious competition with the tradesmen who employ assistants and who would be handicapped by a heavy wage bill of a compulsory character from which these two classes of shop-keepers would be free.

10. *Wage for Age*.—This basis for the scales of wages proposed must be unsatisfactory to both employers and workers. Wage for age discourages incentive and ambition and does not stimulate employees to put forward their best efforts. Any such effect is detrimental to the State and disastrous to the trade and individual. The younger workers will feel that each recurring birthday entitles them to higher wages without any effort on their part to show improved earning capacity. The absence of any method for adjusting wages to decreased earning capacity in the older workers must result in many of these becoming unemployed. Workers of 50 years

and over should be exempt from the operations of any Trade Board; a scale of wages based on age will keep all desirous of taking it up seriously a little late in life, out of it entirely. No master could give them an opportunity of learning. Aged and sub-normal workers not capable of earning the prescribed wages and ineligible for exemption certificates must be unemployable. We are informed that the Board has found it impracticable to propose rates on any other basis. Hitherto it has been the general practice in the trade to base the wage on the number of years' experience and on the qualifications for the work claimed by the worker and the evidences in support of that claim shown by the worker's references.

Under the Education Act we understand that boys are to be kept at school until 16. At 16 they are supposed to be able to earn, under the suggested scale, from 18s. to 21s. 6d. according to district; surely an ill-considered and an impossible suggestion. Most good grocers still train apprentices. In the larger private firms, quite a number are always in training. They are taken on from Standard IX in the Elementary Schools and from the middle forms of Secondary Schools and it is from these properly trained youths that our most capable assistants are drawn. The Federation requires the utmost freedom to continue this practice—one which is essential to the proper carrying on of the trade, and one on which its future status in many districts depends. We require to be entirely free as a Trade to make our own arrangements in this matter of apprenticeship.

11. *Area Basis Unsuitable*.—The Federation accepts what is understood to be the view of the Board that uniform rates for the whole country are not practicable. We have received many complaints of the serious anomalies which must arise if the Areas at present proposed are adopted. For towns of 12,000 to 30,000 population to be subject to the same wage rates as the large cities other than the metropolis is manifestly unfair. It would also be obviously unjust for rural Areas in the outlying portions of the Metropolitan Police Area to pay the same rates as the populous districts of London, especially when adjacent to similar Areas just over the border which are subject in some cases to the lowest scale. We know a town of 12,000 under Scale "B" surrounded by six neighbouring towns under "A," all good marketing towns, in three of which one large firm has branches and is therefore put into most favourable position by this arrangement.

12. *District Committees*.—No provision is made in the Board's present proposals for setting up District Committees. A Trade Board will not work in any event without District Committees. The employers' side, if a Trade Board has to be, should consist of bona fide employers and the workers' side should consist of none but those actually employed in the trade and earning their living at it. These, we believe would be most desirable for dealing with local conditions. Seasonal trade at health resorts, suburban trade, shops in working-class districts, scattered areas in rural districts, and rapidly changing conditions in industrial centres, are matters which could be more effectively dealt with by District Committees than by a Central Board. Such Committees could be under the direction of a Central Board for the purpose of dealing with main principles and for the decision of disputed or difficult points.

13. *Independent Chairmen versus Appointed Members*.—The Federation is of opinion that if the Board consisted of equal numbers of employers and workers, with an independent chairman with legal qualifications, decisions might be more speedily arrived at than have thus far been the case with the system of "appointed members." Of course in this expression of opinion there is no desire whatever to cast any reflection upon either the eminent ability or the impartial conduct of the present "appointed members." It must, however, be obvious that having no practical knowledge or experience of the technicalities of the Grocery and Provision Trades, these members are dependent entirely upon the impressions made on them by the discussions between the employers and the workers. Their five votes are cast accordingly. With an independent legal chairman the discussions might be more effectively directed, whilst his trained

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

legal experience might enable him probably more speedily to obtain decisions than could be the case with the five "appointed members" who might find differences of opinion even amongst themselves which would have to be harmonised before they could act in union.

14. *Fixed Rates.*—The scales, when they have been confirmed by the Minister, are binding upon employers but not on the workers. The function of a Trade Board is, we understand, to fix minimum wages. The high rates which are now before the Minister, in the junior sections especially, are calculated to make them standard rates. There are not wanting signs, however, that some of the Trades Unions propose to make these rates jumping-off point for higher rates. Thus the employer, though he would legally be bound to the minimum rates of the Board, is still liable to attack from Trade Union organisers continuing agitations for still higher rates outside the control of the Board or the Ministry of Labour. Many good grocers are already paying on even a higher scale than that already proposed, on the grounds of merit. We enter our protest against the arbitrary fixing of a high minimum wage for youths of 16 to 20.

The reduction of hours to 48 is inconsiderate and mischievous. It must have been realised by employees that the result would be overtime. The grocery trade is seasonal. Bank holidays and festivals bring extra pressure; daily weather has an enormous effect upon it. Health and seaside businesses have to be worked up to double and treble normal and winter pressure. It is not the general practice to make much reduction of staffs, largely because it has been considered only fair to keep good men in season and out, also for reasons of efficiency. Obviously this practice could not be continued under the Trade Board regulations. A wet day or a succession of wet days puts the pressure on later and fine days. Then there would be overtime. In our opinion a 52-hour week should be the standard, as against a normal week of 58, with an equitable arrangement to meet seasonal requirements. 52 hours' work leaves 92 hours for sleep and recreation in the six days. In many localities and at many seasons the public will suffer inconvenience, notably factory operatives and workpeople generally, if so short a week as 48 hours is fixed.

15. *Necessity for delay in confirming present Proposed Scales.*—The Federation Committee has been loyally supported by the affiliated Associations in their endeavour to study the possibilities of the Trade Board. Up to a certain time Associations were willing to agree to carry out the important experiment of the Trade Board minimum scale. Indeed, when these scales were first issued the members of the affiliated Associations largely followed the advice of their representatives on the Board and voluntarily adopted as their minimum the wages recommended. The long delay in arriving at a definite decision has created serious doubt as to whether these scales would ever be confirmed. Employers throughout the country having received the official notices of the proposal to fix rates and had an opportunity of considering the effect of the attendant regulations on their businesses, undisputable evidence has been forthcoming that it is not now possible for the Federation to obtain support of its members to any proposed scales. In consequence, at the quarterly meeting of our General Purposes Committee at Scarborough on October 18th, 1921, when about 200 members of the Committee were present, a resolution was unanimously passed requesting the Minister of Labour to withhold his confirmation of the present proposals until Lord Cave's Committee of Enquiry had heard and considered the evidence submitted to it and made its report. The appointment of that Committee is an evidence of the desire of the Ministry of Labour to learn from an independent committee its recommendations, if any, for alterations or modifications of the 1918 Act. It would appear, therefore, illogical to confirm the proposals of the present Board (which is understood to be the largest Trade Board in existence in this country) until this Committee has completed its enquiries. The Federation, therefore, earnestly hope that a recommendation

for delay in confirmation may be made by Lord Cave's Committee.

In further consideration of the applicability of Trade Boards to the distributive trades, it must be borne in mind that they were designed for mechanical trades, factories and factory routine and arrangements. Ours is not a mechanical trade. Each man cannot have an appointed routine task allotted. Every article handled requires different treatment and different time. If a salesman, he is in the hands of the buyer. It is simply futile to attempt to measure up his services by time or age merely. Then factory work goes on "weather or no," summer or winter; not so the Grocery Trade. It is subject to curves of high and low dimensions. Master, man and customer are in a relationship absolutely unknown and unrecognisable in a works or factory.

5507. *Chairman:* I think you are the President of the Federation of Grocers' Associations?—Yes, that is so.

5508. You have been twice Mayor of Bournemouth?—Yes.

5509. And you have had over 40 years' practical experience of the retail grocery trade?—50 years.

5510. You have been appointed by the Parliamentary Committee of the Federation to give evidence?—That is so.

5511. You say in your statement that the Federation was established in 1891?—That is so.

5512. It consists of 240 local associations and District Councils of Associations, with a total membership of about 16,000 members owning 40,000 shops, and employing over 100,000 workers?—Yes.

5513. You say that that covers more than half the grocers' shops in which workers are engaged?—Yes.

5514. That is in England, I suppose?—In England and Wales.

5515. The Federation does not include departmental stores, co-operative societies, or multiple shop businesses in which grocery and provisions businesses are conducted?—No.

5516. Then your statement refers to the Conference at Montagu House in February, 1919. I think you were told at first that it was proposed to set up a Trade Board for the whole of the distributive trades?—That is so.

5517. Was there at that time a demand for a Trade Board for the grocery trade?—No.

5518. I think the Shop Assistants' Union applied for such a Board?—So we understand.

5519. What proportion of employees in the grocery trade are in that Union?—About 10 per cent. according to the best of our knowledge.

5520. Is that so to-day?—I think it is so to-day.

5521. Are any of them in other Unions?—Not the grocery assistants.

5522. Would the porters or some other classes of employees be in other Unions?—Speaking generally, no. There might be exceptions, say, in London or in one or two of the large cities, but as a trade, no.

5523. Then the trade—at all events the workers in the trade—are not sufficiently organised to be dealt with under a Whitley Council?—Probably not.

5524. Did your Federation consider the proposal to set up a Board for all the distributive trades?—Yes, it was considered, but it needed very little consideration to show that it was not possible at all; and I think the powers under which the Minister of Labour was acting did not warrant him in making the suggestion that one Board should be set up for the whole of the distributive trades. The thing was too big, and the procedure, the interests, and the description of the trades were altogether too varied to be dealt with in any such way.

5525. Supposing it were legal, would it be desirable to form a limited number of Trade Boards for all the distributive trades? I mean, assuming that there are to be Trade Boards for those trades and that a Joint Trade Board were made legal, could you suggest a division of distributive trades into two or three Boards?—I think one broad division that would occur to one would be food as distinct from (shall I call it) dry goods; you will perhaps understand that. But then the conditions of meat, fish and milk are all so entirely different from the conditions of the grocery

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

trade that I cannot conceive that it would be workable; and then there is the volume of business and the area over which it has to be conducted. The grocery trade is conducted in every remote hamlet in the whole country, and there is no other trade which is so conducted. The food of the people must be taken to them in the most remote districts. Then in congested districts it becomes such a huge trade; the amount of capital involved and the amount of transport and the preparation—the division of bulk into quantities suitable for the different classes of consumers—seem to me to make it impossible for there to be a Trade Board dealing with anything else but the grocery trade if it has to be.

5526. I suppose in so far as the Trade Board rate is based on cost of subsistence, there is not much difference between the employee of a grocer and the employee of a butcher, or a baker?—No, probably not.

5527. Their cost of living would be about the same in the same district?—About the same.

5528. So far as volume of work goes, would it be desirable to form District Committees or District Boards?—Yes; the conditions of the trade vary so much as between industrial localities and rural localities, and especially seaside and health resorts, that I do not see how one Central Board can effectually deal with the varying problems. Of course, the question then comes in of the enormous expense of these District Councils: you are getting a steam hammer to crack a nut. It has not been demonstrated to us that there is any great demand or any actual necessity for this organisation at all.

5529. Of course, that is a wider question.

5530. Lord Weir: May I ask just one question on the general point. Your main difficulty is the question of the regulation of wages over the whole of the trade?—That is the great difficulty.

5531. Would you see the same difficulty if you had carefully interpreted the meaning of the words "minimum wage"? If you had only to settle minimum wages and not to regulate wages as you do now, would that alter your views as to the difficulties?—The variations would be so great that you would get a very great complication there. Your minimum wage for large and wealthy towns where a high class of assistant was required to keep up, and so on, would be very widely different from the minimum wage in other places. Then if you take a rural locality, of course, the difference is acknowledged roughly in the varying schedules.

5532. That would merely leave the area differences?—The area differences would be so great.

5533. It would sweep away your other difficulties, the variations in the different trades or the different branches of the trade, and would leave you solely with your difficulty of a variation according to the conditions in the area?—But then the area, of course, is only one of the difficulties. You still have individual competence.

5534. I am speaking of purely a minimum wage. —Might I ask whether your question is to this effect: Whether a national minimum wage would help us?

5535. Yes.—If that is your question, yes.

5536. A national minimum wage?—A national minimum wage applicable to all trades would help us and we think as a Federation that that is the basis to start upon.

5537. Chairman: Or even a national minimum wage applicable to all distributive trades?—Yes, to distributive trades; quite so.

5538. Lord Weir: You could take a much wider view of a Board if it had to fix a national minimum for even a series of trades?—Much wider. That would help us.

5539. Chairman: Subject, as you have said, to differences as to area?—Yes, differences of area.

5540. Mr. MacCallum Scott: You mean a national minimum graduated according to the area?—Yes.

5541. Chairman: You are not yourself a member of the Board?—No.

5542. But I think your Federation did choose some members of the Board?—Yes.

5543. I have got to the fourth paragraph of your statement. You have something to say about the grocery trade not being in any way a sweated industry?—Yes, that is so.

5544. What do you say about that. Perhaps you would read the paragraph?—I think we thought that rather a strong paragraph, because it is essentially my experience.

5545. Will you read it and we can follow it and discuss it?—With pleasure. "The Federation wishes to point out that the grocery and provision trade could in no way be described as a 'sweated industry.' Whilst in that trade, as in every section of the community, there are doubtless some 'black sheep,' generally speaking the employers are not 'bad payers' to their workers. There has been and continues a personal and friendly relation between employer and worker which precludes 'sweating.' In the ordinary retail grocery business there are abundant opportunities for the advancement of the worker through the various grades with consequently increased wages. In many cases the employer has set up his best worker in a business on his own account. In a very great number of cases the energetic young worker decides for advancement to start business for himself. To one or other of these conditions is due the establishment of the great majority of retail grocery and provision businesses throughout the country. This state of things is an indication that prior to the war the trade was not filled with 'sweated' workers. If a further proof of this were necessary it will be found in the fact that among the traders represented by this Federation, strikes and similar labour disputes were almost unknown. Most employers now allow holidays at full pay. Situations are kept open during illness and pay in most cases made up. Occasional days, half holidays and hours off are allowed without loss of wages. In many businesses a system of bonuses based on the success of the stock-taking periods obtains, and other amenities and privileges are enjoyed. Under Trade Board conditions all the above customs must be altered and staffs must be taken in and out by a Time Recorder or Time Keeper."

5546. You say there that the trade was not "filled with 'sweated' workers." Of course that statement does not go very far. Were there some firms which grossly underpaid their workers?—Yes, that would have to be admitted—I do not know whether firms or individuals; perhaps it would be better to say individuals. I do not think it would apply to any firm of any standing or with any large scope of business.

5547. Some employers, we will say—yes. Would you think the last paragraph of the statement germane to the point which we are now discussing?

5548. I want to deal with this first. You say that strikes are almost unknown. I suppose with a bad organisation of the employees strikes were very unlikely to happen?—Well, they have happened in unorganised trades pretty frequently, long before the Trade Unions reached the position in which they were, even in pre-war days. Strikes were quite common where a trade was not fully organised.

5549. They may have happened in some cases, but you will probably agree that where you have a wholly unorganised industry it is much less likely that a strike will occur than where you have a strong organisation?—Yes, I must admit that.

5550. And therefore there really was no method of bringing these "black sheep," as you call them, to book until you had a Trade Board?—That must be admitted.

5551. Lord Weir: On that point the 1909 Act says: "Where the rate of wages prevailing in any branch of the trade is exceptionally low." Would you consider that the grocery trade should have been brought under the Trade Board under the 1909 Act—that the rate of wage was exceptionally low? Would you have considered the Minister justified in imposing the Trade Board on the grocery trade under the 1909 Act?—No, there was no warrant for it whatever.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

5552. *Mr. Poulton*: Would you consider, if not under the 1909 Act, that he was justified under the 1918 Act?—I will come to the detailed points in a moment, but in the 1918 Act the wording is very different. It is: "Accordingly having regard to the rates of wages prevailing in the trade or any part of the trade, it is expedient that the principal Act should apply to that trade."—It is not speaking of distributive trades, is it?

5553. Oh yes, speaking of any trade.—Might I take the last paragraph of my report which I think perhaps will be germane?

5554. *Chairman*: Is that No. 3?—No, that is No. 15: "In further consideration of the applicability of Trade Boards to the distributive trades, it must be borne in mind that they were designed for mechanical trades, factories and factory routine and arrangements. Ours is not a mechanical trade. Each man cannot have an appointed routine task allotted. Every article handled requires different treatment and different time. If a salesman, he is in the hands of the buyer. It is simply futile to attempt to measure up his services by time or age merely. Then factory work goes on "weather or no," summer or winter; not so the grocery trade. It is subject to curves of high and low dimensions. Master, man, and customer are in a relationship absolutely unknown and unrealisable in a works or factory." That is a strong contention which we make.

5555. *Mr. Poulton*: But is not the outstanding feature of the Boards at present that they set up a minimum rate; they do not say whether you shall pay a man higher. They simply say you shall not pay the man lower; so that the question of the depreciation of a man's ability and the different treatment that he may have to give to a certain part of his work, and the time it may take, is not affected, or need not necessarily be affected, by the Trade Board regulation? We think that the wages for the junior sections are practically impossible.

5556. That is, you think that it is a scale which is not practicable in your trade?—That is so.

5557. That may be, but that is possibly a question for the Board to reconsider. What I am suggesting to you is, when you say here that you cannot do it because of the different treatment and the different time, that the Board sets up a minimum. I am not sure whether it is in yours, but I know it is in some of the regulations of the Boards; to make it quite clear and beyond any dispute it states that any rates of wages which may be higher, or conditions of employment which may be superior to, shall not be affected by this decision of the Trade Board.

5558. *Chairman*: It is not quite the same, but there is a similar paragraph in this table.—Referring again to the junior section, and the wages fixed for juniors, I say here in paragraph 10: "Under the Education Act we understand that boys are to be kept at school until 16. At 16 they are supposed to be able to earn, under the suggested scale, from 19s. to 21s. 6d. according to district."

5559. *Mr. Poulton*: Of course, there you merely say the rate is an impossible rate.—Quite impossible.

5560. But supposing the rate was varied to what you consider possible; it only proves that it is impracticable at present.—Quite so.

5561. Then you go on to say in paragraph 15—

Chairman: I do not think we have got to that yet.

5562. *Mr. Poulton*: I know, only Mr. Robson himself went there; that is why I wanted to mention it. You say that factory work must go on, bad weather, summer or winter, but not so the grocery trade. I notice you have the same kind of thing in other words in paragraph 14. I thought that the grocery trade above all trades was not a seasonal trade, because we are always wanting our groceries every day. Of course, you may have a busy time, particularly in a seaside resort; but in our factory system that is exactly what we suffer from unfortunately; we suffer from it very badly in the factories.—If you have a week's fog in London like you had a while back, it would take at least 50 per cent., or perhaps more, off any grocery business, and that business will be concentrated on succeeding days, on fine days, when

you would have to work your staff overtime under these regulations.

5563. That may be because of some special thing, but I should not have thought that the grocery trade, particularly in an ordinary inland town, could be said to be a seasonal trade by any means.—I stress there that it is subject to weather, and I would like to press that point. It is far more so than would be realised by anyone not in the business. If it were exclusively an order trade it would not apply so much, but where there is counter trade—and every good grocer likes to ensure that he shall have a proportion of counter trade—that trade is cut off by bad weather and concentrated on days when overtime would have to be worked.

5564. That is a matter which is in the power and jurisdiction of the Board to consider, is not it?—I hope so.

5565. *Lord Weir*: The atmosphere you want to convey to us about this trade is that you regard your people rather as members of a staff than as employees; is that it?—Yes; it is a much more friendly and family relation than is customary in the factory system. They are more than "hands."

5566. *Mr. Poulton*: Of course, generally speaking, the businesses themselves are of small dimensions compared to businesses under the factory system; there may be 7, or 8, or 9, or 10 people; and therefore there is bound to be a different relation to what exists in a factory where you have a thousand people.—Yes; so we say there ought to be different treatment.

5567. But is there not? I thought you were a very happy family on both sides?—We are, and we are anxious to preserve those relationships.

5568. The Board need not necessarily disturb that, surely?—I am afraid they may.

5569. *Chairman*: We got to the fifth paragraph, where you refer to the friendly attitude of your Federation, and you say that Committees were set up, and you mention the Conference with Sir Montague Barlow and Dr. Macnamara, and then in paragraph 6 you say: "No opposition has been offered to the principle of collective bargaining even under a Trade Board if that principle could be worked on a mutually satisfactory basis," and you say there must be alterations in machinery. One reason you give is that there is not sufficient elasticity to meet changing commercial conditions; you suggest a great reduction or simplification in the regulations and machinery which appear at present to tend to the destruction of good feeling between employer and worker. What do you mean by that sentence?—I allude to it in the question of the amenities that we give to our staffs. If we are put upon strict regulation there will be no margin for us to show the consideration that we have shown.

5570. But I want to know what are the modifications of the machinery which you suggest?—Is not that explained in the continuation of the paragraph? It is felt that six months is too long for rates of wages to be in operation without opportunity of revision.

5571. *Mr. Poulton*: But is not that the general rate?—Yes.

Mr. Poulton: But I think the Chairman wants to know the machinery you would put up for dealing with these individual cases, rather than the bulk?

5572. *Chairman*: I wanted to know what your suggestions are; I daresay they would come out by degrees. That is one; that the six months is too long. Of course you know it can be altered in less time if it is sent to the Minister?—Put shortly, the machinery is altogether too slow.

5573. And you are working that out; first the six months, and then two or three months for a variation?—Yes.

5574. *Dame Adelaide Anderson*: I should like to ask you one question about the hours. You spoke of the amenities between the employers and workers just now. I want to be clear as to whether the workers are not employed in any part of the day.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

You spoke of sales being transferred to a later date?—Yes.

5575. You can always adjust the work in a grocery shop, can you, so as to keep the employees employed during the time the shop is open?—We have very great difficulty indeed, and a run of bad weather or a run of slack business demoralises the whole of the staff. It is the most difficult thing we have to deal with to keep the staff going when from any cause business is bad; and then sometimes we should let a man go for half a day.

5576. But there is work that can be done in a shop in advance?—Up to a certain point, yes, but we cannot go on day after day. We cannot make work; we could not guarantee under any circumstances to keep a big staff going independent of the weather or trade.

5577. *Chairman*: You have mentioned two changes which you suggest. Then you refer to exemptions?—The method for meeting that is very cumbersome, very cumbersome indeed.

5578. What improvement do you suggest?—I suggest one a little later on, that those over 50 should be exempt from the operation. Employers have men who are of a very low order of intelligence; they can do certain things and are employed to do them; but if we had to pay them on the suggested wage scale, they simply would not be employed. They cannot earn the money.

5579. Do you think those men would be willing to apply for exemption on the ground of their inadequate intelligence?—Some of them would not bother; they have not mentality enough. They would take their notice; they simply would not bother.

5580. Others you think would apply?—Others would apply, but it is the trouble and the irritation of our having to apply that we should object to.

5581. *Mr. Poulton*: But you do not suggest that it is impossible to set up machinery to meet those cases, do you? It may be quite a new thing to you in your trade, and therefore you do think it is irritable and troublesome and cumbersome, and all the rest of it?—Yes.

5582. I have been working at my trade, a fairly big trade, for 30 years, and giving exemption to those men who are of the sort of capacity you mention?—Have you had to go through similar machinery?

5583. Yes.—Well, as you very correctly point out, it is a new thing to us altogether.

5584. That is the difficulty; it is a new thing and therefore there is irritation?—And if you will pardon me asking you a question, is your machinery the same?

5585. Practically. We have an equal number on both sides who sit and decide as to whether a man or a woman, as the case may be, should be exempted or should work at a lower rate than the minimum rate, and what that rate should be.—Can you imagine over a sparsely populated area the cost and the trouble—

Mr. Poulton: I think simple machinery could be set up. I am not now saying that the present machinery could meet the position satisfactorily. I am only suggesting that it can be done, and could be done, I think, satisfactorily.

5586. *Chairman*: The great point is that it ought to be extended to other cases, such as people who are slow workers, or not fit to earn the specified wage?—Yes; and I am reminded that that sort of irritation to which you have alluded, Sir, would lead us to this position: "Oh, we shall not bother with it; you do not fit the bill, you must take your discharge."

5587. *Mr. Poulton*: That is a case of not wanting to meet an awkward situation.—We are very human in the grocery trade.

5588. I know. Of course the whole thing is quite new to you?—Quite.

5589. *Lord Weir*: Of course if a true minimum were set up the question of exemption would not arise?—Not so much.

5590. *Chairman*: Might it not still arise as regards what we call sometimes subnormal workers, people of unusually low intelligence? You still have the point; you could not fix your minimum with reference to the capacity of subnormal people; it would have to be for normal people.—That is so, but even so the basis would be different, and there would be a less margin to adjust.

5591. Then you are not satisfied with the definition. Is it not long enough for you?—One hardly can be satisfied, because you see it could be dodged so very easily. A man can just keep 11 of our leading commodities and do what he likes.

5592. *Lord Weir*: Is it conceivable that such a thing would develop?—It is developing.

5593. That is, you are getting specialised grocers?—If this was the place and the hour I could name a firm who are developing it to a tremendous extent.

5594. And is that definitely based on getting out of the Act?—Oh, no; I am not saying that. It is simply in operation in a large firm; they are the very antithesis of grocers. They are specialising upon a few grocers' goods every now and then and continue to do so.

5595. *Mr. Poulton*: Is it not for the Board itself to meet and get such a definition as will bring them within the scope of the regulation?—You see, you could take two or three of these enterprising cheap firms, and with or without arrangement they could keep a score or even two score of our leading articles, and have nothing but girl labour to hand them out. It is most dangerous, and it is in operation now. I do not like to mention the names of firms, but they are perhaps present to your mind.

5596. *Mr. MacCallum Scott*: What kind of articles are you thinking of—tea?—Oh, yes; and coffee and cocoa. Cocoa are being dealt with like that and if they adopted the American plan of packing almost every commodity, even perishable things, they would not leave us anything worth while handling, and they do employ cheap girl labour.

5597. *Chairman*: Of course that is a matter for discretion; but I understood what you quarrelled with was a person who sold less than 12 of the recognised articles, and so gets out of the Trade Boards Act?—Yes.

5598. That is under the regulation of the Trade Board itself?—Yes.

5599. And have you applied to the Grocery Trade Board to reduce the number of 12 to a lower number?—This is not the Board's definition: it is the definition of the Ministry of Labour.

5600. That is true. I should have said, have you applied to the Board to get that altered?—I think this is the first opportunity we have had for making an influential protest.

5601. *Lord Weir*: So long as those enterprising firms you speak of pay Trade Board rates, then the specialisation is not necessarily a bad thing, is it?—If they did pay Trade Board rates on our basis, then, of course, we should have no grievance.

5602. But you submit that they do not pay Trade Board rates?—They do not.

5603. *Chairman*: What kind of trader would follow that course of selling less than 12 of the grocery articles?—Dairies very largely; fishmongers would, butchers would, and so would greengrocers; but what I have in mind is a very enterprising firm of fancy dealers; and then, too, there are café proprietors. I assure you, my Lord, that it is a very wide point.

5604. It is a real point?—It is a real point and a very strong point.

5605. *Mr. Poulton*: Did not many of these people sell these articles before the Trade Boards came into operation? It may have increased perhaps, but all the businesses you have mentioned have done this for years. At any time within the last 25 years I could go to those people and get articles which are sold by grocers.—Now it is going to be put on definite, clear lines.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

5606. But if you find that there is a development against yourselves, it seems to me the Chairman has put the point to you twice—that you should get a definition to bring them within the scope of the Board.—That is one result which we hope would come from this Committee now that we have put the case.

5607. *Mr. MacCallum Scott*: Would not most of these other shops, distributive shops, come under a Trade Board also?—No; there is no present suggestion, anyhow. We cannot say, of course, what might be done in the future, but there is no suggestion yet that they should.

5608. *Mrs. Lyttelton*: Of course, if there were a national minimum wage your objections would go?—Largely, but not entirely.

5609. *Chairman*: Then you mention street traders. I do not know what point you want to make about the street traders?—I think no more than is stated there. The competition is extremely acute in London and in one or two provincial towns; not so much in the provinces, but it is very acute indeed in London.

5610. They, of course, are free from the Trade Boards because they do not employ workers.

5611. *Dame Adelaide Anderson*: What kind of articles are they selling in the streets?—Cocoas, milk, bacon.

5612. Soap?—Oh, yes, soap has been a great thing, and matches and no end of sundries.

5613. Matches were always sold in the streets. —Yes, they were, but now you get a stall with quite a selection.

5614. But the ex-Service man must find some outlet, and that may be a temporary thing, may it not? —Well, unfortunately we know that alien capitalists are behind a great deal of this street trading.

5615. *Mrs. Lyttelton*: You mean that the street traders are in fact employees?—Yes, and they are employed by men of substance.

5616. That ought to be able to be regulated, but you cannot affect the man who is working simply on his own without any employees in any trade, can you?—You cannot expect to regulate any man who is not employing anybody; you have to put up with that competition in almost every branch?—Yes, but it is within our knowledge that this has been taken up as a profitable employment of capital by aliens.

5617. *Lord Weir*: That would have no connection whatever with the Trade Boards, surely?—No, but we are subjected to that, and they are not under these Trade Board regulations.

Mrs. Lyttelton: They evade the Acts by being hidden employees.

5618. *Mr. Poulton*: But if they are employees and not employers, I should have thought that you could have brought some of them under the Boards if you investigated the matter. If you state that they are employees of some people with a considerable amount of capital, than that is a business, and the people are ordinary employees, surely?—And we say they would be difficult to control; that is my remark with reference to that. It is purposely short, but we just point it out as one of the forms of competition of which cognizance ought to be taken in the operation of the Trade Board.

5619. *Chairman*: Then the same observations apply to the paragraph about one-man businesses; those are businesses where no workers are employed, and therefore the rates do not apply?—That is so.

5620. You cannot carry that any further, can you? —No, I cannot carry that any further.

5621. Then you refer to wage for age; that is, that a young worker should be entitled to an increased minimum wage as his age increases?—Yes.

5622. You say that it discourages incentive and ambition?—That is a very strong point indeed. I should like to emphasise that point. The whole section as regards juniors and learners would work out very unfortunately indeed. We have very little to say about the senior qualified men; in fact, there are very few of them who are not now paid more than the suggested wage—very few.

5623. *Mr. Poulton*: Would you explain how you used to pay these young people who were learning beforehand; I have always understood that you did pay them by the same method; as they had served you so long, so they had risen in wages providing their work was satisfactory?—Yes, that is the crux of the whole thing—providing their work is satisfactory. Now we have to do it whether it is or not.

5624. Surely not; you do not mean to say that you are compelled to keep them there?—Exactly; that is the alternative—discharge them.

5625. Oh, no, not quite that.—I misunderstand it, then. If a youth growing up is not worth the money, the 5s. or 7s. 6d. advance which he is entitled to under the Trade Board, it occurs to us that we have no alternative but to dismiss him or to pay the wage.

Mr. Poulton: I had in mind my experience on a School Board Authority, and they have always paid their youths according to that. As soon as they arrived at a certain age they went up on a scale. If their conduct was not satisfactory we had them before us and talked to them, and I should have thought that there was an obligation on you to talk to them and say they shall not have their rates. It would have a good effect, I think.

5626. *Lord Weir*: Surely they could turn round and say it did not make any difference?—That is the crux of the whole thing. You may talk to them in a proverbial way—

Mr. Poulton: Of course, if they refuse to pull themselves up, that is an entirely different matter. If they simply say: "We are going to have it without any regard to service at all," then you can dismiss them.

5627. *Dame Adelaide Anderson*: Is it not possible to put them on probation for a month or two months? —Not under the Trade Board.

5628. Surely you could dismiss them with two months' notice?—You can dismiss them with a week's notice.

5629. You could put them on probation and say that you will have a report each week of their progress?—Yes, but supposing they have not the mentality; supposing they cannot do the work, and it is not in them?

Chairman: Or supposing they won't?

5630. *Dame Adelaide Anderson*: Supposing they won't, then they leave.—Supposing they are of slow development. I know employees who have not shown any competence or qualified for responsible positions until they were turned 20 or 21, and then they have turned into useful men. Youths do not all develop alike.

5631. Then would it meet your point if you could have some provision for unfitness, for subnormality in juveniles?—That would come in under the contention we were making in the previous paragraph.

5632. *Lord Weir*: Would it work better, for example, if you had simply a starting rate and the rest was left?—A starting rate, yes.

5633. And then an adult rate; would it be better if the rate of promotion was left to you?—That is wrapped up with the paragraph on apprenticeship.

5634. *Chairman*: Your trouble is this, that the scale goes up regularly from the age of 16 to the age of 24 without regard to the boy's or the young man's services at all?—That is so.

5635. Simply as his birthday comes along, up goes his wage?—Yes; that, we think, is an impossible condition of things in our business. He is not tending a machine; his value depends upon his mentality and his application to the business.

5636. Supposing you take in a young man of 18, who knows nothing of the business, you have got to pay him at the lowest rate, 28s. a week, from the very beginning, practically?—Yes. It is impossible.

5637. The moment he is 19 he gets 34s. and upwards?—Yes.

5638. That is your trouble?—Yes. It is quite impossible.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

5639. *Mr. Poulton*: If that is a fair scale—I am not going into the question of whether it is a fair scale or not; I do not know, but assume that it is a fair scale—for the ordinary normal learner or apprentice, as the case may be, then if you had someone who was not satisfactory, would it not meet the case if you had a good deal more elasticity in the Act so that you could deal with such people as that?—That is what we are asking for.

5640. You do not want to do away with the system altogether, but you want more elasticity in these cases which are bound to occur?—Yes. Then we are told that it is impossible, and therefore if it is impossible we say, “Wipe it out, and give us leave to deal with our juniors on the old lines.”

5641. Who told you that it is impossible?—One has gathered that in discussions with those who have been working on these scales.

5642. I know one Board which insists on having reports as to how the apprentices are being treated, and how they are getting on, and whether they are giving satisfaction.—That is a very excellent idea, I should think.

5643. *Chairman*: Do you take apprentices?—Yes. 5644. For how long?—Three years, and if they wish for office training that can be extended to four years.

5645. *Lord Weir*: As a rule were those apprentices paid on a very low scale?—I think about the present basis would be about the start. When a lad leaves school at 14 years of age, if he is elementary, he will start in our district at about 10s. and advance 5s. a year.

5646. *Chairman*: You have dealt with old people. You think that a man is old at 50 years, I understand, and ought to be exempted from the scale?—It would simplify it. I have got men over 50, and very good men, and I believe my friends have, too, but it would simplify the operation of the scale.

5647. No doubt it would simplify it, but would not the effect be that men of 50 years would be employed, and employed at low wages, instead of younger men?—I do not think so. There is always something the young, competent man has which a man of 50 years has not got, but if a man reaches 50 and stays in the employ, and is still hale and hearty and competent, we should not readily part with him or underpay him.

5648. That is your view. I have heard nobody yet put it at 50, and I am rather alarmed to hear that one is old at 50. Then you have dealt with boys. As to the area basis adopted by the Grocery Board, what do you say?—I think the case I quote there shows how difficult it would be.

5649. Scale A applies to all rural districts and all urban districts with a population of less than 10,000; Scale B to all other areas except the City of London and the Metropolitan Police District; and Scale C to the City of London and the Metropolitan Police District?—Yes.

5650. Do you say that it is an unsuitable division?—It works out very badly between many of the London Police Divisions. There are New Barnet and New Southgate, which are included in the London area, with populations very much below that minimum; and there are Watford and Bushey; Watford has 45,000 inhabitants and comes under Scale B, and Watford is Bushey's most serious competitor, and there the population is only 8,000, and still they have the same scale of wage to pay. I think the same thing applies to New Barnet and New Southgate.

5651. Watford is outside the police area, is it?—Yes, it is outside.

5652. Is Bushey inside?—Yes.

5653. So that the wage in Bushey would be higher than the wage at Watford?—Yes, although there are only 8,000 inhabitants there. Then as to the other case which I quote, shall I give you the details of it?

5654. Yes.—In Trowbridge, with a population of nearly 12,000, they will have to pay Scale B wages. All the neighbouring towns, namely Warminster, Chippenham, Westbury, Bradford-on-Avon, Melksham and Devizes, will pay under Scale A. This is a very serious disadvantage to Trowbridge grocers, whose profits are cut down to a minimum. Competitive firms in those neighbouring towns will have a great advantage over them through that difference in the scale of wage. At Melksham, for instance, only five miles from Trowbridge, there is a firm of wholesale grocers who do an enormous trade and employ a large number of assistants, porters, carters, etc., at their four establishments in Melksham, Devizes, Marlborough and Shaftesbury. They have them all round, and they are under a lower minimum. I do not want to labour that point too much, but it just shows how difficult it is. There wants to be more attention given to these areas and more elasticity.

5655. Wherever you draw the line you must have some difficulties, must you not?—I suppose so. That is why one advances these extreme case with a little diffidence, but they are felt very keenly indeed in these areas.

5656. *Lord Weir*: Surely that evidence is inconsistent with your previous evidence, that you generally paid over the minimum rates. By comparison those people appear to regard it as the standard.—In saying that we paid over the standard rate I had in my mind assistants and qualified men. On the other side, as regards junior wages that is where the difficulty presents itself most acutely. In those towns that I have mentioned probably they would not be paying over the suggested wage in those rural localities.

5657. In those rural districts the minimum is the standard?—Yes, probably.

5658. Then, of course, the juniors' and learners' rates are absolutely standard, and are in no sense a minimum for juniors; is that right?—Yes, so we understand it.

5659. Do you know anyone who, for example, pays the juniors more than the Trade Board rate?—No. I said that qualified and competent men were in receipt of better wages.

5660. Just to prevent misconception, I think the Trade Board has excluded apprentices from the scale now; is not that so?—Quite temporarily, we understood. That is quite a temporary matter.

5661. Do you mean that the period is limited by the decision of the Board?—No. The workers' side are trying to get it modified and thrown out altogether. We are very much pained at the hostility of the employees' side to apprenticeships at all. I think the hostility of the employees' side was one of the first things that alarmed us. That might arise because on the employees' side there are very few grocers' assistants—hardly any.

5662. *Mr. Poulton*: You mean on the Board?—On the Board. Trade Union officials, yes, but assistants who would know the value of a proper training for youths are not properly represented there, and the employees' side are distinctly hostile to apprentices in any form.

5663. Did they give any reasons why they were hostile?—I should not think they would like to give the reasons. One can only infer from their hostility generally.

5664. The trade has to be fed?—One reason given was that the employment of apprentices was simply a means of evading proper wages, which is a very gross and insulting suggestion to those of us who, for more years than we care to count, have been employing apprentices and turning them out, many of whom are now in very good business and in responsible positions.

5665. *Chairman*: Do you know whether this resolution against apprentices was carried by agreement, or whether it was done on a division?—I think it was on a division, the employers and Appointed Members against the employees. It is very significant that in that case we had the Appointed Members with the employers.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

5666. *Mr. Poulton*: If you had the Appointed Members with the employers how did they get excluded?—They might ultimately; we do not know; but that is the position now. It is a temporary arrangement.

5667. *Chairman*: I have the resolution now, and it is more limited than I thought. It runs in this way: "It was resolved (the representatives of workers dissenting) to exclude from the operation of the rates indentured apprentices under the age of 19 years whose indentures were entered into prior to the date on which the minimum rates become effective and provide for the effective instruction of the apprentices in the trade for a period of not less than three years"; so that it is limited to existing apprentices?—Yes.

5668. It does not provide for future apprentices being exempt?—No, and I think the attitude taken by the employers over that has been a great factor in startling us and making us afraid of the employees as represented on that Board. We asked who they are and what they are, and we found out that they are not men who are competent to judge of what the trade requires; they are trade union officials and men who take altogether too narrow a view of the possibilities of the trade and of the requirements of the trade.

Mr. Poulton: If I understood you rightly, Mr. Chairman, that does not exclude apprentices, it is only excluding the existing indentures.

Chairman: Yes, that is what the witness complains of—that it means that future apprentices must be paid the full Trade Board rate.

Mr. Poulton: Yes, but it does not exclude apprentices to the trade.

Chairman: It does not prevent apprentices to the trade.

Mr. Poulton: I understood the witness to put it the other way about.

Chairman: No, it does not exempt apprentices from the full Trade Board rate.

Mr. Poulton: That is another matter. I understood from Mr. Robson that it excluded apprentices, but as a matter of fact it only excludes existing indentures and prevents their being interfered with, whatever the rate of pay fixed by them may be.

5669. It does not exclude apprentices in the future, only they must pay the Trade Board rates, which the witness complains of. The rates are a different thing.

Chairman: That is the very point that we were discussing.

Witness: Quite so. Quite obviously you are not going to turn a raw lad loose in your business at 21s. 6d. per week.

5670. *Mrs. Lyttelton*: Practically it would mean no apprentices; that is what you mean?—That is so.

Mr. Poulton: You conveyed to my mind that the workers objected to apprentices, and they do not object. I want it to be clear that they do not object to apprentices. It is the employers who object to apprentices on that scale.

Mrs. Lyttelton: That is what Mr. Robson means.

5671. *Dame Adelaide Anderson*: I want to understand what is the real reason in objecting to paying an apprentice a minimum?—Because he cannot earn it.

5672. Then those scales for 16 to 17 years of age are fixed for people who already know the work?—We do not know what they are fixed for; that is our trouble. We are supposed to take in anyone without any knowledge at all, and turn them loose amongst our stock, and to endeavour to do our work without supervision and in a position to earn, whereas there must be a certain period during which they have to be taught their duties.

5673. *Mr. Poulton*: Were they not paid some wage before the Trade Board was established when they were apprenticed? Was not that named in their indentures?—10s. is what it is now; they start at 10s.

5674. *Dame Adelaide Anderson*: You feel that the rise is too great, having regard to the fact that you

are teaching them?—The cost is too great. If your contention is right, that they do not object to apprentices, our reply to that would be that we object to the pay which we would have to give the apprentices.

5675. *Mr. Poulton*: I can quite understand that. —But as a matter of fact they do object to apprentices in those set terms. They object to the whole system of apprenticeship to the grocery business. That is the attitude which the employees have taken up.

5676. *Chairman*: Now we will pass to District Committees. There are none, I think, in connection with the present Board?—No.

5677. Do you think that there should be such Committees?—I think the Act will be inoperative without them if it is to come in.

5678. What do you mean by that? I do not understand that?—I mean that there will be unemployment and disorganisation; there will be a hundred and one questions cropping up, and the Trade Board itself would be snowed under with petty details with which there is no machinery to deal. I have alluded to the wide scope of the business and its varying phases. I cannot conceive how it can be dealt with by one Central Board.

5679. I want to follow that out. The Central Board has fixed the rates for the whole country?—Yes.

5680. What are the petty details which you think would swamp the Board?—Subnormal workers, and then the impossibility of seaside resorts getting their work done, excepting with a big payment for overtime. Surely protests would come and instances would be given of a harsh operation of this business. Then, too, there would be representations from the employees' side that they were dismissed at the end of a season, and asking the Board to make some arrangement and to intervene on their behalf.

5681. How could the Board intervene?—They would be asked to intervene; and then there would be such anomalies as arise out of the division of areas; there would surely have to be some adjustment in the cases I have quoted, and that would be going on all over the country. I can imagine a very great deal of work coming back upon the Board before this was in operation.

5682. What you have in mind is applications to the Board to revise these rates?—Yes, to revise rates, areas and conditions.

5683. Therefore you contemplate District Committees having power to revise the rates subject, I suppose, to the approval of the Board?—That is so.

5684. Of course, there is also the duty of dealing with applications for exemption?—Yes.

5685. Which I daresay you would say would be best dealt with locally?—Yes.

5686. Now you pass to the question of the Appointed Members. What is the view of your Federation about those?—We think that the Board should consist of equal numbers of employers and workers and an independent Chairman. Appointed Members, unless they are familiar with the trade, cannot be helpful. I do not think I can add anything useful to paragraph 13 of my statement. It has been very carefully considered.

5687. You say that these minimum rates tend to become standard rates?—Yes.

5688. Then you say something about hours?—The experience of those who have tried to work the 48 hours has been quite unfortunate. I have a case under my hand here where opening at half-past eight in the morning was tried, and adjusting the hours of the various places accordingly, but the later hour—the half-hour—was found to be exceedingly inconvenient, and that would apply in any industrial districts. If the time were taken off at the other end of the day it would apply even more when the workers got home.

5689. What is the normal week in the grocery; is there any normal week?—54 to 58 hours.

13 December, 1921.]

Alderman HENRY ROBSON, J.P.

[Continued.]

5690. You suggest 52 as a fair arrangement?—I suggest 52. We gave a great deal of consideration to it. We are working 51½ to 52 hours, and many of my friends are working the same, and that is found to be possible.

5691. Then in paragraph 15 you speak of the need for delay in confirming the present proposals?—We really hoped that that would have come about automatically.

5692. *Lord Weir*: There is one question that I want to ask about hours. We had evidence in connection, I think, with the grocery trade that a very considerable section of the distributive trade do not object to 48 hours. The Co-operative evidence, I think, was to that effect. They did not raise the question of restriction of service such as you have indicated?—If it was from the Co-operative it would hardly be a fair criterion for other trades. The co-operator must go to his store just when the management says that it must be opened. The ordinary trader is in no such position as that: he must consider very carefully, as far as ever he can in reason, the requirements of his locality and of his customers.

5693. *Mr. Poulton*: When you speak of 52 hours as against 48 hours, do you mean that the employees should work 52 hours or that there should be such an arrangement of time that an employee must work 48 hours but that the business might keep open 52 hours; that is to say, that the hours during which they serve behind the counter should be so arranged that their time should not exceed 48 hours, while the business might be open 52 hours?—No, we mean that the hours of business should be 52.

5694. And that the employees should be there 52 hours?—Yes, with the employees there.

5695. *Dame Adelaide Anderson*: That is to say, that overtime should commence after 52 hours instead of after 48 hours?—Yes.

5696. Was that the arrangement before the Trade Board proposal was made?—I do not think overtime was customary. That was met, I think, by the Christmas present. It is at Christmas time really that overtime takes place, and I believe at seaside towns there is generally a recognition—in fact, I know there is a recognition—of any extra time

(The Witness withdrew.)

Mr. FRANK IMPEY, called and examined.

The Witness handed in the following statement as his evidence in chief:—

I am a Chartered Accountant carrying on business at 37, Newhall Street, Birmingham, having been in practice since 1885, and give evidence on behalf of the Pin, Hook and Eye and Snap Fastener Employers' Association.

I have had considerable experience in labour questions.

For some five years, ending in 1900, I was Secretary to the Bedstead Manufacturers' Association and Joint Secretary to the Bedstead Trade Wages Board.

Since 1908, I have been Secretary to the Warwickshire Colliery Owners' Association, an employers' organisation dealing with labour questions in the Warwickshire Coalfield, and since June, 1912, have been one of the Joint Secretaries to the Minimum Wage Board in that Coalfield.

During the war I was one of the Joint Secretaries acting for the Employers on a Board constituted under the guidance of Lord (then Sir George) Askrwith, in the Birmingham and Walsall Harness, Saddlery and Military Accoutrements Industry.

Some months ago I was appointed Secretary to the Pin, Hook and Eye and Snap Fastener Employers' Association. The rates for labour employed by members of this Association are fixed by the Pin, Hook and Eye and Snap Fastener Trade Board, of which I have been appointed a member.

The members are makers of pins, safety pins, hair pins, hooks and eyes, and snap fasteners. There are 17 members, representing about 85 per cent. of the output and employing about the same proportion of the labour in the whole trade.

worked, but there is no keeping time and paying so many hours of overtime in the trade that I know of.

5697. That recognition by a *donneur* or an extra gift would be in no way compulsory?—No.

5698. I mean, there would be a large number of traders who would not recognise it?—Possibly; but it has been give and take in our business: "You have an easy time now; you will have to stick in then," or, "You had a day off on such a day, and you must not grumble if you have a few hours to work over now." That is constantly happening. Then, too, I am reminded that we have always paid for holidays, and that compensates, or should compensate, for overtime. Ten days to a fortnight, I think, is customary. Perhaps it may be only a week, in some case, but I do not know of those cases; and full pay is given.

5699. *Lord Weir*: Is it not the case that all those points which you have been describing to us this morning do not represent actual experience under the Trade Board, because the rates have never operated yet, and none of these things have actually come into operation?—No, but we say they may.

5700. You are only telling us of what the effect will be.—Quite so; that is agreed. We are now working under those happy conditions which we have tried to sketch here, and we are anxious that they should not be interfered with, and we fear that they will be interfered with, for this reason and the other, as set out.

5701. *Mr. MacCallum Scott*: A good many of the points which you have made, I think, have been points not against the principle or theory of setting up Trade Boards, but against the manner in which the Board has operated in this case?—We have tried to make out that a Board for our trade was not necessary, and if it is considered necessary we have indicated the terms in which we think it should be modified to operate better.

5702. But I think your chief objection has been to the scale which it has fixed for young persons?—And the attempt to rule out apprentices and to limit the hours to 48, and the difficulties of the area.

Chairman: We are much obliged to you for your evidence.

The Association is of opinion that a Trade Board cannot benefit its members as manufacturers, and in the long run will be detrimental to the workers. To-day by forcing up wages, it is rendering it impossible to meet foreign competition, and is so lessening the volume of employment for the workers.

On November 18th last the Association passed the following resolution:—

"That in the opinion of this meeting the employers could satisfactorily negotiate labour questions with their employees without the intervention of any Trade Board."

They regard a Trade Board in their industry as an unnecessary evil. If, however, it is to continue, its construction should be amended, and the procedure and administrative arrangements of all Boards be speeded up. The scope of each Board should be determined by it and not by the Ministry of Labour.

I hold that most Trade Boards have gone much beyond the limits intended by Parliament.

The Trade Boards Act, 1918, Section 8, Sub-section (i), which cancelled Section 4, Sub-section (i) of the Act of 1909, is mandatory only as to fixing "a minimum rate of wages for time work" referred to as "a general minimum time rate."

Both Acts, however, are permissive not mandatory as to piece rates, and it is clear that the Act of 1919 is permissive only as to time rates for anything beyond "a general minimum time rate," i.e., a minimum rate below which no worker may be employed.

The trades which I represent agree, however, that a general minimum time rate should be fixed for adult males, and adult females, with graded scales

13 December, 1921.]

MR. FRANK IMPEY.

[Continued.]

for youths and girls, and that the adult age should be 24 for both men and women.

Legislation constituting Trade Boards was introduced on the ground that in trades where labour was not organised, it was desirable to have such minimum rates as would secure that unskilled workers could earn a reasonable minimum or subsistence wage.

It is undesirable to extend the scope of a Trade Board beyond this—certainly not farther than to fix time rates for a few of the principal classes of workers.

As to piece rates, these should not be fixed by Trade Boards at all.

Here I would draw attention to the difference between an industry which is merely engaged in the distribution of produce in the home market, or is producing for use in the home market only, as contrasted with industries dependent for their customers largely upon an export trade. The Pin, Safety Pin, Hair Pin, Hook and Eye and Snap Fastener trades come under this category, as some 50 per cent. of their output is directly or indirectly for export, whilst in their home market they are meeting competition from Czechoslovakia and Germany at prices which, in many cases, do not approximately exceed the cost of the material and the wages of production in this country.

Already the rates fixed during the trade boom following the war, when costs of production were receiving scant consideration, and are as yet only slightly reduced, are killing the export trade, and causing it difficult to compete with the foreigner in the home market. This intensifies unemployment.

Returning to the question of piece-rates, there are obvious reasons why these should not be fixed by Trade Boards. Their interference with piece-rates should end and with securing that the rates paid in any particular works will yield to a worker of average skill, ability and energy the agreed time-rate for piece-work.

My grounds for this argument are that conditions under which piece-work is performed vary so much that a rate which in one place, works or factory will yield a good week's aggregate earnings, will in another merely bring the worker a pittance. So much depends upon the way the work is given out, and on the tools and facilities provided.

My earliest experience in the fixing of piece prices was in harvest work in Essex. A price per acre was fixed for cutting, tying up, setting up, carting and stacking. Reaping machines, wagons, horses and other implements were found by the employer. Whether the machines were in good order, the horses up to their work, supply of wagons plentiful and all tackle put into thoroughly sound condition before the commencement of the harvest, so as to avoid breakdowns or delay, made all the difference in the number of acres cleared by a gang per week, or in the harvest month, and so to the gross earnings per man in each gang. Where the conditions named were present, a lower rate per acre of corn harvested yielded a better gross earning per man than where the machinery and tackle were ill found. An all-round price per acre would be an injustice to the up-to-date farmer.

Take another illustration: In the Harness, Saddlery and Military Accoutrements industry it was found that the method of giving out the work, the arrangements in the works and the machinery furnished made all the difference. Where in a first-class works it was possible to keep the hands (either men or women) working week in and week out on one article, it was found that they became more dexterous, and by not losing time in changing over from one job to another, the quantity of articles got through per week, and consequently their piece-work earnings, were entirely different from and very much greater than those in a works engaged on exactly the same lines of goods but in small and irregular quantities, where the appliances were poor, and, in the case of machine sewing, old fashioned and slow running. Therefore, rates which on one works were entirely satisfactory, in others were constantly the cause of complaint, the parties stating that they did not yield the agreed time-rates.

The same line of argument is equally applicable in the Pin, Hook and Eye and Snap Fastener industries.

There is a very great variation in the different classes of work given out, the method and quantity in which they are issued and the general arrangements and facilities of the works. Some are large, modern works, with good overhead lighting—a most important factor when handling small articles such as pins, hooks and eyes, hair pins, etc., with well arranged tables and sitting accommodation for carding and putting up work. Other works are much inferior in their lighting arrangements and general facilities for getting work done, whilst the work may be given out in small quantities, which means loss of time in changing from one operation to another.

In the course of the operations of the Board, Mr. Counsel, an Inspector from the Ministry of Labour, has investigated operations in certain works, and reported to the Board on points which further illustrate the argument against piece-work prices.

With regard to carding snap fasteners, some firms give out boards for the use of the workers and some do not, whilst it is quite easy for the boards to be more or less convenient for use. His report was that the provision of convenient and up-to-date boards greatly facilitated the output.

He also reported that waven cards carefully and systematically pierced were given out for safety pin carding, the operation was immensely facilitated.

Many other examples could be cited, but these suffice to show that in well organised works advantages were given to the worker, which render his or her work easy, and so facilitate the quantity of work which can be performed in a given time.

Where an employer goes to the trouble and expense of devising these time-saving appliances and organising methods of expediting output, he naturally resents having immediately to discover to his competitors advantages which he has designed at considerable trouble and cost.

The Association which I represent is therefore strongly opposed to the fixing of piece-rates, as tending to handicap progressive manufacturers, who spend money on up-to-date works, appliances and facilities.

The Employers' representatives on the Pin, Hook and Eye and Snap Fastener Trade Board are reluctantly forced to the conclusion that the appointed members of the Board approach the wage question from an economic standpoint, or from the point of view of the capacity of the trade to pay a given wage, but from the standard of living which they think the workers in the trade should enjoy, utterly irrespective of whether or not the earnings of the industry admit of the payment of such wage.

It is recognised that a Chairman who brings a legally trained mind to bear upon the questions coming before him and decides matters from the evidence adduced is perhaps more likely to give satisfaction than a commercial man, who may come with preconceived ideas, but it is strongly felt that if additional appointed members of the Board are necessary beyond the Chairman, they should be persons who can act in the capacity of assessors, which predicates that they should have had commercial and business training, rather than ladies and gentlemen interested in social or welfare work, or only versed in the theoretical side of commercial economics.

As to the Employers' representatives, these should be persons engaged in the trade, with a right to nominate an official of their trade organisation if it represents members doing, say, 50 per cent. of the output of the trade.

The Workers' representatives should in the main be male or female operatives actually working in the trade, but, as in the case of the employers, with the right to appoint one, or if there is more than one section of workers, say, two officials of trade unions representing not less than 50 per cent. of any section of the workers.

The last, but not the least, important weakness of the present Trade Board system is its slow and cumbersome procedure. Experience shows that from the time a proposal to alter wages is made to the

13 December, 1921.]

Mr. FRANK IMPEY.

[Continued.]

time when it becomes effective in operation, the minimum period is over three months, even when there has been mutual agreement between the two parties to the Board. The whole method of procedure must be speeded up. Particularly where a decision to alter prices is agreed to by both the Employers' and Workers' representatives without the vote of the appointed members, there should be no delay in the decision becoming operative.

In connection with speeding up, it is submitted that the period of 40 days referred to in paragraph 1 of the First Schedule to the Act of 1918, being the time fixed for the publication of notice of intention by the Ministry of Labour to make an Order, is unnecessarily long, as the parties affected—both employers and workers—will before the proposal has been submitted to the Minister have had ample time to consider and discuss it and to confer with those whom they represent.

The Association draws attention to Section 8 of the Act of 1918 where an amendment is obviously necessary in the interests of both the employer and the worker. This lays it down that a worker shall be entitled to wages whenever he is upon the works of his employer, unless such employer proves that "he was so present without the employer's consent, expressed or implied." It is suggested that the word "consent" should be altered to read "request." In times of bad trade particularly, both dayworkers and pieceworkers may present themselves for work in the morning, and there may be no orders immediately awaiting execution, but the employer can see that it is possible for such to be provided during the day and the worker wishes to wait to do the work when it is ready, which is obviously to his advantage. As the clause stands the employer may decline to consent to the worker remaining "present on the premises" as he would become liable for payment, whereas it may be to the worker's advantage to be able to stop in a dry and comfortable place awaiting the work rather than to return home, wait about in the street, or go to the nearest public house.

To sum up, the view of the Pin, Hook and Eye and Snap Fastener Employers' Association is that the operation of the Trade Board Acts should be limited to what they hold to have been the original intention of Parliament, viz., that of fixing a "general minimum time rate," that they should not fix piece rates, but every works should fix its own, subject to such piece rates yielding the agreed minimum day rate to a worker of average skill, ability and energy. There should be a general speeding up of the operations of Trade Boards and attention to the constitution of the Boards, as mentioned, together with the suggested amendment to Section 8 of the Act of 1918.

5703. *Chairman:* You are a chartered accountant carrying on business at 37, Newhall Street, Birmingham?—Yes.

5704. You have been in practice since 1885?—Yes.

5705. And you give evidence on behalf of the Pin, Hook and Eye and Snap Fastener Employers' Association?—That is so.

5706. You have had considerable experience in labour questions?—I think I have.

5707. The members of your Federation, I think, are only 17 in number?—That is so.

5708. But they represent about 75 per cent. of the output?—Yes.

5709. And employ about 75 per cent. of the labour in that trade?—I think they would.

5710. I think your Association has passed a Resolution which is set out in your Statement, "that in the opinion of this meeting the employers can satisfactorily negotiate labour questions with their employees without the intervention of any Trade Board"?—That is so.

5711. The Board was set up in 1920, I think?—Yes.

5712. And they have fixed minimum rates of wages?—They have fixed minimum rates of time wages and some few piece-rates.

5713. You say that the Trade Boards have gone beyond the limits intended by Parliament. What is your meaning there?—We think the intention was to fix a minimum time-rate below which no one in the

industry should be paid, and that it was not to fix a rate for various grades of employees right throughout the works.

5714. Do you mean that minimum time-rates should be fixed according to some criterion, and if so, what criterion?—There should be a minimum rate for the average worker in the trade of no particular skill, and below that rate nobody should be paid according to the operations of the Board.

5715. Upon what basis would you fix a minimum rate for the average worker?—It must be a rate upon which they could fairly and reasonably subsist.

5716. *Lord Weir:* You said that in each trade there should be a minimum rate. Why do you say "for each trade"? Why do you differentiate each trade?—I am only speaking for this particular trade. I am referring to the particular trade with which we are dealing.

5717. You have not in view a national minimum wage?—I have not considered that, but I do not see why a national minimum should not be fixed for the average unskilled worker. By average worker I mean a worker of reasonable strength and physical and mental capacity.

5718. You would not say for the least efficient unskilled worker, would you?—I do not think I should say for the least efficient, because the least efficient would include those that are not up to the average. I think you must have it on the average.

5719. They have got to live.

Mr. MacCallum Scott: But if it were fixed for the average the least efficient would have to be paid it.

5720. *Chairman:* You can make a different scale, I suppose, for women and differences for children?—Yes, I have said that in my proof. We recognise that that practically must be done.

5721. Making the adult age 21?—Making the adult age 21.

5722. What do you say as to piece-rates?—My view is that piece-rates should not be fixed by the Trade Boards at all. It is so difficult to fix a piece-rate which will apply fairly all round in any industry owing to the different conditions in which the work is carried on and the quantities in which it is given out, and the appliances that are furnished by different manufacturers.

5723. *Mr. Poulton:* Could not they fix a minimum piece-rate there as well as a minimum time-rate and allow for the differences in the work, which I see you mention in your statement?—I think the preferable way is to fix what is called a piece time-rate and then let each works fix its actual piece-rate, but in such a way that it must be possible for the workers to earn the time-rate which is laid down. By doing that, you give the employer who provides good facilities, some advantage for the capital expenditure to which he has gone in providing the facilities and the appliances and machinery.

5724. *Lord Weir:* If you fix the time rate, even a piecework time rate, you are not compelled to fix the piecework prices?—No, that is what I object to.

5725. You are not compelled to do it?—You are not compelled to do it, but I think there is a tendency for Boards to do it, and that is what we object to.

5726. It is left to the Board to do it or not to do it?—It is left to the Board, but my view is that it is not a wise thing to leave it to the Board.

5727. You mean you would prohibit the Board from fixing piecework prices?—On this particular Board we do not want piecework prices fixed; we want to leave it to each works to arrange its own piecework prices, but so that those piecework prices must enable a worker of average skill and ability and strength to earn the piece time rate.

5728. Why do you not?—We are quite content to leave it at that, but we do not want to give the Board power to fix the actual piece rates.

5729. The Board is not compelled to fix those piece rates?—No, but it may fix them. In the judgment of the employers they should not be fixed. It is quite possible that the Board may fix them in spite of our view.

5730. *Mr. Poulton:* You want it to be positive that they shall not have the power to fix them, do you

13 December, 1921.]

MR. FRANK IMPEY.

[Continued.]

not?—They certainly should not have the power to fix them, except, we will say, with the employers' consent. If it is a mutual arrangement, I do not see any objection to it, but it should not be in the hands of the Board to fix full piece rates in each works.

5731. *Mrs. Lyttelton*: Except as regards a minimum. You would like a minimum piece rate?—No, a day rate—a time rate.

5732. Applied to a piece rate?—And the employer must be able to prove that the piece rates which he fixes with the facilities which he gives will enable the worker to earn that time rate.

5733. That is what I meant, but that is as far as a minimum is concerned; you do not want any further fixing beyond that?

5734. *Chairman*: Is it not rather difficult to judge whether a piece rate will yield to the ordinary worker the minimum time rate?—The workers in any given works will very soon know, and examination of their books will show what is being done.

5735. Is it always easy to know whether a piece rate yields to the ordinary worker the minimum time rate?—Yes, in any works the pieceworkers' books will show what they have earned in a week.

5736. On piecework?—On piecework.

5737. What about home workers, who may take, of course, only a limited amount of piecework?—As to home workers, it is a very difficult question, but I do not see any other course than to pay the home workers the same piecework rate which happens to be paid inside the works, because it is quite obvious that if anything higher is fixed for the home worker there will be no home work given out.

5738. You would pay the home worker the same piece rate as is paid in the works, provided that that piece rate is sufficient to enable the people in the works to earn the full time rate?—That is so.

5739. *Mr. Poulton*: Upon that question of the time rate, do you consider that the piecework rates should be fixed to enable the worker on piecework to earn only the time rate?—It is usually styled the piece time rate.

5740. I know, but you may also know that usually when piecework is the method the piecework basis is placed upon a higher rate of output than the time rate is, so as to give the worker the benefit of his ability, and in some trades as against their day rate they base it upon 20 per cent. higher?—We have recognised that there should be some difference.

5741. But you say: only the agreed time rates?—I will say the piece time rates. There is an expression "time rate" and there is an expression "piece time rate."

Mrs. Lyttelton: The Witness wants a minimum for piecework and a minimum for timework.

Mr. Poulton: In many trades the minimum for piecework is 25 per cent. above the time rate. I want to know whether he wants to adjust the process in that way.

5742. *Lord Weir*: It is laid down; there is a difference?—We agree that there should be a differential rate, a purely time rate and (I think the usual term is) a piece time rate; and that is that the employer arranging piecework in his works must be able to demonstrate that it is yielding to the worker the piece time rate agreed upon.

5743. *Chairman*: Is 20 per cent. about the usual difference?—I think it is too liberal.

5744. What is the usual difference; are you able to say?—Before the Trade Board was in operation it was generally looked upon as about 15 per cent. over.

5745. In connection with piecework rates you draw attention to the question of exports?—Yes, I think the question does wear rather a different complexion in a trade which is merely acting as a distributive one, or is only manufacturing goods which are used entirely in the home market. They do not have to contend with the same difficulties as a trade like the one which I am representing has to contend with, where, in round figures, 50 per cent. of their production is exported. At the moment we are beset with competition from all quarters, not only in neutral markets in the export business, but Germany and Czechoslovakia are sending snap fasteners, safety pins and hooks and eyes into this country at prices with which

the manufacturers here cannot at the moment compete at all. The prices at which the goods are coming here are in some cases less than the cost of the material plus the actual wages of production without overhead charges or profit would come to in this country. I mentioned the limit that I would put on to piecework rates here. "The interference of the Board with piece rates should end with securing that the rates paid in any particular works will yield to a worker of average skill, ability and energy the agreed time rate for piecework." That is where we think the interference of the Board should end in the matter of piece rates.

5746. You do not agree with the Select Committee on Home Work, which in 1908 reported in favour of allowing the Trade Boards to fix piece rates?—For home work I can see that some arrangement about piecework is necessary, but that is a very limited portion of the whole amount paid in wages in this industry.

5747. *Lord Weir*: As far as I can see it is only for home workers that any piece rates are fixed; there are no piece rates fixed by the Board for factory workers?—But there have been suggestions that there should be, and it is the ripening of those suggestions into actual results that we are fearing.

5748. I am very ignorant of this kind of trade, but surely it is conceivable that over the trade there would be very many different methods and ways of carding safety pins?—Very many different methods.

5749. You could not possibly fix a piecework price to cover all?—I do not think you could, and I do not think you ought to attempt to do it, and that is why I am saying that the interference of the Trade Board with piece rates should end with seeing that the rates fixed by the employers in any individual works will yield the piece time rate.

5750. So that if you fix rigidly piecework prices for operations you are tending to stop progress in developing better methods?—I entirely agree with you, and that is why I am protesting against fixing them.

5751. You have to assume, I presume, as regards homeworkers that the facilities are equal at home where these operations are carried out?—I am not sure that the facilities would be equal. I think one has to admit that a homeworker is bound to be under certain disadvantages. It is an advantage to a homeworker to be able to get work. People who do the homework in this industry are married women who cannot leave their families—perhaps they may be widows—and they may have worked in the trade in their younger years, and they are very glad to supplement their means of living by taking work to do at home; but it is quite obvious that in a given time they cannot expect to earn the same amount of money that a worker inside a works would earn, where they would not be subject to interruption, and so on. If it is a married woman, probably in the middle of what is her afternoon for this work she has to get her husband's tea, and so forth.

5752. *Dame Adelaide Anderson*: Is there any specific part of the carding of safety pins, for instance, which is done in the factory?—To-day the bulk of it, I should think—practically all of it—is done inside the factory.

5753. Then is the work given out extra special work, or is it part of this same work?—The time when the out-work is given out is when there is a big push in trade.

5754. *Mrs. Lyttelton*: And it is the carding that they do out, is it?—It is the carding of snap fasteners and hooks and eyes and safety pins.

5755. Used a great deal more to be done at home than is now done? Has not the tendency been to put it more into the factory?—I think that would be so, and I think the reason is pretty obvious: that the goods are apt to get soiled, and there is a certain amount of loss outside.

5756. Though you pay less wages outside, on the whole it pays better to have the work done in the factory?—It is more satisfactory. That is the growing tendency, I think; and there are advantages about having out-work done; but it only occurs in times of good trade.

13 December, 1921.]

Mr. FRANK IMPEY.

[Continued.]

5757. In times of extra push?—Yes.

5758. *Dame Adelaide Anderson*: Can you give any kind of idea how many out-workers there are in this industry?—At the present moment they are almost a negligible quantity, because trade is so very quiet. A little while ago the average number of hours worked per week was well under 30, so that the number of out-workers employed to-day is at a minimum.

5759. *Mrs. Lyttelton*: Is it true that a great many children are employed on homework?—I suppose a woman who took out homework, if she had children, would get the children to help. Of course, the carding of safety pins is very light work.

5760. Yes, but all the same it is a trade which in former days was tremendously sweated; I am referring to the payment of homeworkers for carding. —I think probably you are right, that years ago it was a badly-paid trade.

5761. *Lord Weir*: Surely the employer has some recourse. Coming back to piece-work prices, supposing you get out a better method of doing something which involves your wanting to pay a lower piecework price, you can go to the Board and get that lower price, can you not?—No, because though the Board does not actually fix the piecework price in each works, it will be no concern of the Board what facilities are offered, except that if the workers in any particular works call in question their ability to earn, under the piecework price which has been fixed in their particular works, the minimum piece rate, then the matter must be enquired into. I have mentioned in my proof an illustration of a case where an inspector of the Ministry of Health reported that the introduction of certain facilities very greatly increased the number of grosses of snap fasteners that could be carded in an hour. The effect of that would be that a works which afforded those facilities would, in our opinion, be acting quite reasonably and quite fairly in paying a lower rate per gross of fasteners carded, because by reason of those additional facilities the worker would card a greater number of grosses in a given time, and would earn more money.

5762. Of course, that is provided for quite definitely in the Act of 1909, which says in Section 4, subsection 5: "A Trade Board shall on the application of any employer to fix a special minimum piece-rate to apply as respects the persons employed by him." You can get a special rate, can you not?—We do not want to be under an obligation to apply for a special rate.

5763. You mean you want to vary the rate yourselves?—We want to leave it to the employer to fix the rate subject to the rate fixed complying with the condition that the worker shall be able to earn his time rate.

5764. *Mrs. Lyttelton*: Is that decision to be in the hands of the Trade Board, or in the hands of the employer?—I think it must be either in the hands of the Trade Board or of an inspector of the Ministry of Health, if there is a dispute.

5765. *Chairman*: Of what decision are you speaking?—Whether a piece-rate fixed in a works admits of a worker earning the piece time rate.

5766. *Mr. Poulton*: But if you want a piece rate fixed up irrespective of the Board, I presume that that would be a rate fixed not by the employer but by agreement?—The employer and the workers in the factory would agree on a piecework price to begin with, and if later the workers contended that the rate fixed did not give them a reasonable opportunity of earning the piece time rate, they would be in a position to complain.

5767. Do you want them to be in a position to complain to the Department although the Department did not fix the rate?—I think they might complain to the Board, but if an investigation were held under the present arrangement an inspector would visit the works and see whether the rate did yield the time rate.

5768. I know, but you do not want it to come under the Board, you say?—I think the Board must have some right to see that the piece rates actually fixed will enable the worker to earn the time rate.

5769. *Lord Weir*: Surely if a Central Board in London were called on to fix standardised piecework prices for a particular operation, it could not do that unless it visited every factory and studied every man's different way of carrying out that operation?—I entirely agree, and that is why we think that the Board should not fix the piece rate.

5770. Surely it would not attempt such a stupid thing?—I do not know about that.

Chairman: Would there have been many piece-rates fixed before the Act?

Lord Weir: Yes, for very standardised processes.

Chairman: They are fixed under this Board?

Lord Weir: For homework.

Witness: Our opinion is that the Boards as a rule are showing a tendency to go into a very great deal too much detail, and in so doing they will presently make the cost of carrying on the Boards and the delay in getting effect given to their decisions so great that the Boards will become unworkable. That is what we fear.

5771. *Mrs. Lyttelton*: Might I ask whether you do not think that if there were only a minimum fixed, considering that it is an unorganized set of employees they would never tend to get much more than that minimum even though their piecework might be very good?—I do not think there is much danger of that. I think I said in my printed evidence that we should prefer one minimum rate fixed, but it might be proved desirable to fix one or two rates for different classes of people.

5772. But before there was any Trade Board that resulted in sweating; that is admitted. Is it not possible that if you only have a minimum rate it will result in nothing more ever being paid than that minimum rate?—I do not think it could be said of this particular trade that as far as the workers in the factories were concerned it was what could fairly be termed a sweated industry.

5773. I was thinking of the home worker at that moment; I think there is no dispute there?—I think as far as the home workers are concerned they are fast disappearing. The larger works have it more advantageous on the whole to carrying the work on in the works, and a great many of them have fitted up workshops for these girls to work in. I went through one the other day, and if they had been doing the work in one's own drawing room they could not be sitting in a cleaner place, or a warmer or more comfortable or better-lighted place. It is a very nice trade for young people to work in, and I think that is one of the reasons why labour as a rule is not difficult to find in the trade. There is very little damage to the clothing.

5774. *Dame Adelaide Anderson*: It is not a very skilled occupation for those workers?—It is skilled in this way, that they get dexterous with their fingers in carding. That is where the skill comes in.

5775. *Mrs. Lyttelton*: A good worker can earn much more on piece-work, of course?—Yes.

5776. *Chairman*: Will you tell me just why it is that a piecework basis time rate is fixed as well as the ordinary minimum time rate?—On the ground of meeting a general recognition which has grown up in industrial circles that a worker should be able to earn rather more on piecework than on day work. Because he is supposed to put more energy into it. I do not know that it is an argument with which personally I agree, because I think that if a person undertakes to do certain work he should give of his best in working, whether he is working piecework or day work; but it has generally been recognised, and it is a claim which is always put forward by Trade Unions, and I think has now become generally recognised.

5777. *Chairman*: I follow that: As a matter of history I know it is so, but if the object of the Trade Board is to fix a subsistence rate only, then would there be any justification for fixing a higher piecework time rate?—From that point of view, I should say, no.

13 December, 1921.]

Mr. FRANK IMPEY.

[Continued.]

5778. It is really based on the view that nobody ought to give piecework except with a view to getting more work out of the worker; that is what it comes to?—No, it is an advantage to the employer. The more work that an individual workman or workwoman can do in a week, the more it is to the employer's advantage, because with the same floor space and the same appliances his output in the week will be greater, and in order to get the greater output he need not increase his accommodation.

5779. I understand it quite well; but I was trying to reconcile it with my view of the minimum in the Act; really this system of piecework time rate is based on the profit to the employer and not on the cost of living to the man, is it not?—Our argument, of course, is that it is impossible to fix a rate of wages in any trade which is greater than that particular trade at the time being is earning. That is the difficulty we are up against to-day. I think that if one could take the trade results of various firms in this industry for the last three months, it would be found that labour is being paid absolutely out of capital and not out of any profits that are being made.

5780. Yes, but in order to prevent what was called sweating, I dare say you will agree that you must fix a rate at some level sufficient to keep the workman alive?—I think, and I should hope, it would be something more.

5781. One hopes that it will be something much more, but at least it must be that?—It must be that, yes.

5782. Even though that wage may not show a profit to the employer?—Yes, it is obvious that that must be so.

5783. Then how do you bring in the question of profit to the employer?—Well, the question of profit to the employer comes in in this way, that if for very long the employer must go on paying a greater wage than the industry is earning, he will have to give it up.

5784. Of course; but is not the whole basis of legislation this, that if a man really cannot pay a wage that will keep the workman alive he had better give it up?—Yes.

5785. We have the rest of your statement. As to the Appointed Members you think that they should be assessors rather than members of the Board?—Well, I very much doubt whether there is the necessity for Appointed Members other than the Chairman; but if there are to be other Appointed Members it seems to me that they should be persons who are capable of giving advice on commercial questions that will come before the Board. I will try and give you some idea by an illustration. I was engaged some six months ago in an arbitration in the coal trade. We had a very able man as the Arbitrator, and he said before commencing the proceedings that a good many technical questions connected with the trade would crop up and he would like each side to name somebody who might sit with him and with whom he could consult on practical questions, as assessors. I think if there are to be Appointed Members other than the Chairman they should be people of that character.

5786. Mr. Poulton: In a similar way as in Munitions Courts?—Yes.

5787. Chairman: Or the Court of Admiralty, where they bring in an admiral or a captain to advise the President?—Yes.

5788. You would not object in trades where women are very much employed to having a woman as an assessor?—No, provided that the woman was somebody connected with the trade, not some person who was merely interested in social well-being generally. I do not think that for this particular purpose

anyone sitting in the capacity of an assessor can render any very valuable service unless he or she has some knowledge of actual work in the trade.

5789. Then as to the representatives, you think that they should be as a rule persons engaged in the trade?—Yes. On the operative side we think there is far too great a tendency for the representatives to be officials of trade unions and not persons actually working in the trade. I think on this Board there are three trade union officials on the operatives' side, and there is one man who is an actual worker in the trade and possibly three women. I think the proportion of trade union officials is too great.

5790. Mr. Poulton: Do you think that they have a detrimental effect, or what effect do you think they have had that you should object to them?—Unless they are people who have worked in the trade they do not know what the conditions inside a factory are, because they cannot form a reasonable opinion as to what is a reasonable proposal on any particular point. They have got to rely on somebody else.

5791. But is not that their business, as a matter of fact, to find that out, just as it is a solicitor's business to find out what is his client's case?—Yes; I have no objection whatever to having one, or if there are two sections of people, two trade union officials, but I should like to avoid the tendency to make anything like the majority of the side trade union officials.

5792. Chairman: Then as to speeding-up, I think we may take what you have written here as sufficient; we have heard so much about that—Yes. That is most important. That is really merely a matter of adjusting the machinery.

5793. You are speaking there, I suppose, of the machinery for fixing and varying the rates?—Yes, the time in which notice is required to be given.

5794. Then you draw attention to Section 8 of the Act; that is the waiting clause, is it not?—That is the waiting clause in the Act of 1918, and a day rate has to be employed unless the employer is in a position to prove that the workman was present without the employer's consent, expressed or implied. Now, very often the workman wishes to stop; it is to his convenience to stop.

5795. And the employer may say: "Well, I cannot give you work, but you may wait here if you like"?—Yes; very often, especially in times of slack trade, you may not have work perhaps in the morning, and during the day there is more work that comes through, in the hook and eye trade, for instance, work that has to be janned; they come through and have to be carded, and so on. The worker stops till the afternoon, and he can do half a day's work. The suggestion is, of course, that the wording of the clause should be rather turned round. I say in my Statement on page 5 that the Section "lays it down that a worker shall be entitled to wages whenever he is upon the works of his employer, unless such employer proves that 'he was so present without the employer's consent, expressed or implied.' It is suggested that the word 'consent' should be altered to read 'request'." If the employer requests a man to stop, then when he is waiting for either day work or piecework it is obvious that he ought to be paid, but if he is only there waiting for his own convenience, I do not think he should be entitled to wages. Very often it is to the man's convenience to stop at the works; he does not want to walk home in the wet; he does not want to walk about in the wet, and it is very undesirable that he should of necessity go outside and go into a public-house and spend some money so that he can sit in a dry place.

(Adjourned for a short time.)

Mr. J. J. STARK, called and examined.

The Witness handed in the following statement:—

(a) Appointed Members.—The Chairman of the Board should have legal or judicial training; the

Deputy Chairman should have industrial experience; and the third member should—as is the case now—be a woman, where, in the trade concerned, a large number of women are employed.

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

(b) At least 75 per cent. of the representatives on each side should be actually engaged in the industry.

(c) It would be very helpful to have some definition as to the meaning of the word "minimum" as applied to wages.

Our experience is that the employers argue from the point of view of the least skilled worker in the district in which the cost of living is lowest, whereas the workers' side, being mainly trade union officials, argue from the facts as they know them in the industrial centres.

The result is that very often so wide a difference is disclosed that the Appointed Members are liable to vote for something midway between the extremes; consequently, something more than a national minimum is decided upon.

This we believe to be one of the reasons why the rates have tended to be nearer standards than minima.

(d) It ought not to be necessary to seek the permission of the Ministry of Labour to issue fresh proposals at any time. The Trade Board, being representative of the industry concerned, ought to be in a position to issue fresh proposals when necessary.

When the two sides of the Board have agreed on a new rate the objection period should be reduced from two months to one month.

When at the expiration of the objection period, whether two months or one, no serious objections have been raised, the new rate should be made operative at the earliest possible date, having regard to the printing and issuing of the notices to the employers.

If in the opinion of the Board the objections received render it necessary and advisable to make certain alterations in the proposals, it ought to be possible to incorporate them in the Order without issuing a fresh set of proposals.

(e) It should be obligatory on the Ministry of Labour to publish various Orders, and even proposals to establish new Boards, in the trade papers connected with the industry concerned.

(f) In the event of an alleged breach of an Order the Act places the onus of proof on the employer that he is innocent of the charge. This should be altered. The onus of proof should be on the Ministry of Labour as the prosecutor.

(g) When on investigation it has been found that an employer is not complying with an Order, there should be a definite time fixed within which a note should be sent to the employer of the arrears of pay due by him to the workers in question.

Several cases have come to our notice recently in which a demand for payment of arrears has not been sent to the employer by the Ministry until about six months have elapsed from the date of the investigation.

(h) All cases of proposed prosecution should be reported to the members of the Trade Board concerned, so that if necessary, representatives can attend the hearing of the case.

(i) Trade Boards should be empowered to make permits of exemption retrospective. The omission of this provision (which we understand was only discovered about twelve months ago) tends to defeat the object for which permits were instituted.

(j) The powers of Trade Boards might wisely be extended to any case, where, in the opinion of the Board, or Committee to which its powers were delegated, it was just and equitable between the parties in the circumstances attaching and affecting any particular case that a permit should be granted.

(k) We protest very strongly against the accommodation provided for the meetings of the full Board in the new premises at Old Bailey. The meeting rooms are unsuitable from almost every point of view. The ventilation is bad; with one exception the meeting rooms do not give even the cubical capacity per individual laid down as the minimum under the Factory Acts, and the noise from the street is frequently so great that one cannot make oneself audible.

(l) Until recently rulings as to the scope of the Orders were given by the Ministry. Recently the Boards themselves have been consulted, and we think

that this should be made compulsory. The people in the industries concerned are best fitted to say to whom their Orders are supposed to apply.

We draw special attention to the difficulty, at any rate in our industry, of applying the piecework basis time rate, arising from the indefiniteness of two expressions: (1) the ordinary worker, (2) the circumstances of the case.

(m) Clause 9 of the 1909 Act is so ambiguously worded that it is impossible to say without testing in the Courts whether a certain kind of agency which is known in the laundry industry comes within the scope of our Board or not. This matter should be cleared up by revised wording.

(n) A great deal of friction and unfair competition has arisen owing to the practical impossibility of applying Trade Board regulations to the thousands of very small laundries which are to be found in most districts. It is probable that there are very nearly as many workers in the aggregate employed in these tiny places as in the whole of the recognised commercial laundries. This matter demands attention.

(o) Regarding institutions, the following resolution passed by a Sub-Committee of the Laundry Trade Board speaks for itself:—

"The Institutions Committee of the Laundry Trade Board (Great Britain), while appreciating the fact that laundry work done in institutions by the inmates solely for the purposes of the institution is in the nature of domestic work, is strongly of opinion that workers employed in such institutions, but not being themselves inmates under care, should be paid not less than existing Trade Board rates."

"The Committee is further strongly of opinion that work done by hotels, shipping companies, and the like, in aid of the carrying on of their business as hotels and shipping companies, is distinctly industrial and in competition with commercial laundries. Therefore, those engaged on the work should receive either by way of wages or wages and sustenance not less than the Trade Board rate."

"The Committee is further of opinion that institutions taking in work from the public are engaged in an industrial occupation and are in competition with commercial laundries. Therefore, the workers engaged should receive in wages or in wages and sustenance not less than the Trade Board rate."

"The Committee would point out that it is no part of the aims and objects of institutions to wash for the public. Such work is only undertaken for the purposes of gain, and the Committee hold that this public work should be prohibited unless the institutions are willing to accept all the responsibilities of commercial laundries with respect to Trade Board rates, National Health Insurance, Unemployment Insurance, and all the provisions of the Factory Acts."

5796. *Chairman*: Mr. Stark, I understand you are Secretary of the National Federation of Launderers, Limited?—That is so.

5797. And I think you are a member of the Laundry Trade Board?—I am.

5798. You come here on behalf of the employers' side of that Trade Board?—I come here on behalf of the employers' side and on behalf of the employers in the National Federation of Launderers.

5799. First you have something to say about the appointed members?—May I first draw your attention to a covering letter which was sent with this précis of evidence in which I referred to a recommendation of the National Council that the numbers of the Board should be revised? The rest of the evidence of which you have a précis was approved by that Federation as well, so that the précis comes from the whole side and from the National Council of the Federation, and that one particular point is in addition to the one from the Federation. I wanted that to be clear.

5800. What is the number on your Board?—It is 24 now on each side; it was originally 17.

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

5801. That is 48 all together?—It is 51; there are three appointed members.

5802. *Mr. Poulton*: You think that Board is too big?—Yes.

5803. You think so from experience?—We know no adequate reason for increasing the numbers from 17 to 24; in fact we were not consulted about it.

5804. Was not the Board as a Board consulted?—No.

5805. *Dame Adelaide Anderson*: What time was it brought in?—The Board itself?

5806. No, the change?—The change was about June or July last year.

5807. *Chairman*: Then what have to say about the appointed members?—Nothing more than you have in the précis.

5808. It is quite a short précis?—We think that the Chairman of the Board should have legal or judicial training, that the Deputy Chairman should have industrial experience and that the third member should be a woman in the case of those trades where a large number of women are employed, and that is what has been done by our Board, and we think it is quite a satisfactory arrangement.

5809. *Mr. Poulton*: In the case of the woman member, do you assume that it should be a woman having experience in the trade or a woman having experience in social work generally?—With respect, I think there is a little bit of danger in having a woman who has experience in social work generally because so often there is a bias in one direction.

5810. You think it should be a woman who has actual experience of the laundry trade?—Oh, no; we are not suggesting that; in fact, our point rather is that the appointed member should not be directly connected with the industry for which he or she is adjudicating.

5811. *Chairman*: Yes, but should not the woman member be a woman who has had experience in the past?—No; we are not putting that point at all.

5812. *Dame Adelaide Anderson*: You do not propose any more qualifications at all?—We have had no particular difficulty with our appointed members other than would be provided for on the lines suggested.

5813. *Chairman*: What you want is a good sensible woman?—That is our point.

5814. Then you say at least 75 per cent. of the representatives on each side should be actually engaged in industry?—We attach very great importance to that. We think it is very necessary that those on both sides of the Board should have practical knowledge of industry. On the employers' side of our Board everyone has had practical experience of the working of laundries, and all with one exception (my own) are still actively engaged in the industry, and we think it is most important that that should apply also to the other side.

5815. On the other side I see only 11 out of the 24 are actual workers, and 13 are full-time Trade Union officials?—That is so, and of that 11 I should suggest with respect that they are not all of them quite so much workers as might appear on the surface. For instance, one of them I know is a mess-room attendant.

5816. *Mr. Poulton*: Would you appoint only those actually engaged in industry? I do not know the composition of your Board at all, but suppose 11 permanent officials have been men or women, as the case may be, have been brought up in the industry, do you mean that they should be debarred because for some years they have not actually been working in the industry?—We have not had that experience. We have had to face officials who have no knowledge of the industry at all except what they have learnt from their members, and we have found that over and over again.

5817. Has that been found in practice on the Board, where you depend upon being able to place your case in a manner that both sides can fully understand, a detriment to the actual settlement of cases?—Yes, very seriously so.

5818. In what way?—We are faced with appointed members who do not know the details of the trade. We have also been faced with frequent changes in the appointed members. Our first 3 appointed members were in office for about 9 months; then we had changes in 2 of those appointed members, the Chairman remaining about 6 or 8 months. If I may say so, and I do not say it in any critical spirit, the appointed members have had to get to know the people whom they were hearing and to make up their minds, if I may say so with all respect, as to just how much they could believe of what they were told by the respective sides, and in the absence of a knowledge of the trade there were a great many points raised—I may not disclose any secrets; I do not wish to do so—which were convincing to the workers on the other side, but were not within the personal knowledge of the leaders on the other side, because they did not know the particular nature of the industry they were up against. That has been the difficulty.

5819. *Mr. Pugh*: What is your method of allocation of the workers' representatives on the Board?—That has been done by the Ministry of Labour; it is outside our province. Perhaps one of the difficulties is this, that we have no craft union, and there are a good many trade unions who cater for members amongst laundry workers, and they all want representation on the Board. That is what I understand, but, of course, that is outside our particular work.

5820. *Chairman*: I think they are all nominated by unions?—I believe that is so.

5821. *Mr. MacCallum Scott*: Would it not be difficult to get on the workers' side persons actually engaged in the trade who were capable of stating the case?—We claim not at all. We claim that there would no difficulty whatever; in fact there are some of the prominent laundrymen with whom we are well acquainted who would be perfectly willing to allow their workers to serve on a Board; and I believe I am right in saying that in one case at any rate where they have a Works Committee representation was made to the Ministry of Labour for a member elected by the Works Committee to serve on that Board.

5822. I was not referring to the difficulty of getting away from the work, but with regard to the great unskilled mass of the people, are there many who would be able to state the case well?—I am not suggesting they would state the case, because we are only suggesting 75 per cent. of the side. We agree that it is only reasonable that there should be professional leadership, and 75 per cent. we think allows ample room for that.

5823. *Chairman*: Then you say it would be very helpful to have some definition of the meaning of the word "minimum" as applied to wages?—Yes; that is perhaps the most important point, or one of the most important points to which we draw your attention. As I believe has been represented to you before in evidence, there has been a tendency, in our opinion at any rate, and a very marked tendency to establish as Trade Board rates rates which are in fact standard rather than minimum; and in our particular industry there are special circumstances which make it different from a good many other industries. For instance, I understand that there is a great desire in many industries (and there is reason for it) that everybody, never mind where his factory may be, should be on an equality in this matter. Now we have no such thing (if I may so call it) as national competition. For instance, the wages, say, in a county like Cornwall would not affect the industry in London, and the practical difficulty that I personally have felt in arguing before the appointed Members has been this. Our duty has been to establish a national rate. We therefore have had to argue from the point of view of the rural areas. Obviously with the national rate that had to be our consideration. You can equally understand that the other side have argued from the point of view of the industrial centres for two reasons: first, because it is very clear that those facts suited their case best, and also because it was from the industrial centres that they drew their knowledge, because generally speaking, the organised workers are to be found in the industrial centres more than

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

in the rural areas, and as I have said in this précis the result has been, at any rate in our opinion, that the appointed members in trying to act fairly to all parties have voted for a rate which was in our judgment too high for the rural areas. I do not know whether it is within your knowledge, but on every occasion when a rate has been fixed by our Board it has had to be fixed by the vote of the Appointed Members. Now I personally would say, and I think my side would say, that a rate which would be fair and reasonable for the rural areas would be practically useless so far as the large towns are concerned; but we do not think that that constitutes a difficulty at all because we have a special department for dealing with trade unions and wages questions, and we are constantly making and have in existence at the present time a whole lot of agreements for wages at a higher rate than the Trade Board rate.

5824. You are speaking of the federation now?—Yes; and the head of that department is a member of a Trade Board as a matter of fact; he is secretary of the employers' side; so that in order to get over this difficulty, which we understand has arisen with other Boards too, though we are not directly concerned with them, we think if it were possible some kind of definition of a minimum wage should be laid down by regulation or in the Act or something of that sort.

5825. Mr. Poulton: But in default of that would not their case be rather met by differing rates in rural areas?—On that point the majority on both sides of our Board are strongly against it. I know there is one and I think there are possibly two members of the employers' side who would favour differential rates. The workers' side, I believe, as far as my knowledge goes, are solidly against it; there may be individuals who are in favour, I do not know; but the practical difficulty there, when it comes to differential rates laid down by the Act or by an order of the character of the Trade Board Order, is the boundary difficulty.

5826. You would always get hard cases, I suppose?—Yes. There are a few instances where it might possibly be done. For instance, on one occasion in the female Order which has just been replaced by a new one which came into operation yesterday, the county of Cornwall and the Shetlands and the Orkneys were excluded from an increase of a halfpenny an hour. But they are fairly clear-cut. There are a great many other cases in other parts of the country where it would be very difficult—perhaps not impossible but very difficult—to have differential rates, and yet there is a very great need for them. Therefore, we think that some clear statement as to what a minimum wage really means would be very helpful.

5827. Mr. MacCallum Scott: Have you any suggestion to make in that respect?—We think that logically the right definition would be the least skilled worker in that part of the country in which the cost of living is lowest. I want to make this clear. We fully realise as employers that in putting up this case we are laying ourselves open to the charge of trying to hide behind these rural districts, but I do not think we are quite doing that kind of thing, and in support of that view I would remind you of our willingness to agree with trade unions in industrial centres for higher wages.

5828. Would that be in London, or would you suggest that it should be graduated in accordance with the area?—I would suggest that the duty of the Trade Board is to establish a national minimum rate and that in cases where that does not apply trade unions come into operation at once. I take it that the object of Trade Boards has not been to remove the necessity for trade unions, and if I dare hazard a guess—I do not think it is a very wrong guess—probably one of the reasons why the labour leaders object to differential rates is that they think it may remove some of the need for their activities which are necessary under the national rate.

5829. Chairman: Therefore, according to you, everything above the least skilled class of worker in the least expensive district would be a matter for bargain?—Yes.

5830. Either individual or collective?—That is so. Take for instance the present state of the trade. So

far as large centres of population are concerned, and I think so far as the majority of the laundries in the rural districts are concerned, there are a whole lot of workers who are getting considerably more than the Trade Board rate. The rates vary on different classes of skill, and I know as a matter of fact that they are getting considerably higher wages in many cases.

5831. Mr. Pugh: In view of the objection to differential rates, how are you going to enforce rates above the minimum? If you cannot enforce them, will you not then have actual differential rates above the minimum?—The only reply I can give to that is that these differential rates have been in operation by agreement with trade unions to my personal knowledge for the last 8½ years, and they have been increasing in number. Our first agreement with a trade union was made in June or July, I think it was 8 years ago, and we have agreements in Newcastle and various parts of Lancashire and in Birmingham, Leicester and Nottingham.

5832. Perhaps I have misunderstood you. Is not your objection not to differential rates but to different rates for different areas; that is for a rural as against an industrial area?—I am afraid I do not quite see the point.

5833. I understood you to say that there was an objection on the part of your Board, with the exception of possibly 2 representatives on the employers' side—and they were unanimous on the workers' side—an objection to differential rates as between rural and industrial areas: is that so?—That is so.

5834. Then the objection is not to differential rates above the uniform minimum but to differential rates as between one area and another?—I am afraid I do not quite see the distinction.

5835. Chairman: I understood you to say this: the majority of your members object to the Trade Board fixing differential rates in different areas?—That is so.

5836. Now we have passed on to a different subject, a minimum wage, and you are stating your view, and I understand the view of your Federation and those whom you represent, that that minimum wage should be the wage of the least skilled worker in the least expensive district, and that differential rates above that should not be fixed by the Board at all, but should be a matter for agreement?—Precisely. I think I ought to report that just over a year ago when we found a very great practical difficulty in obtaining a rate which was reasonable for the rural areas, we then as an employers' side proposed differential rates, and we drew up a somewhat elaborate scale which varied from, I think, 28s., 30s.—I am speaking of the female workers only—32s. and 34s., and the labour side absolutely refused to have anything to do with it whatever, and threatened to withdraw from the Board if anything of the kind was entertained, though our 34s. rate was higher than the rate which was eventually given as a flat rate, and included a very large proportion of the workers. The then Chairman of the Board has admitted that although he believed this scheme was put forward in good faith, and was a workable scheme subject to adjustments here and there, he did not think it could be put into operation unless the labour side would co-operate with us in defining these areas, which they refused to do; and after a very long argument the proposals were finally issued at 30s. for the country and 35s. for London, and a radius of, I think, 50 miles. That was the form in which the proposals were issued. When the meeting was held to consider objections to those rates, the newly appointed Chairman told the Board quite frankly that he would have nothing to do with the differential rates, and that the special rates for London must be dropped. He said he would have nothing to do with it, and so we went ahead with the rate.

5837. Mr. Poulton: You are rather suggesting that the Chairman has a very great deal of power in that matter. I did not know he had anything like that power in his hands?—You see our experience has been

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

so far, as I have previously mentioned, that the voting, when it came to important questions, such as rates, was invariably equal, and presumably the Chairman on that occasion was speaking for the other Appointed Members. It simply meant that by voting for or against any amendment the Appointed Members gave an indication as to what they would be prepared to vote for, and if a proposal came from either side along those lines it would be carried by the votes of the Appointed Members.

5838. You eventually, I presume, had a rate for the country?—Yes.

5839. What was that rate?—There were various complications there which I shall have to trouble you with to enable you to appreciate the course of it.

Chairman: You will find it here. (*Copy of Scale of Rates found to Mr. Poulton.*)

Witness: May I just correct a point which I mentioned just now? I said the radius for London was about 50 miles; it is 30 miles.

5840. Chairman: I gather the present wage is 8d.?—It was 7½d. from yesterday; a new order came into operation yesterday.

5841. That is the ordinary minimum rate?—Yes.

5842. Then there is a piecework rate?—A piecework basis time rate of 9d., reduced from 9½d. to 9d.

5843. And then special rates for casual work?—Yes. That was a very small matter.

5844. There is also a guaranteed time rate?—That is so.

5845. Do you need that in addition to the piecework basis time rate?—We do not think we do, but we have to endure it.

5846. Would these new rates apply to the country except the Orkneys and Shetlands and Cornwall?—The last order was 7½d., which succeeded an 8d. order. The Orkneys and Shetlands were excluded from the 8d. order, and therefore they are already on the new rate for the rest of the country.

5847. Really they are on the same footing now as the rest of the country?—Yes, very much to their disappointment.

5848. What hours do you work?—That is on the basis of a 48 hour week.

5849. That is 32s.?—Yes for 8d.; for 7½d. it is 30s. Would you wish me to reply to that question of Mr. Poulton's?

5850. By all means?—It is a little elaborate, but it is necessary, I think, as throwing a side light on something else which probably has been brought to your notice. Our first order, which was issued in November two years ago, was for 28s. for a week not exceeding 48 hours. It was carried against the vote of the employers both as regards the rate and as regards the principle of the guaranteed week. Some few months after that we issued this proposal of 30s. and 35s. to which I have already referred. During the objection period the Ministry of Labour discovered from their legal adviser that a guaranteed week was *ultra vires* as regards a Trade Board; so that when our Board met to consider the objections to the 30s. and 35s. proposal respectively, presumably to confirm it, they were confronted with the position that they could not confirm the order in the form in which it had been issued. I have already told you how the 35s. special rate for the London district came to be eliminated, and it was decided then to confirm the order as a national rate for a week of 48 hours, instead of a week "not exceeding." The labour side argued that that loss of a guaranteed week meant a loss to the workers, and that there ought to be some *quid pro quo* for it, and the Board decided not only to make an order for the 7½d. or 30s. rate, but at the same time to ask permission of the Minister, which they obtained, to issue proposals for an 8d. rate, or 32s. to make up to the workers for the loss of the guaranteed week. The point to which I wish to draw your special attention is that the legal adviser to the Minister of Labour, after having had the two months' objection period and the month following the confirmation of the order by the Board, failed to discover this illegality in the order, and it

was presumably in operation for 6 or 8 months before they made this discovery, which handicapped us very much in our work.

5851. Mr. Layton: Do I understand that this 30th May variation was the result of that decision?—Eventually, because when it came to confirming the 8d. rate the cost of living had begun to fall; unemployment was creeping up and our industry was getting into a very bad condition, and we claimed as a side that the rate ought not to be confirmed, and we therefore took advantage of the opportunity given after the confirmation of the rate by the Board by a majority of coming up to the Ministry here and asking the Minister not to confirm that 8d. order. We did not see the Minister; we saw the Parliamentary Secretary and received a very courteous hearing, and the Minister took some two months in which to make up his mind as to what he would do, and eventually he returned it to the Trade Board, and the Trade Board had to meet again to consider the new situation. Finally the 8d. rate which had been issued in the former proposals in the early part of the previous November came into operation on the 30th May, when there was really no excuse for it, though the labour side asked for it, and I believe the Appointed Members thought that it was due some months before. They said it was overdue and must be issued in that form, but the whole controversy arose owing to the failure of the legal adviser to the Ministry to discover what we think it was his duty to discover in the first instance. I believe I am correct in saying that ours was the first Board to fix a guaranteed week; that was the first order of the kind ever issued, so that one would have thought that the legal adviser to the Ministry would have given the matter his careful attention.

5852. Chairman: Did the proposal arise in connection with your own Board or in connection with some other?—I think our Board is the only Board that has put forward a guaranteed week proposal. I am open to correction, but I believe that is so.

5853. I am told that the Milk Distributive Board proposed to do the same thing, and it was in that connection that the point was investigated?—I do not doubt that that is so, but I have my suspicion that there was some difficulty experienced when it came to prosecution for breaches of our Order, as to whether the Legal Department felt they would be quite safe in prosecuting our people. Probably it was a combination of circumstances.

5854. Does that lead you on to your next point about machinery? You say it ought not to be necessary for you to seek the permission of the Ministry of Labour: that is on the six months point, I suppose?—Yes, on the six months point. On that point I think it is only fair to my side to say that when the suggestion was made by, I believe, several Trade Boards from the employers' side that this period should be reduced, we refused to take any part in the agitation, because we thought it was hardly playing the game with the other side. While the rates were going up the employers were ready enough to take advantage of all the delays that they could find, and it did not seem quite playing the game when the rates were coming down suddenly to take the other view. But we found that it was really necessary, and we realised this great difference, which I think is a fair statement of the case, that when the rates are going up, supposing a Board issues proposals to increase the rates, it was quite in order for an employer either on his own initiative or by agreement with his workers, or by agreement with the trade union, or for the whole industry voluntarily, to introduce those higher rates prior to their coming into legal operation, and as a matter of fact that did actually take place in a number of instances. But when the rates are going down you cannot take the reverse process; however much you may bargain with the trade unions you cannot anticipate a decrease, and taking that fact into consideration we think that the speeding up which is suggested in this little memorandum of ours would not be unfair and would in fact be a great advantage to everybody concerned, because in our own industry at the present time we are suffering from a decrease in volume, simply because the people cannot pay the price.

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

5855. I follow what you say when wages are going down, but when wages are going up if you allowed a change at any time would not that prevent forward contracts being made?—Well, that does not apply in our industry to any appreciable extent.

5856. You do not make long forward contracts, probably?—No. There are a few cases of hotels and so on, but I am dealing with hotels later on in my evidence.

5857. Then as to time, you say the time for objection to a new rate should be reduced from two months to one month?—Only when the two sides of the Board have agreed. That may be a council of perfection, ever to hope that the two sides of our Board will ever agree on a proposal, but I understand that it frequently happens on other Boards, and we hope that it will on ours.

5858. What do you say as to the time for objections to a variation of the rate?—That is our point, that when the two sides have agreed on a new rate, that is a variation of a rate—

5859. Oh, that means variation, does it?—Yes, the objection period should be reduced from two months to one month.

5860. Then you say, when no serious objection has been raised, a new rate should be made operative at the earliest possible date, having regard to the printing and issuing of the notice to the employers?—Yes.

5861. Do you mean that the time for confirmation should be reduced?—No, Sir, what I mean is this. What happens is the proposals are issued, the two months' objection period starts from the date of the issue of the notice, which may be a fortnight or three weeks or a month; it is usually two or three weeks after the decision of the Board; there is two or three weeks for the issuing of the proposals. Then comes the two months' objection period. Then the Board has to meet to consider the objections, and the Board cannot reasonably meet until that two months' period has passed by two or three weeks, because the objections have to be considered by each member of the Board, and therefore have to be duplicated and circulated and carefully considered. The Board then, we will assume, confirms the rate. The Order as made by the Board or the decisions of the Board go to the Minister, and we find that the Minister takes the longest possible time in which to decide whether he will issue that Order or not. Under the Act, as you know, of course, he is allowed one month in which to make up his mind, but in exceptional circumstances he may take longer. At the very best it is the last day of the month and sometimes longer even than that. Here is a case in point showing the difficulty. We passed a resolution in connection with this 7½d. variation, the one which came into operation yesterday, asking that the Order should be issued so that it would come into operation on the 28th November. Finally the Order was issued on Saturday, dated the 10th, but coming into operation on the 12th. He is a fortnight later than we ask, and he gives—well, no notice at all.

5862. What is the date of your fixing that rate?—9th November.

5863. So he took just the month?—Yes.

5864. That is what you mean, that you would like the action of the Minister to be expedited?—We think so. Then the last paragraph of that clause (d) of my précis we consider is very very important, and we do not think it is controversial. The objection period is obviously reasonable and fair, and is for a purpose.

5865. An objection period?—Yes, an objection period. We meet to consider the objections. It is conceivable that some objections may be raised dealing with some point which possibly has escaped the notice of the members of the Board, or it may be that it is discovered that the proposals of the Board are so very unpopular that it would be wise to alter them. Now except in minor details, if it is deemed necessary to vary proposals after the objection period, except in quite minor detail, it is necessary to issue a fresh set of proposals before you can issue the Order. Now we think that that is wrong, that the power

of varying proposals ought to be extended beyond purely minor details. It operates in this way against both sides. We felt it, of course, in reference to ourselves, but it is particularly necessary in the case of fresh Boards—those who are issuing their first set of proposals. I think the first proposals are largely in the nature of a gamble; you try to be fair and reasonable, but you are breaking up new ground. We had 850 objections to our first proposals, and while, of course, we cannot say what was in the minds of our then Appointed Members, we formed the impression, rightly or wrongly, that if it had been possible to vary proposals in the Order without going through a fresh objection period, the Order which the Appointed Members would have voted for would have been somewhat different from the one they did. I do not say it is so, because I cannot know the thoughts of the Appointed Members; but that is the impression we formed, and at any rate, whether I am right or wrong, it is a position which might arise, and will be very likely to arise on many of the Boards, particularly when they are issuing their first Order.

5866. How far would you carry it? Just take this instance: you issued a proposal on 9th November, altering the rate to 7½d. Supposing you had a number of objections to that as being too high, and you had been persuaded that 7d. was a right rate, do you think the 7d. should have been fixed without giving a further period for objections?—Well, I agree it wants safeguarding, and just how it should be done we have not considered on our Board. It is a personal opinion; I cannot commit my side, but I feel sure we should not object to any provision of that sort. For instance, if the Appointed Members in consultation with the Ministry of Labour thought it wise, we should not object, I think.

5867. If the Board with the consent of the Minister of Labour thought it wise?—Yes—something of that kind; it must be protected, obviously; I agree. I will give you one really important illustration; it was one of those border-line cases in which we passed a resolution as part of our proposals regarding payment for statutory holidays. The payment for statutory holidays was to be double time, and the employers in passing that resolution felt that the substituted day which is permitted under the Factory Acts, which is permitted for our workers, would, for the purpose of the Trade Board Order, become a clear day for the purpose of payment. For instance, practically every laundry in the country works on Good Friday, and gives some other day; the women prefer it and the employers prefer it. We quite thought with regard to Good Friday that the old procedure under the Factory Act would apply for Trade Board purposes; it would be a clear day and the substituted day would become the statutory holiday; but it was held by the legal adviser that unless there were special words put in it meant the other thing; the workers themselves were quite desirous of having it. So far as we could get the views of the workers—not the officials but the workers—they quite agreed with that, but it was said: "Oh no, that would be a substantial alteration. It would have to be dealt with as a new proposal, consequently, the Order went through in that objectionable form, and we had to wait until the recent Order before the necessary corrections could be made. Incidentally on that point I may draw attention to that as one of the little things which shows the advantage of having workers present, because the Trade Union officials on the other side opposed our proposal at first to have this custom, and the actual workers got up and said: "We want to work on Good Friday, we prefer to do so," and yet the officials were against it; they did not realise the point. They thought we were trying to make our workers work on Bank Holidays. I do not say the same thing would apply to Easter Monday; but I know from my own personal experience that when I was first in business—I do not know whether I have become contaminated afterwards—I had an idea that it was wrong to work on Good Friday. The workers said they did not want to stop at home; they wanted to work; and that is the attitude of the workers generally.

13 December, 1921,]

Mr. J. J. STARK.

[Continued.]

5868. *Dame Adelaide Anderson*: Is not this special order a special order in the same way as under the Factory Acts; is not the procedure the same?—We are informed that if we make what the legal advisers of the Ministry consider are serious alterations, but what seem to us to be quite trivial, there must be a fresh proposal and an objection period.

5869. I understand that. I was touching on the point that it is parallel to the issue of special orders in other circumstances; it is a fixed procedure?—Yes.

5870. Would you alter one in one case without the other?—We feel very strongly, although we agree that there must be safeguards, that there ought to be a little more freedom. I do not mean to say that you ought to be able to alter the thing entirely, but you should be able to take into consideration any points which may arise in the objection period, and include them in the order without delaying the thing for another three or four months.

5871. If there was a dangerous process in the laundry, and an order were proposed regulating that process and the employers objected, would they like to see the order made operative without the issue of notices?—May I suggest that it is not quite a parallel case, because here you have a Trade Board which is presumably representative, and is, as a matter of fact, fairly representative of the trade, and it would open for either side to make representations to the Minister?

5872. That is just what I wanted to get at; it is, as a matter of fact, an established procedure in the making of special orders?—I think that the Home Secretary may, and in fact does, consult the people concerned. I am quite free to confess that the Home Office always treats us very fairly in these matters, but when they ultimately make their decision we are not there, whereas on a Trade Board we are in the negotiations all the while. There is that slight difference.

5873. *Chairman*: Then to take the next point shortly, you think the Ministry should publish the various orders in the trade papers?—We think that is very necessary. That is simply arising from the fact that, speaking as a Federation official, we come across cases not infrequently of people who do not know the orders, and it is very difficult to get hold of their names and addresses.

5874. Then you say in the event of a violation of the order the onus of proof should be on the prosecutor?—Yes, we think that is only common justice. As a matter of fact I must confess I was very much surprised to find on looking into the Act that it was as we have complained at the present time.

Chairman: I am afraid that the system has grown a good deal in recent years; I cannot say I like it.

5875. *Dame Adelaide Anderson*: Is it not the fact that practically no prosecutor could get at the facts except with the consent of the employers, and surely it is the ordinary law or custom that nobody should be compelled to commit himself?—May I gave you an illustration of that? It is far from an extreme case. I am going to deal with it later in this memorandum; that is, the question of the ordinary worker. Surely it is not up to the employer to prove that a worker is not an ordinary worker, but it is up to the Minister of Labour or his representatives to prove that somebody whom we do not think is an ordinary worker is an ordinary worker. That will become clearer when I deal with that part of the evidence.

5876. It means that the Minister must have access to all the documents?—He has at present. He has a right to go to the works and look at the wages books, and in fact he does go there, and sometimes stops for a week on end. That is one of the complaints we have to make with reference to hotels, that the commercial laundries have the privilege of visits from these inspectors which may last for some time—two or three days or a week—but the hotel laundries are free from that.

5877. *Chairman*: Which is the section to which you refer in the proof?—It is Section 5 (4) of the 1909 Act: "On any prosecution of an employer under this

section it shall lie on the employer to prove by production of proper wages sheets or other records of wages or otherwise that he has not paid or agreed to pay wages at less than the minimum rates."

5878. That particular sub-section is now repealed, but I think the same words are in Section 5 sub-section 5 of the Act of 1918; the final words of the section?—Yes. I think I have made my point on that.

5879. Then I think (g) speaks for itself. You think there should be notice to the employers of any arrears?—We think that very important. Within the last two months I have had at least half a dozen cases, or thereabouts, brought to my notice in which the inspector visited round about March of this year. It was known that he was not satisfied with the rates, and the official communication from the Ministry with a note of the arrears which were due to the worker was received in September and October, and I think the last one was in November.

5880. Were the arrears running on all that time?—No, the rates had been adjusted. The inspector had said: "Those rates are wrong and must be put right, and I will send you a note of the arrears," but the practical difficulty is first of all this. In one case there was a laundry where the arrears were either £200 or £300, but it specifies the workers and the amount due to each. There is first the difficulty that these workers are very liable to have left, and then comes the difficulty of finding them. It is only fair to the workers that they should have an opportunity of getting the money due to them. Secondly, it does not follow that the amount which is returned by the Ministry is a correct one, and the longer the time which has elapsed the more difficult it is to investigate and check those figures, and it has been found that the figures are not always accurate.

5881. *Mr. Pugh*: Surely if the error is admitted the employer himself can calculate what the arrears amount to retrospectively, cannot he?—No. That point again will be dealt with when I deal with the piecework basis time rates. I think Mr. Pugh will appreciate the difficulty of calculating them, and there may be differences of opinion.

5882. *Chairman*: The employers know what the arrears are?—Quite.

5883. Cannot he reckon it just as well as the inspector?—No, with respect. Perhaps it would be better to take the piecework basis time rate which I was going to deal with later on.

5884. Which number is that; is it not the second part of (f)?—That is so.

5885. You draw special attention to the difficulty of "applying the piecework basis time rate, arising from the indefiniteness of two expressions (1) the ordinary worker, (2) the circumstances of the case."—This, I think, is a difficulty which perhaps does not arise in a number of industries, but it is a very real one with us. There were two of our members who quite welcomed the Trade Board Order in the first instance, and always believe in treating their workers fairly, and a week or two before the first Trade Board Order came into operation—their laundries were in the same district; as a matter of fact, *Dame Adelaide Anderson* in another connection would know both these laundries if I mentioned their names—and they met and discussed very carefully what piece rate it would be necessary to introduce in their laundries to comply with the piecework basis time rate of this first Order. They had the experience of many years to go on, and they agreed on a schedule. The first piecework basis time rate was 8½d. In the one case every one of the workers on piece earned 9½d. an hour and over, except one, and there was one—or it might be two—who earned 8½d. or 9d., and they were very old people. In the other laundry the average worked out at 8d. an hour, and the majority of the workers were earning round about 7½d. an hour. They were two laundries within a couple of miles of each other, working under presumably reasonable conditions, with well-equipped factories under good management, and the rate which was higher than necessitated by the Trade Board Order in the case of one laundry was not high enough in the other. Now, that could be multiplied over and

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

over again. An inspector comes along—I do not know whether you are taking evidence from the inspectors, but I venture to suggest that if you had the Trade Board inspectors before you, and you put this question to him, I think their answer would be the same as mine—that if half a dozen inspectors, one after the other, equally skilled inspectors, went into the same laundry on successive days where there were 30 or 40 pieceworkers, their individual estimates as to how many of those 30 or 40 pieceworkers were ordinary workers would vary. Now, we will assume, for the sake of argument, that of those 25 are ordinary workers. The earnings of pieceworkers in the average laundry vary tremendously. As a rule, the better workers earn about double what the less skilled workers do, and your piece rates, each piece rate, in fact, has to be such that the less skilled ordinary worker can earn not less than the piecework basis time rate, whatever it may be. Now, we will assume that the employer has admitted that there are these 25 ordinary workers. An inspector comes along and he says: "No, you are wrong there; there are 26;" and the twenty-sixth worker is earning $\frac{1}{2}$ d. less than the piecework basis time rate. You may say that is a small matter, but no, those rates have to be increased so that the other women can earn the extra $\frac{1}{2}$ d., and the others have to be increased by putting up that rate to 9 $\frac{1}{2}$ d., or whatever it may be. You have not complied with the Order in making up the slower worker to the proper figure; the whole wages have to be put up, and that is the great difficulty. I may tell you that at the present time there is a committee consisting of employers and workers sitting to try and prepare a piecework schedule which will get over this difficulty (which I think is admitted by both sides as a difficulty); they have had one or two meetings, and so far they have 200 articles down—200 different rates—and there are still a good many more provisions to be made, variations and so on. You will see the extraordinary difficulty of applying a thing of this sort; in fact, inspectors have told us that it is quite conceivable—and we know it from experience—that there may be two laundries working side by side or on opposite sides of the road, and doing the same class of work, and a piece rate which will be passed by an inspector in one laundry would not apply in the other, because the "circumstances of the case" would be different.

5886. But you might have the same difficulty, might you not, even if there were no piecework basis time rate, because then you have to say that the piece rate is such that the ordinary worker could earn the general minimum rate; so you would have the same point?—Yes; but there is the question of degree. At the present time we have a piecework basis time rate and also a time rate. Now seeing this difficulty—and we do not agree that the piece rate ought to be higher than the time rate, for a good reason—we think that the piece rate for that reason alone ought not to be higher; but the principal thing is, apart from whether it is higher or lower, that these two expressions "the ordinary worker," which is gloriously indefinite, and "the circumstances of the case," are not the right kind of expression to be in an Act and in Orders of the kind that we are dealing with.

5887. What would you put in their place?—We think something of this kind: that the general minimum time rate should be guaranteed to all these workers, whether they are on piece or not; simply that the time rate should be applied to everybody.

5888. Mr. Poulton: Who has the right of determining, under these particular two clauses, what is an ordinary worker?—That is ultimately for the Courts to decide. The inspector comes along and says: "Your rates are not high enough." If the employer agrees or thinks it is not worth while to oppose the inspector, then he has to alter his rates and to pay arrears. If he refused to do that then the case is taken to Court and it is for the Court to decide.

5889. Let us take that case you mention, which was rather an extreme case, of 26 workers and 25 of them can earn the rate and one cannot; the inspector says

that is because the rate is not high enough, but the employer says 25 out of 26 can earn it, so the rate is high enough; how would you say that should be determined?—We say it is a thing that cannot be determined. At present it is decided in the Courts.

5890. Mr. MacCallum Scott: Does it lie with that inspector to determine it?—The inspector makes his careful examination, and I would like to say we respect and appreciate very much the work of the inspectors; we think they are very admirable, generally speaking, although of course the new ones when they are learning the business made mistakes, but generally they are very fair and reasonable. The inspector comes back to the Ministry and someone at the Ministry, presumably the head of the Department, sends a notice to the employer that there are so much arrears to be paid.

5891. That is not what I mean. An inspector goes into an individual factory where he finds 26 whom he would class as ordinary workers, and one who is not earning the rate. Does it lie with the inspector to decide "This is not a proper rate on the experience of this individual factory"?—Yes.

5892. Then he can fix a different rate for each factory?—He can inform the employer that he has to pay certain rates, and if the employer does not pay them, then he is open to prosecution.

5893. Chairman: But, of course, he can defend himself; it is for the Court to decide ultimately?—Yes; it is the magistrates who have to decide ultimately; and if I may remind you, the magistrates are not, as a rule, trained in these technical points of laundry work.

Mr. MacCallum Scott: That is not exactly what I mean. It would not be the inspector who would initiate the prosecution?

Chairman: The inspector would inform the Ministry, and the Ministry would institute the proceedings.

5894. Mr. MacCallum Scott: That is the point I wanted to appreciate.—That is our whole point.

5895. There may be different piece rates enforced in different factories for the same work?—Yes, because of the circumstances of the case.

5896. Dame Adelaide Anderson: I was just wanting to ask what are the essential factors of these circumstances that affect the matter—the salient things?—For instance, the use of flat irons which have to be heated at a coke stove, as compared with gas irons. Then there is the condition of the work which comes for ironing. From one laundry it might come in a wetter condition than from another. Dame Adelaide Anderson will understand what I mean by preparing for ironing; if the clothes are properly prepared for ironing it makes a difference. There are all sorts of practical points: for instance, whether the work which has to be ironed is taken to the ironer by some member of the staff, or whether the ironer comes to the giving-out table, as we call it, and fetches it every few minutes; whether she does her own goffering or some other girl does the goffering for her.

5897. It is the varying organisation?—Yes. To some extent you can allow for that by time studies and so on, by careful analysis of the jobs, the conditions under which the work is done; but when you come to those somewhat intangible considerations, such as an enthusiastic head of a department who is capable of arousing enthusiasm, and another one who is not quite so enthusiastic, it becomes more difficult. I do not want to slander any particular county; but take what we generally understand of workers in certain parts of East Anglia. The ordinary worker in a somewhat remote district of East Anglia, if you take such a worker and put her alongside the ordinary average worker in a Lancashire mill town, where they are used to machinery—if you put those two sets of girls on to the same piece rates, working with the same machinery, probably what would enable the Lancashire mill girl to earn perhaps double, or 25 per cent. or 50 per cent. more than the piecework basis time rate, would not enable the girl from East Anglia to earn the rate.

5898. Mr. Poulton: Do you suggest, as a remedy, that the Board should have sufficient elasticity to deal with it?—No, we suggest that you should remove

13 December, 1921.]

Mr. J. J. STARR.

[Continued.]

these two expressions "the ordinary worker" and "the circumstances of the case." We say they are so indefinite that (if one may use a colloquialism) it is largely a gamble how they will be interpreted.

5899. *Chairman:* You suggested just now that the employer should guarantee the minimum general rate, but surely that would not suit all employers, would it?—Yes, I think so, if you abolish the piecework basis time rate. At the present time if you simply do not make a rate, then the time rate becomes the piecework basis time rate, does it not?

5900. *Yes.*—Now leave that out of consideration; leave the piecework basis time rate and say that every worker in that particular laundry shall either be paid or have their money made up to so much, and do not go into these finer points, for which it is impossible almost to lay down a rule.

5901. Surely that puts a premium on the slow worker, does it not? I can understand your saying that the piece rate ought to be such that it should produce a general minimum time rate in the hands of the ordinary worker, but I doubt whether all the employers would agree with your view that the employer should guarantee to every one working at piece rates, however fast or however slow, the general minimum time rate?—We have had two years' experience of this delightful uncertainty as to whether when an inspector calls upon us we are going to be called upon to pay arrears of £50 or £100 or £200, or whatever it may be; and laundrymen are tired of it; it is too uncertain.

5902. *Mr. Layton:* I see you have here a guaranteed minimum time rate fixed by the Board?—Are you speaking of the guaranteed time rate for pieceworkers?

Mr. Layton: Does not that apply to the pieceworkers?

5903. *Lord Weir:* The real thing that has caused all the trouble surely is your fixing of a standard, instead of a minimum?—Excuse me, may I answer the other question first, because that is quite a different point? There is the guaranteed time rate for the average ordinary workers. Then there is a guaranteed time rate to pieceworkers, which, under the new order, is 6½d. Now that does not get over the difficulty; all that means is that in the case of what we call sub-ordinary workers, those whom it is agreed are not ordinary, or those who are ordinary workers, but for some particular reason do not earn up to the rates, even if they are unsatisfactory you make their money up to that 6½d., or whatever it may be according to age; but when you have done that, your obligation has not ceased, unless your piece rates are such that in the circumstances of the case the ordinary worker can earn the money; so even though you have made the money up to the 6½d. you have still this other liability upon you.

5904. *Mr. Layton:* And this guaranteed time rate provides for abnormal workers or abnormal circumstances; you want another guaranteed time rate for the piece workers?—No, I am suggesting that there should be no piecework basis time rates in the Acts at all. Under the Acts if you do not make one, the ordinary time rate becomes the piecework basis time rate. Now my difficulty there is—to repeat myself; and it is not quite easy to grasp unless you have been through it as we have—that it does not meet the case to make that particular worker, or those two or three or more workers, up to the piecework basis time rate. You have either to dismiss all these workers—and still you have got the arrears difficulty to deal with—or you have to increase all your rates; so that rates which enable some of the workers to earn double the piecework basis time rate are not high enough; and you have to pay the arrears.

Chairman: Or fight the case.

5905. *Mr. Pugh:* But would you not regard that worker as sub-ordinary, and deal with her accordingly?—Yes, we should, but the inspector would not take the same view.

5906. But you gave a case of 25 out of 26.—Yes, that was an extreme case, but there are other cases.

5907. *Chairman:* I think we follow the point.—We appreciated that point as officials very much, because

we have so many laundrymen coming to us and asking us whether their piece rates are in order or not, and I have to go through those piece rates, and in many cases I have advised them to have the inspector down to tell them whether they were right or not, because I could not form an opinion at all, as to whether they were right or wrong.

5908. Now we go to (h).—Yes. That is not very important perhaps, but it would be helpful to us to know.

5909. Then (i): "That Trade Boards should be empowered to make permits of exemption retrospective."—I am presuming that members of this Committee know the provisions under which licences are granted.

5910. Oh, yes.—Well, what happens is this. I apply for a licence for a worker; if I know the procedure I ask for a form. If I do not, I simply write a letter and a form is sent to me. A form may come in in a day or two, or perhaps three days or four. Then however quickly the communication may get through from the Postal Department of the Trade Boards offices, eventually I get the form. I then fill up the form, and perhaps that may take me two or three or four days. I have got to get the worker to sign it; I have to find the worker's age; in a good many cases she does not quite know how old she is and has to look up her birth certificate. If it is not a case of old age the medical man has to provide a certificate. Then notice is sent in, then that has to be dealt with either by the Board or by a Committee of the Trade Board; in our case it is a Committee. That Committee has been meeting on the average something like once a fortnight; it used to meet at longer intervals—it is a committee of two (at the present time)—in order to get these things through quickly. It was about 12 months ago that we were informed that we could not make these licences retrospective. Up to that time we had been granting them, when we approved of them, up to the date of the application, and I understand that that was another sudden discovery of the legal advisers to the Ministry of Labour. I think the explanation may be that there have been some changes in the legal advisers to the Ministry; I do not know, but being charitable, I hope that that is so. I reported this matter to the employers or other Trade Boards and was practically laughed at by those on the older Trade Boards, because they said they had never had any difficulty of the kind; they had granted licences in the ordinary way. I think the workers' side of our Board agree about this; I do not think there is any controversy about it at all. I am a member of this Committee, so I speak feelingly, and I feel the responsibility in granting a licence—in granting a permit, which we call a licence. It not infrequently happens that we think that a particular case is very likely quite a legitimate case, but we cannot be satisfied on the form; we would like to have an investigation. It may be that I say on my side, "Well, I will get my local representative to have a look and report on the goods," or it may be that the labour side say they would like their local trade union official to make inquiries, or it may be where there are eight people employed altogether, and there are applications for four licences, and we ask for an inspector to go. Well, if I have to take it up I may get a report in a fortnight, or it may be in a week. If a Trade Board inspector has to go, if we get a report in six months we are fortunate. I had one case where it was hung up for 12 months owing to lack of inspection. Now it is an absolute scandal; there is an employer who is liable to be shot at simply because, although the Committee on both sides is agreed—the whole Board is agreed—that it is a legitimate case for a permit, after 10 or 12 years' experience the legal adviser to the Ministry of Labour says we cannot make these licences retrospective. I do not query the legal opinion, but it is very difficult and troublesome to get that opinion now.

5911. As a theoretical point it seems very important. Have you ever known a case where an employer has been made to pay arrears in a case like this?—Not exactly, but this is the difficulty. I presume you know that the Minister has said that though the licences cannot be retrospective he will

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

not take proceedings for the intervening period when the licence has been granted; but I submit in the first instance that that is an extraordinary attitude for a Government Department to take up, to wink at what is illegal; and, further, it is too risky from the employers' point of view.

5912. I see your theoretical point, but I wanted to elicit the point that there has been no actual hardship?—But if you will allow me, this did actually come to a prosecution with them; but it is a thing which Mr. Pugh will appreciate, not perhaps just now for a year or so.

5913. I have said I appreciate the point as a theoretical point for amendment of the Act. Do you want to go into further hypothetical cases?—With all respect, I want to suggest that this is more than a theoretical difficulty.

5914. Do you want to convince me that I am wrong in agreeing with you?—No, I do not want to press the point, but this is not a fact. It is more than a theoretical point, it is a practical point.

5915. Very good. Now in the next point (j), you deal with the slow worker?—Yes, and no. As a matter of fact we have adopted this on the suggestion of our own Chairman, Mr. Clegg Mellor, and it arose in this way, that there were one or two cases in which the trade union member of the Sub-Committee and myself felt that technically we could not grant the licence, because the case did not come within the four corners of the Act; but we agreed it was a case in which it was reasonable and fair to the worker, and best for the worker, that it should be granted, and so we referred the matter, as is our custom when we are not quite sure, to the Chairman, and the Chairman, having had one or two of these cases before him, suggested that this clause should be put in.

5916. You must be a little more definite in an Act of Parliament than this clause is: what kind of case do you wish covered?—The last case that was brought up, and which I think will serve as an illustration, was the case of a worker who was suffering from intermittent malaria. He had these attacks of malaria perhaps once in six months, or something of that kind, and obviously he was not worth quite so much as the man who was fit. It was the male rate of £3 a week, and the man was perfectly willing to accept £2 10s., because it was more than he could get in any other place in the district, and it was put up in view of this malaria that he came within the expression about physical or mental deficiency. We considered it on both sides and we said: "No, we do not think technically it comes within the four corners of the Order, but it is a case in which it would be good for the man to grant the licence." Possibly Mr. Clegg Mellor is appearing before you.

5917. Mr. Poulton: In other words, you want the Act worded so that you can do it?—On agreement cases, yes. It is not a case where it is done by a majority.

5918. Then you come to (k)?—All I can tell you of that is that at the last meeting but one of our Board, after we had been sitting for about half an hour, having had to waste about half the time while we sat in silence for the noise outside to cease, one of our members collapsed and had to leave the room on account of faintness (which I expected to have to do as a leader of the side); and eventually at about 11.30 we had to hire a room at our own expense away from the building, simply because we could not face it. There is only one room at the Old Bailey that is possible for a meeting of the Board, and that is so bad for hearing that on my side I have as leader, to sit as far away from the Chairman as possible, in the remotest corner, so as to make sure that everybody on the Board may hear what I say and what the Chairman says to me; I have to treat the Board as a public meeting. How the ladies must feel I do not know. It is a great physical strain, and a strain which nobody ought to be called upon to go through.

5919. I take it that what you have said will be read by the Minister; it is scarcely a matter for the consideration of this Committee?—We have written it, Sir, and I hope it will be read.

5920. (l) is as to scope. You think that the practice of consulting the Board should be compulsory?—Yes. We are very strong on that.

5921. Then (m); what is the kind of agency referred to there?—I think that this is a difficulty peculiar to the laundry industry, so far as I know. Take one case which was typical from the Birmingham district; there is more than one case of either a house or a small shop to which people bring, and from which they fetch, their parcels of laundry work. It would be advertised as a receiving depot, or the agency of such and such a laundry. The arrangement that the laundry makes with the person living on the place is that as a rule she is rent free, and possibly gets her gas free, and usually gets a few shillings a week, and very often a small commission on the cash turnover; and the only duty that the person living there has is this: there is a push bell at the door, and when that bell is pushed she comes down from her household affairs, takes the parcel in, and then goes away again. Well, the legal advisers to the Ministry claim that she is an employee within the meaning of the Act, and that the whole of the time she is liable to be called by the bell to answer the door she is working; and in some cases the amount that landrymen would be called upon to pay would be about equal to the total amount of the cash she handles in the course of a week.

5922. Mr. Poulton: You mean that in all these cases—a good many are newsgagents and small tobacconists—they would come within the regulations?—If they took in laundry.

5923. Many of them do.—I did not know many of them did; there are pure depots, but our view is that the cases you have mentioned would come in.

5924. Dame Adelaide Anderson: They are agents, and you would be compelled to pay the agent as if he or she were a worker?—Yes.

5925. Chairman: Which head do you say it comes under?—That comes under the 1909 Act, clause 9.

5926. I know that, but which heading in your schedule of rates?—It is clause (m) in my statement; clause 9 of the 1909 Act is so ambiguously worded.

5927. I beg your pardon, I know that; but what do they say she is under your schedule of rates?—As a time worker, subject to the 7½d. an hour.

5928. Then she is doing some operation incidental to the laundry trade?—Yes, that is so; this is based on clause 9.

5929. I know that; I was looking at your schedule here. Well, what do you suggest should be done to meet that sort of case?—That a necessary alteration should be made in the particular section of the Act.

5930. That is throwing it on to somebody else. However, I dare say it will be considered.—Thank you.

5931. Mr. MacCallum Scott: Do you suggest that it might be met by a definition of what the trade was?—I suggest this whole difficulty arises from the fact that many parts of this Act were drawn up at a time when it was not contemplated just where it would go. That is outside our own particular order, but if I may draw attention to it, it may be useful. I believe under the Act you will find that there are only certain types of places in which it is necessary to expose the orders, and there are a good many of the new Trade Boards which have been established in which it is not compulsory to expose the orders, and power is not given to the inspectors to come in and inspect the wages books, and yet there are Trade Boards for those particular occupations. It is one of those things where it wants amending to suit the circumstances. What might suit us might not suit somebody else. I submit it is for the Ministry of Labour's legal advisers to amend the Act in accordance with the way they want to administer it.

5932. Chairman: Then (n)?—That is simply the result of experience. I do not know whether it is

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

within your knowledge that there are, according to the records of the Office of Trade Boards, between 7,000 and 9,000 places to which Trade Board notices have to be sent. On our Federation records of commercial laundries we have about 2,800 to 3,000; but we believe there are considerably more than 7,000 places employing one or more workers. That is a matter which is probably common knowledge to anybody, at any rate in the suburbs, who notice a very large number of small hand barrows going about with laundry work on Mondays and Tuesdays. Now, in the aggregate they represent a very large turn-over. For instance, in Bournemouth a very careful census was made by the laundrymen, and I think about two or three years ago, or it may have been a little longer; and it was found then that in the aggregate there were just as many people employed in these little cottage laundries as were employed in the commercial laundries. Now the complaint on the part of our commercial laundries is that they are privileged to receive the visits of inspectors on more than one occasion, whereas these little people who are not complying with the order at all, and who are in the aggregate as big as the commercial laundries, are not inspected. For instance, only within the last two or three days one of my assistants, whose business it is to call upon laundries with a view to making them members of our Federation, discovered a place in the centre of Kent that has never yet complied with the Trade Board Order, and yet an inspector has been into that district and visited certain laundries which are complying with the Order at least three times since the Board has been in existence. Now how it is to be overcome is a very difficult problem, and it may be that it will be necessary to deal with it along lines outside the scope of this Committee; but it is a very great hardship on the commercial laundries, and it is having its effect. It is tending to transfer the work, and consequently workers at the laundries where they are protected by Trade Board Orders, and Welfare Orders, and Home Office inspection, and so on, are being transferred into these other places where they are not protected in any way at all. That has actually taken place.

5933. *Mr. Poulton*: Do you mean that these places employ other people, or are they simply one man or one woman businesses?—Oh, no, they employ one or more workers; in some cases they have an extraordinary number of relations working for them, but in other cases they actually employ labour; in fact if I were at liberty I could mention one case of a Trade Union official who was actually working a hand laundry of that kind.

5934. *Dame Adelaide Anderson*: That is not a new trouble, as regards regulation?—Oh no.

5935. I remember I challenged you to give the names of such places for inspection. Lists were made as complete as possible, and every one of these places is under the obligation to notify its existence if they employ one single person?—I agree. I am not complaining of that.

5936. The list can be made complete with a certain amount of energy and care?—Well, at the present time, as I have already said, there are 7,000 people on this list. At the present rate of inspection I forget how many years it is going to take before all of them have been inspected once. That is my difficulty.

5937. *Mrs. Lyttelton*: You want more inspectors?—Well, I suggested to the employers on the other Trade Boards that that would be so, and asked them to combine with me in making that request; but they said they would have all the inspectors concentrated on our industry, and they did not appreciate that so much as we did.

5938. *Dame Adelaide Anderson*: At many of these places there is probably one woman working by herself, and with occasional help from some other woman?—In that case I think it must be more like 50,000.

5939. They are not really employing at all?—I should say these 7,000 are. It is surprising. I know

there is a difference of opinion on this point, Mr. Chairman, but I can only say that I am receiving evidence of it every day, reliable evidence; laundries that we at our office had never heard of. I will give you chapter and verse if it is necessary, but I do not think it is necessary at the moment.

5940. *Chairman*: The point is that with the present staff the inspection is really not adequate to cover all the ground?—That is so.

5941. Do you want more inspection or none?—Well, no, I do not want none.

5942. Then you have a resolution about Institutions?—That may be divided, I think, into two parts. It is a very important matter, and is probably a matter which will appeal to this Committee very strongly. It will be within the knowledge of at any rate some members of this Committee that my organisation strongly opposed the suggestion made 8½ years ago that a Trade Board should be established for the laundry industry. We were successful, but when the proposal was made under the new Act we came along and said: "Oh yes, we will co-operate with you provided your order is made comprehensive." We had a conference in this building over which the then Parliamentary Secretary for the Ministry of Labour presided, Mr. Wardle, and the conference consisted of employers' representatives and labour representatives, and a number of officials from the Ministry, and Mr. Wardle submitted to us a draft definition which we criticised, and eventually our revised form was accepted, on the statement from the officials of the Ministry that it was comprehensive and would include practically everybody. The only doubt in the minds of the officials was whether it would cover institutions. Mr. Wardle then said that if this wording did not cover institution laundries, and if the Act as at present worded did not allow them to cover it, it was the moral responsibility of the Ministry of Labour to see that that difficulty was overcome. After our first order had been issued some little while—I think it was three or four months—we were informed by the Ministry of Labour that the scope of the Board did not apply to laundries run in connection with hotels, shipping companies, railways, and so on. Well, that came as a very great shock to us, because it was obviously unfair, it was not intended, and we had been advised by the Ministry of Labour that the definition which we agreed upon would bring them in. Consequently we made joint representations to the Ministry, that is, the Appointed Members, employers and labour, and we attended, I believe it was in this room, at any rate in this building, in May of last year when we were received by Mr. Wolfe, and he said that there were these legal difficulties in the way of these institutions, which were fully realised, there being no contract of service and so on. But there might be some difficulty in the case of boarding schools which had their little private laundry, where the inclusive fee covered laundry work as well; but there was no difficulty in the case of hotels and shipping laundries, and railway companies and restaurants, and so on; but as they were not covered by the scope of the Board at present it would be necessary to give them an opportunity of objecting to the proposed extension, which he practically promised us. That would take, he said, some three or four months, because the notice had to be published for so long—notice of proposal to extend—and they had to be given an opportunity of objecting. Well, that was in May of last year, and nothing has happened yet, at any rate nothing so far as meeting our views is concerned. So after waiting many months, writing to the Ministry of Labour and getting either no reply at all or nothing but formal acknowledgments that the matter was receiving attention, we sent a strong resolution reciting the facts. A few weeks ago we had a representative from the Ministry of Labour before the Board, and he apologised for the delay and admitted that he was somewhat surprised to find on looking up the file that the matter had been in hand for so long, but he suggested that it would be unfair and unwise to press the Minister just now. The actual expression was that it was

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

unfair to embarrass the Minister just now, and it would be much wiser to wait and see what the Cave Committee was going to recommend on this point. We feel that this has been scandalous treatment of a Board—and I used the word deliberately—after it has been in existence two years, especially in view of that conference which was held very nearly three years ago when we co-operated with the Minister, and the desire of all parties concerned was that this hotel, restaurant and shipping should be brought in. Everybody thought that they were covered by the section, and then after the first Order had been in operation a little while they found that they were not, for some reason or other—nobody knows why. Then after 18 months we are promised that it will be put right in three months, and the whole thing is apparently forgotten. We think it is very unfair, and the consequence of it is this, that in the meantime, particularly over the last 12 months, these hotels, or many of them, have started establishing their own laundries, whereas before they sent the work to the commercial laundries. I believe it is a fact that in many of these cases they pay the Trade Board rates of wages, but they are not troubled with the difficulties such as I have indicated with regard to piecework basis time rate, and this creates a feeling of injustice, and, if I may say so, a lack of trust in the Ministry, that after these very clear statements nothing should be done. Now with institutions we are up against a more difficult problem, I admit, and the extent of the evil varies according to the district. You are not concerned with Ireland in this matter, I think?

5943. No.—There, of course, it is most extreme, 40 per cent. of the work is done by institutions. Liverpool is probably the most acute centre with us, and there is one institution laundry in Liverpool which enters into competition and actually holds large contracts for shipping work, and has multiple roll calendars and big motor vans running about, and has taken away from the commercial laundries large contracts. Now the difficulty is—and we fully appreciate the difficulty—that there is a contract for service in many of these cases; the inmates are taken there for various reasons; but I believe that the percentage of work done in Liverpool is 7 per cent. of the estimated turnover of the laundry work that is sent away from homes in Liverpool; 7 per cent. is done in these institution laundries. Now, that may sound small, but it is the effect of that price competition which is absolutely uncontrollable. What happens is that they get a contract, or get a chance of getting one, there is an appeal made for funds, for the £1,000 or £2,000, that is wanted for the additional machinery. It is an extraordinarily difficult situation. The Board is quite united on this; the labour side is as keen as the employers' side, and the Appointed Members too. We have communicated with several Government Departments; I think at one time we had the pleasure of communicating with Miss Anderson, and with every Government Department we could think of. I do not know whether you can help us in this matter. I hope you can.

5944. What do you ask us to recommend?—That such alterations should be made in the Acts as will bring all laundries, institutions, hotels, contracts and so on within the scope of our particular Board.

5945. *Dame Adelaide Anderson*: It is very surprising that hotel laundries and shipping laundries which are occupied as ordinary businesses employing workers are not included. Are they really quite outside the scope of the Board?—It is quite as big a surprise to us.

5946. They are not outside the Factory Acts?—No, not outside the Factory Acts.

5947. *Lord Weir*: If they were brought in, would it make much change in the competition? If those institutions and those departments of the railways and hotels were under the Trade Boards Acts, would it make any vital difference to the competition?—Well, I want to be very careful; I do not want to overstate the case at all. Of course we do not know,

but I understand that in many cases the hotel and shipping laundries are paying the same as commercial laundries. I believe that is so in many cases, but they are allowed complete freedom from this kind of restriction, certain advantages which are really practical—they have freedom in various ways. For instance, there are some laundries who do not pay for Bank Holidays who give some other concession. There is a sort of free play; they are not under restrictions at all. Take, for instance, the freedom from piecework basis time rate. I do not want to speak disrespectfully of the inspectors, but it is not always pleasant to feel that when some official of the Ministry of Labour thinks it necessary to spend three or four days in your laundry going through the place, he can do so, it is so much cost really, and it disturbs the place. The inspectors are quite kind and reasonable; I am not complaining about them at all, but it is very inconvenient.

5948. *Dame Adelaide Anderson*: Is it not the case that you have made agreements with some of these institutions—some of the associations?—That is so, in some cases.

5949. They have joined your association so that they are working on the same lines?—It is not a question of joining. There are cases in which they agree not to enter into price competition; there are some districts where that is so.

5950. They fix their prices on the same basis as the commercial laundries—by agreement with the association?—All I can say is that they do not indulge in price competition. My federation does not regulate prices.

5951. *Mr. Layton*: Then with whom have they entered into these agreements?—Just with the local tradesmen as such.

5952. Are there local associations which have these understandings?—There are local sections. The organised laundries have local branches, and in some cases they have proper agreements regulating prices—an understanding that they will charge about the same prices for the work.

5953. *Mrs. Lyttelton*: It is really an agreement about rates of prices and not rates of pay, because in many instances they do not pay?—In these institutions they do not pay.

5954. Where there is a contract of service?—Yes. Then comes the point of entering trade for gain. May I draw your attention to that, Mr. Chairman, because it is rather important? If you got over the difficulty in some of these other cases there is the use of the words "for gain"; it is a little difficult to say what is gain and what is not in some cases. For instance, if you have an institution which is doing a turnover of £2,000 or £3,000 or £4,000 in the laundry, is that for gain? It is not gain in the ordinary commercial sense, but it is really a gain in the sense that it benefits the institution.

5955. *Mr. Poulton*: The hotels, railway companies and shipping companies do not enter into competition with the commercial laundries, do they? Surely they do not try to secure any laundry work, do they?—Oh, yes. For instance, the Regent Palace Hotel within the last 12 months, or about that time, have established a laundry, I believe, in the basement. Up to that time the visitors to the Regent Palace Hotel could send their laundry wherever they liked. Very shortly, if not immediately after they started their own place they made it a rule of the hotel that no laundry van should be allowed to call there, and any visitors who wished to send their laundry had to carry it out themselves; the members of the staff are not allowed to move it. That also applies to other hotels. Take the Carlton and the Savoy; their work up to about a year ago, I think, was done by the commercial laundries, but now they have started their own laundries, and one of them employs over 100 workers, and that work has been taken clear out of the commercial laundries.

5956. *Lord Weir*: Is not that normal progress?—It may be; but my point is that when they are doing the same class of work they ought to be under the same conditions as the people who were doing the work originally. If it is good for the workers in a commercial laundry to be under the Trade Board, it should be equally good for them to be under it when they are working for these hotel laundries, when they

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

are doing the same work in a place called by another name. It is not merely incidental to that work; they are doing the work for the visitors at their hotels, and, as a matter of fact I believe in one case work is being done for people outside; it is not even confined to the work of the visitors at the hotel. That does not matter very much, perhaps; but to the extent that they are not under the Trade Board regulations the workers are being removed from conditions which are presumably for their benefit, and are being put into places where they are not under those restrictions.

5957. Surely a case like that would come under the Trade Board; surely one like the Savoy, an independent laundry, would be under the Trade Board?

5958. *Dame Adelaide Anderson*: Has there been any test case?—No; we have simply been informed that they are not under the Trade Board.

5959. *Lord Weir*: On what basis did you increase your minimum rates in May, 1921; what caused a rise in wage rates then?—I think that was dealt with before you came in, my Lord, but if you wish it I shall be glad to repeat my answer.

5960. Not at all.—We think it was a scandal doing it at that time.

Chairman: It was owing to the delay between the proposal and the confirmation.

5961. *Mrs. Lyttelton*: What proportion of your workers are women, and what proportion of them are in trade unions; do you know at all?—The proportion of women is roughly 85 per cent.; but the nearest figures to which I can direct you are those now published in the "Labour Gazette" for the month under the extension of unemployment insurance.

5962. What proportion of those are in trade unions?—On that point I am afraid that any figure I could give you would be strongly contested by the other side of our Board. We hold that comparatively few are organised, but they vary in different parts of the country.

5963. If comparatively few are organised, that makes the case for the Board stronger?—Yes; we are not opposing it; we have supported Trade Boards, but we want certain amendments which appear to be necessary as the result of experience. We should be sorry to see our Board abolished.

5964. *Mr. Layton*: I do not recollect whether you told us this last rate was passed by agreement or by a vote of the Appointed Members?—This last reduction?

5965. Yes.—By the vote of the Appointed Members.

5966. Have you ever had an agreement on your Board?—No—except, I think, with regard to the ventilation of the offices, or something of that sort.

5967. How does the minimum rate of 8d. and a piecework basis of 8½d. compare with pre-war rates? What do you estimate has been the increase on average earnings as compared with before the war?—It is practically impossible to give you an estimate, because prior to the formation of the Laundry Trade Board all we had to go on was agreements with trade unions. There was no craft union; it was purely local agreements, and the agreements varied. We would make almost on the same day, or at any rate within one week, different agreements with the same trade union according to the district in which we happened to be working; and the only thing that we had to go on when our Trade Board Order was issued was an Award of the Interim Court of Arbitration for London, for Brighton, for Hull and for Newcastle.

5968. But could not you give representative cases; take London, for example?—There was no rate in London other than this Award that I have given you, which had been in operation for three or four months, and then only applied to the Federated Laundrymen.

5969. That had only been in existence a few months before the Trade Board?—Yes.

5970. But have you no means of comparing those with representative rates for London before the war?—I do not think one could fairly. One could take an average, but it would be largely a guess. There is no secrecy about it. We admit as an industry that wages before the war, generally speaking, in the

laundry industry were altogether too low. There were many cases in London in which the rate of wages for time workers would be 13s., 14s., or 15s. a week for a week of 54 hours. There were a number of cases in which it was more, according to the nature of the laundry, according to the attitude of the individual laundry proprietor, and more particularly the nature of the work done by the worker—the department. You see my difficulty; it was not an organised industry. I am not trying to dodge the question; I do not quite know how to give you any facts which would be other than guesswork largely; Mr. Crabtree, who is our industrial commissioner, can perhaps confirm that. 8½ years ago was the first agreement we made; that was in settlement of a strike, and was agreed with the National Federation of Women Workers. It meant an increase, and the agreement was 12s. a week at 21 years of age and over for a 55-hour week. From that time onwards we made successive agreements with trade unions for time workers. That was by agreement. From that time onwards we began making an increasing number of agreements with trade unions for localities, and it was always going up and up and up, to the point at which it reached the Trade Board. The Trade Board rate was equal to the highest rate we had made. That is significant. The first Trade Board rate was the highest rate which we had entered into by negotiation with trade unions for any part of the country.

5971. At the time the rate was made?—At that time; it is about two years ago. It came into operation, as a matter of fact, two years and a month ago.

(*Lord Weir here took the Chair.*)

5972. *Lord Weir*: The Trade Board adopted the maximum as a national minimum?—Yes. Those agreements I speak of were for the industrial centres, and it is because of that early experience that we attach so much importance to the definition of what a minimum wage should be. Have you got my point? I do not want to be disrespectful to any member of this Committee, but one must speak perfectly frankly. We found in effect that when we were dealing in negotiation with a particular trade union, and one or two of the officials, we could make better terms than one could get when there were a whole lot of trade union officials together. You will appreciate my point; that is what we found on the Trade Board. I say it with all respect, but that is actually what happened, and it is very significant; and we submit that it proves the very great necessity for laying down as clearly as possible what is meant by a "minimum."

5973. *Mr. Layton*: I understood you to say there was a tendency to lose work from the commercial laundries, which went to very small laundries, or laundries run by individuals. Would you say that that is a serious tendency?—Yes, particularly in certain districts. I could give you a number of them.

5974. Would that be because your prices are more than the public is prepared to pay to-day?—Yes; that is the reason.

5975. Has there been any marked reduction in your prices in the last six months?—No, very little; because they were not increased as the increased costs justified at the time when all other things were going up. We did not go up to the extent that other things did, and so we cannot come down.

5976. I suppose labour is the chief item in your cost?—About 50 per cent. of gross turnover goes in wages, and therefore an increase in wages to us makes a great difference.

5977. Nevertheless, the prices paid, I suppose, are at least as high as the increase in the cost of living—probably more; is not that the case?—As far as I can tell—it is very difficult to say exactly on that point, because we have about 50 or 60 articles on our price-list, and the actual percentage increase varies according to the proportion of these different articles.

5978. But there are not many that have risen less than 100 per cent.?—The average for everything, as

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

nearly as I can tell you, for everything throughout the country, is 100 per cent.

5979. The average is only 100 per cent.—That is the average; but even then there was no standard price before the war. There is no standard quality of work.

5980. But that being the case, and the public being unwilling to pay your price, how do you propose to meet the situation, seeing that this trade is going to these small individual laundries, or is being done at home, or, as you have explained, by institution laundries, and so on?—The trade at the present time is a decreasing one. We are in a position when we cannot decrease our prices materially, and we have simply got to put up with the remaining volume, unless some new discoveries, which have not yet come along, are made, which will enable us to reduce our costs. The last figures I just referred to show 103,000 employed in the laundry industry. As far as I know—it is very difficult to get exact figures—before the war there were about 140,000. Then you had about 144,000 people working on an average of 56 hours a week, and you now have 103,000 working an average of not more than 44 hours a week.

5981. Is that the whole trade, or your own members?—No, the whole trade. I am speaking from the unemployment figures.

5982. That may be accounted for by a different method, of course?—There is actually, very much to my personal disappointment, because it is contrary to what I have preached personally, a decrease per hour output in spite of the reduced hours. I would have expected an increase. There has been a certain amount of labour-saving machinery introduced; not to any appreciable extent, because so much of the work in laundries is of a nature which you cannot deal with on mass production principles.

5983. But at the same time, I suppose, your Board does not contemplate endeavouring to get the rate down below the general female rate in the country as it was before the war?—We have no desire whatever to return to pre-war conditions. The only point we are concerned with at the moment is just what is best for everybody concerned, and, as a matter of fact, with regard to this reduction in wages of which I have spoken, I was at a meeting yesterday when over 50 per cent. of the people there—I think it was about 80 per cent.—said they were not going to reduce their wages that 3d. per hour, because they considered that in their particular district it was not justified; it was not fair to the worker.

5984. *Lord Weir*: You mean that the decreased cost arising from this rate change would not be reflected in prices?—No; I did not make myself clear. In the particular case I was speaking of they were not going to reduce their wages, because they considered it as a new rate, and one which did not apply in their particular district, but applied to other districts where the cost of living was not so high. The difficulty as to whether prices were to be reduced is a matter for each man, or group of men, to consider for themselves. For instance, there are many districts—I think the majority; but at any rate many of them—where, when that 8d. came along in May last, the rise from 7½d. to 8d., there was no increase made in the charges; consequently when it comes down to 7½d. they cannot make a decrease.

5985. *Mr. Layton*: That depends upon the profit they were making before the rates came in?—On that particular point there is no laundryman in the country—perhaps I must not say that; but the great majority of laundrymen in this country to-day and for the last three or four years have not been making a profit on their turnover which would be considered to be a reasonable one by any collection of business men.

5986. *Mr. Poulton*: When you say 50 per cent. labour cost, do you mean 50 per cent. labour cost now, or do you mean generally; is that higher or lower, say, than it was before the war?—It is higher than it was before the war. The difficulty is this: however high the price of boots may go there are

very few men or women who can make their own boots; but there are very few women who cannot, or, if I may say so with respect, think they cannot, do laundry work at home, and they can do it. If they count up what it costs it seems much less than they pay a laundry. If I may use a very simple illustration, if a lady can take a silk blouse and wash it with a pennyworth of soap and iron it in a very little while she wonders where the one shilling or one shilling and sixpence goes to, which she has to pay to the laundry. Before the war the cost of labour was about 42 per cent. of turnover; at the present time it is 50 per cent.

Lord Weir: A change in the hours would affect that.

5987. *Mr. Poulton*: With regard to the hotels and railway companies and so on, is it not a fact that they are doing more work and consequently there are fewer commercial companies in business? You stated that that has become a rather serious thing to you, the hotels doing their own work, and also the shipping companies and the railways. Therefore they are not within your meaning of the term, at present at any rate, commercial undertakings, although of course they are commercial undertakings in a sense?—Did I understand you to say that you understood me to say that there were fewer firms?

5988. Yes, in answer to Mr. Layton.

Mr. Layton: I think he said fewer employees. I think the witness gave me the figures; the 140,000 was approximate, but the 103,000 is actual.

5989. *Mr. Poulton*: I do not know how you make your returns; it depends how the returns are made. Supposing returns are not made from these places, and your place happens to be reduced in their employees?—Excuse me; the present figures are for all those who come under unemployment insurance; they are the Board of Trade figures; but further than that I have confirmation from my own records. These people come under unemployment insurance; there is no question about that. I do not think anybody will doubt that, and there has been a marked decrease in the number of employees. There is no query about that at all.

5990. *Mr. Layton*: You would assert that there are actually less people; they are doing less per hour, and therefore the commercial laundries generally are doing less laundry work than before the war?—Absolutely, yes.

5991. Whereas the work is now being done in private houses?—In cottage laundries and in private houses and at home. I can put it in a plain way. You have only to consult any middle-class woman whom you may meet, as to whether she is doing more work than before the war and she will always tell you that she is. I have heard of ladies getting together and having a sort of little communal laundry; they combine together to have a little laundry built in the garden.

5992. *Mrs. Lyttelton*: Of course, the great increase of these electrical and other small machines which you can put into private houses has increased the amount of washing at home. They are very clever things, and many people have set them up co-operatively as you have just described. Lots of people I know have combined in that way. They get a machine and employ one woman, and it is due to the immensely expensive rate that we now have to pay to the laundries for the work.—That is an opinion.

5993. I only state the fact. I do not criticise your prices.—It is only just equal to the difference in the value of money.

5994. *Mr. Layton*: Have you ever investigated whether these individual persons working for householders, or in small laundries employing one person, can earn the Trade Board rate?—They do not get it because they charge such extraordinary prices.

5995. Can you give definite evidence of that?—Yes; I have not the papers with me now, but in my own laundry which I owned up to three or four years ago it was not unusual for me to get customers' books coming in to me. Ladies very often use their previous laundry book when they go to a new laundry, and I would see that they were being

13 December, 1921.]

Mr. J. J. STARK.

[Continued.]

charged at their previous laundry for many of the articles no more for the complete process of collecting and delivery and doing all the work than I was paying my piecework ironers for ironing the things only. We could get evidence of that if you liked; there are thousands of cases of that kind.

5996. But women who take in washing and work very long hours, are their earnings less than the Trade Board rates?—These women would be better off working in a factory laundry; they would be financially better off, there is no question about that; there are various reasons for it with which I do not think I need trouble you. You will frequently find that these women who are doing that kind of thing—one is very sorry for them—

5997. *Mrs. Lyttelton*: Your main point is that it is not fair that there should be a large class

of workers engaged in your trade who are not under the Trade Board?—That is so. I will not go so far as to say throughout the whole country, but in many parts of the country it represents half; I refer to such places as Bournemouth, Southport, and places of that kind. I could also take you round the suburbs of London where practically every house takes in washing.

5998. *Lord Weir*: I think if 50 per cent. of the workers are employed in such a fashion it makes it very hard indeed to extend the Trade Board so as to cover their operations?—Yes, and it makes it all the harder for the employers who are willing to be not merely just, but generous, when these people are cutting into them all the while.

Lord Weir: Thank you very much for your attendance.

(The Witness withdrew.)

Mr. ALEXANDER RAMSAY, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

General Aspects.

1. It is desired to draw the attention of the Committee to one or two of the national aspects of the Trade Board System. The system embodies the principle of compulsory regulation of wages, and in effect puts the determination of the wage to be paid into the hands of an authority nominated by a Government Department, and one which does not, in general, enjoy the confidence of the employers.

2. This system of compulsory wage regulation already applies to approximately $3\frac{1}{2}$ millions of workers. It is understood that Industrial Councils in operation cover approximately another $3\frac{1}{2}$ millions of workers. There is a marked tendency on the part of these bodies to emulate Trade Boards and seek the power to fix compulsory rates. Should this tendency develop, it would entail their being for Whitley Councils some Statutory Authority corresponding to what already exists in Trade Boards, and there is, therefore, a prospect of the wage conditions of some 7 millions of workpeople being governed by an Authority which has no responsibility to industry. It is held that such a condition would, in the long run, be extremely bad for the economic life of the country, and that any movement in this direction should be carefully watched.

3. It is a matter of common knowledge in the Midlands that workpeople who are protected by Trade Boards do not join Trade Unions, and as Trade Boards extend, the authority of the Trade Unions over the workers will correspondingly decrease. In spite of the fact, certain Trade Unionists are strong supporters of the Trade Boards system. It is suggested that this support is a question of high policy, and that these see in the compulsory regulation of the wages of millions of workpeople what they believe to be a first step towards the ultimate control of industry by the State.

No argument is made here for or against such a proposition, but it is suggested that there are far-reaching issues bound up with this enquiry to which the Committee should have due regard.

Regulation of Wages in other countries.

4. The ultimate economic prosperity of this country depends largely on our capacity to exercise a prosperous foreign trade. In no other country in Europe, nor in America, is there machinery in operation at all comparable to that of our Trade Board system. Our foreign competitors are, therefore, in a position to take advantage of the disabilities of British employers and undercut them. It is argued that the development of wage regulation in an export country such as ours must be made with some regard to the international labour situation.

Cost of Trade Boards.

5. The Minister of Labour on 23rd March, 1921, gave the cost of Trade Board administration for ten months, ending January 1921, as £92,665. No reference is made to the cost of printing, to rent, incidental labour and establishment charges generally, such as would be debited against the Department by any ordinary business house. It is believed that the real cost of administration is nearer £200,000 per annum, and while this would not be regarded as a large sum provided Trade Boards were rendering national service of importance, it is one which, in these times, should not be overlooked.

Inception of the 1918 Act.

6. The third report of the Whitley Committee, dated 7th June, 1918, on "relations between employers and employed on Joint Standing Industrial Councils" made certain recommendations upon which, presumably, the Government acted in bringing into being the Act of 1918. The Committee recommended that where no suitable organisation existed for the regulation of wages a Trade Board should be set up, and this is the basis of the 1918 Act.

They observe, however, "briefly our proposals are that the extent of State assistance should vary inversely with the degree of Organisation in Industries." We do not, however, regard Government assistance as an alternative to the organisation of employers and employed. On the contrary, we regard it as a means of furthering the growth and development of such Organisation."

If this is the intention behind the Act it has so far signally failed in its purpose, because, as already pointed out, the effect of Trade Boards upon workers has been to decrease their dependence on Trade Unions and, naturally, to remove them from without their scope.

In very many instances the same applies to employers of Labour, especially the smaller manufacturers, who, finding their wage conditions regulated for them, do not experience the same need to associate themselves with employers' organisations.

Trade Boards as an Alternative to Direct Organisation.

7. If, contrary to the opinion of the Whitley Committee, Trade Boards could be regarded as providing an alternative to the organisation of employers and employed, the fact that they do not tend to create organisation might be immaterial. But they do not provide an alternative for organisation. It is sometimes argued that it is fundamental in Trade Boards that they secure peace in industry. Such a contention is based on a pure assumption, which ignores the other and dominating factors.

The majority of Trade Boards have been created since 1918. They started by perpetuating the wage rates which gave the workers no reasonable ground for complaint. But there ensued a period

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

of declining trade, succeeded by a definite and disastrous slump. To claim that under such conditions Trade Boards have been the means of keeping the peace is simply to claim for them that they have defeated an enemy which did not in fact exist.

Effect under Good Trade.

8. When trade is good and labour scarce, Trade Boards will not contribute to the peace of industry unless they put themselves in the position of the best employer, a situation not contemplated under the Act. Workers will not be content to accept less from a Trade Board employer than their fellows obtain by direct negotiation, apart from Trade Boards. This means that the wage fixed by direct negotiation, apart from Trade Boards, will be the determining factor in the wage standard, and it is contended that no step should be taken by the State which will weaken the organisation on either side responsible for reaching such agreement.

Extension of Trade Boards.

9. Under the 1909 Act 13 Trade Boards were brought into being. Under the 1918 Act Trade Boards were constituted as follows:—

Eleven in 1918.

Fourteen in 1919.

Thirty-five in 1920.

The activity of the Ministry of Labour in the years 1918 to 1920 is extraordinary. Wide powers for fixing special rates for special classes of workers existed under the 1909 Act, but it was apparently found unnecessary to apply them. In the intervening 10 years the Trade Union organisation in this country had enormously developed, and, it is contended, would have proved adequate for the safeguard of the workers. But on the ground of alleged lack of organisation the Ministry ran riot and in so doing have done much to destroy the confidence of employers in its discretion and disinterestedness.

Inefficiency of the Present System.

10.—(a) Trade Boards have led to confusion in that sometimes more than one Board applies to the same factory, although the work is entirely analogous.

(b) Differing rates are applied to operations, although the same worker may be performing those different operations successively in short periods of time.

(c) The rates fixed differ from those arrived at by direct negotiation, although the operations, from the point of view of skill, arduousness, or economic value, are largely similar.

(d) While they are of no service when trade is in a prosperous condition, they prevent, when trade is bad, the quick determination of an economic wage.

(e) As a matter of fact the rates and operations scheduled by the Trade Boards are so numerous and complex that hundreds of inspectors would be needed to ensure definitely that effect was given to them.

(f) From the time a Trade Board determines a rate, until such rate becomes effective, a period of, at least, three months elapses, and until it can be altered a further six months must elapse, unless the Minister specially intervenes. Such delay and restriction is too great. A Trade Board having made a decision, such decision should be made applicable within a month, which provides ample time for appeal, and it should be within the power of the Board to alter a rate at any time subject to the provision of a month's notice being given.

(g) *Appointed Members.*—There is a feeling in industry that the present Appointed Members are economic theorists or social workers. While in their own sphere they are entitled to the highest admiration, as industrial administrators they do not enjoy the confidence of employers. It is suggested that the Minister should, in future, definitely ask for nominations from responsible bodies on each side, who concern themselves with the same or similar classes of labour to that which it is desired to protect.

Fundamental Considerations.

11.—(1) The Ministry of Labour should be impartially at the service of industry.

(2) It should refrain from all undue interference in industrial affairs.

(3) A policy which lays it open to a charge of seeking, at the expense of the State, an alternative to direct negotiation should be abandoned.

(4) In relation to the above, it should be kept in mind that the Government have considered it necessary, in the national interest, to de-control other sections of industry, viz.:—

Agriculture;

Mining;

Railways.

(5) While a decision of a Trade Board is supposed to rest upon the authority of Law, a general attempt to refuse application of such decision would create a difficult situation, and have a bad moral effect on the parties to industrial negotiation.

Recommendations.

12. A. *Release from a Trade Board.*—Appeal to be removed from the control of a Trade Board already established should not be directed to the Minister, but to an Industrial Tribunal to be appointed.

B. *Creation of a Trade Board.*—The Minister of Labour should not in his own right exercise an authority to create Trade Boards. The Industrial Tribunal before-mentioned should examine any such proposal; give suitable notice to the parties proposed to be included; hear evidence and report; without such report the Minister should not act.

C. *Scope of Trade Board.*—Trade Boards should not attempt to define wages for operations. They should concern themselves only with a minimum wage for the lowest grade of worker in an occupation and allow the ordinary economic forces to determine the wages of skill and merit.

5999. *Lord Weir:* Mr. Ramsay, I think you are Chairman of the Birmingham and Wolverhampton District Association of the Engineering and National Employers' Federations?—That is so.

6000. Are you yourself a member of any Trade Board?—No, I am not connected with a Trade Board.

6001. You wish to give us some evidence, first, on the general aspect; you wish to draw our attention to some of the national aspects of the Trade Board system.—I think in dealing with paragraph 1 of my statement—I presume you have the evidence in front of you—I had better just say in relation to that national issue that in drafting this summary of evidence I tried to keep before me not only the particular needs of certain of our people who were covered by Trade Boards, but also the needs of very many and very large employers, who, although not covered by the Trade Boards, find that the Trade Boards really do affect them in their operations; and therefore paragraph 1, and perhaps some of the subsequent paragraphs of the statement, are directed not only from the point of view of the man who is covered, but from the point of view of the employer who is not covered but affected by the Boards.

6002. You say in paragraph 1 that in effect the determination of the wage is in the hands of an authority nominated by the Government—surely that is rather a strong statement.—It may appear to be a strong statement, but I can only tell you that part of the general feeling in the industry, or at least that part of the industry which I represent, namely, the manufacture of metal products, is that the Trade Board in effect and in fact may be regarded as a Court consisting of the Chairman and Appointed Members, and that the representatives on either side may be regarded as the respective attorneys arguing the case. Therefore, if that in fact is the principle and method upon which the Trade Board is conducted, it is not too strong, I think, to say that it does put the determination of these conditions into the hands of an authority nominated by the Government.

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

6003. *Mr. Poulton*: You go on to say, in paragraph 2, on the Industrial Council—by which I take it you mean the Whitley Council—there is a marked tendency to emulate Trade Boards and seek the power to fix compulsory rates. Do you suggest that on these Boards, which are voluntary, it is a bad thing to fix a rate for the bad employer, which shall be, at any rate, as good as that of the fair employer?—I can answer that question, I think, best from two points of view. I should be inclined to agree that there is something to be said for bringing the bad employer, as you describe him, into line with the good employer; but I am more concerned at the moment in paragraphs 1 and 2 in regard to the issue more from the general point of view and in the wider sense, and I am concerned with the prospect of some considerable number of millions of workers in the country having their wages regulated for them in a compulsory fashion. I do not believe that that would be a good thing for the country.

6004. *Mr. Layton*: The emphasis, then, is not on the fact that it is a Government Department which does not in general enjoy the confidence of the employers, but on the fact that it is a legal regulation; is that so? I mean you are not complaining primarily of the tribunal which nominates the people who fix the wage, but of the compulsory character of the wage fixed?—I think you will have to regard it that I am complaining that as affecting 3,500,000 workpeople an authority nominated by Government does fix wages, and I do not approve of such an arrangement; and then subsequently I fear that by the extension of this system of compulsory wage regulation another 3,500,000 people would be brought within the orbit, so to speak, and I regard that as an evil separate and distinct from the other.

6005. Supposing that you had got two collective agreements between employers and employed forming the basis of this system of wage regulation, would you then object to its being given legal sanction?—I do not for the moment think I could agree to say that I approve of wages being made statutory by the Industrial Councils.

6006. I am trying to get at whether it is the character of the tribunal that you complain of or the statutory authority behind them?—With respect, I suggest if you separate paragraph 1 from paragraph 2 as I have done you will see my point. In paragraph 1 I am dealing with the tribunal nominated by the Government and in the second I am dealing with the general principle of some millions of workpeople being controlled by an authority, whatever the authority may be, and which has compulsory powers.

6007. What is the burden of your complaint against compulsorily fixed wages; is it that they are insufficiently elastic to meet varying trade conditions?—Do you mean the compulsory regulation of wages by Trade Boards?

6008. Well, you were suggesting in the note that 7,000,000 people may have their wages statutorily fixed; what is your objection to that? Is it that that system does not allow sufficient elasticity, or do you suggest that they fix the wrong wages?—Well, one cannot say that they fix the wrong wages, of course; for they have not fixed any wages. We are casting our minds into the future.

6009. Which is it that you fear?—I am just going to explain that, as far as I can see, if we had some kind of extreme development of this fixing of a wage, and making it compulsory, we should have, as I have tried to demonstrate later on, the majority of those workpeople, whose wages are so fixed, outside the trade union on the one hand and a considerable number of the employers outside employers' organisations on the other hand, and I do not believe it would be good for general industry. I am not here to speak for the unions, but I do not think it would be good for the workpeople that there should be on the flank of industry a very large force of unorganised labour. But my other point, and probably the stronger point, is this. My view is that limits whereby wages can be fixed and made statutory are pretty well defined,

and I do not think we have got to go very far to reach the limit; but if this system were carried to the point at which 7,000,000 workpeople were covered, as I indicated it might be, then one can foresee that the time would come, probably in a state of good trade, where the workpeople might refuse to carry out, or to be regulated by, the order of the Court; and one can conceive that in a bad time there might be a reaction amongst employers also against the finding of the Court. And where you have got a system of compulsory regulation, so far as I can see, the moment either the one side or the other says it is not going to work this system, the whole system will collapse like a pack of cards, and that is why I feel it is one which we dare not take too far.

6010. *Mr. Poulton*: But with regard to this second three-and-a-half millions, their method is a method of voluntary arrangement, although it may have a compulsory application to a trade or any given number of trades. Therefore the position is not the same. I was going to ask: What do you mean by the phrase "they will be governed by an authority which has no responsibility to industry," whereas as a matter of fact they are the employers' and the workers' representatives on the Whitley Councils, which are taking the place of the old arbitration boards and that kind of thing; I mean, they have got a direct responsibility?—At the moment, while the members of the Industrial Council are nominated from either side of the industry, it could not be held to speak for the industry as a whole.

6011. Why not?—Because it does not represent the industry as a whole.

6012. What would you say did represent the industry as a whole? Supposing there are 80 per cent. of the employers and 80 per cent. of the employees organised in federations and unions respectively, would you not say that that represented the industry?—I should certainly say they would.

6013. That is the case in many of these Councils?—But that is not the case I am making. The case I am making is this: that the moment you give that Industrial Council statutory powers you immediately set in motion a force which is going to operate against that organisation, a force which will bring people out of the unions and will bring many employers out of their employers' organisations.

6014. *Mr. Layton*: But is not the exact opposite to what is happening in the trades which are governed by Trade Boards? The evidence that we have is that the organisation tends to be strengthened by the operation of the Trade Boards Acts?—I can give you evidence on the other hand, as far as the manufacture of metal products is concerned, that the whole tendency is in the opposite direction, and I think I can show you that the normal tendencies to be expected from the facts of the case would lead, not towards organisation, but towards disorganisation.

6015. You say that the number of workpeople under the Stamped Metalwares Board who are in organisations is less than it was before the Board was formed?—Yes, and I say further that as the Boards extend the number of people connected with organisations will decrease.

6016. *Lord Iveir*: I should like to know the definite ones you know of, because the bulk of our evidence, as Mr. Layton says, has been the other way. You might give us just as full details as possible to bear out that contention?—I have a case in mind of a firm to whom the Trade Board was applied in 1920. The Trade Board was applied to only 5 per cent. of the workpeople; but the employer, in order to avoid confusion, did, I believe, in fact extend the Trade Board rate to the whole of his workpeople. At the time the Trade Board was applied to that factory, and it is not a small factory, 90 per cent. of the employees were members of a trade union. At the present moment, after something less than two years' operation of the Trade Board, so far as we know the numbers of workpeople who are members of a trade union is absolutely negligible. I have in mind two other factories, both covered by Trade Boards, in which I am credibly informed that there is not a single

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

trade unionist employed, and these factories are quite in the heart of the industrial section of the Midlands. I have the assurance of certain trade union organisers of the district from which I come, and I do not think there would be very much difficulty in getting their permission to use their names for the statement that the Trade Boards do, in fact, operate against the extension of their organisation.

6017. It is very important for you to let us have full information about that; because all our other evidence leads the other way. However, you say quite definitely that in this particular trade, the pressed metal trade, the workpeople who are protected by Trade Boards do not join trade unions, and, on the other hand, you go on to say, not only so, but they leave the trade unions?—They do.

6018. Perhaps you might take the other side of it, the organisation on the side of the employers. What is the effect of the Trade Board on that?—What we find is that the smaller employers do not consider association of any kind when their working conditions are provided for and governed by the Trade Board. We have cases of other employers, more substantial employers, who have, in fact, left the employers' organisation. It might not be possible for me to say and prove that they left because they are provided for by the operation of a Trade Board, but the fact remains that the Trade Board does govern their working conditions, and that such being the case they do not find the need of association with other employers, and they have dropped away.

6019. Might we put it in this way, that in the stamped or pressed metalwares trade organisation on the employers' side has been decreased since the establishment of the Trade Board. We want to get this definitely?—I am just wondering how to reply to that, not because I have any doubt as to the tendency, but there have been so many factors operating in the last year or two affecting organisations that one must hesitate about saying that any decrease is entirely due to this cause. But if you examine the probabilities of the case, as I think you are entitled to do, if a worker, whether a man or a woman, finds that his or her wages are regulated through a Trade Board, it is clear to me that, receiving these advantages without cost, there is no inducement for them to join a trade union and pay a subscription, and precisely the same argument operates on the employers' side.

6020. Mr. MacCallum Scott: Does not that show how well satisfied the employers are with the Trade Boards—that they think it is no longer necessary to maintain their own organisation, that the Trade Board does the work that organisation was doing before?—No, I should not say that that was the case. If the satisfaction was so great, one would have some difficulty in discovering why this Committee was sitting.

6021. Lord Weir: In the badly organised industries the very fact that you have to establish a Trade Board tends to bring about an immediate organisation among the employers, if for nothing else than getting representative members for the Trade Board?—But may I suggest that the fact that a Trade Board is in operation does not at all prove that there was a state of disorganisation before the Trade Board came into being? Let me put it in another way. When the war-time conditions were removed, with the regulation of wages by the Ministry, had the Trade Board not intervened the unions themselves would have been successful in performing their functions of organising these people.

6022. Mr. Poulton: But surely you are forgetting the important clause in Section 1 of the Act, which really established these Trade Boards—that the Minister has to be satisfied that there is no adequate machinery existing for the regulation of wages; therefore, if your statement is correct—and I am rather surprised to hear it, having regard to the evidence of your other colleagues in that particular trade, because if they are leaving the associations they have no organisation, and therefore the Trade Board will continue, because that is exactly what the Act states?—I quite agree with you that the Act states

that it must be shown that sufficient organisation does not exist, but the feeling in the Midlands is, that the Minister, or his representatives, to be exact, were easily satisfied when they were looking for the lack of organisation.

6023. Lord Weir: Let us get it quite clear; do you suggest that the Minister was unjustified in establishing that Trade Board, because there really existed adequate organisation?—I suggest that the Ministry was too zealous in extending Trade Boards.

6024. You are speaking of Trade Boards generally?—Yes.

6025. Do you suggest, for example, when you say "zealous" that the Minister established any Trade Board unjustifiably, that is, in industries where the organisation was adequate?—Yes, I think I dare put it as high as that.

6026. Can you give us an example of that?—The difficulty I am faced with is that under the Stamped or Pressed Metalwares Trade Board there are undoubtedly a number of smaller employers amongst whom I should say, when the Trade Board came into being, there was very little organisation. On the other hand, there are included under the Trade Board very many employers who are members of employers' organisations and whose workpeople in very many instances were members of trade unions. Now, I suggest to you that when the control of the Ministry in relation particularly to the control of women's wages came to an end, or was about to come to an end, the ordinary forces governing wage negotiations, namely, the employers on the one side and the unions on the other side, had no opportunity of demonstrating whether, in fact, this trade was going to be organised or whether it was not. The Trade Board simply stopped in, and, as I claim, by stopping in, created and caused to extend this disorganisation.

Mr. Poulton: On paragraph 3, I am not quite sure whether Mr. Ramsay is very sincere about this, but I should like to know whether he has any evidence to back up the latter part of his statement, that "certain trade unionists are strong supporters of the Trade Boards system. It is suggested that this support is a question of high policy, and that these see in the compulsory regulation of the wages of millions of workpeople what they believe to be a first step towards the ultimate control of industry by the State."

Lord Weir: That must mean control industry; not control the State.

6027. Mr. Poulton: If they controlled industry they would more or less control the State?—I can answer that in only one way. Your argument presumes that I have made my point in connection with the Trade Board in point of fact tending to draw people out of the employers' and workers' organisations. The Trade Union Congress at Cardiff recently passed a strong resolution in support of the Trade Board system, and they spoke, if my recollection serves me rightly, about the political intrigue of employers who wished to have the Trade Board system removed or modified; but the men who passed that resolution were miners and railwaymen and dockers, and probably engineers also; there were many others who were not concerned with Trade Board working, and who, I submit respectfully, knew nothing about it. It is a significant fact, and here I must make a statement which I am afraid I cannot prove; I have the proof, but I cannot adduce it. It is a significant fact that at least one of the most important and strongest trade unions in this country, a union which is concerned with the organisation of precisely the class of labour which Trade Boards cover, is exceedingly doubtful with regard to the Trade Board system, and, in fact, I might put it higher than that, and say it is opposed to many points of the administration in its present form.

Lord Weir: I think that Mr. Poulton's question is answered, but I do not know that it helps us very much.

6028. Mr. Layton: I should like to go back to the other point, as to whether your objection to this system of national regulation is largely based on the lack of adaptability of such a system to changing

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

economic conditions?—I think it ought to be made clear that I have not any objection to the compulsory regulation of wages where such can be clearly proved to be necessary; that is to say, I do not support sweating; I should say by all means take every power you can to repress sweating. What I say is that the country ought to watch the tendency to the undue extension of this system of fixing wages by compulsion.

6029. But assuming—and it is a big assumption—that the system can be made sufficiently elastic to vary with the economic conditions, would you then object to a rate being made compulsory and obligatory on either employers or workpeople who were trying to get the wages at the lower level?—I am afraid the only answer I can give you is that the assumption, even, is not one which I can accept, because as I tried to make the case before, if this system of fixing wages and making them compulsory gets beyond a certain limit in extent, it will break down the very moment that either side says it is not going to have that wage, whatever it may be, and put it into operation.

6030. You say the assumption is not adequate; that is the point I was really trying to get at, that the legal system of regulation is not sufficiently elastic to meet the economic conditions of the country?—As an article of faith, if I may so put it, the only safe and satisfactory way of determining the wage conditions in this country will be by direct negotiation.

6031. Because it is more adaptable, or simply, as you say, as an article of faith?—I should say for many reasons. For example, the unions on the one hand and the employers on the other having made a bargain, there is a reasonable assumption that that bargain will be kept; secondly, that having made a bargain, that bargain may be taken to reflect the opinion and feeling and general needs of industry, and that on the whole the system is the system which commends itself as being the one which will most satisfy the parties.

6032. In other words, they fix better figures; they fix figures more suitable in accordance with economic conditions?—I should limit my consideration to one point. They are the people who are concerned in industry, and therefore they are the people who are entitled to determine the conditions of industry.

6033. Mr. Poulton: What would you do, then, with that great mass of employers who are outside organisations, and employees who are outside unions, because possibly some of their economic conditions are different from those of the organised parts of the industry. I mean, with some of the smaller men the wages might be exceptionally low; what would you do with them under your method?—What I should do is this: the Act of 1909, the parent Act, provides that where it can be shown that wages are exceptionally low in relation to other wages, a Trade Board should be set up. I should apply the 1909 Act.

6034. So that, as a matter of fact, although you have taken a strong view, at any rate, against the 1918 Act, you would not abolish Trade Boards altogether?—No, not at all, but I should change the "circumstances."

6035. Lord Weir: That is, you would leave the "circumstances" to be entirely a measure of "exceptionally low," rather than based on lack of organisation?—Lack of organisation often merely in the opinion of an official of the Ministry of Labour.

6036. Would you attempt to define in a clearer way, or interpret in any way, the term "minimum rate"?—I deal with that, I think, a little later on in my summary.

6037. Very well, we will take it later. Would you tell us something about paragraph 4, foreign competition?—I have not dealt very much with the result of foreign competition. All I have done is to try and draw the attention of the Committee to what, after all, is an important factor. In the "International Labour Review" for November one finds a description of the compulsory systems which are in operation right throughout Europe, and from one's knowledge of wage conditions of these other countries it is significant—I put it no

higher than that—that the system of compulsory wage regulation in this country is very far ahead of that in any other country. Now, in view of the fact that we are an exporting country, and that a good deal of our prosperity depends on our capacity to export favourably, I suggest that, after all, the tendency to fix wages by compulsion in this country ought to be met with some due regard to the conditions in other countries with whom we are in competition.

6038. Mr. Layton: In other words, if I may come back to the point I was on, you assume that the compulsorily fixed wages are not the right economic wages?—All I have said here is that our foreign competitors are in a position to take advantage of the disabilities of British employers.

6039. Yes; that is to say, that the legally fixed wages are not the right wages economically?—I have not said that at all.

6040. Mr. Poulton: In effect that is what you say?—No, not at all. What I say is this: if the wage in this country fixed by a Trade Board is 8d. an hour and there is no compulsion in Germany, or in France, or in Austria or in Italy, there is nothing to prevent a French employer from paying 4d. an hour. I do not say he should, but I say it does put him in the position of putting his British competitor under a disability.

6041. Mr. Layton: Yes, but take the position to-day. You have foreign competition with a certain level of wages. If the Trade Board system were elastic, and followed, say, a sliding scale in any sort of way, it seems to me that a reasonable arrangement, such as exists in organised trades, would meet foreign competition very largely, based upon knowledge of export conditions. The rate could be fixed to meet that competition?—Yes, I know.

6042. And therefore the disability you are talking about is that the wrong rate is fixed?—The disability I am talking about, my Lord, is that the British employer has not in fact freedom, whereas his foreign competitor has.

6043. Lord Weir: In connection with that question, can you give us any definite examples of any trade which we are losing?—I think if you were to put that question to Mr. Chandler, who is the technical expert on this particular problem, he would answer it better than I could.

6044. Mr. Layton: Would you say that the fixing of rates which have not been elastic enough and have not adapted themselves to foreign competition has had any effect in influencing the wages paid in other trades which have to meet foreign competition?—As regards the manufacture of metal products, certainly I think it is true to say that the Trade Board rate has adversely affected the rate paid through direct negotiation, but that situation is very rapidly altering. The wage fixed by direct negotiation has been coming down due to the various economic factors agreed upon as between the parties, and it happens that at the moment the agreed rate is for certain ages of workpeople lower than the Trade Board rate, and in a month's time—say by the end of January—the agreed rate will be substantially lower than the Trade Board rate.

6045. But the fixing of the Trade Board rate has not prevented that agreement or prejudiced the negotiations?—To my knowledge it has not. Of course, I am speaking with a somewhat limited knowledge of the circumstances of this area.

6046. Lord Weir: Is it not anticipated that under certain conditions it might affect the negotiations with unions?—I understood that Mr. Layton was speaking of the past. If Mr. Layton put his question in the present or in the future, then I say unhesitatingly that the Trade Board rate will make it difficult for the employers to get an agreed rate such as otherwise they could get.

6047. Mr. Layton: And therefore to meet foreign competition?—Certainly.

6048. Lord Weir: Paragraph 5 deals with the cost of Trade Boards. We have had that before us already.—Yes.

13 December, 1921.]

Mr. ALEXANDER RAMSAY.

[Continued.]

6049. Then the next paragraph is as to the inception of the 1918 Act.—I think there we have covered most of the ground. I just make the point that the Whitley Commission made this report and recommended Trade Boards to be extended where organisation did not exist, with the avowed intention of improving organisation, and my case is that it has not effected that. Now I think we get to paragraph 10.

6050. Is there any point about the rate of development of the Trade Board system that you wish to make?—There is not very much that I can say which is really evidence. We believe, and it was the common belief amongst employers, that the Ministry of Labour during 1920 was extraordinarily zealous, and that perhaps in 1921 it would have been equally zealous had not the employers raised a very severe agitation. We have knowledge of cases where it was proposed to extend the Trade Board to certain classes of work in which, in point of fact, there was a very high degree of organisation, and that not only the employers but the trade unions made very energetic representations to the Ministry that the Trade Boards should not in fact be extended as proposed.

6051. Naturally they would take the least organised trades first and gradually then would come to the more and more organised ones. Surely that is the order in which the Ministry would do it?—Yes, that is no doubt the order in which they proceeded, but what I suggest is that, having got to the organised trades, they ought to have left them alone.

6052. Now you want to say something about the inefficiency of the present system, which is dealt with in paragraph 10?—I think, in connection with Sub-sections (a) and (b), at least, you have had evidence with regard to overlapping and inefficiency, and I need not pursue that.

6053. Yes, we have had plenty of evidence upon that.—With regard to paragraph (d), I have already dealt particularly with that point by indicating that the rates arrived at by direct negotiation are, in point of fact, for some ages less now than the Trade Board rates, and that there is every prospect—in fact, it is a certainty, because we are operating under a sliding scale—that at the end of January the rates agreed upon by direct negotiation will be considerably less than the Trade Board rates.

6054. They will reflect more quickly the influence of economic causes?—Yes.

6055. Mr. Poulton: Did the employers in point of fact, when trade was good, object to that slow process? I do not remember a case, and I have asked many witnesses and they cannot tell me about it. They did not object when it was in their favour, but now that it is affecting them adversely owing to bad trade they are complaining of the slow method and the inefficiency and the economically disastrous position that it is landing them in. They really cannot have it both ways?—You are dealing with the question of machinery?

6056. Yes, quite so.—I am only responsible for my own point of view, but I will say quite honestly that I am not putting up an argument in favour of employers who want it both ways. I have simply examined the Trade Board machinery and its operation from the point of view of those who are affected and who are my constituents, and I am making the recommendation which I believe to be the right thing.

6057. I am quite sure of that; the only thing which I want to say on this point is that, if it was all right when trade was prosperous, it seems to me that the only thing that can be said now, instead of saying that it is disastrous and ought to be abolished, is that the machinery is not sufficiently elastic to allow you to deal with it quickly?—As a matter of fact, the information I have is that during the war period and during the prosperous period the Trade Board rate was not in effect bothered about. In very many instances the employer paid more than the Trade Board rate, and he did not worry about the Trade Board rate, so that he did not get the advantage of that slow crawl up which you indicate.

6058. Lord Weir: Then we come to Sub-section (e).—That deals with the question of defining rates for

operations which, perhaps, I might go into a little more fully afterwards, but there is very little doubt that the scheduling of operations is so complex that the employers, in point of fact, very often do not know what rate they ought to pay, and inspectors coming into their works are very often unable to tell them what rate they ought to pay for operations.

6059. Mr. Poulton: I take it from Section (f) that you are not absolutely opposed to the Boards. There again there is the question of the ability of the Board to alter its methods quickly, because you go on to say that the delay and restriction are too great, and that there should be ample power of appeal and for altering things quickly?—I entirely agree that the Trade Board system should be maintained, but I contend that the basis upon which a Trade Board is created and maintained should be altered, and I suggest that there should be a reversion to the point of view of the parent Act of 1909, namely, that the Board should apply only in cases where wages can be shown to be unduly low.

6060. Lord Weir: And, in those cases, that the machinery for alteration should be speeded up?—Yes, it should be speeded up.

6061. Then you have something to say about Appointed Members?—There again I am only echoing the feeling of the industry. We have a high regard for the Appointed Members in their own particular sphere, but, unfortunately, they do not know enough about works administration properly to fix suitable rates, and we suggest that the Minister should definitely ask the responsible authorities on either side.

6062. You want the Minister to consult the employers' and employees' representatives on the Board?—Yes, or to ask on the one side the reputable employers' associations, and on the other side the trade unions, to submit to him a panel of suitable names from which the appointed members could be chosen.

6063. Mr. Layton: Certain witnesses have suggested to us that it would be best to have a lawyer or someone with legal training, since the function is that of hearing and deciding upon the arguments put forward by either side, rather than a technical man. Would that be your view?—I am afraid it would not be my view. I have no prejudice against lawyers at all; I think that very often their legal training and very acute minds are of extreme value. If one may judge from what one hears of the operations of Trade Boards by members who come to consult me, the decision of the Trade Board rests with the side who can use the best advocacy and persuade the appointed members, who in themselves know nothing about the practical operations.

6064. Would you consider it essential for the appointed members, or, at all events, the chairman, to have technical knowledge of the trade?—I think it would be a very great advantage.

6065. Is there not the difficulty that if you insist upon that, the people who have technical knowledge are associated either with the employers' or with the employees' interests?—It is generally true, of course, but still there must be suitable persons who are not associated with either side. After all, one finds Industrial Courts—

Lord Weir: It is very difficult to find them, surely?

6066. Mr. Poulton: Would you put it the other way: that you should have a trained man in the chair, and that he should have one from either side as assessors to help him, so that they could deal with the technical points which came before him?—The only difficulty there is, I think, that if you give a chairman assessors, you are in point of fact putting the whole responsibility of the decision on to the chairman.

6067. You have to do that in many cases on a voluntary Board, when the Board itself fails to agree. Of course, this would only operate when the Board failed to agree?—Quite. I should think, as a matter of fact, the system would operate at least as well as the present one. All I am suggesting is that the Ministry should keep in mind the desirability of having men to hear evidence and give a decision who know something about factory administration,

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

because otherwise I feel that they cannot; they will be persuaded by the side which puts up the best case, and it does not necessarily follow that those have got the facts with them, although they are the most convincing in their speech.

6068. *Mr. Layton*: If you limit the Trade Board to fixing a minimum, is the detail of factory administration of much importance, or is it not rather a question of general economic considerations, having in view rates in other trades, the cost of living and matters of that kind?—If you will so alter the working of the Trade Boards that they do in point of fact establish what can be reasonably regarded as a minimum instead of a standard rate, and allow the economic factors to come into play in the factory, then I should think that the answer is in the affirmative, but I do not regard the rate which is at present fixed by the Trade Board as a minimum; I regard it as the standard rate paid.

6069. You would agree that a minimum is rather a commercial or economic matter than a question affecting the technique of any particular factory?—Yes, if you will consent, as I suggest you do, that a legitimate minimum rate be fixed, then one can regard the whole situation quite apart from the technical point of view.

6070. *Mr. Poulton*: But I think that is all the Board professes to do—to set up a minimum?—I am glad you said "professes." That is quite so.

6071. The evidence we have had from so many witnesses is that it is a minimum and not a standard.

Lord Weir: You promised to speak to us about this question. We might take that now.

Mr. Poulton: If it has become the standard in your trade, it is a very interesting fact, of which we shall have to take note.

6072. *Lord Weir*: You suggest that it is the standard in your trade, do you?—I cannot from my own knowledge say that, no.

6073. Shall we get that from Mr. Chandler?—Mr. Chandler could probably tell you more about it than I could, but I was going to put a point to you: I cannot, from my own knowledge, say that any rates higher than the Trade Board rates are being paid, but I would point out to you that if you take the Pin, Hook and Eye Trade Board, for example, the agreed rate at present for a boy of 14 years of age—and a rate which we think is a high one—is 14s. per week, and the Trade Board rate is 15s. 6d.; the agreed rate for a youth of 15 years of age is 17s., and the Trade Board rate is 20s. 6d.; the agreed rate for a youth of 16 years of age is 21s., against the Trade Board rate of 23s. As you go up the scale you find that the Trade Board rate is in that instance considerably higher than the agreed rate, the rate paid by the Employers' Association.

6074. Which you have termed the standard district rate?—Which is called the standard district rate. If the Trade Board rate is a minimum and the employer in giving it is expected to regard it as a minimum and to pay more as the exigencies of the case demand, then I suggest that he is being very unfairly dealt with.

6075. *Mr. Poulton*: As a matter of fact, is not this in most of the documents sent out on the final determination of the Department upon the proposals come to by the Board; because whether they are come to by agreement or by the Appointed Members is immaterial for the moment; they have to come to something, and this is one of the last notices sent out; I will just read it: "The above proposed general minimum time rates are without prejudice to workers who are earning higher rates of wages, or to agreements," etc.; I need not read any more. Is not that, as a matter of fact, the basis—that they are minimum rates, and the fact that the Department sends that out practically means that they hope they are paying higher than the minimum, does it not?—Might I answer that by saying that if a Trade Board does in point of fact create a minimum rate which is higher than the standard agreed rate for the district—the standard district rate—then it is a

very serious argument against Trade Boards, which have put rates of that description upon the industry.

6076. It does not follow. It might be because the standard rate is too low, according to the Act; and you know that was the basis of the original Act, at any rate, that the rate was so low that nobody could live upon it at all?—I am afraid I could not agree that a rate, which is arranged between the leading employers' associations in the country and the main trade unions of the country can ever be regarded as a rate which would justify the setting up of a Trade Board.

6077. *Lord Weir*: When you speak of a minimum time rate, what have you in mind—I mean a genuine true minimum?—Do you want a figure?

6078. No. What, in your view, is a genuine true minimum?—First of all, one must clear the ground. I think this attempt of the Minister and the Trade Boards to create a whole series of rates for operations is absolutely doomed to complete failure. It has the essence of failure in it. Its complexity condemns it. What I suggest, therefore, is that what ought to be done is to fix a rate for an occupation; that is to say, if a girl is working a metal press, what does it matter to the Trade Board or to anybody else whether the article which she is pressing is going to make a shaving stick case or a piece of furniture for a coffin? It does not make the least difference, but still the rates would be fixed under two Trade Boards differently. Therefore I say a rate ought to be fixed according to occupation, and a rate ought to be fixed for the lowest grade of worker in that occupation beyond which rate in a lower direction no employer should be permitted to pay. That I regard as a genuine minimum rate—a rate under which no employee engaged in that occupation can be paid. The higher rates, the rewards for skill and merit, should be determined by ordinary economic factors, and in point of fact would be determined by those factors if the Trade Board did not operate.

6079. May I take it that you have not in mind anything in the nature of a national minimum rate?—I should very strongly object to a national minimum rate.

6080. *Mr. Poulton*: You believe in an occupational minimum rate?—Occupational. I hold the view that if you create a national minimum rate you immediately create, not an industrial issue, but a political issue, and I should be very sorry indeed to see industrial conditions determined by political considerations.

6081. *Mr. MacCallum Scott*: Can you fix an occupational rate without a Board of some kind for each trade?—Of course, one has not worked out the minimum in detail. I think it would probably be convenient to keep certain Boards in being—that instead of addressing themselves over weeks of labour to a rate for a whole series of operations they would simply decide that a suitable rate should be regarded as a minimum rate for the occupations covered by that Board, and they would probably fix a minimum rate in a single sitting without the least trouble, whereas now they spend weeks in hard labour and create only confusion at the end of it.

6082. Would you suggest any idea as to the basis of that rate? Should it be a rate based upon the standard of subsistence?—There again in the determination of that rate I think one could quite easily be guided by the recognised practice outside the Trade Board orbit. If you take the manufacture of metal products, for example, my own Association covers 170,000 workpeople. I do not suppose that there are more than 2,000 within our control who are covered by the Trade Board. We fix a minimum rate for the 170,000 workpeople, and no man employed by us gets a less rate than that minimum. I should think if I were a member of a Trade Board fixing a minimum rate I should have regard to the minimum in operation as agreed between the main Employers' Associations and the main Trade Unions, and I think that in actual practice that would be found to be a satisfactory method of arriving at the rate.

13 December, 1921.]

MR. ALEXANDER RAMSAY.

[Continued.]

6083. You have certain recommendations to make, I think?—I am inclined to think that we have covered most of these now.

6084. You refer specifically to some kind of tribunal which you suggest.

Mr. Poulton: I should like that amplified, because it is a very interesting suggestion.

Lord Weir: We want to know all about this.

6085. Mr. MacCallum Scott: That is dealt with in Sub-section A of paragraph 12?—The 1918 Act provides that if one wants release from a Trade Board application should be made to the Minister. Our feeling is that application to the Minister means application to the permanent officials of the Ministry of Labour. There is a feeling in industry that in relation to this matter the permanent officials of the Ministry of Labour are not entirely disinterested parties, in that with the extension of the Trade Board system the standing and importance, and it may be the permanence, of the Department are increased, and the employers at least, for whom I speak, feel that they would have a greater measure of security if, instead of making an appeal to the permanent officials of a Department which is interested, they had the right of appeal to an outside authority.

6086. Mr. Poulton: Would that Industrial Tribunal be composed of an equal number of employers and employees, or in what way would you constitute it?—What I had in mind was a tribunal nominated by the Minister, somewhat of the nature of an Industrial Court.

6087. They would naturally take evidence?—Yes.

6088. That would apply equally to the creation of a Board as to release from a Board?—Precisely. I suggest that in the creation of a Board they should give notice of their intention, hear the evidence from both sides, and then make a Report to the Minister.

6089. Lord Weir: The procedure now is by public inquiry?—No, the procedure at the moment, I believe, is that the Minister lays an Order upon the Table of the House.

6090. That is, to establish a Board? Mr. Poulton was dealing with the establishment of a Board?—Yes. In Section 1, sub-section 3, of the 1918 Act it says that a trade can be withdrawn from the operation of the Act by special order if at any time the Minister of Labour is of opinion that the conditions of employment in the trade have altered. My point is that we should be required to satisfy not the Minister but a tribunal whose duty it would be to consider the facts.

6091. What sort of tribunal would you suggest?—A tribunal very much in the nature of the present Industrial Court.

6092. You would not suggest the Industrial Court?—I should prefer to leave my answer as I have stated it, if you do not mind.

6093. Then your second recommendation——Deals with the creation of a Trade Board.

6094. That is just the converse?—Yes. And the third recommendation deals with the question of scope which we have already covered in the previous discussion. I have another suggestion to make which I do not advance very dogmatically, but which I feel the Committee might keep in mind when they are considering the matter, and that is: having in view the fact that I have recommended a reversion, as it were, back to the point of view of the 1909 Act, that it should be considered whether an employer who is a member of a substantial Employers' Association, and who pays the authorised rate of that Association, should not by virtue of that fact be automatically excluded from the provisions of the Trade Boards Acts. If you had an employer in those circumstances it is perfectly obvious that he could not be sweating because he is paying a rate agreed upon between the main employers and the Trade Unions of the country. He is not a sweater because the rate is one which would have the whole organised opposition of the Unions of the country against it if it were not adequate; and, secondly, it could not be said that he at least is not organised, which, so far as the employer is concerned, meets the purview of both the 1909 Act and the 1918 Act. If his workpeople were not organised I think, in view of the fact that their wage was being determined by direct negotiations, the ordinary functions of the Union would operate, and I think they very soon would become organised.

6095. Naturally in that case you might have in some place a set of wages determined by the organised trade and another determined by the Trade Board.—In the same factory?

6096. Yes.—We have that at the moment and cannot avoid it; but if the employer were a member of the employers' organisation under the scheme which I am rather tentatively suggesting, the rate which he would pay would be universal—the agreed rate—and the present anomalies and differences would be got over.

6097. Mr. Poulton: That is to say that the rate which he would be paying would have to be not an agreed rate of his association, as an association, but an agreed rate between that association and either the workpeople direct or their representatives acting for them, and it would have to cover the whole of his employees? You could not have a rate which was set up arbitrarily by one side, who would say: "That is the rate."—I think that that does not in fact happen in actual practice, you know.

6098. Yes, it does occasionally. I take it that you mean an agreed rate?—An agreed rate.

Lord Weir: We are much obliged to you.

(The Witness withdrew.)

MR. FRANK H. CHANDLER, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

General Remarks.

In giving evidence I propose to confine my remarks to the Stamped or Pressed Metalwares Trade Board, of which I am a member. The Board has brought into operation by an Order issued in November, 1919, and the first meeting took place in March, 1920. The number of firms covered is between 650 and 750, and the variety of products made by these firms is so large as to prevent the whole of the products being brought within the scope of the Board, consequently anomalies arise in the conduct of the Board's business, and it is difficult at times to deal

intelligently with questions put before us. My experience has definitely shown that the Ministry in their attempts to schedule operations have been far too ambitious. The policy of attempting to schedule operations has proved completely unsuccessful, and should not, in fact, have been adopted.

Scope.

This brings me to a question of scope. I do not know the difficulties with which other Trade Boards have to contend, but with the Stamped or Pressed Metalwares Trade Board the question as to whether a worker is covered or not is an ever-present source of trouble and difficulty.

13 December, 1921.]

Mr. FRANK H. CHANDLER.

[Continued.]

Original Definition.

The definition covered about twenty-five articles originally, and has an omnibus clause which includes "any similar articles or metal parts of such articles." The Trade Board in November last year were at variance with the Ministry of Labour as to the interpretation of scope. The Deputy-Chairman of the Trade Board (Professor Jones), was requested to make an independent investigation and report, which he did, and in January last a meeting took place between the Trade Board and the Department on the question of scope. The then Chairman (Mr. W. J. Jeeves, C.B.E., K.C.) and the Deputy-Chairman agreed with the Trade Board's interpretation of scope, which was at variance with the interpretation of the Department.

Further Negotiations.

As a consequence protracted negotiations have taken place and the result is that an amended draft definition will be submitted for the consideration of the Trade Board at their meeting in December. This draft definition represents a compromise between the different parties concerned. It has not yet been submitted to the public, and it is quite possible that when the various interests who will be affected know of the suggested alteration in the definition of scope, further negotiations will have to take place, the result of which cannot be determined until afterwards.

Consequent Delay.

It will thus be seen that with this particular Trade Board, twelve months has already elapsed since the question of scope was raised, and the individual members of the Board cannot by themselves give an authoritative reply on points which may be put before them. In these circumstances it will readily be seen that an ordinary inspector is unable to answer questions of scope when he visits establishments in the course of his duties. The inspectors attempted to do so during the earlier months of the Board's operations, but their decisions conflicted with each other and also with the opinions of the Trade Board. These facts are well known to, and acknowledged by, the Department.

Minister's Arrangements Regarding Questions of Scope.

In order to mitigate these difficulties, the Minister of Labour, a few months ago, arranged that questions of scope should be referred to the Trade Board for their opinion before he gave a ruling on any point brought forward. This arrangement certainly has advantages, but the serious point from the view of the ordinary employer or worker who raises a question is the length of time it takes to get an authoritative reply.

Minister's Arrangements still Result in Delay.

As an illustration of this delay I have in mind a notice of meeting dated the 16th August, referring

questions of scope to a Committee who met on the 25th August. The opinions of the Committee were subsequently confirmed in September, and the Minister issued his ruling on the 8th November. Your Committee will readily see that although such delay may be explained officially, it is no satisfaction for a person who writes in July to get a reply in November.

Definition of Scope still in Abeyance.

You will, no doubt, remember that Mr. Wolfe, in giving evidence before your Committee some weeks ago, said that the definition of the Stamped or Pressed Metalwares Trade Board occupied a week of discussion—you will observe that the discussion is not finished yet.

Present Definition Unsatisfactory.

One of the difficulties in connection with scope is found in the narrow definition at present in operation. The variety of products which are similar to those enumerated in the Schedule, and the large number of firms involved who make articles both inside and outside the jurisdiction of the Board tends to create an unjust situation by differentiating between various factories.

Effect of Trade Board Rates on Other Classes of Workers.

I have in mind a works where the Trade Board operates for a small number of workers, and the fact that the Trade Board wages rates are applicable to one section necessitates that a similar rate is applicable to the whole works, although the other workers are provided for by direct negotiations. The competitors of the firm in question do not come within the scope of the Trade Board's present definition, and consequently are not controlled.

Analogous Operations.

In the Birmingham District there is also a difficulty in the similarity between the workers engaged under the Stamped or Pressed Metalwares Trade Board and other Trade Boards, such as Coffin Furniture, &c. About 15 months ago a suggestion was put forward by the Stamped or Pressed Metalwares Trade Board for amalgamating the following Trade Boards:—

Stamped or Pressed Metalwares Trade Board.
Coffin Furniture Trade Board.
Pin, Hook and Eye Trade Board.
Button Trade Board.

The proposal was not agreeable to the other Trade Boards. Presumably it was felt by them that the Stamped or Pressed Metalwares Trade Board would prejudice their conditions.

Minimum Rates Operative.

The minimum rates operative at the present time in the different Trade Boards above referred to are as follows:—

	Date of Order.	Males, 21 and over.	Females, 18 and over.	Females, 21 and over.
Stamped or Pressed Metalwares ...	October, 1921...	1s. 2½d. per hour	8d. per hour	—
Coffin Furniture ...	September, 1921	1s. 2-42d. per hour	—	7d. to 8-3d. per hour.
Pin, Hook and Eye ...	September, 1921	1s. 1½d. per hour	8d. per hour	—
Button Trade Board ...	October, 1921...	1s. 1½d. per hour	7½d. per hour	—

There are, of course, other and different Schedules, and with correspondingly higher rates for all these Trade Boards.

Difficulty of fixing other than Trade Board Minimum Rates.

The difficulty of fixing other than Trade Board minimum rates on a national basis is found by painful experience to be an almost insuperable task. In the Stamped or Pressed Metalwares Trade Board it has been agreed that the rates fixed between the Brass

Employers' Association and the Brass Workers' Trade Union shall be operative under the Trade Board. In April last the brass employers agreed to a sliding scale based on the cost of living. It is not possible under the Trade Board machinery to give immediate effect to the variations caused by such an arrangement, and for a few months we have had the Trade Board rate as a legal minimum fixed at a higher rate than that which has been agreed upon between the employers and the workers' trades union. The matter has been dealt with as intelligently as the Trade

13 December, 1921.]

Mr. FRANK H. CHANDLER.

[Continued.]

Board's machinery allows, but the result has been that a man working in a shop and coming under the Trade Board has been receiving a higher rate of pay than men in the same shop on similar work whose work does not come under the Trade Board.

Special Workers.

The above remarks apply to skilled male workers, such as polishers, drop-stampers, &c.

With regard to women workers, in June and July, 1920, a Committee sat to determine special rates for special workers, and a schedule was drawn up for women workers. The rates of pay were considered during a period of good trade, and, owing to various delays, were confirmed in June, 1921, during a period of depression (they were carried by a vote of an Appointed Member). The schedule of special rates is not satisfactory, owing to the difficulty of covering a wide range of variations in practice both as to method and organisation in different factories. The committee when drawing up this schedule had in mind certain specific requirements, and while these are set down as clearly as possible, they are often ambiguous to a worker or employer. When the special rates for women workers were confirmed, it meant an increase in wages to certain women at a time when trade was depressed and the economic conditions demanded reductions all round.

Machinery.

The present system of altering rates is too cumbersome to be useful. As your Committee know, after negotiations have taken place and a rate has been decided upon, it is four months before the rate can become operative. So much has been said on this point that it is not necessary for me to labour you with further arguments.

In some factories where several Boards operate, there are varying rates for similar classes of workers—this point has also been put before you by other people. Another point of difficulty is where only a small percentage of workers are affected by the Trade Board, and the rate introduced in the works affects workers who are not covered by the Board. As an instance, I have in mind a factory where about 5 per cent. of the workers can be regarded as coming within the scope of the Trade Board. It is a very bad policy to introduce a rate in a factory for a small percentage of workers which differs from the rate paid to the majority; consequently whatever rate is introduced has to be a general rate. The employer in question is federated with the Engineering and the National Employers' Federation, and consequently pays a reasonable rate in any case. The point I raise here is one of principle, to show how unwise it is to apply a Trade Board to an employer who is federated, and is able to show that he pays a reasonable wage.

Exemptions.

Another evidence of cumbersome machinery is found in this connection. It takes too long for applications for exemptions to be dealt with. I have in mind a visit I paid to a works in Birmingham, in company with a workers' representative, in March last. The employer said, "I wrote about this woman last October, and thought the matter had been dropped long ago." Our committee had had the application brought up for their consideration a week before we called.

Inspection.

For the year ended 11th August, 1921, the Department made the following visits:—

Number of firms visited for the first time	37
Number of revisits to firms	68
Numbers of visits to workers	17
Number of visits paid to other persons	7
Total number of visits paid	129

Of this total, 115 visits were paid in Birmingham, and the remaining 14 in the rest of the country. It will thus be seen that Birmingham is the principal centre affected by the Stamped or Pressed Metalwares Trade Board. The evidence of visits paid shows that some 600 firms have not been visited at all, which means that, if inspection were to be made really efficient, the whole system would break down through an overburden of staff.

Uncertainty of Definition.

In the manufacture of stamped and pressed metalwares, an article in its early processes can be utilised as the basis for a number of finished forms which may, or may not, come within the scope of the Board. In practice, the early processes are often made in large quantities, and afterwards sub-divided into different orders; consequently it is not always possible for an employer to say that a worker is under the Board or not, because a worker may be engaged on a machine, and the work produced in the morning may be utilised for an article within the scope of the Board, and the work produced in the afternoon may be used for an article which does not come within the scope of the Board. If it is not possible for the persons engaged in an industry to always determine whether a worker is covered or not, how is it likely that an Inspector can give an authoritative ruling on so difficult and complex a question? The question of inspection is entirely bound up with the question of scope, and in order to illustrate clearly some of the difficulties the Inspectors are met with, I propose to submit to your Committee a few samples illustrating the above points.

Ineffectiveness of Present Definition.

Before leaving this question entirely I should just like to mention one article, by way of illustrating how ineffective the present schedule is in reaching some workers who might well be brought within its scope. Some weeks ago the Trade Board was asked to confirm an opinion expressed by the Department with regard to ferrules. According to the schedule, a ferrule made by cold stamping or cold pressing is covered by the Trade Board. The following question was put:—

"Ferrules.—Workers engaged in cutting metal for ferrules with hand shears, shaping by hand and soldering on base and barrel by fire."

Obviously we are considering stamped and pressed metalwares, therefore the ferrule mentioned above does not come within the scope of the Trade Board. The point I wish to illustrate is as follows:—To make a ferrule by cold stamping or cold pressing requires suitable machinery, and implies that the firm who would manufacture such articles is of sufficient size and possesses an organisation capable of dealing with large quantities. The obvious implication is that such a firm would pay a reasonable wage. Taking the other case of the ferrule made by hand, in the manner described above, a firm using this method is most likely to be a small firm unattached to any Employers' Federation and, by reason of the present schedule, not hampered in their dealings with workpeople. If we bear in mind that the object of the Trade Board is to protect the lowest-paid worker in unorganised factories, we quote this instance as an evidence of the fact that Trade Boards are capable of missing the workers who should be covered and are attempting to do the work which has already been done by Employers' Federations and Trades Unions combined.

Recommendations.

These are being presented on my behalf by Mr. Alexander Ramsay, Chairman of the Management Board of the Birmingham and Wolverhampton Districts of the Engineering and the National Employers' Federations, and I concur with all he says on this point.

(Signed) FRANK H. CHANDLER.

13 December, 1921.]

Mr. FRANK H. CHANDLER.

[Continued.]

6099. *Lord Weir*: You are the managing director of Messrs. Wright, Bindley & Gell, Limited?—Yes.

6100. You appear to give evidence on behalf of the Birmingham and Wolverhampton District Association of the Engineering and National Employers' Federations?—Yes.

6101. I think we might take your evidence as submitted, and if there are any special points that you desire to emphasise, you might mention them. I think there is the piece-work rate question, is there not?—I will not weary you by saying much.

6102. I do not want to hurry you in any way. If there is any point which you wish to emphasise, please do so, but we will take your statement in full.—You will observe that in my evidence I have restricted myself to a criticism of the operations of the Stamped and Pressed Metalwares Trade Board. I do that because I take it that your Committee is dealing with the administration of Trade Boards and I wanted to give you, if I could, a clear outline of the difficulties we have had in administering this particular Trade Board. It is a very difficult one.

6103. You are a member of that Trade Board yourself?—Yes, I am a member of the Trade Board, and I am also a member of the administration committee of the Trade Board, which is composed of four employers' representatives and four workers' representatives. You will observe generally from my evidence that the biggest difficulty which we have is in the question of the interpretation of the scope of this particular Trade Board. I say at the end of paragraph 1 of my evidence: "My experience has definitely shown that the Ministry in their attempts to schedule operations have been far too ambitious. The policy of attempting to schedule operations has proved completely unsuccessful, and should not, in fact, have been adopted." Then in paragraph 2 I say: "This brings me to a question of scope. I do not know the difficulties with which other Trade Boards have to contend, but with the Stamped or Pressed Metalwares Trade Board the question as to whether a worker is covered or not is an ever-present source of trouble and difficulty."

6104. There is just one point. You refer always to the Ministry?—Yes.

6105. Do those matters of scope not come up very definitely before the Board itself? Cannot the Board exercise any authority in the matter?—That is the difficulty. Our Board first met in March, 1920. In September, 1920, Mr. Dawson, who is a labour representative on the Board, wrote to the Ministry on a question of scope and he got a reply in October. We considered it at our November meeting and we were entirely at variance with the Ministry's interpretation of scope. During the period from March up to our meeting in November we had been interpreting the scope of this Trade Board as covering all stamped or pressed metals by virtue of the omnibus clause at the end of the definition saying, "All similar articles or any parts of such articles." It enumerated about 25 articles in the definition and then it said, "Any other similar articles or metal parts of such articles." We, on both sides of the Board, read that as covering the whole scope of the stamped or pressed metalwares trade. The question of scope which arose was in connection with the metal trade. We of the employers' side agreed with the workers that a certain thing should come within the scope of the Board. The Department took a different view, and the step we took was to ask Professor Jones, who is the Deputy-Chairman, to make an independent investigation into the trade, which he did, and he reported to the December meeting of the Board. His report was favourable to our previous opinion. We then asked the Department to meet us, which they did in January. We made very strong representations to them as to the inefficiency of this definition of the scope and they arranged for us to appoint a Committee to meet members of the Department the next day, which we did. In February we came down again to the Department and met representatives of other industries who would be affected by any extension of the scope. After that, the Department, we assumed, would get out a draft

definition, in which there was some delay, and questions had to be asked in Parliament by Labour Members. We pressed the Department to get out this draft definition and they asked to meet us again in June, and gave us seven days' notice. We could not meet them until August because our Chairman was away, and the Deputy-Chairman was away, and there were one or two other things which interfered with the meeting. We met them in August and were then still at variance with the Department: The Trade Board's opinion is that the definition should include all articles which are of similar character or similar nature. If you allow me I will illustrate some of the difficulties of this question.

6106. *Mr. MacCallum Scott*: Would this be the same point as was mentioned by Mr. Jackson?—I think, if I may be allowed to say so, I can perhaps emphasise it a little more clearly than Mr. Jackson did, if I may show you these samples. (*Various specimens of work were produced and explained by the Witness.*) Here is a cup, which is used for a gas burner, and at the present time that comes within the scope of the Board; and here is a similar cup from which are made various things. Here is a tube which is supplied for parts of medical instruments. These are two washers; one washer is for the motor trade, and because it is a motor accessory it does not come within the scope of the Board, but the other washer is supplied for the burner, and because it is part of an article which comes within the scope of the Board, that comes within the scope of the Board, so that while a woman is cutting out one washer the Board would have nothing to do with her wages, but when she cuts out the other on the same machine, and possibly on the same day, she is under the operation of the Board.

6107. *Lord Weir*: It is covered by this, is it not, that you have your cup, and from that you may make a large variety of things, some of which come within the scope of the Board, and some of which do not?—Yes.

6108. And when you make the cup you do not know what it is going to be made into?—That is right.

6109. Does that cover it all?—Yes, that covers the point.

6110. What real difference does that make? What is the practical effect of it in practice? Is it very serious?—The effect in practice is this: that the operation of the Trade Board for people who make certain articles which come within the scope of the Board brings those people within the scope of the Board, and it is quite possible to make these various articles, which I have here, on the same type of machine or the same machinery, but they do not come within the scope of the Board. There are a great number of firms who make articles which do not come within the scope of the Board at all, but they are in the stamped or pressed metalware trade, and at the present time they are not covered by the operation of the Board. I have an illustration here of certain things which are made out of a heavy cup. It is possible to make out of that cup a .303 cartridge case. I have put this point to the Ministry officials themselves, and so have the Labour representatives. If we in our factory are covered by the Board for certain of these things on the same class of machines or in the same shop, and the rate of wages of the women is determined by the Trade Board, obviously the same rate must be paid to the women who make these other articles which do not come within the scope of the Board. I think that is clear. Out of this particular cup we can make a cartridge. I particularly put this point to the Ministry: "I want .303 cartridges covered by the definitions." They refused to consider it, because they said that the munitions industry in this country is well organised, and they would not consider the inclusion of the making of cartridge cases within the provisions of the Stamped or Pressed Metalwares Trade Board.

13 December, 1921.]

Mr. FRANK H. CHANDLER.

[Continued.]

That is one of the points of difficulty which we have. Therefore we come across this difficulty with the Ministry, and they drafted a definition to meet our case, or as they said to meet our case, and it was divided into two classes: Class A, which they considered were primary articles, or primary trades, and Class B, which were contributory articles, or contributory trades. Assuming that a firm make the articles within Class A, they come within the scope of the Trade Board for the whole of their manufactures. If they do not make the articles in Class A, but make them in Class B only, they do not come within the scope of the Trade Board unless it is more than a certain percentage of their output. Now that would leave such a firm, say, as Kynoch's, of Witton, outside the scope of the Trade Board. The question of whether Kynoch's pay a reasonable wage or not is immaterial for the point I am making; I am making the point that if the scope applies to one firm it should apply to another. We as a Trade Board would not accept that. The definition which is to be considered by our Trade Board at the end of this week is a compromise between the Department and ourselves. We have been arguing this point with them for 12 months, and we have really not got anything agreed upon yet. The thing which I am contending against with this particular Trade Board is the inefficiency caused by the fact that we are uncertain as to whether we can tell persons that they are under the Board or that they are not. We made such strong complaints to the Ministry about it that the Ministry arranged about last May or June that questions of scope should be referred to the Trade Board. I have instanced a question of delay in that connection in my evidence. In paragraph 7 of my evidence I say: "As an illustration of this delay I have in mind a notice of meeting dated August 16, referring questions of scope to a committee who met on August 25. The opinions of the committee were subsequently confirmed in September, and the Minister issued his ruling on November 8." Now some of the points were raised in July; a man asks a question in July: does such and such a thing come under the scope of the Board, and we cannot give him a reply until November. I submit that it is ridiculous. We have a meeting of the Administrative Committee of our Trade Board on Friday next, and we have six foolscap sheets of questions to answer as to whether certain things come within the scope of the Board or whether they do not. As an individual member of that committee, I would not dare to pass an opinion upon it unless I were in consultation with all the other members. I illustrated this to put this question. If we, who are employers and workers, have got to get eight people together to give an opinion as to whether a certain thing comes within the scope of the Board or does not, how can an Inspector, when he goes into the works, know whether the workpeople engaged in that particular works are covered or not? The result of it is this: that there is great difficulty of inspection, which I mention in paragraph 17. You will observe that for the year ended August 11, 1921, the total number of visits paid was 129; of those, 68 were revisits to firms. According to the information that I have got, the Department can confirm it, and they may have some further details, I think there are between 650 and 750 firms scheduled under this particular Trade Board. Now 600 of them have not been visited for a whole year. I do not submit that it was possible for the Department to visit them, but what I do submit is, that if the Department had been able to carry out an effective inspection of that particular industry it would have broken down the Trade Board, because of the cost of the inspection, and the point I make is this: that we have got 600 firms not visited, and, while I am unable to prove it, I am told on all hands—I have not any evidence to put before you—that there are numbers of firms who are altogether ignoring the Trade Board, for the

simple reason that they are not themselves in a position to say whether they come under the scope of it or not.

6111. This method of referring questions of scope always to the Trade Board itself is insufficient, in your opinion?—The difficulty which I am trying to emphasise is this, that this particular Trade Board is too ambitious in its origin or in its scheme, and that the stamped or pressed metalwares industry is so wide in its scope, and its application is so varied, that I do not think one Board would effectively cover it. I think that to deal with the job really effectively and as it should be dealt with, you would want 20 Boards.

6112. Mr. Poulton: Would not that be covered by your colleague's statement that, if you fixed them at all, you should fix a minimum, which is a minimum and not either a standard or a maximum, for the occupation?—It would help them immensely, providing you could get this: that you make the Stamped or Pressed Metalwares Trade Board cover all stamped or pressed metals.

6113. That is what I was coming to; because, as far as I can see, the whole of your evidence (which I think is very valuable) is largely based on the definition of scope and the inevitable delay because the Department itself appears not to be able to make up its own mind?—Exactly.

6114. I do not know how many there are of you, but supposing there are 20 of you practical men sitting round the Board, I take it from your evidence that what you mean is that if those 20 men said, "That particular article comes within such and such a category," the Department should accept that from you, you being the practical men in the trade.—That is our contention.

6115. I thought I read you correctly.—If I may, I will give you this instance of some of the difficulties of this. This is one of the Department's definitions of scope. They say, "Workers who come within the operations of the Trade Board: carrying: workers engaged in carrying goods which fall within the scope of this trade to or from a warehouse," they consider come within the scope of the Trade Board. Here is another ruling of the Department on carrying: "Workers engaged in carrying goods which fall within the scope of the Trade Board from one Department to another, neither Department being a warehouse," do not come within the scope of the Trade Board; which means that if the warehouse is through that door, and a man is carrying goods from here through the door into the warehouse, he comes within the scope of the Trade Board, but if he is carrying goods from here to another part of the works he does not come within the scope of the Trade Board. That is a ruling of the Department.

6116. I take it you think that if the Trade Boards are to be continued, the Trade Boards should have the right, as being the people who understand the business, to say that so many people in my factory—it does not matter how many I employ or what particular operations they are—are within the Trade Board, and there is the minimum for my factory, and beyond that we will pay in accordance with agreements with the union?—Quite so.

6117. And that that shall have the force of legality, the same as decisions arrived at, you say, after a long series of delays occurring, with uncertainty created on both sides?—Quite so.

6118. Lord Weir: I am sure you have made those points very clear in your evidence. Is there any other point that you would like to emphasise?—I do not think I will worry you any more, for the reason that I can see you have got it clearly in your minds—and I am very pleased to see it—and that you are giving due weight and consideration to a minimum rate, and that you would abolish the schedules. If you can do that it will relieve the Trade Boards of a great deal of work.

6119. You must not take it for granted.—I simply put it into words.

(The Witness withdrew.)

Adjourned to to-morrow at 11 o'clock.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

FOURTEENTH DAY.

Wednesday, 14th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G.,
(Chairman).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTLETON, D.B.E.

MR. J. BELL, M.P.

SIR ARTHUR F. PEASE, BART.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

Mr. HERBERT KAY, called and examined.

The witness handed in the following statement as his evidence-in-chief:—

SUMMARY OF EVIDENCE to be submitted on behalf of the London Employers' Association by Mr. HERBERT KAY, Secretary of the London Employers' Association, Secretary of the Employers' Side of the Dressmaking and Women's Light Clothing Trade Board (England and Wales), Secretary of the Employers' Side of the Hat, Cap and Millinery Trade Board (England and Wales), Chairman and Secretary of the Employers' Side of the Ostich and Fancy Feather and Artificial Flower Trade Board (Great Britain), Member of the Wholesale Mantle and Costume Trade Board (Great Britain), Member of the Retail Bespoke Tailoring Trade Board (Great Britain), Member of the Corset Trade Board.

The views expressed in this summary were also approved by a majority of the employers' representatives on the Dressmaking and Women's Light Clothing Trade Board (England and Wales) (only one member voting against) at a meeting held on Monday, December 12th, 1921.

The London Employers' Association is an organisation concerned mainly with the various branches of the Clothing trades, both manufacturing and distribution. The largest sections are dressmaking and women's light clothing and hat, cap and millinery. The membership includes manufacturers who supply the wholesale, wholesalers who supply the retail, and retailers who supply the public direct. The Association has representatives serving on all the Trade Boards referred to above, and its chief work is in connection with questions of wages and working conditions as apart from general trade matters.

The main portion of the membership is in London, though several Provincial Associations are affiliated and a number of individual firms in the provinces are members.

Scope of the Present Trade Boards Acts.

1. Under the Act of 1909 the Board of Trade were able to apply the Act only to trades where payment was exceptionally low as compared with other trades.

2. The Act of 1918 may be applied by the Minister of Labour "to trades where no adequate machinery exists for the effective regulation of wages, and that having regard to the rates of wages prevailing in the trade or any part of the trade, it is expedient that the principal Act should apply to that trade."

Attitude of the Association towards Trade Boards.

3. The Association is of opinion that rates of pay and conditions of employment in any industry are best determined by collective bargaining between employers and workers or their accredited representatives, but if the Government decide that wage regulating machinery is necessary owing to absence of

organisation or for other reasons, then a system of Trade Boards embodying the principles of the Trade Boards Act of 1909 is preferable to a national minimum wage.

4. The following resolution was carried without opposition at a meeting of the Executive Council of the Association held on Monday, December 5th, 1921:—

"That if wage regulating machinery is to continue, Industrial Councils and/or Trade Boards are preferable to a national minimum wage, and that a system of settlement of wages and working conditions on the principles as laid down by the Trade Boards Act of 1909 be approved."

Criticisms of Existing Acts and Machinery.

5. The Act of 1918 began to operate in 1919, and the trades with which are concerned were brought in during 1919/1920. This was a particularly inopportune time for Trade Boards to begin to function, for the basis of fixing wages was in the main the cost of living as compared with 1914, which at that time was continually rising.

6. There was also a tendency, due in the main to war conditions, for the new Boards to follow too closely the rates fixed by the older Boards, and by reason of their better organisation and a gradual lifting of rates from 1909 onwards, were able to bear higher rates. Insufficient regard was paid by new Boards to the circumstances existing in the particular trades, and the importance of moving slowly and effecting gradual improvement in the rates, although this was continually urged by employers' representatives on the new Boards.

7. These two factors have led to the fixing of what have in many cases been standard rates and not minimum rates which the Acts contemplate. The effect of this action was less noticeable and the rates less burdensome so long as trade remained normal, but after the slump came in 1920 many of the trades newly scheduled found it extremely difficult to continue to pay the rates.

8. It is perhaps correct to say that in some of the trades newly scheduled, the pre-existing rates of pay were comparatively low and—taking the case of small country dressmakers—perhaps below the economic level, but suddenly to lift those trades to the economic level was more than they could bear, and the progress should have been—as in the case of trades covered by the 1909 Act—more gradual.

9. The tendency of the new Boards on which we are represented has been to move too quickly, and in undertaking the fixing of rates for special classes of workers, they have attempted in less than a year what some of the older Boards did not attempt for several years, added to which experience has shown that in certain trades the basic rates have been fixed on too high a level to begin with.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

10. In certain trades the number of notices issued, together with their complicated phraseology, have had a bewildering effect, especially upon the small employers in the newly scheduled trades. Taking the case of the Retail Bespoke Tailoring Trade Board, in a period of about two years something like 14 Trade Board notices have been issued, and are expected to be digested by small tailors up and down the country. It would be no exaggeration to say that many of the employers affected have consigned these notices to the waste paper basket, and those who have not done so, have certainly never troubled to become acquainted with the obligations which these notices entail. Even if they had attempted to understand them, the involved nature of the phraseology would in many cases have baffled them.

11. Much confusion, friction and expense have been caused by the operation of different Boards for branches of practically the same industry in establishments where all these branches are carried on side by side, and where in some cases the workers come under two or more Boards in one day.

12. The length of time required under the Acts before changes in wage rates can be made, may be said to be one of the most serious defects of the Acts as they stand. Even when wages were rising, at a time when the cost of living was going up and trade was good, many of the employers, once a rate was fixed, would have preferred that the increased rate should come into operation with the least possible delay, but when trade is bad and the cost of living falling, the question is a far more important one, as the maintenance of higher rates than the trade can bear does, in fact, lead to unemployment.

13. The Minister of Labour also scheduled trades far too rapidly, having regard to the fact that practically no machinery existed for enforcement of the rates or even for notifying employers that rates had been proposed or fixed. Many employers in various parts of the country received no Trade Board notices and were entirely ignorant of rates for months after they became effective, and others, knowing that enforcement was being neglected, did not pay the rates.

14. The relationship between the Ministry of Labour and the Boards has not been conducive to their successful working and the transference to Montagu House of sections of Trade Board work hitherto carried on under the Trade Boards at the Trade Board offices has led to constant friction between the Boards and the Ministry, and has been responsible for much unnecessary delay.

15. Had the Minister put into operation the recommendations of the Joint Committee appointed to inquire into the administration of the Trade Board machinery (see their report of March, 1921), much would have been done to remove some of the difficulties referred to above.

16. The method of appointment of Appointed Members, and, for that matter, some of the Appointed Members themselves, have given rise to dissatisfaction amongst both employers and workers on these Boards, and some alteration in the procedure of appointment is necessary.

17. On the workers' sides of certain Boards there are:—

- (a) Too many trade union leaders
- (b) Too many trade union leaders who have not at any time had any connection with the trade.

Suggestions Submitted for the Consideration of the Committee.

18. Experience of the Boards with which we are concerned has convinced us that the Act of 1918 should not be applied in the first instance to trades which are in the main unorganised on both sides, and have had no experience of the working of Trade Boards, and we suggest that in the case of newly scheduled trades the principles of the Act of 1909

should apply, and only a general basic minimum rate for male and female workers and female learners (both time and pieceworkers) be fixed in the first instance.

19. Should the power to fix rates for special classes of workers be retained in the Act, these powers should not be used in the case of newly scheduled trades for at least two years after the setting up of the Boards, and then not until the Boards are satisfied that the basic rates are being paid throughout the trade, and only by complete agreement between the two sides of the Boards and without the votes of Appointed Members and under special order made by the Minister or authority concerned.

20. The determinations of Trade Boards should be simplified, and instead of varying rates being fixed for workers entering the trade at different ages, simple basic minimum rates should be fixed on experience rather than age, and in yearly periods rather than half-yearly periods in the case of learners.

21. It is possible by arrangement between employers and workers in many industries to embody in simple terms agreements affecting thousands of workers on a sheet of foolscap, and this position should be aimed at by the Trade Boards.

22. Schemes of apprenticeship and such other matters should not be undertaken in newly scheduled trades for at least two years after the setting up of the Board, and then only by agreement as set out in paragraph 19.

23. If the determinations were simpler and the work of the Boards confined to the limits referred to above, the number of meetings involving employers travelling from all parts of the country would be very considerably reduced, thereby saving expense to the State and loss of time to the employer, in addition to which enforcement of the rates would be much easier.

24. Outside the fixing of basic minimum rates the greatest amount of freedom of contract should be allowed as between employers and workers or employers and trade unions, as the case may be.

25. That both from the point of view of expense and smooth working, the smallest possible number of Boards should be set up in any industry which has various branches closely related to each other.

26. The Acts should be so amended as to make it possible to include all the making up branches of the clothing trades under one Board for the purpose of fixing basic minimum rates, and the same should apply in the case of the distributive trades.

27. Separate committees might be formed within the Boards for the purpose of dealing with special matters affecting any particular section and also for recommending the fixing of rates for special classes of workers, where any section was agreed that this was desirable.

28. Effective steps should be taken to see that all employers in any trade which has been scheduled and for which rates have been proposed, should receive the appropriate Trade Board notices, and for this purpose the machinery of the Employment Exchanges and, if possible, the Home Office (Factory and Workshop Section) and Unemployment Insurance departments should be used in compiling lists of employers.

29. The present Acts should be so amended as to make it possible in certain cases to effect variations in the rates in from four to six weeks at the most from the date of proposal.

30. It should be possible under the Acts to make alterations of a limited character to a notice of proposal at the fixing stage without the necessity of issuing a fresh proposal.

31. The relationship between the Ministry concerned and the Trade Boards should be on the lines recommended by the Joint Committee in their Report of March, 1921.

32. Questions of scope should in all cases be referred to the appropriate Boards, and where the views of Boards concerned do not coincide, co-ordinating machinery should be established.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

33. Legal advice should be available for the Boards at any stage on questions relevant to their work.

34. The enforcement of rates should be the subject of close co-operation between the Boards and the Minister or other authority responsible under the Acts, and the machinery referred to in paragraph 28 should be used to secure enforcement.

35. The powers of the Minister responsible for applying the Trade Boards Acts to suitable trades should be strictly limited by any amending Act, and the fullest measure of self-government be given to the Trade Boards. Certain matters at present dealt with by the Minister might be referred to an Appeal Board elected from the whole of the Trade Boards. The work of Trade Boards should in no way be subject to political influence, but there is always this danger so long as the power to hold up the confirmation of Trade Board decisions remains in the hands of a Minister of the Crown.

36. Appointed Members might be appointed in consultation with the two sides of the Board, or alternatively, might consist of a Chairman with two Assessors, one nominated by each side of the Board; the Chairman being acceptable to both sides.

37. *District Committees.*—The Association is not in favour of District Committees, but agrees with the principle of area rates for certain trades, the division recommended being that adopted by the Grocery and Provisions Trade Board (England and Wales).

6120. *Chairman:* You have had a great deal of experience of Trade Boards, and I think you have come here as Secretary of the London Employers' Association?—Yes.

6121. You are also Secretary of the employers' side of the Dressmaking and Women's Light Clothing Trade Board of England and Wales?—Yes.

6122. You are also Secretary of the employers' side of the Hat, Cap, and Millinery Trade Board of England and Wales?—Yes.

6123. You are Chairman and Secretary of the employers' side of the Ostrich and Fancy Feather and Artificial Flower Trade Board of Great Britain?—Yes.

6124. And a member of the Wholesale Mantle and Costume Trade Board of Great Britain?—Yes.

6125. And a member of the Retail Bespoke Tailoring Trade Board of Great Britain?—Yes.

6126. And a member of the Corset Trade Board?—Yes.

6127. So you are something of a pluralist?—I have had some experience of Trade Boards at all events. In addition to the London Employers' Association, the Summary of my Evidence has been approved by the majority of the employers' side of Dressmaking and Women's Light Clothing Trade Board (England and Wales), a majority of the employers' side of the Hat, Cap and Millinery Trade Board (England and Wales) and unanimously approved by the employers' side of the Ostrich and Fancy Feather and Artificial Flower Trade Board (Great Britain) and the Federation of Ladies' and Children's Light Clothing Manufacturers Association, Ltd., Nottingham. The employers' representatives on the Hat, Cap and Millinery Trade Board (England and Wales) were communicated with by letter, and had there been a little more time, it is probable that further letters of approval would have been received.

6128. Is the London Employers' Association a large body?—The membership is something over 400, and the total number of workers employed by our members, mainly manufacturing, when the figures were collected, was between 60,000 and 70,000. That takes in none of the distributive workers employed by our members, nor does it include our affiliated associations.

6129. Are your members mainly connected with one trade, or do you represent a good many trades?—All sections of the clothing trade.

6130. That is dressmaking and millinery, and I suppose the other trades are represented on the Boards of which you are a member?—Yes. We also have a certain number of members in the men's clothing trade, which in the main is represented by the Wholesale Clothiers' Federation.

6131. You mention the difference between the two Trade Boards Acts, with which the Committee is now familiar; what is the attitude of your association towards Trade Boards?—As defined here, we say, in the first instance, that the Government should make very sure that wage-regulating machinery is necessary before applying it, and, if that be the case, then we say that we have no objection to Trade Boards; in fact, we prefer them to other machinery, provided their work is confined within limits similar to those imposed by the Act of 1909.

6132. Your view, I gather, is that rates of pay are better determined by collective bargaining than by wage-regulating machinery?—Yes, provided always that the organisation is sufficient on either side to justify that position.

6133. *Lord Weir:* Can you tell us your main objection to a national minimum wage?—Yes; we fear that a national minimum such as we have seen mentioned would become a very big political question. That is one aspect of it. Then we see great difficulties in the working of a national minimum wage. We would want to know upon what type of workman it is going to be determined, whether persons with dependants or without. Then we see difficulties also in making provision for the infirm and incapable workers. We say, in fact, that the position could only be met by some system of Trade Boards attached to this so-called national minimum wage machinery. Those, I think, are the main things which we have in mind. The political aspect was the one to which I think we attached the most importance.

6134. You mean that there might be agitation to raise the national minimum at every election?—That is what we rather fear. We even think that the Labour Party might make very effective use of it by saying that they would get another couple of shillings per week for their constituents, if we had a national minimum wage in operation.

6135. I dare say you are familiar with the Australian attempt to fix a national minimum wage?—Yes.

6136. We are told that the sum arrived at by a committee there was £5 16s. 0d. a week?—I can tell you at once that such a figure would not be acceptable to the trades with which I am concerned.

6137. I understand it is not acceptable in Australia, at present at all events?—Quite so.

6138. Assuming that a Trade Board were established for a particular trade, either because of inadequate organisation or on the ground of exceptionally low wages, why would you prefer the 1909 Act rather than the 1918 Act?—The 1909 Act was clearly, I think, intended to deal with cases of underpayment.

6139. Assuming that a Trade Board has been applied to a trade, what is the essential point for which you prefer the 1909 Act?—Because of the reason I have just stated, that we feel that the prevention of sweating is desirable, or the prevention of real underpayment, whereas, as I understand, the Act of 1918 is a piece of machinery which is intended in fact to regulate wages throughout the industry.

6140. Where does it say that?—The words of the Act are quoted.

6141. The regulation of wages is referred to in the clause by which the Act is applied.—Then we have experience of what has been done under the Act of 1918: an attempt has been made in certain trades—

6142. What has been done is a different thing.—Then we can say that in the case of the 1909 Act it was not attempted. The machinery is obviously provided in the one Act where it was not provided or used in the same way in the other.

6143. A Board is not compelled under the 1918 Act to do any more than it is under the 1909 Act, barring, I think, the addition of a piece rate?—I appreciate that provision was in fact made in the 1909 Act for fixing special rates, but the fact remains that the machinery was not used.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

6144. You mean that, under the 1918 Act, Boards have gone very much further than they have under the 1909 Act?—I do mean that, and I think the conditions through which we have been passing have been very largely responsible for it. Mention is made at a later stage in my summary that the Boards have progressed too quickly by reason very largely, perhaps, of war conditions and the fact that the pace was set by other industries. I think that is one of the reasons perhaps why the provisions of the 1918 Act have been used too rapidly by new Boards.

6145. *Mr. Bell:* Would not that have happened without a Trade Board in existence under the abnormal conditions?—Not to a great extent in the case of the trades that we are concerned with, because of the fact that no very great amount of organisation existed on either side.

6146. But when you say that wages fixed in other industries had the effect of increasing rates in your own, would not that have applied without any Trade Board?—No. I say that that was the position because of the Trade Boards being established.

6147. Was not the difficulty to keep workpeople and to obtain workpeople, if they could get higher wages elsewhere? Had not that an effect on your industry?—It might have had some effect.

6148. Without a Trade Board in operation?—Yes, even without a Trade Board, but it would not have had nearly the same effect if there had not been a Trade Board.

6149. *Chairman:* You say that the year 1919 was an inopportune time for Trade Boards to begin to function; why do you say that?—Because of the reasons which I have just mentioned. In my judgment, and in the opinion of the Association, normal times would be the times for Trade Boards to be brought into operation. As a matter of fact, they did come into operation in numbers in 1919 and 1920, which I think the Committee will agree were the most difficult years that we had to contend with from the point of view of fixing wages.

6150. You say that insufficient regard was paid by the new Boards to the circumstances existing in particular trades and the importance of moving slowly and effecting gradual improvement in the rates?—Yes.

6151. You think they went too fast?—Yes, I say that the pace was made by the older Boards. Let me take the case of the dressmaking and women's light clothing trade. The point first and foremost in the mind of, let me say, the workers' side when this Board met for the first time in January, 1920, was the rates that had been fixed by other clothing Trade Boards, and I am bound to say that even the employers felt that they must have some regard to that position. It was overlooked, I think, by many that the conditions in the newly scheduled trades were different to those in some of the trades which had been covered by Trade Boards for a period of years, inasmuch as organisation was at a much higher pitch in the latter. There is something in becoming accustomed to machinery of any kind and having wages fixed. Those trades, like the dressmaking trade, had practically no experience.

6152. You agree that some of the rates of payment were too low?—I do. I think we cannot get away from that, and I have in mind particularly the conditions which were in existence before the Trade Board was actually set up in the dressmaking and other cognate trades. In 1919 an Order was made under the Wages Temporary Regulation Act, 1916, Order No. 357, which covered those trades which have since been covered by Trade Boards. The case was heard before the Court of Arbitration for three days, and I was present. Evidence was submitted by the workers' side, which, I am bound to admit, was conclusive that underpayment was taking place in certain parts of the country.

6153. That rate would continue in operation until that Act expired, would it not?—As I understand

the position, the Wages Order 357 was a temporary machine until the Trade Board was set up.

6154. But you think that, although some rise was quite right, the Boards have gone too fast?—Yes, that is the opinion of my organisation and of myself.

6155. I suppose when the slump came there was difficulty in reducing?—Yes; the slow working nature of the machinery was, of course, unfavourable then.

6156. You say that the two factors which you mention have led to the fixing of what in many cases have been standard rates and not minimum rates, as the Acts contemplate; will you develop that a little? First, what do you understand by minimum rates?—I mean a rate based upon the ordinary worker, and perhaps having regard to subsistence conditions, more than anything else, and of course the ability of the industry to pay. The rates in some of these trades were suddenly lifted to the same level as some of the organised trades, or very closely.

6157. *Sir Arthur Pease:* The standard wages?—Yes; not in these trades particularly, but I believe in some of the trades covered by Trade Boards, rates have actually been fixed higher than the rates agreed between organised employers and employees.

6158. *Lord Weir:* Do you differentiate in any way between the male and the female rates? Is it the case that the female rates may be taken almost universally to be a standard, whereas the male rates were not altogether a standard?—I should say that it was a standard, or more than a standard for certain sections of the trade in certain parts of the country, and there might be other districts and conditions of trade which would really make it a minimum. Take London, for instance. I do not think any of the rates which have been imposed by Trade Boards have been more than the London employers in the main would be prepared to pay, and to pay without damage to the industry, but taking the case of the smaller towns and the outlying districts, then I think the rate was not only a standard rate, but perhaps higher than a standard rate, having regard to the conditions which exist.

6159. *Chairman:* Have you ever, in your experience, tried to frame a definition of "minimum rate"?—Like many people I have given a good deal of thought to that, but it is by no means an easy subject.

6160. It is a difficult task, is it not?—Yes.

6161. Because to say only that it shall be a rate sufficient to maintain the workers in comfort, would perhaps not be sufficient?—No.

6162. I suppose there are rates, especially the rates paid to women and young people, which would not, by themselves, be sufficient to maintain the worker in comfort, because those workers may be helped from elsewhere?—Yes, I am quite sure of that, especially in the case of learners and young workers.

6163. Also, I suppose, in the case of married women, some work only as a supplement to the income of their husbands?—I think there are cases of that kind, but that is not, of course, general.

6164. *Sir Arthur Pease:* There are much fewer married women employed now than there used to be, are there not?—I imagine that would be the case.

6165. *Mr. Bell:* And you complain that the rate has been fixed too high?—I think that.

6166. Can you give us any idea of the percentage increase which has gone on as a result of the operation of the Trade Board?—I think that would be an extremely difficult answer to give, when you remember that we had no basis for fixing rates in many of these trades prior to the Trade Board being set up. It is almost impossible to give what would be the percentage increase.

6167. Is it your opinion that the percentage increase has been greater through the operation of the Trade Board than in some industries which have not got a Trade Board?—I should think so, taking certain sections of the trade. I have perhaps in my

14 December, 1921.]

MR. HERBERT KAY.

[Continued.]

mind for the moment the small country dressmaker, who did in many districts pay comparatively low rates. The percentage increase there has been very high.

6168. Would it be as high as 200 per cent?—Yes, I should think so in certain cases.

6169. But would you not say 200, taking the industry as a whole?—No. If you take the larger towns, the percentage increase would be nothing like that.

6170. You are aware that in the cotton trade the percentage increase was 210 throughout the whole of the industry?—I have heard that said. Of course, the cotton employers might say that was too high.

6171. *Chairman*: Paragraphs 10 and 11 of your statement, perhaps, speak for themselves. You speak of the number of notices and the overlapping of Boards.—I would like to say a word on that question of overlapping. That has been one of the real difficulties of the employers, in establishments where they have different trades carried on side by side. It has been one of their particular grievances having different workers in certain cases coming under two Boards or more in one day.

6172. Could that difficulty be met by grouping some of the Boards so that one rate would apply to all the workers in the group, except, of course, as to piece rates, which might have to be separately fixed?—This is my own personal view. I have always felt that, as regards the making-up sections of the trade, if we got back to the real basic minimum rate, there would be no reason why there should not be one Board only.

6173. If the Board fixed piece rates they would have to have separate committees to deal with different branches?—Yes, I make the suggestion in my summary that some machinery of that kind should be in existence. I ought to say that some of the old Clothing Boards are very anxious to keep their section of the trade separate.

6174. That is human nature?—Yes. In the early days, of course, we had individual employers wanting a Board for their own premises, and certainly every organisation felt that they ought to have a Trade Board for themselves. I have always looked forward to the time when we should see beyond that position. Some of us, who have been accustomed to Trade Board work for the last two or three years, do see beyond it; the position will never be satisfactory until you get one piece of machinery for regulating the basic minimum, leaving freedom by section committees, or whatever machinery you put up inside the Board, to deal with the different matters affecting the different sections.

6175. *Lord Weir*: Could you give us an example of something which might take place now, say, in the sewing trades or the clothing trades?—For the purposes of a basic minimum rate—I want it to be clear that this is my own personal view—such trades as the dressmaking and millinery and mantle and costume trades are all trades which could be brought together for the purpose of this basic minimum.

6176. You could group, say, four in the clothing trade?—Yes. I think you might go beyond that. I even feel, as I said a moment ago, that there is no reason why the whole of the clothing trade, which has about seven Boards altogether, should not be brought within one Board for the purpose of this basic minimum rate.

6177. Having got them together, would you then submit that they should be divided into two groups—wholesale and retail—as has been suggested?—I have never yet found anyone who could find that line of demarcation as between wholesale and retail.

6178. You mean it would be impracticable?—Yes, for the purpose of administration. You have the difficulty of firms who do both. But taking up the first point, I remember the days when these

Boards were being set up and lines of demarcation were being looked for by the Ministry. Employers who came asking for Boards for separate sections, were obliged to go away admitting that it was impossible to find a line of demarcation.

6179. *Chairman*: If you were to group the Boards like that, and so reduce their number, would you think it desirable to form area committees?—I mention that later in my summary. Perhaps you have district committees in mind. From inquiries I have made—I have had no experience of the working of them in my own Boards—they have not been very satisfactory, added to which, as the Act now stands, once a district committee is formed it cannot be abandoned. What we feel is that the position might be met in some of these cases by having area rates; in fact, so keenly do we feel about that, that only yesterday we proposed area rates for the dressmaking trade.

6180. What kind of areas are suggested?—We have taken the same areas as the grocery and provision trade.

6181. From the point of view of population?—Yes. Rates were actually proposed yesterday.

6182. Do you think the division into three classes is a good one?—I have given a good deal of thought to it myself in submitting it to the employers, and I think that is the best available scheme. We shall know better after experience what is wanted. I can imagine some point cropping up about a man who is on the border line.

6183. *Mr. MacCallum Scott*: The illustration which was given yesterday, I think, was Bushey and Watford.—Yes.

6184. Do you know that district? Watford have the lower rate, being the much larger town, and Bushey, being in the London area, have the higher rate?—Yes.

6185. *Mrs. Lyttelton*: Do your area rates show great variation?—Yes. Perhaps I might give them.

6186. *Chairman*: If you please.—Taking the general minimum time-rate in the case of London, it is 8d. I am speaking of the retail branch for the moment.

6187. *Sir Arthur Pease*: Is that for men or women?—It is for female workers. The Board have decided to base the rate upon experience rather than age. They have eliminated the question of age altogether.

6188. After how many years would that be paid?—The proposal now reads: first year, second year, third year, and fourth year of learnership, and after four years the rate is 8d. in London.

6189. Would that apply if a woman did not start till she was 21?—Yes, the employer would, in fact, be able to take a woman of 21 at the basic rate, although that would not be very likely to happen. What I have just mentioned is for the London area. Taking the case of the larger towns outside London—

6190. *Chairman*: Over 10,000 population is that?—The areas are London and the Metropolitan Police area, and then towns up to 10,000, and all other towns as a central area. For the larger towns outside London, the general minimum time-rate for female workers is to be 7½d. Then for the areas under 10,000 population, and with those conditions which are attached to the Grocery and Provision Trade Board definition, the rate is to be 7d. That is after four years in the trade in each case. A piecework basis time-rate has been mentioned in each case. The employers' side opposed this as unnecessary, but the workers' side said that the co-operative societies did, in fact, employ pieceworkers in the retail trade.

6191. What was the result?—The proposal was decided upon by the Board.

6192. Do you propose piece-rates and time-rates?—Yes. The co-operative representative on the

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

workers' side said that piecework does, in fact, exist amongst the female workers.

6193. Did the Board agree to fix a piece-rate?—Yes. A piece-work basis time-rate.

6194. Is that above the other?—Yes; it is 1d. per hour above the general minimum time-rate. As far as the bulk of the retail trade of the country is concerned, that will have no effect, because there is no piecework.

6195. Could you tell me before you leave that point what, in your view, is the justification for a piecework basis time-rate?—So far as the wholesale end of the trade is concerned, the suggestions made by the trade union are that the pieceworkers have got harder work and perhaps not quite such regular employment; whereas the time-worker, of course, has got her money assured whether she is working or not. Then I might mention certain other rates that were dealt with yesterday. In each area there is to be a rate for a special class of skilled worker. At the present moment there are two grades of such workers scheduled. The two have been reduced to one, and a rate of 9½d. in the case of London has been fixed for the skilled worker, who has got to be a really skilled worker with a special definition stating what her duties are. Then there is a rate of 9d. in the case of the larger towns, and a rate of 8½d. for the smaller districts. Perhaps Mrs. Lyttelton would understand that the worker affected has got to be 20 years of age or over; she must have had two years' experience in addition to the learner-ship period in the trade, and must take the responsibility for making a lady's bodice, skirt, gown, or blouse. That means she must have other people working with her—apprentices, improvers and assistants as a rule.

6196. But that rate, of course, is not fixed on sub-sistence?—That is so.

6197. It also depends upon the value of the worker to the employer?—Quite.

6198. *Sir Arthur Pease*: Would that wage be below the wage which is generally being paid in the trade?—The rate which is in operation to-day is in the one case 10½d. and in the other case 9½d.; but the information which many of us have is that those rates are not being paid by a good many employers.

6199. *Mrs. Lyttelton*: I suppose it is left entirely to the employer to decide on the skill which warrants 9½d.?—I do not think that. I think that a girl who can make bodices, skirts, gowns or blouses could soon establish the fact that she can do it.

6200. And in consequence she would get the rate elsewhere?—Yes.

6201. *Mr. Bell*: By what steps do you propose to ensure that the girl gets the higher rate?—Having provided the definition and the rate we look to the Ministry or to the authority concerned to enforce it.

6202. *Mrs. Lyttelton*: But if there is no adequate inspection of course the thing could not be done?—Inspection is a very important matter, and one of which I speak later in my statement.

6203. *Lord Weir*: This rate for a skilled person is not new, I understand?—That is true.

6204. You are simply varying it?—Yes. I mentioned that there are two rates in operation with a similar definition; but one rate is to be substituted with a slightly altered definition, and a lower rate.

6205. I thought it was an extension of your practice, but it is not?—No; it is a contraction really.

6206. *Chairman*: Then you refer to the time occupied in varying the rates?—Yes.

6207. Is that an important question?—It is a very important question. You see I mention that. Even when the cost of living was rising I have heard employers grumble about the length of time taken before they were able to give advances even.

6208. Surely there was nothing to prevent them paying a higher rate at once?—I agree, but it is a different matter one employer paying it and the others being left out. When the slump comes of course, and when you get these conditions, the drop becomes, if I may say so, even more necessary, because it means the difference between a small employer being able to carry on and having to close up in some cases. We say the time should be very considerably reduced. The Committee are aware that sometimes it means four months before you can make a change now.

6209. You think that the time for the lodging of objections might be reduced?—Yes.

6210. And also the time in which the Minister is required to form an opinion?—Yes; I think that is one of the sections which wants speeding up very badly.

6211. And you think also that the manner of giving notice might be modified so as to take less time?—Giving notice of rates which have been proposed?

6212. Proposals to alter rates.—Anything which would simplify the matter is worthy of consideration, I am sure. We say that in the case of agreed rates there is no reason why they should be held up at all.

6213. That, I suppose, is on the assumption that the representatives on the Trade Board really do represent the whole body—either the employers or the workmen—because if they do not, their agreement is not really conclusive?—I appreciate that point. Of course one looks to the Minister, or whoever may be concerned, to make certain that the Board is a representative one. While you have had a good deal said about the non-representative character of the Dressmaking and Women's Light Clothing Board, my Association are not in agreement with many of the criticisms that have been levelled at it.

6214. You think it is fairly representative?—In this case I think the Ministry really did their work as well as they could.

6215. Are the small people represented?—I have a list of the towns. I am thinking of the retail representatives. These are the towns: Cardiff, Birmingham, Ipswich, Exeter, Smethwick, Dudley, Newcastle-on-Tyne, Swansea, Woking, Leeds, Taunton, Burnley, Eastbourne, and London.

6216. The majority of those are towns of good size?—Yes.

6217. I did not catch the name of any representative country district?—No, I must confess that the very small places are not represented here.

6218. *Mrs. Lyttelton*: And the West Coast is rather left out?—That is so.

6219. *Sir Arthur Pease*: Can a district which is not represented give evidence before the Trade Board in any way, or is it confined to members of the Trade Board?—I think it is within the power of the Board to hear anyone who makes application. They would have the right to refuse or admit them, but there have been cases on record where non-members of the Board have been heard.

6220. But it is not the usual practice?—No, the assumption being of course that members of the Board where they are attached to organisations in different parts of the country, obtained the views of their members before attending. Where you have got independent representative members on the Board who have been selected by the Minister, I know that in certain cases they have taken the feeling of their fellow employers in the district from which they come.

6221. Are the customs and practices in the trade very different in different parts of the country?—Customs and practices of what character?

6222. I am thinking whether it is the custom to keep a man on whether he is actually employed or not, or whether he is sent away each day he is not

14 December, 1921.]

MR. HERBERT KAY.

[Continued.]

wanted and those kind of things?—They may vary of course.

6223. I was thinking of holidays, for instance, and similar things?—The practice may vary.

6224. *Mrs. Lyttelton*: Take seasonal work?—Yes, you do get a variation in that way. I should say in pre-war days that the work in the retail section was of a more seasonal character than in the wholesale section, and I should say that that position would obtain to-day.

6225. *Sir Arthur Pease*: Is it the general practice of the trade, supposing it was a slack time out of the season, to keep the employees on?—Up to the days of the war I think that seasonal work was pretty prevalent in certain sections of the sewing trade; but I am very glad to say—and I think that employers are glad to say—that that has been considerably reduced. Since the war period slack time has been very seldom until we had this dreadful trade depression. The position is not normal now.

6226. Do you want to go back to what it was pre-war?—I do not think so. I do not think you will ever have the same amount of unemployment in normal times—or irregular employment.

6227. *Lord Weir*: Taking the representatives from the towns you have specified, would they not in most cases be employers from very big shops in the centre of the town rather than the small shops on the outskirts?—I am very glad that question has been asked. The employers from these towns which have just been mentioned are in many cases cutting out garments in their own workrooms, particularly the lady representatives, and they have been very valuable on the employers' side of the Board.

6228. *Chairman*: With regard to objections received from country districts, are they carefully read and considered, in your experience?—I can only speak for myself. I go through them most carefully.

6229. Do you get a copy of every one?—Yes, I think until lately we have had a copy of every objection. With a view to saving expense, which is always desirable, the Trade Board Offices have recently been preparing a summary, but the bulk of the objections have always been accessible to members of the Board who might want to see them.

6230. How many would they be?—Sometimes you get a large number. You might have 200 or 300. May I add one further point on the question of representation? I have in mind Ipswich, Woking, Cardiff, Newcastle-on-Tyne, Leeds and Birmingham. All those towns are represented on the Board by practical dressmakers who have got charge of their own workrooms.

6231. Then in paragraph 13 you say the Minister scheduled trades far too rapidly.—This perhaps is one of the most serious things of all. Trade Boards have been set up one after the other, with no machinery, or practically no machinery, for enforcement of the rates. Boards have been told at every meeting for some time past that rates were being evaded all over the country, and we say that if you cannot make certain that a reasonable amount of inspection should take place, and that enforcement will in fact be brought about, you had better not set up the Boards. That is the position really.

6232. Have you considered the possibility of using the inspectors attached to other departments?—Yes. I have made a suggestion as to that in the Summary.

6233. *Mr. Bell*: Have you any suggestion to make in the direction of improving the method of inspection?—I suppose you mean the quality of the inspection, do you not?

6234. Yes, and the method generally?—The method I would say would be improved if certain machinery which already exists were made use of. Take the Factory and Workshop Inspectors of the Home Office. I cannot for the life of me see why the Home Office Inspectors, when they are passing through factories and workrooms, should not at the same time ask to

see the records and wages sheets of an employer. The same thing would apply to the Unemployment Insurance Department. That would apply more or less to the straightforward inspections.

6235. *Chairman*: Can you tell me what the unemployment insurance inspectors do now?—I imagine they do some inspection in connection with unemployment insurance.

6236. I did not know whether you could tell us how much they did?—I do not know exactly what their duties are. I only know that our members have those inspectors passing through their factories from time to time.

6237. *Mr. Bell*: I want to get to the method of inspection which is in operation in this industry. You are supposed to have correct weights; you are supposed to have correct measures. You have a method of inspection to see that weights and measures are correct, have you not?—Yes.

6238. Is there any objection to the same method being adopted under the Trade Boards?—I suppose the essence of inspection would be to make sure that the Trade Board records were available for you to inspect them when you went there. I think that under the Act that is supposed to be the case. The record of time and the record of payment should be available to the Inspector.

6239. So that an inspector, say, sent by the Chief Constable in any town might walk into an office and ascertain whether the correct rates were being paid or not?—Yes; surely that would be the case. I think if it were a police inspector it would create a commotion.

6240. If it were a breach of the law, why should it not be a police inspector?—We have not considered the police side of the inspection.

6241. *Mrs. Lyttelton*: But you think the factory inspectors might be given power to examine the wages, which they have not at present?—Yes; also the unemployment insurance inspectors.

6242. You mean they would be working for the Trade Board practically, where there was one?—Their duties would be either dual or three-fold.

6243. *Chairman*: There is power in the Act for the Ministry of Labour to arrange with other Departments for the use of their officers?—Yes, and we say the fullest use should be made of them.

6244. *Mrs. Lyttelton*: Only up till now the factory inspectors do not inspect wages?—That is so.

6245. *Chairman*: No such arrangement has been made up to now, but it could be made.—Yes.

6246. Could the Shop Hours Inspectors be utilised in this way in this connection?—I do not see why not. In the case of retail shops the inspector who was passing round might go to the counting house and inspect the wages books.

6247. Those inspectors are appointed by the local authority.—I am not clear about that.

6248. *Lord Weir*: The inspectors who would be more suitable for viewing and inspecting the wages would be the factory inspectors of the Home Office would they not?—I should imagine so. I have had a good deal to do with the Home Office inspectors, and they look for things and are properly trained inspectors.

6249. *Chairman*: But they would only go into places which are factories and workshops within the meaning of the Act. They would not go into many of the small shops, would they?—I think so. Most of the small retail shops which have got workrooms come under the Factory and Workshops Acts.

6249a. Where there are workrooms?—Yes.

6250. Still, there would be a residuum which would not be visited in the ordinary course to-day by the factory inspector?—Quite so; but I saw an estimate of the numbers published recently. There are 281,000 factories and workshops in all, and 50,000 of that number are in London, so that there are quite a number of factories and workshops where Home Office Inspectors visit.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

6251. But there is a much larger number of shops which come under the Trade Boards Act?—Quite.

6252. If you add all the other trades?—Quite.

6253. *Sir Arthur Pease*: You would really want a trained man to do this inspection, would you not? An untrained man might be in great difficulties and would not do the work properly?—I do not say that. I think the ordinary routine inspection could be done by a person of ordinary intelligence. When you come to complicated piece-rates then you want someone who has had a proper training. But there is a tremendous amount of inspection to be done where it simply means the number of hours which have been worked in a given day or a given week, and the number of shillings they ought to receive in return. That is straightforward inspection and could be done by people of average intelligence.

6254. *Mr. Bell*: Would not you regard a police officer as a man of ordinary intelligence?—Some of them are.

6255. What makes you say it would create a commotion if a police officer walked in? Does he create a commotion now if he looks at the weights or the measures?—It would be a new departure, and a uniformed man parading about a workshop would not be conducive to peace. We should get accustomed to him in time no doubt in the same way as we do to other things; but it does not strike me as being the ideal form of inspection.

6256. *Sir Arthur Pease*: If he came in plain clothes that would be all right?—That might be better, of course.

6257. *Chairman*: I am told that unemployment insurance inspectors are, to some extent, utilised now. But they require a certain amount of training before they can do all the work required under the Trade Boards Act?—I can understand that. I am glad to hear they are being used to that extent. What we say is that they should be used to the fullest extent.

6258. We have now dealt with paragraph 13. I suppose paragraphs 14 and 15 run together?—Yes.

6259. You have in mind the recommendations of the Joint Committee?—Yes.

6260. Have you considered those in detail?—Yes, I did consider them, because I was one of the Committee that prepared them.

6261. Are you in agreement with all of them?—Yes; I signed the Majority Report.

6262. Do you really think that they should all be carried out?—I do. I think the recommendations of the majority should be put into operation, and that they would do a good deal to smooth the work between the two sections of the Ministry.

6263. Then you refer to the method of appointment of appointed members which you say has caused some dissatisfaction. Have you any suggestion to make on that?—Yes, I make a suggestion at a later stage, I think. These are in the nature of criticisms that you are dealing with now. My constructive suggestions come later in my statement.

6264. You also claim that on the workers' side of certain Boards there are too many trade union leaders, and especially too many trade union leaders who have not had any connection with the trade?—Yes.

6265. Perhaps your suggestion as to that comes later on?—No, I have not dealt with that. If you agree I will touch upon it now. I think employers would feel better satisfied if there was a bigger proportion of the actual workers from the factories or workrooms on these Boards.

6266. You would not object to there being some experienced trade union leader there, would you?—No, I should not object, and the people I represent would not object. You have had it suggested in recent times, I think, that all these non-employers should be removed from the employers' side of the Board, and I think that trade union leaders should be pretty well all removed from their side. Anyone with knowledge of Trade Boards knows you must have some person of that kind on them, and some of us have even got knowledge equal to that of the em-

ployers, because we have spent the whole of our lives in the trades we represent.

6267. *Mr. Bell*: I take it you yourself are in a similar position to that of a trade union leader?—I am at the moment, but up to 1918 I was in the trade, and had been for the whole of my life.

6268. And your association thought you were most efficient to give evidence on their behalf, although you are not actually engaged in the trade?—Yes, quite.

6269. *Chairman*: Do you suggest a percentage or something of that kind?—I think there should be some limit. We have not given very careful consideration to what the percentage should be, but we certainly feel that there should not be half a Board of purely trade union leaders, many of them not connected with the trade in any shape or form beyond that of being an organising secretary. If there are to be leaders at all, we think it is preferable that they should be people who have had experience at some time or other in the trade with which they are dealing.

6270. *Sir Arthur Pease*: Do you mean that they have not had experience in your trade, or do you mean that they are not working in it?—You have representatives on the workers' side representing perhaps the Workers' Union. These would be on the Dressmaking Board. A General Workers' Union organiser is not the best man to have as a spokesman on a Dressmaking Board. If they were men who are connected with one of the clothing unions who had, in fact, some knowledge and experience of the trade, then so long as the numbers were limited no serious objection could be taken.

6271. *Chairman*: I see 12 out of 30 workers' representatives on the Dressmaking Board are full-time trade union officials; and on the employers' side there is one non-employer out of 30?—That statement is not quite accurate. There are three non-members really on the employers' side of the Light Clothing Board.

6272. Then with regard to your suggestions, the first is that the Act of 1918 should not be applied in the first instance to trades which are in the main unorganised on both sides, and have had no experience of the working of Trade Boards. What exactly do you mean by that?—I mean that the Government ought to start with new trades much on the same lines as they started with new trades under the 1909 Act.

6273. Do you mean they should only apply the Act to trades where there are exceptionally low wages?—Yes, in the first instance.

6274. *Lord Weir*: If that test were applied instead of the organisation test, do you believe there are many trades in this country to which the Acts would require to be applied?—It is difficult to say, because of the very difficult times. But one knows of course at once that the position is nothing like it was in 1914. I do not think I can go beyond that.

6275. You mean that many trades where the wages in pre-war days might really have been called exceptionally low have had those injustices redressed during the war?—I think to some extent, yes.

6276. But it would be infinitely more difficult to select a large number of trades to-day than it was under the 1909 Act?—Yes, only you have got to take the other conditions into account. I suppose, while the wages to-day are considerably higher than they were in 1909 or 1914, there is reason for their being high, and relatively perhaps the rate of payment is not very much more than it was in 1909. There might be trades like that, I suggest. In the main, of course, I would say that the position is altered.

6277. The reason I asked that is that you might say you consider it would be the Minister's duty under the 1909 Act to impose a Trade Board on the mining industry on the ground that the base wages are exceptionally low?—Yes, that is a very real difficulty. I imagine that the miners would not receive the proposal of a Trade Board very favourably, even though their wages are low at the moment.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

6278. But it might become the Minister's duty under the Act to impose a Board because he was satisfied that the wages were exceptionally low?—But then the wages operating in the mining industry to-day have in fact been agreed as between the employers and the workers, have they not?

6279. Yes.—Would it be the Minister's duty to override what had been arranged between the employers and the workers in an industry where the organisation on both sides was complete?

6280. Do we not get to the fundamental question now whether the mining industry is a sweated industry?—I am not prepared to discuss that.

Chairman: There are some saving words in the Act of 1909 about the other circumstances of the case.

6281. *Mr. Bell:* Suppose you go to the conditions under the 1909 Act, I take it you mean that nothing but a minimum should be fixed. Suppose the rate in London was 40s. and the Glasgow rate 20s. Would not the Glasgow employers say that to make the minimum 40s. would be very unfair to them?—I should assume that there would be no such difference between London and Glasgow.

6282. You are quite aware that there have been very large differences in operation between different parts of the country?—Yes.

6283. And that it is the people who have had to pay the largest increase who are complaining the most?—Yes.

6284. Suppose that in fixing the minimum it brought the minimum rate higher than the rate that they had been paying in the same industry for a more skilled worker. How are you going to fix the rate for the higher skilled worker?—I do not quite follow the question.

6285. If you increased the minimum to such an extent in some parts of the country that it raised the minimum to a higher rate than the rate that had been paid to the highest skilled worker?—By agreement, do you mean between the two parties?

6286. I mean where the employer has fixed the rate without any agreement between anybody. Suppose the minimum for the lower paid work was increased to such an extent that it brought it higher than the rate the employer had been paying for the more skilled work, how would you fix the rate for the more skilled worker?—Would that be a serious matter if the rate you are referring to was a rate which had been agreed to between the employer and the worker? If it was a rate agreed to between a trade union and the employers in an industry where the organisation was very high, I could see something in it.

6287. My experience is that these rates are not arranged between the employer and the worker, and that where the rates are low they are generally fixed by the employer.—Are you speaking of Trade Boards?

Mr. Bell: No; I am speaking of what happened previous to Trade Boards coming into operation.

6288. *Chairman:* Is not the answer that if the basic minimum rate is fixed so high that it even exceeds the rate paid by agreement to the skilled worker, the effect must first be that the skilled worker will not be paid anything extra for his skill, but will probably be kept at the minimum rate to compensate the employer; secondly, it may be that the employer might reduce his average altogether?—One hopes, of course, that in normal times the minimum fixed by Trade Boards would have regard to all the conditions, and that there would not be such anomalies as *Mr. Bell* has in mind.

6289. We have been told by a good many witnesses that the effect of the rates which they consider too high has been that the skilled workman has suffered. He had to be kept down to the standard instead of having something above the old minimum?—In other words, the Trade Board rate has been the maximum and not the minimum.

6290. It has been both the maximum and the minimum.—Yes; that may have been due to the Board having fixed their rates too high.

Chairman: That is the point I think *Mr. Bell* was putting to you.

6291. *Mr. Bell:* Perhaps I might put it in another form. Suppose that the rate in London was 40s. and in Manchester 35s., that is what we might call the minimum?—The Trade Board rate?

6292. No. The Trade Board is being formed and they are considering the rate. Suppose they fixed a minimum rate of 40s., it means that the rate becomes 40s. in Manchester instead of 35s. But for the more skilled worker the rate in London is 50s. and in Manchester 40s. How are you going to bring the Manchester employer up to the 50s. for the more skilled worker unless the Trade Board is going to fix the rate?—I think in practice, an increase in the minimum does in fact affect the various grades of workers above the minimum. That is speaking generally.

6293. But unless you have a decision of a Trade Board you would have no guarantee of obtaining anything like a similar rate for similar work in the same industry?—I know we have met these arguments very often at Trade Board meetings. It has been suggested in all seriousness that, having fixed the minimum rates, the other rates do, in the main, adjust themselves and I think that is so. You cannot fix a minimum rate which is not based upon skill, but upon the requirements of the individual, and expect the man who is a skilled worker to work alongside that worker for whom the rate has been fixed at the same rate. It does not operate in practice.

6294. Does not the same thing operate in practice with regard to the skilled worker as operated in practice with regard to the less skilled worker, namely, that there is a great variation in the rates paid?—Generally speaking, I would say that the worker who is skilled can, in the main, command his proper value.

6295. *Mrs. Lyttelton:* He has got a strong weapon in his hands, even if he is not organised?—Yes, and he uses it very effectively—and quite rightly.

6296. *Mr. Bell:* Do you mean by reason of his skill?—Yes.

6297. But skilled workers in the country have been in receipt of very low wages very often?—Yes, and high wages too.

6298. Yes, but not because of their skill. I think you will agree that if a skilled worker has been able to command higher wages it has not been because of his skill, but because of his organisation?—I should hope it were both. I think skill has played its part. I think it must do.

6299. I agree, to some extent; but skill without the organisation has very often led to extremely low wages if you have got a number of skilled workers?—No one appreciates the value of organisation on the workers' side more than I do. I have to meet it every day of my life, and I realise the strength of it, and workers have in fact got many of their increases by reason of their organisation.

6300. *Mrs. Lyttelton:* I suppose skilled workers as a whole are more easily organised than unskilled workers?—Yes, I think that is so.

6301. *Chairman:* Now we come to the second part of your summary. In the first paragraph it is suggested that in the case of newly scheduled trades the principles of the Act of 1909 should apply, and only a general basic minimum rate for male and female workers and female learners (both time and piece workers) be fixed in the first instance. Is that the principle of the Act of 1909?—That is the line upon which they proceed under the Act.

6302. As a matter of fact, the Act did permit the fixing of different rates for different classes.—Yes, that is so; but that has never been used until comparatively recently.

6303. You say "in the first instance." How long do you think that restriction should apply to a Board?—I mention that in the next paragraph.

6304. I see in the next paragraph you say: "Should the power to fix rates for special classes of workers be retained in the Act, these powers should not be used in the case of newly scheduled trades for at least two years after the setting up of the Boards, and then not until the Boards are satisfied that the basic rates are being paid throughout the trade, and"

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

only by complete agreement between the two sides of the Boards and without the votes of appointed members and under Special Order made by the Minister or authority concerned." Is the purpose of that in order that the basic rate may first be fixed by the Board?—Yes.

6305. And then that the special rates may be considered and dealt with by agreement?—Yes. We say that if the power is to be retained in the Act for this purpose it should be used in this way. There should be no question of the appointed members voting. In every case it should be a matter of agreement between the two sides.

6306. Do you mean a unanimous agreement?—I do.

6307. And if that happened you would make it enforceable by law?—Yes; I think there would be a case for it.

6308. *Mrs. Lyttelton*: Is the reason for the two years, that you feel that during that time there would be an opportunity for the skilled wages to adapt themselves to perhaps a higher basic minimum rate?—Yes, that is one reason. First and foremost in my mind is to get your trade accustomed to the machinery of the Trade Board. Make certain that the employers covered by the Board are paying the rate, and then if it is felt by agreement on the two sides that something could be done in respect of other classes of workers, and that in fact something should be done, then all right.

6309. Two years seems rather a long time?—I do not think it is in the light of my own experience on some of the Boards where we have attempted to fix special rates after 12 months. I think another 12 months would have been extremely useful.

6310. *Lord Weir*: Some of the old Boards took more than two years before they arrived at this practice of graduating wages?—Considerably more.

6311. They applied themselves, as you suggest, to the basic minimum rate for quite a long period?—Yes. I believe, speaking from memory, that the first rates for special classes of workers were fixed in 1919; whereas, in fact, some of the Boards had been operating from 1910.

6312. May I put it that you would like new Boards to have two years really in which to learn their business?—That is exactly the position. We attach a good deal of importance to that.

6313. *Chairman*: It would not make much difference to most of the existing Boards?—Perhaps not, except that they may be aiming at getting back to the basic minimum rate. I do not say they are; but they may be.

6314. Then your next point is: "The determinations of Trade Boards should be simplified, and instead of varying rates being fixed for workers entering the trade at different ages, simply basic minimum rates should be fixed on experience rather than age, and in yearly periods rather than half-yearly periods in the case of learners."—That really was put into practice by the Dressmaking Board yesterday. Under the old determinations you will notice that there are various columns setting out various rates for workers entering the trade at different ages.

6315. *Lord Weir*: You do not suggest any actual change in the powers of the Board, but you think by the two years' delay questions would often be handled better by the Board. Do you propose definitely that they must not base rates on age? It is left entirely now to the Board. They have full freedom to do it in any way they like?—I appreciate that. It is not only a criticism of the Acts that we are trying to give you, or suggestions on the Acts, but we really dealt with the machinery, feeling that the Committee would like to hear something of it. I am conscious that I am telling you something that the Board ought to have done, and in fact they have not done. I thought the Committee would like to have the information before them. Our view is that, first of all, there should be nothing but basic rates for the first two years, and secondly, that those basic rates should be of the most simple kind, having regard to

the type of employer who has to follow them in many cases. Instead of having three or four columns of rates for learners entering the trade at different ages, give them a straightforward schedule with headings for the first year, second year, third year, and fourth year. Make sure you have the right rates, and then there will be little trouble.

6316. *Chairman*: As regards the special rates, your Board have only one special rate above the minimum?—Yes.

6317. Do you think that an advantage?—I do not know that I should like to use that word; but one feels, of course, that having legislated for special classes of workers and having had two rates, it is a very drastic cut to remove them from the cover of all protection at one sweep.

6318. You think it an advantage to limit the number of special rates?—I do, leaving freedom to the employer to go above the rates which have been fixed for a higher degree of skill.

6319. Then you go on to say: "Schemes of apprenticeship and such other matters should not be undertaken in newly-scheduled trades for at least two years after the setting up of the Board, and then only by agreement." I would like to understand that. It has been suggested to us that apprenticeship is better than merely paying learners a fixed wage, as it enables the trader to obtain young people and to teach them their trade, say, for three or five years, or whatever it is, without feeling bound to pay them the full rate as learners. What do you say to that?—You will notice I do not say they should for all time keep away from schemes of apprenticeship. But I have in mind the Retail Bespoke Tailoring Trade Board, of which I am a member. In addition to their many and varying rates which they propose, and the number of notices which have been sent to employers all over the country, they have embarked upon a scheme of apprenticeship which involves an indenture which again is a pretty complicated document for the small country tailor to digest when he has got the other 14 Trade Board notices on his wall at the same time. All I say is that it would have been better for them to have held their hand until they had grown into the Trade Board movement. The amount of matter sent out from the Retail Bespoke Tailoring Board is beyond any ordinary man's capacity to digest. It is my job to do it; I spend my life on it, but I have not digested half or a quarter of it. It pours in like water—apprenticeship schemes and varying determinations; in fact, I begin to wonder how some of the members of that Board can possibly attend to their own business. Therefore, I say, keep off so much matter in the earlier days of the Board.

6320. *Mr. Bell*: Do you mind defining what you consider the difference between a learner and an apprentice?—An apprentice, as we understand the position, is the young person who works under an indenture. Different conditions of employment are laid down as prescribed in the indenture, and for a different period of years. A learner, of course, may be discharged, or may leave at any moment; there is nothing binding. I am speaking now of the thing as it operates under the Trade Board.

6321. *Sir Arthur Pease*: In an apprenticeship both the employer and the employee would be bound for three years and the employer could not dismiss the apprentice in less than three years?—That is so. Certain conditions would be laid down. I do not know whether the Committee have the indenture before them?

6322. *Chairman*: I have the document.—Perhaps you will appreciate the difficulty to the small country tailor in following it.

6323. *Mr. Bell*: But suppose your suggestion were adopted, what guarantee would you have that some of these apprentices or even some of the learners would get any wage at all?—The practice of the Boards that I know has been to fix a rate for apprentices and one for learners as well.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

6324. But you are asking that they should not?—I am asking that the scheme of apprenticeship should not be dealt with; that is the scheme of indenture—and that they should not touch these things until two years after the Board had been set up; in fact, that all they should do would be to fix learners' rates as apart from apprenticeship schemes.

6325. Have you had any experience of the payment of premiums by learners in this industry?—Yes; my parents paid one for me.

6326. *Lord Weir*: As a learner?—Do you mean as a learner or as an apprentice?

6327. *Mr. Bell*: As a learner.—I have not heard of premiums for learners.

6328. Suppose I had a girl whom I wanted to learn dressmaking in the town where I live, and I was told that the wage fixed by the Trade Board was 10s. a week for a girl of 14, but that they required a premium of £26 before they would take her on. That would mean no wages for a year. Have you no experience of thing of that sort?—I do not say I have never heard of such cases; but there is no case coming within my knowledge where such a condition has been imposed.

6329. *Sir Arthur Pease*: That would be an apprenticeship, would it not?—The case Mr. Bell quoted was the case of a learner who was told that she could have a job at 10s., or whatever it was, provided she paid that amount in the form of a premium.

6330. *Mr. Bell*: The result being that the learner had no wages for 12 months?—Quite. The Act does provide that premiums may be paid during the first month of employment, I think.

6331. *Chairman*: I am not quite sure whether I have got this yet. Do you think it desirable to encourage apprenticeship by encouraging Trade Boards to fix a lower payment for an apprentice than the payment prescribed for a learner who was not an apprentice?—I think in the main apprenticeship is a good thing.

6332. We were told by drapers that they had given up taking in learners because they could not afford to teach ignorant children their trade and to pay them a wage at the same time. We had a letter from one of the Education Officers in Liverpool. He said that he could not get places for any one of the children leaving the elementary schools in the drapery trade because of the high wages. What I suggest and what I should like to have an opinion upon is that it might be well for the Trade Board to say: "We want to encourage the teaching of trades, and therefore for an apprentice whom the master is bound to keep for a term of years we will let you pay a smaller sum in the earlier years than what you are bound to pay for a learner." What do you say to that?—I think there is a good deal to be said for it. The conditions under which the young people would be taught would be prescribed in the indenture, and the methods proposed would vary a little from those of an ordinary learner, because the learner might be put on odd work, whereas the apprentice would have to be put on the essential operations at once.

6333. And really be taught the trade?—Yes. Of course, experiences differ in this direction. In London, before the days of the war and during the war, I had the greatest difficulty in my business at that time in getting learners into the trade. We found the only means of getting them in the right quantity and of the right type was to increase their payment.

6334. Now, of course, things may have altered?—Yes; but the fact remains that taking my own experience in London, sections of the clothing trades were being starved for some years during the war because of the circumstances which existed and of the low rates of wages. In order to induce a better supply I and a number of other employers in London drew up a schedule of working conditions with an increase in their rates which was put before the girls about to leave school by the schoolmistress and the education authority. That was really the basis

of the set of working conditions now operating for the sewing trades in London, which were mainly designed to attract the proper quantity and the best type of young person into the trade. To-day, of course, you may get as many learners as you want, and perhaps at any price.

6335. Then you say in your statement: "If the determinations were simpler and the work of the Boards confined to the limits referred to above, the number of meetings involving employers travelling from all parts of the country would be very considerably reduced, thereby saving expense." That seems a conclusion from the previous recommendation?—Yes. There again some of the Boards have spent days on end which, if they had proceeded more slowly, would not have been necessary.

6336. Then you say: "Outside the fixing of basic minimum rates the greatest amount of freedom of contract should be allowed as between employers and workers, or employers and trade unions, as the case may be." And then your next paragraph is: "That both from the point of view of expense and smooth working, the smallest possible number of Boards should be set up in any industry which has various branches closely related to each other." I suppose that expresses your view?—Yes. We consider that a great deal of the confusion which has been caused has been due to the fact that certain Boards have not been working more closely together.

6337. Then you say: "The Acts should be so amended as to make it possible to include all the making-up branches of the clothing trades under one Board for the purpose of fixing basic minimum rates, and the same should apply in the case of the distributive trades." That, I think, you have already developed?—Yes.

6338. Then you say: "Separate committees might be formed within the Boards for the purpose of dealing with special matters affecting any particular section, and also for recommending the fixing of rates for special classes of workers, where any section was agreed that this was desirable?"—Yes.

6339. *Sir Arthur Pease*: If the section demanded it, the Board would be bound to agree to it?—The Board should have the co-ordinating authority in every case. Take the present Dressmaking Board. Matters affecting the retail branch of the Board are dealt with by a section of the Board; and the same thing applies to the wholesale branch. But there are points and stages where agreement is common, and then, of course, the two operate together.

6340. But, as a matter of fact, every section that wished to have a committee should be allowed to have one?—I am not prepared to say that. I think that the Board as a whole would want to have some voice as to the formation of these committees.

6341. *Chairman*: This paragraph would apply to piece rates, I suppose?—Yes, or to the fixing of special rates for special classes of workers. You might have a committee for a particular section of the clothing trade to deal with that.

6342. *Lord Weir*: I suppose this is all after the two years' apprenticeship of the Board?—Yes; after the two years' initial work.

6343. *Chairman*: Then you say: "Effective steps should be taken to see that all employers in any trade which has been scheduled and for which rates have been proposed should receive the appropriate Trade Board notices, and for this purpose the machinery of the Employment Exchanges and, if possible, the Home Office (Factory and Workshop Section) and Unemployment Insurance Department, should be used in compiling lists of employers." I think to a great extent that is done already, is it not?—I wondered if the Home Office were used in that connection at all.

6344. I am told they are. Then you say: "The present Acts should be so amended as to make it possible in certain cases to effect variations in the rates in from four to six weeks at the most from the date of proposal."—I think that suggestion explains itself.

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

6345. Then you say: "It should be possible under the Acts to make alterations of a limited character to a notice of proposal at the fixing stage without the necessity of issuing a fresh proposal." How would you limit that? Would it be enough to say that the Minister should sanction such alterations?—I appreciate the difficulty. It is a question of what is a minor alteration.

6346. Then you draw attention to the recommendations of the Joint Committee with which you have already dealt?—Yes.

6347. Then you say: "Questions of scope should in all cases be referred to the appropriate Boards, and, where the views of Boards concerned do not coincide, co-ordinating machinery should be established." Do you mean there that a Board should have power to determine what came within its own scope?—Yes, I do. The trade should be the judge of what should come within the scope of the Board.

6348. Is not that going a little far? Would it not be the tendency of a Board to extend its jurisdiction as far as possible?—Not necessarily. There are cases, I think, where Boards would be glad to be rid of some of their responsibility in that way.

6349. Human nature differs. I do not know whether you are aware of a case where the Tailoring Board, I think it was, came to the conclusion that it extended to the making of waterproofs and mackintoshes, and it was contended that that was wholly outside the scope of the Trade Board on any legal construction?—That might show that there had not been proper consultation before the definition was drafted. I think the second part of my suggestion, to the effect that there should be co-ordinating machinery, would remove many difficulties.

6350. Do you think that where a real question of scope occurred it would be well to have an appeal to some tribunal?—Yes, I do. I make a suggestion that there should be a tribunal of that kind, and I have in mind in making it questions of scope amongst other things.

6351. Would the Industrial Court be a good tribunal?—I am inclined to think you ought to provide machinery appointed from the Trade Boards themselves as a whole.

6352. Do you mean some central body representing Trade Boards?—Yes.

6353. Then you say: "Legal advice should be available" and so on. That arises on the Report of the Committee, does it not?—Yes.

6354. The next paragraph is: "The enforcement of rates should be the subject of close co-operation between the Boards and the Minister or other authority responsible under the Acts, and the machinery referred to in paragraph 28 should be used to secure enforcement" ?—I mention the Home Office and the Unemployment Insurance Department.

6355. Then you say: "The powers of the Minister responsible for applying the Trade Boards Acts to suitable trades should be strictly limited by any amending Act, and the fullest measure of self-government be given to the Trade Boards." Is anything intended by this except what is to be found in the Report of the Committee?—I do not think so except that in a general way the less interference the Board have from the Minister or from any Government Department, the better they like it. The opinion is that they will function all the better without that interference. What we really want is to be left alone and to work out our own salvation.

6356. The next paragraph is: "Appointed members might be appointed in consultation with the two sides of the Board, or, alternatively, might consist of a Chairman with two Assessors, one nominated by each side of the Board; the Chairman being acceptable to both sides." I follow the suggestion about the Assessors, but is it desirable to have them nominated by each side of the Board? Would it not be better to have two independent Assessors, if possible, skilled persons selected either by the Chairman or by the Minister? You see, if they are nomin-

ated by the two sides of the Board, you simply add one to each side, and you get no further?—Perhaps I did not convey what I intended. I did not necessarily mean that they should be appointed by the Board. They might be people outside the Board entirely. I meant that the power of nomination should be in their hands.

6357. Would not the effect be simply to add one to each side? Each side would surely nominate someone representing its own views?—The advantage, if you had an Assessor of that kind would be, I think, that there would be an opportunity of ascertaining at different stages the views of the different sides and giving those views to the Chairman.

6358. Is there any difficulty in ascertaining the views of each side?—There is. The appointed members to-day are independent members, and there is no real connection with either side, which means that even side discussions with them are of a very formal character. Now by having what would be really representatives of the different sides sitting with the chairman, these particular persons would in fact act as mediums between the sides of the Board and the chairman. You would get to closer quarters; that was our view.

6359. *Mrs. Lyttelton*: You really want to appoint an advocate on each side?—The machinery of the Industrial Court is of that kind, is it not? You have there an independent chairman, and then you have—not assessors—but a trade union representative on one side very often and an employers' representative on the other.

6360. *Chairman*: They are not persons appointed by the persons engaged in litigation.—I appreciate that difference.

6361. We have been told that the appointed members can only give a vote in favour of or against a proposition which has been proposed. They cannot arbitrate?—They cannot, of course, propose rates. They may informally make suggestions, as they often do. I am one of those number who hope that as long as Trade Boards exist the less the appointed members have to do the better.

6362. I can see the advantage of your proposal if an umpire was going to make an award to have a technical man on each side, possibly people with different views, to say that the award was a practical award; but if he had only got to vote on a specific proposal I cannot see the advantage?—A good deal has been done by the appointed members to get to the position where, a vote is taken. For instance, you have two proposals submitted, one from the employers' side and one from the workers' side with a good deal of difference between them. The work of the appointed members is to bring the two sides together. Then they may get to a stage where a vote has to be taken, and that is where, of course, the appointed member throws his vote on one side or the other.

6363. I think you said that appointed members cannot propose rates?—Yes, I said that.

6364. I think that is a mistake. They can propose rates. Whether they will get them carried is another matter.—Is that so?

6365. No doubt an appointed member would not raise such a thing unless he knew that one side would accept it, because otherwise he could not carry it.—Is it a fact that a schedule of rates can be proposed by one of the appointed members?

6366. I think so. I can find nothing in the Act against it.—I should hope it would never be done.

6367. Then as to district committees, you have already given your views, and you do not think they work. You would prefer the principle of area rates in certain trades?—That is so.

6368. *Mr. MacCallum Scott*: I have just one point. I am very interested in your views about the national minimum wage, because some of the witnesses who have been here representing, I think, the distributive trades have strongly advocated that. Do you draw a distinction between what you call a real basi-

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

minimum wage and a national minimum?—Yes, surely. First of all, on the question of the national minimum wage, we say in practice, that what was a minimum wage for one industry would not necessarily be a minimum wage for another.

6369. Why not?—It would be a minimum in name, but not in effect, really. Could you say, for instance, that the engineering industry ought to have the same minima as the dressmaking industry?

6370. Engineering is an industry in which there is effective bargaining between employers and employed. We are only referring here to those trades in which there is no effective machinery.—The national minimum wage, I take it, might even bring in industries where a pretty high state of organisation did exist.

6371. *Chairman*: It would not be a national wage unless it brought in all trades.—It would include such industries as engineering, in fact all industries.

6372. *Mr. MacCallum Scott*: Do you think it would lead to more political activity than the present state of affairs leads to, or is it not open to anyone at elections to advocate that a minimum wage should be put forward?—I think if you had it on the Statute Book and there was a rate fixed, it would be more effectively used.

6373. *Mr. Bell*: Is there any greater danger in that than going on a public platform during an election and advocating a minimum wage?—The difference I draw is the one I have just mentioned. If you had a wage fixed, it would be a question of getting it a bit higher or a bit lower. At present you can only say you will try to get a minimum wage, and that is as far as you can go.

6374. *Sir Arthur Pease*: These rates are compulsory under Act of Parliament. It might be possible to make the minimum wage compulsory and to use the machinery of the Trade Boards to fix the other rates in the trade without compulsion?—I have not given any consideration to that point of view.

6375. I mean using it in just the same way as ordinary trade unions and employers fix their wages, which are fixed by the trade on both sides. Or should the Council fix them? You see what I mean; make the minimum rate absolutely compulsory by Act of Parliament and yet leave other gradations to be arranged, more or less, by arrangement?—My own view, on a casual thought, is that that would not be desirable. Above the minimum, which we say should be determined by the industry concerned and by the people who are in that industry or associated with it, the greatest possible freedom should be left between employers and workers without statutory interference.

6376. It would not be statutory interference; it would simply be using the machinery of the Trade Board to bring the two parties together to discuss it.—It is really a Whitley Council, I think, with power to enforce their conclusions.

6377. The compulsory power would apply only to the minimum; but the other arrangements would be under the same arrangements as the Whitley Council, or as ordinary negotiations between trade unions and employers.—The Trade Board machinery would be used, really, to bring the two parties together.

6378. *Mr. MacCallum Scott*: Yes, and there should be statutory power with regard to the minimum only.—It is a very interesting point, and I would like to consider it. It seems to me that there is a great deal to be said for anything that would bring the two sides of industry together.

6379. *Lord Weir*: From the point of view of the statutory fixation of wages, assume that you have a male labourer over 21 years of age in a jute factory. Now the law to-day protects him, I think, against a lower wage than 42s. His brother is also a labourer in a pin, hook-and-eye factory, doing equivalent and similar work, yet the law protects him to the extent of 53s. Is that, in your opinion, a proper thing for

the law to do, seeing that the two brothers are doing work of exactly the same kind?—It really means that of the two pieces of machinery, one or the other has not done its work properly. If one rate is the correct minimum the other is not, unless the conditions vary much in the two industries.

6380. Then you would say that the lower rate is ample protection against sweating. In other words, what would be the objection to a national minimum rate which is in effect the lowest minimum rate for male adults fixed by any Trade Board to-day? If you simply passed that and said that was compulsory, would not that get you out all sweating?—Yes, I suppose it would; but it would not remove the difficulties that we see.

6381. It would remove the whole sweating trouble?—Yes; but it would not do away with the objections to the national minimum which I have previously mentioned.

6382. *Mr. MacCallum Scott*: Do you not think the present system whereby one fixes 42s. and the other 53s. is more likely to lead to political agitation to level them up?—I do not think so, because the matter is determined by the people in the industry at the moment, is it not? Whether it is by collective bargaining, or Trade Boards, or Industrial Councils, the rates and conditions are in fact dealt with by people who are in, or concerned with, the industry.

6383. *Chairman*: I am very much interested in the point which Sir Arthur Pease has put to you as to whether it would be possible for the Trade Boards to perform the functions of Whitley Councils. Suppose that were done, and the Trade Board fixed a basic rate for the lowest class of worker in each trade of 42s., and fixed a higher rate for skilled workers at 53s., and the lower rate was compulsory and the other not, do you think the higher rate would be observed in the trade?—I should think it would be open to doubt. In many quarters it would be observed, of course, but if the state of organisation were very low, I do not think you would get anything like universal observation of the rate.

6384. Would the fixing of such a rate tend to encourage the organisation of workers in order to enforce it?—Speaking from experience, I have been rather disappointed with the rate of progress of organisation both on the side of the employer and on the side of the worker, due I mean to the setting up of Trade Boards. I think the Whitley Committee had in mind, when they recommended the extension of Trade Boards that it would lead to an increase in organisation on both sides and ultimately to Whitley Councils. A certain amount has resulted but nothing like what one would expect. Many workers are still content to remain outside their organisation and to receive any benefits that their representatives can get for them. The same thing applies on the employers' side. They are quite content to get any benefit they can, and to let their colleagues do the work at the Trade Boards Office. To that extent, I am disappointed, and I was wondering whether the machinery suggested would lead to better organisation. If it would, there is something to be said for it.

6385. The real basis of the Whitley Council position is that the trades are organised?—Yes, that is so.

6386. *Sir Arthur Pease*: But you would agree that even in a highly organised trade the work really falls on a few shoulders, although the other firms are members of that organisation; that must be so?—Yes; that point of view I appreciate. But the point is that in a number of trades I have in mind they have kept outside the organisation altogether.

6387. *Mrs. Lyttelton*: They have not paid their subscriptions?—There might be cases of that kind also, but it has not led to an increase in organisation such as might have been expected.

6388. *Mr. Bell*: You have an objection to what you term statutory interference. In view of what you have just said, I want to ask you this question:

14 December, 1921.]

Mr. HERBERT KAY.

[Continued.]

Apart altogether from the Trade Board, or even with the Trade Board, suppose that the employers' organisation and the workpeople's organisation should agree that a certain rate is fair and should be paid, and some employers who are not members of the organisation do not pay that rate; in such a case, would it not be an advantage to have a statutory obligation, where employers' organisations and workpeople are agreed that a rate should be paid, that all employers in the industry should be compelled to pay it?—Yes. If the employers and the workers represent a substantial portion of the industry, there could be no objection to it; in fact, some employers say that others who do not pay the rate should be made to pay it, and I share that view.

6389. *Sir Arthur Pease*: There are conditions which vary so greatly in different parts of the country—in fact, there are different conditions in each workshop—that it would be quite impossible to draw up a detailed schedule. Something must be left to the district or to the individual firm?—Yes, added to which it must not be overlooked that the imposing of rates by statute, accompanied by the machinery of Trade Boards, involves a considerable expense on the business of an employer.

(Adjourned for a short time.)

Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, Miss MARY QUAILE, Mrs. L. E. SIMM, called and examined.

The witnesses handed in the following statement as their evidence-in-chief:—

On behalf of the National Women's Advisory Committee of the National Federation of General Workers, a body comprising over one-and-a-half million trade unionists of the unskilled and semi-skilled class, including many thousands of women, we desire to submit a plea in support of the retention and extension of Trade Boards.

Experience shows that some such method for regulating wages and controlling conditions is absolutely necessary if a reasonable standard of living is to be secured and maintained for those engaged in occupations which are not strongly organised.

When the cost of living was much lower than it is at present, or is likely to be in the near future, the scandal of long hours and low wages in many occupations compelled some public action to be taken to provide a measure of protection and improvement.

That Trade Boards have been effective we will endeavour to show, but before doing so, we desire to meet the contention that the stress of competition compels the employers to secure cheap labour. While admitting that some economic forces cannot be controlled by domestic action, your Committee will bear in mind that the "cheap labour competition" argument is centuries old. If it had always been accepted the workers would be no better to-day than the workers were in the seventeenth and eighteenth century. This argument was used less than a century ago respecting child-life in the cotton-mills, and the force of Thomas Carlyle's reply to mill-owners, that "if you cannot run the cotton-trade without the aid of the devil, let the devil take the cotton-trade" is equally applicable to the similar contentions advanced to-day.

Many of the occupations in which exceptionally cheap labour is demanded are not subject to foreign competition, consequently the stress of competition is created by those who contend they suffer from it, but they ask others to bear the burden.

It would be idle to go into detail showing the weakness and evil of the "cheap labour competition" argument, for anyone with the least knowledge of industrial history knows that it has been applied to every trade, and if it had been accepted, the standard of human life for the manual workers would never have improved.

6390. *Chairman*: You do not object very strongly to the fixing of one basic rate?—I prefer a basic rate for each separate industry.

6391. And you would prefer not to have anything beyond that one basic minimum rate in an industry?—I have said that there might be cases where the fixing of higher rates would be justified, where you have a fairly high degree of organisation in a particular trade, and where you have complete agreement between both sides of the Board. But I want to get back to the two years' apprenticeship of the Boards suggested by Lord Weir, and let them develop on natural lines.

6392. When you say there might be justification for fixing higher rates, do you mean it might be said that it was the duty of the State to enforce the higher rate?—Yes; it might be felt that the degree of organisation was such that something should be done for the skilled worker. You have had certain views expressed here by Mr. Barnard of the Light Clothing Board, and Mr. Mounsey of the Hat, Cap and Millinery Board, and I want to make it clear to the Committee that in neither case did the views expressed by them represent those of the employers' side of the Boards.

We do not propose to submit many examples showing how the application of Trade Boards has materially improved conditions, for this is generally accepted. This application may have been irritating to many employers, but the great volume of human good resulting must be the paramount consideration. Any attempt to remove irritation will have our support provided it does not weaken the application of the principle.

In the Net industry, a recent inquiry showed that the rate paid for making billiard-table pockets worked out at 2d. per hour. A Trade Board rate was fixed at 7d. per hour—an immediate improvement for the worker.

The Tailoring trade is an outstanding example of the value of Trade Boards. The conditions in this trade were a scandal, but since 1909, when the first Trade Board was established, conditions have very greatly improved, and the trade stands upon a much higher level. In slack times it was customary to ask the girls to work for lower wages to enable employers to make "stock," but we record with satisfaction that since the Trade Board was established disputes on such questions have been almost eliminated.

We do not regard Trade Boards as something final, but rather as a step towards something better. Sir Montague Barlow, Parliamentary Secretary to the Minister of Labour, speaking at Bournemouth in July this year, said "He would ask the Grocery Trade to look upon the Trade Board position as a stage in the line of progress. So soon as the industry was duly organised on both sides he hoped it would be possible for them to pass out of a position of a Trade Board, with its powers of State regulation, to a purer and freer air of a voluntary Whitley Council.

One of the first Trade Boards set up, the *Cardboard Box Board*, has as one of its sections members of the Match Industry, who manufacture 90 per cent. of the match boxes used in the trade. This section was notorious for its sweated rates of wages and had no organisation amongst its workers, and has at least gone along the lines indicated by Sir Montague Barlow. The workers and the employers are organised 100 per cent. and have a "Match Joint Industrial Council," which has a wage agreement covering the whole industry—higher than the Trade Board rates—and has not been reduced. It was the earnest desire of the full Joint Industrial Council to send a request

14 December, 1921.] MRS. LEONORA COHEN, Miss ELEANOR STEWART, MRS. C. A. LOCKE, [Continued.
Miss MARY QUAILL and MRS. L. E. SIMM.

to the Minister of Labour to ask that the Box Makers Section be exempt from the Box Trade Board. The members of the Council were in agreement that the Minister of Labour should be asked to receive a deputation, where all the evidence was laid before him, pointing out that Clause 3 of the Trade Boards Acts, 1909 and 1918, contemplates the possibility of the application of the Trade Boards Acts becoming unnecessary, in consequence of alteration in the condition of employment in any trade.

The Match Industry at the present date shows an example of complete organisation on both sides, and is well known to have been one of our worst and often quoted sweated industries.

This instance shows that an industry, formerly requiring a Trade Board for the protection of the workers, has now reached the much higher stage of organisation fitting it for a Whitley Council.

Administration.

We would suggest that improvements in the administration of the Trade Boards Acts could be secured—

1. by the avoidance of delay in establishing new Trade Boards;
2. in the fixing of minimum rates after they have been agreed to by the Board;
3. by more efficient inspection.

Under the head of No. 1 we would instance the case of the Catering Trade and the Licooning Trade. After many months of enquiry and investigation these trades are not yet protected by a Trade Board. An instance of No. 2 may be shown by reference to the delays in the Waste Reclamation Trade Board, which was set up on August 27th, 1920. On January 3rd, 1921, the first proposals were issued, and two months were allowed for objections to be sent in. The Board then met to consider objections; the rates were fixed and sent to the Minister of Labour for confirmation. Owing to pressure from the employers, the rates were sent back for reconsideration by the Board. Ten full Board meetings have been held up to date, and in the meantime the unfortunate rag-pickers have been denied the protection which the Board should give. During the period of delays all wage negotiations were held up by employers on the ground that they would wait until the Trade Board came into operation. The method may have advantages for employers; it is certainly detrimental to the interests of the workers, and appears to be caused by delay on the part of the Minister of Labour.

Inspection.

We would strongly urge an increase in the number of Inspectors engaged under the Trade Boards Acts. Trade Union representatives, in the course of their work, often find that workers have suffered in this regard, and that unscrupulous employers have for a considerable period been able to evade the operations of the Acts. We do not urge this for more prosecutions, because we believe the worker suffers most when a prosecution occurs, being often victimised and unable to obtain employment, and generally known as a "marked" person. With a closer and more complete system of inspection much evil could be prevented, and thus fewer prosecutions would be necessary.

We find that occasionally an inspector may visit a firm and report that the wages paid are not at the right figure. Long before another visit of inspection is paid, the workers may have been dismissed on the grounds of slackness or depression in trade, and the money of which they were defrauded, for perhaps several weeks, is not paid up. An instance of this kind may be quoted in the case of Hilda Crastoy, 3 Bradshaw Street, Withington, who appeared before a Rota Committee to claim unemployment benefit, and there gave the particulars relating to her position. This girl, aged 18 years, was dependent on her own earnings, having no parents,

and residing with an aunt. She had worked at a fashionable milliners as an improver, receiving 7s. 6d. per week. A Trade Board inspector, on visiting this firm, stated that the wage should be 22s. 6d. per week. Subsequently, the girl was discharged, and the statement made that—"They could not afford to pay more owing to the slack season." In this particular case it happened that a trade union representative who understood the responsibilities and operations of a Trade Board Act sat on the Rota Committee of the Local Employment Exchange. The full facts were reported to the Minister of Labour, proceedings were taken to claim the money due to this discharged worker, and, as a result, she was fully paid up. There must, however, be numerous similar cases unrecorded, and where a worker has to suffer in silence and quite unaided.

It is also necessary to have an adequate staff of inspectors to investigate cases for permits of exemption for exceptional persons, who by reason of some slight physical defect, may work for less than the full minimum Trade Board rate.

We strongly urge that, in order to fulfil the objects for which Trade Boards were established, a closer system of inspection is necessary. This can only be obtained by increasing the number of inspectors and thus making more frequent visits of inspection possible.

Conclusion.

Our Committee is definitely in favour of the retention of the Trade Board system, and we trust our suggestions for improving administration may be accepted, namely:—

1. A general speeding up of operations.
2. Increased inspectorate.
3. An extension of Trade Boards where necessary.
4. That Appointed Members should have some knowledge of industrial conditions.

6393. *Chairman (to Mrs. Cohen)*: You represent the National Women's Advisory Committee of the National Federation of General Workers?—(Mrs. Cohen): Yes.

6394. And that body comprises, I understand, over 1½ million trade unionists?—That is so.

6395. Both skilled and unskilled?—Yes.

6396. How many women does it include?—I could not give you the exact number, but we have a very large women's membership.

6397. Your Committee are in favour of the retention of Trade Boards?—Yes.

6398. We will print your statement as embodying the evidence you wish first to give.—Thank you.

6399. You think that the Boards must be retained if a reasonable standard of living is to be secured for unorganised occupations?—Yes.

6400. And you point to a state of things existing before the Act of 1909 was passed?—Yes.

6401. When there was undoubtedly a system of very low wages paid, especially in women's occupations?—That is so, and our delegation to-day is composed of workers, and the workers who have had factory experience previous to being in the trade union movement.

6402. Would you wish to elaborate that in any way?—Yes. Our delegation is actually composed of workers who have worked in various occupations, and they have had considerable experience previous to coming into the trade union movement, and in representing the Federation of General Workers, which consists of semi-skilled and unskilled workers, we feel that although we are representing what is known as the Cinderellas of industry, there is a certain amount of skill attached to every operation which is performed in a factory. I would like to quote a personal experience previous to the setting up of the first Trade Board in 1909. I worked as a tailoress in a large clothing factory, and it was impossible there to earn a living wage, and consequently I left that industry to take up another, and I went into what would be known as a skilled trade, the millinery trade. I mention this fact because we are not conversant with any of the evidence which has been submitted by the employers' side, and all that

14 December, 1921.] Mrs. LEOBORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QUAILL and Mrs. L. E. SIMM.

we know is from statements that have been made in the Press from time to time, and we feel that those statements are not correct. Speaking for Leeds as a large industrial city, I want to say that the tailoring trade, from being a low-down sweated industry, is now on a par with any well-organised industry in the country. I take it that really the commencement of the uplifting of the industry was when the first Trade Board was first set up. The first rate that was fixed, if my memory serves me rightly, or rather the first proposal was 3½d. per hour, and the employers protested against this, as at that time it was considered a very high rate. The consequence of the mass meetings that were held, and the protests that were made from time to time in the industry was that it was finally fixed at 3½d., and I may say that that was an advance for the majority of workers, other than those who were organised in the industry. I have been associated with the tailoring industry, being a native of Leeds, and I think it is one of the best examples that we have to offer. It is now a very well organised industry.

6403. The present rate is 8½d., is it not?—Yes. Previous to the setting up of Trade Boards the women were not paid for waiting time, and I can remember when workers used to go, week in and week out, and never get a single day's work.

6404. I said 8½d.; that is for cutters and so on; but for other workers it is 8½d., is it not?—The tailoring trade have an agreement of 8½d.

6405. But the Trade Board rate is 8½d.?—Yes, the Trade Board rate is 8½d. In the tailoring trade they have always had an agreement with the trade since the industry became well organised, higher than the Trade Board rate.

6406. You say the industry is now well organised?—Very well organised.

6407. On behalf of the workers as well as on behalf of the employers?—Yes.

6408. Do the majority of your workers belong to some organisation?—Well, yes. Of course, there is always a section that cannot be organised. Perhaps I had better not say too much about that, because those workers enjoy the rates that have been fixed by the Trade Board. They have been protected against themselves; they have taken no means to protect themselves, but the Trade Board has had the effect of protecting them.

6409. Then what you said about the trade being organised applies rather to the big cities like Leeds, than to the smaller districts, the less populated districts?—The outlying districts surrounding Leeds are pretty well organised.

6410. But probably not the country districts in other parts of the country.—Well, there are certainly isolated cases that we hear of from time to time, where they have not been organised, but if they are approached the time now has come when they seem as though they respond to any overtures to come into an organisation.

6411. And is the growth of the organisation one of the results of the formation of the Trade Board?—Yes, I think I would be quite justified in giving credit to the Trade Board as being a means of giving a fillip to organisation, both on the side of employers and on the side of employees.

6412. Lord Weir: You do not think that the fact that the Trade Board does the work for them causes them not to join the Unions—I mean, they get all the benefits without joining?—Well, they certainly have derived benefits, as I said in my previous remarks, but still you cannot get away from the fact that the strength of the various organisations in industries where the Trade Board is set up has increased.

6413. Has it developed the strength of the organisations?—Yes, but I might say in the beginning when a Trade Board is set up it may be the cause of workers saying to themselves: "Well, I can get the rate without being under the organisation, and consequently"—shall I put it as the workers themselves put it—"we will throw out of the Union." Perhaps that will be the best way of putting it. But there are other things which the Trade Union can do for them,

and they find them out in time, and they very often come back to us. Then another thing in the tailoring industry is this—I am speaking of the tailoring industry because I have worked in it, and I feel that it is one of the best pieces of evidence that can be given.

6414. Chairman: You have worked in the wholesale tailoring industry?—Yes, wholesale. We have very little bespoke tailoring. A factory, of course, is acknowledged as being wholesale. There used to be endless disputes in the trade, and now those are almost conspicuous by their absence. When the slack period was on employers would ask the workers to take a reduced rate, to make either sample ranges or stock, so that if the workers did that they would be able to get orders; and when the trade got busy they were never able to regain their old position without a fight, or a dispute; but this refers more especially to women, and not so much to men. It was always the women's rates that were reduced first. These are absolute facts, and I think it has been a means of putting the trade on a basis, and the employers know that there is a certain minimum under which other manufacturers cannot go.

6415. You say in the statement under the heading of "Tailoring," that you rather look upon the Trade Boards as a step towards something else; do you mean towards better organisation of the trades?—Well, I will lead up to that. I have already stated that I have not been able to get any information as to what has been taking place on this Committee except through the Press, and I am very pleased to know, through the Press, that Mr. Little gave evidence in favour of Trade Boards. I know Mr. Little pretty well through sitting on various committees with him, and I know personally that he thinks that the trade has been uplifted by the Trade Board. The evidence that we submit to-day is not intended in any way to overlap that which may be given by other trade unions; we intend that it is to be submitted in the way of practical knowledge and experience, having worked in the factories and being members of Trade Boards. The delegation to-day are members of several Trade Boards of which we have knowledge, and other speakers will deal with the points of which they have special knowledge. In the evidence you will notice that we refer to the Trade Boards as being a means to an end, and we also quote Sir Montague Barlow's statement to the Grocery Conference at Bournemouth, in which he says that Trade Boards are a means to an end.

6416. That is what I wanted you to develop. He has said, I think, that he hoped that in time the trade would pass out of the position of being a Trade Board trade; it would become a fully organised trade?—"Into the freer and purer air." I think he puts it, "of a Whitley Council." Well, I agree with Sir Montague Barlow. I think that is possible and now, speaking as a Trade Union official and a member of the Joint Industrial Council for the Match industry, we feel that that is an illustration of a stage that we can reach. We made application some little while ago to ask for the box-making section to be exempted from the Trade Board. In quoting matches, one quotes one of the very lowest paid industries; I think that was acknowledged to be a really sweated industry. On the Match Industrial Council we have our holiday scheme; the workers are entitled to a week's holiday with pay, and the statutory holidays in addition, and we have also an unemployment scheme. I think it is, if not the first, certainly the second, as far as my knowledge goes, that has a scheme for unemployment.

6417. You are speaking of the Union?—No; of the Whitley Council for the match industry.

6418. But has the Whitley Council itself an unemployment scheme?—Yes, it covers the whole of the trade. The trade is organised 100 per cent. on the employees' and on the employers' sides, and I am bound to say that on that Council, having been a member from the setting up of the Council, we

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QUAIL and Mrs. L. E. SIMM.

have worked in perfect harmony. It is not the experience of all the Councils, but on this one especially we have worked in perfect harmony with the employers, and it was the expressed wish of the employers' and the workers' sides that we should ask that we should be permitted to have our section of box-makers withdrawn from the Trade Board, trying to prove that they were fully protected under a Whitley Council.

6419. *Lord Weir*: And you were successful in that?—Well, I think perhaps there has been some delay, being a Government Department; we have not yet got our reply.

6420. You mean that the match-box making section is under the Trade Board?—The section is under the Trade Board, yes, and as a Council we feel that it is unfair that one body, a Whitley Council, which is a voluntary Council, should be overlapped, as it were, by a Trade Board, or that a Trade Board should be overlapped by a Council.

6421. *Chairman*: There has been some opposition from the Trade Board itself, has there not, from the Paper Box Trade Board, to the match-box makers being withdrawn?—If there has, I am not aware of that, because I am not a member of the Box-making Board. I did not know that, because we thought that if we proved that we were fully organised, that would be, in itself, sufficient evidence to have exemption from the Board.

6422. It is one of the grounds which are set out in the Act?—Yes. That is referred to in the evidence.

6423. *Lord Weir*: And you believe that, given adequate organisation, you can make better progress and have a better atmosphere by negotiation with the employers on a voluntary body, such as a Whitley Council, than on a Trade Board?—Yes. Well, of course, the Whitley Council itself really ought to prove that workers are well organised, and it is safe.

6424. *Chairman*: Do you know anything about the jute workers?—No, but I dare say there are members of the deputation who do know about the jute workers.

Chairman: I understand that the jute workers have made a somewhat similar application.

6425. *Lord Weir*: Can Miss Stewart tell us about that?—(Miss Stewart) I am afraid, with regard to what has transpired in the Jute Trade Board, I am not acquainted with the details, because I am not a member of the Board, and as a result I am not prepared to make any statement with which I am not thoroughly acquainted.

6426. *Chairman*: Perhaps I was mistaken in saying the jute workers. I should have said the employers in the jute trade—I am afraid I could believe that very much more easily than that the workers' trade union would ask it; I know some of the jute employers!

6427. *Mr. Bell*: With regard to the application to have a Whitley Council in preference to a Trade Board, of course match-making at present is an industry which is centred—localised?—(Mrs. Cohen) Yes.

6428. Supposing you had a match-making firm started in a place like Brighton, employing a number of girls for whom, perhaps, there is no other employment, and a Whitley Council was in being, and there was no organisation in Brighton; what means would you adopt to obtain the rate that applied in the well-organised centres?—Well, as soon as we knew that a factory was set up in Brighton—our organisation is far-reaching—we should at once set about and concentrate on that factory.

6429. But suppose you did not organise them, and you were helpless through the lack of organisation, how would you obtain the rate agreed upon between yourselves and the employers without the Trade Board?—I think if there was only one factory, and the whole of the employers and the employees were organised throughout the industry, with the exception of that one factory, I should stand a very good chance of organising those workers.

6430. *Mrs. Lyttelton*: May I ask, is your view on the general question that wherever possible it is best to do without the Trade Board, whenever you can get the workers sufficiently organised; or do you think that in any case there should always be a Trade Board, if the industry has ever been under it, even if it becomes well organised? Do you want to work towards doing away with the Trade Board in a well-organised trade which already has it, or do you feel that in any case, however well you organised, you would like the Trade Board to remain?—I should like to be absolutely certain in my own mind that a trade was sufficiently well organised. In the absence of that I think it is absolutely essential to have a Trade Board.

6431. Quite; but if you were satisfied, and in fact perfectly certain in your own mind that the trade, as a trade, was sufficiently well organised to look after itself from the employees' point of view, would you then rather that the trade was under the Trade Board or not?—No, I should prefer that it was under a Whitley Council, if it was well organised; but I should want to be quite sure in my own mind before I let something real slip away. A bird in the hand is worth two in the bush. I would have to be certain in my own mind before I let the Trade Board slip away, because I think that the Trade Board is set up in the first place for the protection of the workers and those who are not able to look after themselves.

6432. *Chairman*: What is your next point; you have some suggestion about administration, I think?—Well, I think first, Mr. Chairman, I should like to mention delays, and as a member of the Waste Reclamation Trade Board, a Board which was set up 15 months ago, I should like to say that that Board has not yet got a fixed rate. Proposals have been put up, lots of proposals have been issued, and there has been considerable delay, and this is no doubt due to the fact that the employers have become very well organised as a result of the setting up of the Trade Board. Previous to the Board being set up we had organisation in various rag shops, but the applications for advances of wages were turned down by the employers on the ground that the Trade Board was being set up for the industry, and that they would wait till the findings of that Board were issued. Consequently the workers were compelled to wait for the Trade Board to be set up, and the trade then got slack. There has been a slackness in trade; I think it is getting a little better now—indeed I am sure it is—but the delay has caused a lot of hardship. The point that I shall make now will, to some extent, answer the question of Mr. Bell. Where the workers are organised, and when proposals were put forward by the Board, advantage was taken of these proposals to reduce the workers' wages, and we had a strike in Bradford at a small rag shop, where the workers absolutely refused to work for the Trade Board rate. They came out on strike because the Board had been used in that instance to reduce the wages that had been got by trade union agreement.

6433. Are they pretty well organised now?—Yes, they are coming into the organisation, but it is a slow process. All the rag-pickers that are organised are really very staunch to the Unions; there is no doubt about that.

6434. *Sir Arthur Pease*: The Trade Board rate is only a minimum rate, it is not a maximum rate?—Exactly; but employers, you see, took advantage of this, and even in their trade journal this strike was reported, but it was not reported as it actually took place. It was even said that it was Messrs. Burrows of Bradford. I had to refer to the Ministry of Labour conciliation officer to get a settlement of this case, simply because we could not come to terms. We got the workers back eventually on the old rates. The strike was against the proposed Trade Board rates. This is before they were fixed, so that what

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE,
Miss MARY QUAILLE and Mrs. L. E. SIMM.

[Continued.]

would be a minimum rate and an advancement for workers in an obscure part of the country would be a reduction for organised workers.

6435. *Chairman*: Yes, it would be below the rate they were getting, but, as Sir Arthur Pease points out, the employer is not bound to reduce his rates to the Trade Board rates?—Quite; we understand that; so that in the setting up of a Trade Board, as I have instanced in the case of the Tailoring Board, at the beginning there was a lot of trouble. With the Waste Reclamation Trade Board there is also a lot of trouble. We have had some heartburnings on the Waste Reclamation Board. I have heard it said, the Appointed Members have said it was enough to turn their hair white, but there is not an Appointed Member with white hair; but the Chairman has absolutely lost his hair; he has not any. I am not going to say that it was really due to the heartburnings that took place on the Trade Board, but it has been a very difficult Board. My experience of a new Board is that there is a difficult period; but in time we get over that. I have had experience of two new Boards.

6436. What Boards are you on?—I am on the Laundry Trade Board and the Waste Reclamation Trade Board, and the Sugar and Confectionery.

6437. And the Tailoring?—No, I am not on the Tailoring Board.

6438. Only those three?—Those three, that is all.

6439. *Sir Arthur Pease*: You said they broke an agreement; was it an agreement for a specified period with these firms in Bradford?—No, it was the rates that had been got by the organisation.

6440. Did they just reduce the wages or did they give a notice that they were going to reduce?—No, they reduced them. They put up the proposed rates schedule on the wall and said those were the rates that were going to operate.

6441. The workers were legally entitled to the old rates?—Quite.

6442. *Mr. MacCallum Scott*: Did they put the reduced rates in force before they were legally enacted, while they were merely a proposal?—Yes, proposed rates.

6443. They put them in force while they were merely a proposal?—Yes, but I should like to say I was called over to this strike, and I met the Secretary of the Association with the Branch Secretary of the Union, and the curious point of this was that the Association itself had been opposed to the reduction of the rates; but I think that they reduced this one firm first, because the Secretary of the Association, Mr. Turner, told us quite definitely that all the other firms in Bradford would now reduce them.

6444. *Lord Weir*: Would you put it as a general tendency that on the publication of a new minimum rate it tends to bring down the rates all round?—Well, I would not like to go so far as to say all round, because it would depend on the strength of the Unions.

6445. That is, in default of good organisation it would tend to bring them down?—It might.

6446. You have the experience of those three trades?—For instance, if the rates were reduced, if it were got by a Trade Union agreement, naturally the workers would report to the Secretary at once, and we would be there, and we would try by negotiation to get a settlement, and try and prove to an employer who had had no experience of Trade Boards, who perhaps might be under the impression that because it was a legal minimum that therefore it was a maximum rate, that that was not the case.

6447. I just wondered if your Leeds experience was typical of the experience of those three trades, or if it was a kind of isolated case?—Well, I think it would be just an isolated case. I would not like to say, it would not be fair to the employers, and I like to be fair to the employers—

6448. I was rather dealing with the effect of the publication of rates.—I was really speaking of an isolated case.

6449. *Chairman*: Then perhaps we need not dwell on that.—I like to be fair.

6450. *Mr. Bell*: What is your experience. Has the Trade Board rate generally meant a reduction or an advance?—The Trade Board rate has perhaps lifted up unorganised workers, but in the majority of cases the employers have still paid under the agreements with the Trade Unions, which has always been considerably higher than the Trade Board rate.

6451. In your experience as a Trade Union official you will have known instances where agreements between the two Associations have sometimes meant a reduction to one section of the workpeople, although meaning an advance to the industry as a whole?—Yes, unfortunately that is so, but we have always been able to adjust the position, provided the strength of the organisation was sufficient. I do not know of any instances where we have been really let down, and in all the instances I have had come to my knowledge, it is very often on the part of the employer, who really does not quite understand the Trade Board.

6452. In your experience, would you say that the tendency on the part of employers is to regard the minimum fixed by a Trade Board as a standard, rather than a minimum?—Yes, failing organisation.

6453. The tendency of the employer is to regard it as a standard?—I do not know a single instance where an employer pays a higher rate if the workers are unorganised—not one.

6454. *Lord Weir*: That applies to female labour in particular?—Yes, quite. I should like to say a little more, if I am not dwelling too long at this point, about the new Boards. We generally have a difficulty on a new Board. In the first place the 1909 Act was set up for sweated industries, and there is always a tendency on the employers' side to feel that he is brought into something against his will. There is always a minority, of course, who think that it will be a good thing in the end, because the employer knows there will be a minimum rate under which his competitors cannot work, and the friction that takes place between the workers' representatives and the employers is generally on account of this atmosphere which is created in the beginning; but I venture to suggest that in time that all wears down, because there is perfect harmony on some of the Boards. I know members of Boards who speak most highly of the Appointed Members, and the working of the Board as a whole. I would specially like to mention that, because in every instance there has been such a strong campaign against the cumbersome Boards, trade union officials on the Boards with no knowledge of industry—as though we had never done a day's work in our lives, whereas the majority of us have absolutely come up from the very dregs, shall I say, of industry.

6455. *Chairman*: It has not been suggested that the trade union members have not any knowledge of industry; I think we were told that some of them have not a knowledge of the industry to which the Trade Board relates.—But I would like to point out that at our branch meetings we meet workers, we sit and talk to them, and we get to know every detail from those workers; it is the actual truth that they can talk to us and they are terrified of speaking to the employers. I have heard employers say that the workers' representatives are afraid to speak because the trade union officials will not allow them; but that is not the case. They elect the trade union officials to put the case for them, but in the meetings they tell us everything that there is to tell about the industry.

6456. In the side meetings, meetings of the sides?—Yes, and I venture to suggest that there is not a worker who would not give us the fullest details of the industry. Then we are continually negotiating

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QUAILL and Mrs. L. E. SIMM.

with them, and often where the employer recognises the trade union official, we go into the works and we see the various operations.

6457. *Chairman*: What is the next point you would like to deal with?—(*Miss Stewart*): Might I ask here whether we shall be able to come back to the first point, or are we dealing with the first point entirely?

6458. *Chairman*: I think we should like to hear Miss Stewart after Mrs. Cohen has finished on any point which has been heard.—(*Mrs. Cohen*): Through the Press—and I am forced to refer to the Press because we have watched the Press very closely—I have seen the hostile evidence that is submitted by the employers, who say that the unemployment is due to the Trade Boards. I should like to say that, as far as we are concerned as an organisation, we feel that that is absolutely untrue, and we still are not convinced that to return to the old sweated wage rates in industry would cure the evil of unemployment.

6459. I do not think anybody who came before us suggested that; but you would like to deal with the real point, I expect. It was put to us by certain trades, I think the Drapery Trade was one, that if the Trade Board rates are too high it might result in the workers being discharged, and consequently in there being unemployment. What do you say to that?—I do not think so, because we know as an organisation that with regard to all the Trade Board rates that have ever been fixed, there is generally a half-penny an hour, or a farthing, or even sometimes a penny, difference in the various rates that are fixed, and I have never yet had any experience of a high rate being fixed for any branch of industry. I have heard it referred to on the Waste Reclamation Trade Board that the rates we were fixing for the men, 48s. and 53s., were higher than the rates that were paid in certain steel works. In relation to that point the employers did not say that the rates that were operating now which were lower were due to an agreement which had been fixed in the industry on the selling price of the steel bars, and even on the munition rates that were fixed the workers in that industry were having almost £1 a week higher than any other rate that was fixed.

Mr. Bell: But supposing you had a small dressmaker, say, in a small town, who was employing three assistants, and by the operation of the Trade Board rate she was compelled to pay to her assistants, say, 10s. a week more than she had been paying, and then she said: "Well, I cannot afford to pay the 10s. more, so I will discharge the three—"

Chairman: Or one of them.

6460. *Mr. Bell*: Or one of them; would you then contend that the unemployment either of the one or the three was not due to the application of the Trade Board rate?—No, I should not think it was the Trade Board rate at all, because I do not think any industry that cannot pay a living wage ought to be allowed to go on, and if the dressmaker was a second-rate dressmaker in her own work—because it all depends on the head dressmaker—if she was not sufficiently good to encourage a good class of customer, I do not see why workers should be penalised on that account.

6461. *Lord Weir*: Do you disagree that it does take place to a considerable extent—the point which Mr. Bell puts to you?—That might be so, but you cannot consider a small dressmaker employing three persons as against a huge industry employing thousands of workers.

6462. *Chairman*: The point Mr. Bell was putting to you was not the interests of the small dressmaker, but the position of her workers who might be discharged. That is what I think Mr. Bell would like to deal with?—Well, if the workers are competent workers, surely they are entitled to a living wage. We must come back to that.

6463. *Mr. Bell*: Yes; we are not arguing that. The nature of the reply which I rather expected from you would have been some argument to show that it

was not due to the Trade Board rates, but perhaps it was some other reason that had brought about the unemployment of these workpeople?—I think it would illustrate the point if I referred to the case of Hilda Cratley, of 8, Bradshaw Street, Withington, which is on the evidence. This girl was employed at the rate of 7s. 6d. per week, although the Trade Board rate was 22s. 6d.

6464. With your experience, would you be prepared to say that there had been any more unemployment in trades covered by a Trade Board than in trades not covered by a Trade Board?—I should say no, because the unemployment is higher in Yorkshire, where I come from, in the skilled trades—the engineering trade and the textile trades, which are not covered by a Trade Board at all. (*Mrs. Locke*): Might I just enlarge on that point with regard to one particular Board, and that is the Laundry Trade Board. I, as a representative sitting on various Rota Committees in the North of England, find that amongst the hundreds and hundreds of girls who come before the Rota Committees we never have any laundry workers. That is one instance of where the girls have not been unemployed through the Trade Board rate coming into operation.

6465. *Mrs. Lyttelton*: You would be prepared to say, I suppose, that even if it were true that the Trade Board rate meant that the workers would lose work, if the rate was not being paid it would be better that the employment should cease, rather than that they should go on at a rate which was unfair?—(*Mrs. Cohen*): I do. I do not think that the State ought to allow workers to be exploited. As a matter of fact, that is what the original Act was intended to do.

6466. *Chairman*: If I may say so, that does not really meet the point which was made. As I said, I do not think anybody who came before us has been an advocate of sweating wages being allowed. Everybody has assumed that the State ought to, and would, take steps for preventing sweating; but what was said was this: that some Boards—I do not say those to which you belong, but some Boards—have fixed the minimum wage so high, so much above the sweating limit, that the small employer has felt unable to keep on the whole of his staff, and has reduced it in some cases by 50 per cent., and we had a number of figures given to us, especially in the dress-making trade in the South of England, where that had been done. Of course, you would hardly deny that that is possible, but I gather that you say that that is not your experience?—It is not my experience. My experience is this, that when a new rate is fixed by a Board, before ever the rate comes into operation the employers declare that unemployment is created, that their industry is going to be ruined. In every instance they have stated that. The Waste Reclamation Board, the Board of the "Royal Riggers," as we call them in Yorkshire, who have made huge fortunes out of rags, have declared that the trade is going to be ruined, and the Trade Board rate is not yet in operation. That is more my experience.

6467. *Lord Weir*: The reference which the Chairman has made to the dressmaking trade deals, of course, with the bespoke trade rather than the wholesale trade of which you have experience.—Perhaps I think more of the workers in a mass than I do of just an isolated case, such as Mr. Bell has referred to. I think of the machinery which is beneficial to thousands of workers—surely we ought to think for the majority, not for the minority?

6468. *Mr. Bell*: I am not arguing that point at all, but in your experience have you come across cases where even the Trade Union, or a member of the Trade Union, has insisted that a certain wage should be paid, and as a result ultimately that worker has been discharged and has become unemployed, and perhaps someone else has been taken on in place of her, but the result has been that that particular person has become unemployed altogether apart from Trade Boards; that has sometimes happened?—Yes.

14 December, 1921.] MRS. LEONORA COHEN, Miss ELEANOR STEWART, MRS. C. A. LOCKE, [Continued.
Miss MARY QUAILL and MRS. L. E. SIDM.

6469. Well, now, if the same thing takes place under the Trade Boards, would you not be prepared to say that it was more the resentment of the employer at having to pay the increased rate than the action of the Trade Board in fixing the rate?—That might be so, because I have already said that the employers in a lot of cases are annoyed at a Trade Board being set up, and they might try that in a case where there is just a small number of workers; but I do not deal with firms where they have just two or three workers, so that my evidence on that point would not be considered satisfactory really as against the large factories that we deal with. I would not like to say anything that would prejudice the case for the people who are actually dealing with the small workers, or the small number of workers.

6470. Apart from the abnormal period through which we have been passing, the abnormal unemployment, would you say that there had been any more unemployment since the operation of the Trade Boards than there was before?—No, I would not like to say that at all, because I have just said that unemployment is worse in Yorkshire in the skilled industries than it is in the unskilled industries.

6471. *Sir Arthur Pease*: I suppose these industries which you represent particularly are dependent really much more on the home trade than the other industries which are dependent on foreign trade; is not that so? The Tailoring Trade, and so on, are dependent on the home industry far more than the weaving and yarns, and so on?—Yes.

6472. The other trades would be more affected by the trade of the rest of the world?—Yes, I think that the trades we represent are more affected by the home industry.

6473. *Lord Weir*: Some of them might be called domestic.—Except the matches, of course. The match industry—the boxmaking, of course, is in a section—is affected with the foreign competition: I should not say to a very large extent, but still there is foreign competition in the match industry.

6474. *Sir Arthur Pease*: And in the Wholesale Tailoring Trade, I suppose?—Well, yes, but not much. I do not think there is anything to be feared in the tailoring, because, after all, Yorkshire is the home of the wholesale clothing trade.

6475. *Lord Weir*: There is one Board to which home competition only would apply, a purely domestic industry—the laundry business. The others are affected, to a certain extent?—Yes.

Sir ARTHUR PEASE here took the Chair.

6476. *Sir Arthur Pease*: Miss Eleanor Stewart, you represent the Workers' Union in Glasgow?—(*Miss Stewart*): Yes. I think that anything I may have to add to what Mrs. Cohen has said will be rather from the general point of view I take in appealing for the retention of Trade Boards. Prior to the Trade Boards being in existence at all we could only hope through the organisation of workers to raise wages in any way, and every time we went to a particular employer, particularly when we paid a second visit, he always referred us to his competitor across the street. The Trade Board, in my opinion, rather takes that argument from the individual or better employer.

6477. Which Trade Board are you speaking of?—I am not speaking for any particular Trade Board; I am speaking really generally for women in various trades.

6478. What is your industry?—Myself, personally, do you mean?

6479. Yes.—I am in the sewing trade; I am a blouse maker in Glasgow; but I am speaking generally of the position when we started to organise women here and there who were a bit further advanced than their fellow workers. I say that if we went to one employer and asked for a better wage that employer could always plead the competition. The Trade Board, in my opinion, forces a bad employer by law to pay a minimum rate, and it is then left

to our organisation to negotiate anything higher than the stipulated minimum rate enforced by law. We are arguing for the retention of Trade Boards in order to protect that position, because it is well enough known that generally speaking, particularly in the women's trades, they were not organised 100 per cent., and it does seem to me that if the Government take away the Trade Boards then we must go back to where we were prior to the introduction of Trade Boards, and that you will always find employers right throughout the country—and I can speak for Scotland—who will take advantage of the Trade Board being taken away, and will pay his workers as little in the form of wages as he possibly can. That, I feel, is the strongest argument I can put forward for the retention of Trade Boards—that it would be a retrograde step, and that, meanwhile, it is advisable to retain the present system of Trade Boards to fix the minimum rate in each industry, at any rate, and anything higher that has to be fixed to leave to organised employers and organised workers to negotiate.

6480. If you organised one man's workmen on one side of the street, do you not organise the workers of the man on the other side of the street, and approach them both together?—We try to organise both, but we may fail in the one case, and we may succeed in the other. We go to the one which we manage to secure and ask him to consider better wages and working conditions inside his shop. We usually succeed in our first visit, but if you make repeated visits across the street—I am using that term, but of course he may be miles away and not actually across the street—he argues what the other man is paying; whereas under the Trade Board you say to him, the minimum rate by the law of the land is so much. We know what every other man should be paying by the law of the land.

6481. I also gather from what you say that you are very strongly in favour of these being minimum rates and not maximum or standard rates?—Yes.

6482. That there ought to be a margin in between for people who want to pay more than that?—Yes.

6483. Some of the Trade Boards, we have been informed, are rather making their standard rates.—That is the tendency, of course.

6484. But you are in favour of having them as minimum rates?—Yes, and leave the rest as a matter for negotiation as organisation develops among the employers as well as the employed.

6485. *Mr. Bell*: But have not the Trade Boards fixed, in many instances, not what you would regard as standard rates, but as minimum rates for different classes of work?—Yes.

6486. So that all they have fixed are minimum rates covering different classes of work?—Yes, that is what, I understand, the Trade Boards up till now have done; they have fixed a minimum rate for certain ages and grades of work, under which rates no employer is supposed to pay.

6487. *Sir Arthur Pease*: I have just one question to ask you with regard to ages and grades of work; we have had it put very strongly that the wages ought to be graded according to experience, not according to age?—Well, in some trades they are according to experience; that you have to be so long in the trade, and after, say, 6 months, 12 months, 18 months and so on, you get a certain rate; that is how it has been fixed.

6488. It has been put to us strongly that supposing a young man or young woman does not begin to learn the trade till a comparatively late age, they cannot get employment at all unless the rate is treated according to experience instead of according to age?—Usually what is done in that case, and I think is settled too in some of the Trade Boards, is that assuming a girl of 18 or 19 or 20 or 21 years of age comes and asks for a job in a shop where wages are regulated by a Trade Board, for a little time that girl has to come in at a lesser rate than the minimum rate for her age, and then after she has been there so long she gets the minimum rate.

14 December, 1921.] MRS. LEONORA COHEN, MISS ELEANOR STEWART, MRS. C. A. LOCKE, [Continued,
MISS MARY QUAILL and Mrs. L. E. SMITH.

6489. And you agree with that?—I agree with that.
6490. *Mr. Bell*: Would not that be a breach of the rate fixed by the Trade Board?—Not if that clause is in which stipulates that the girl of 19 or 20 without experience is to be treated specially. A clause is inserted in the agreement by the Trade Board that she is to be there 9, or 12, or 18 months before she gets to the minimum rate for her age. Some of the Boards have that in; I think I am correct in saying that that is so.

6491. *Mr. MacCollum Scott*: The Trade Board can provide for that?—Some Trade Boards provide for that.

6492. What is your idea as to what should be the basis of a minimum wage; what should be considered in fixing it?—I would take into consideration what we always endeavour to consider in any wages negotiations. We should take out what is the minimum that will enable a man or a woman to live on in decency so that she can carry her human machine along life and to fix the rates on that. Otherwise I might say that my personal opinion is that if we do not give each human being for his or her labour sufficient to carry themselves along, then we have to do something as a country in another way to carry that particular machine along.

6493. Your view is that in fixing a minimum wage one should have in view the maintenance of a certain standard of living?—Yes.

6494. Would not that be more or less the same in most trades?—Yes, I think I would agree to that, with one proviso, that in some industries it depends on the nature of the work; you may require to put in extras to provide for various things which might be very detrimental to the health of that person.

6495. It has been suggested to us to-day, not suggested as a national minimum, but that certain trades should be grouped together for the purpose of avoiding the multiplicity of Boards, and that being grouped together they should then fix one basic minimum for all these trades, and then everything above that, should be a matter of negotiation?—I think I may say on that point that it has been the experience of many Boards, after they have got their own minimum fixed, with their other conditions, that they have seen that it is necessary to consider various Boards and the adjacent trades with separate Boards and to get some means of bringing them together in order to prevent overlapping. If something can be done in the way of forming a Committee and simply by negotiation joining the whole of them into one with sections off, I think it would be a good thing.

6496. *Sir Arthur Pease*: You could not do that except at the highest minimum wage there is. You could not put one at 1s., one at 1s. 3d., and one at 1s. 6d. without statutory power; you could not join together without taking the 1s. 6d. rate.—I do not know that you could argue that that must be done. I am thinking of a Board which has another four so close to it that they should be together. Each of these Boards already have fixed their own minima. My idea would be, if we felt it was going to be better working with the four of us together, that we should have one Board with sections; each section to negotiate its own job, but jointly, and find out jointly whether they all agreed. I do feel at the moment on general principles that something of that kind is required to be done to make the Boards more useful and to save a lot of trouble.

Sir Arthur Pease: That is just the evidence we had from an employer this morning.

6497. *Mr. Bell*: We are not dealing just now with things as we would like them to be; we have to deal with things as they are. Supposing you have three Trade Boards and you have fixed a minimum, say, for women or for girls.—Yes.

6498. One Board has fixed a rate, let us say, as the Chairman illustrated, of 1s. 6d.; another Board has fixed 1s. 3d., and another Board has fixed 1s. Now, suppose that you bring those three Boards together with the idea of avoiding that variation in the rates that have been fixed, how are you going to level

them?—You mean whether we are going to bring the 1s. 6d. down to 1s. 3d., or the 1s. up to 1s. 3d. I think with a proposition before you like that, that the Board wants to meet as a whole and exchange opinions, and see whether the 1s. 6d. people would be prepared in the interests of the industry to come down to 1s. 4d. and to work it in that way. That is only my opinion, and I may be wrong. I think that a Trade Board Committee might be worked in that way, and as the result of the people representing the 1s., 1s. 3d. and 1s. 6d. rates meeting together they can come to some joint agreement, taking into consideration the job of each and discussing the whole thing inside out. I think that has been done very often by an ordinary trade union agreement.

6499. *Sir Arthur Pease*: I think we fully understand your views on that point, and I think we might go on to the next one.—I think the next thing I have to suggest is this: We are dealing with the question of woman labour, and I think our evidence takes the form in the first place of asking for the retention of the Boards, and, on the other hand, there are certain suggested improvements. I think before I leave the question of the retention of the Boards I do want to put it very strongly, as my opinion, that Trade Boards have assisted employers as well as assisting employees, as well as raising the standard of the work. I think that the Trade Board has assisted the employer with whom the workers want to negotiate, namely, the good employer; and that the man who is always out to exploit workers and does not think of their welfare, a Trade Board is very essential to keep that man in line. I would like to put that as my view very strongly, feeling that if we were to lose that, that is what would happen—that these other men who do not care for anybody but themselves, who are the get-rich-quick people, it does not matter how, will do just as they like. The abolition of the Trade Boards certainly plays into their hands.

With regard to improvements, I should like to plead for an increase in the number of inspectors, as I feel that up to now we have had too few inspectors under the Trade Boards, and that if we had inspectors going into various factories they could do a great deal in the way of convincing employers who are rather against Trade Boards—in my opinion because they do not understand why they were constituted. There may be rates being paid which are not the minimum rates, and the inspector can get that put right quite quickly; it is put right whenever you tell the employer that it is the law of the land.

6500. I gather from you that you think there is a good deal of ignorance amongst the employers as to the rates now, and you think there should be more inspection so as to instruct employers as to what are their obligations. That is what you really mean?—Yes, I do feel that inspectors could be used along those lines, because in my experience as a Trade Union official I have found employers, and when I told them this was the law of the land they said it was not so, and they were only convinced after I had gone and made a charge against them that they were paying less than the minimum rate. Then they were convinced that there was something in the Trade Boards Notice which they had hanging inside their factory. If we had more inspectors we should get closer working, and the employer who does not understand anything that the Trade Board has within its rules would be informed. Our inspectors could certainly do a great deal to educate the employer as to his responsibilities.

6501. *Mr. Bell*: How do you get the information that the employee was getting less than the rate?—One gets that in various ways as a trade union official. We have put it in evidence that the bulk of ours get work at the Employment Exchanges, and we discovered in many cases if we enquired into the girls' wages and what they were working at, and so on, that very often somebody who knows a little about the trade unions and Trade Boards meets a girl and

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE,
Miss MARY QUAILL and Mrs. L. E. SIMM.

[Continued.]

says, "What is your wage?" and she replies, "Oh, I have got so much." Then the other girl says, "Well, you come along and see Miss Stewart, and she will see that you get more, because you ought to get more." There are many avenues through which we get this information.

6502. I think you are well aware that to increase the number of inspectors, so as to make the work of inspection as efficient as you would like it to be, would be a very costly business for the country?—Yes.

6503. Have you any other way to suggest rather than an increase in the number of inspectors, in order to make more efficient the carrying out of the rate fixed by the Trade Board?—Well, at the moment I want to say frankly that I do not see any other way unless you have organisation.

6504. *Mr. MacCallum Scott:* Inspectors of other Departments?—Organisation; I mean trade union organisation.

6505. It has been suggested that the inspectors of other departments should be used, the Home Office inspectors, and so on?—You mean the factory inspectors?

6506. Yes.—Very often I use them. I have used them for that, I may say, in Glasgow. I go up and endeavour to give everybody as much work as is possible, and where I fail I endeavour to attach everybody whom I think may succeed, and I may say I have used the factory inspectors in Glasgow.

6507. *Mrs. Lyttelton:* For helping in organisation?—No, but in reporting as to rates—reporting places which I have not organised but where it has been reported to me and where I know as a fact that the employer is not paying the minimum rate. I write my information to the factory inspector in Glasgow and ask her to do what she can along certain lines, and in many cases I have seen good results.

6508. Although the factory inspectors do not deal directly with rates of pay?—Yes.

6509. *Dame Adelaide Anderson:* Is it that the factory inspector is asked to report it to the Ministry of Labour?—I never worry how she does it as long as I get the results. I usually use every channel possible, because everyone in that particular job has an avenue through which he can touch someone else.

6510. Of course all the Government Inspectors are asked to pass on information, and I suppose that will be the way it is done?—Frankly I do not know what their instructions are or the conditions of their job; but so far as I am concerned I simply write to them a note and tell them what is being done, and ask whether they can assist in any way.

Sir Arthur Pease: Does that answer your question, Mr. Bell?

Witness: My point with regard to the cost of inspectors is this. It does seem to me that if we are willing to bear the cost of a Trade Board, and we have come to certain findings, it will pay the country in the end to bear the cost of the extra inspectors.

6511. *Mr. Bell:* But supposing in an industry the workpeople themselves thought they could manage things better than the State, and that they were prepared to appoint and pay somebody to look after this work, and the workpeople's representative was given the authority to see that the people she represented were paid at the legal rate when it was fixed by the Trade Board, and she had the power to prosecute the employer, do you think the workpeople would be prepared to pay for that work being done?—I believe they would, and of course at the moment they do that through their Trade Union organisation, because the Trade Union has the power to prosecute an employer who is not paying the rate; is not that so?

6512. No, I do not think they would claim that right?—You report them, and you are really at the bottom supporting the whole case.

6513. *Sir Arthur Pease:* The workman can be the nominal prosecutor supported by the Trade Union.

The Trade Union as a corporate body cannot prosecute?—You do it on behalf of the worker.

6514. You can support the worker in prosecuting?—Yes.

6515. *Mr. Bell:* Of course the worker has an opportunity of suing the employer so as to make him pay the rate?—Yes.

6516. But, of course, as a Trade Union official you know what that means; you have a very great difficulty in getting the workpeople to do it, because they know that ultimately discharge will follow: because it is only the bad employers, after all, who have to be compelled; the good employers are quite willing to pay the rate?—That is so; and, of course, there may be some better suggestion made; but at the moment I feel that as things are we should increase our inspectors just because of the case of the girl who does it and is spotted out and is not long in that employment—to put it shortly.

6517. *Sir Arthur Pease:* May I sum up what you mean. You think it important to increase the inspectors for two reasons, one of which is to see that the employer performs his duty, and the other is to take steps to find out what wages are actually paid with a view to instituting prosecutions if necessary?—Yes.

6518. *Mr. Bell:* Without increasing the number of inspectors—because I think all of us want to economise as much as we can—do you think it would have any effect with the employers, if it were found they were paying less than the rate, if the penalty was made so high that they would not risk being caught?—Well, one feels inclined in the first flush to say yes, it should be made higher than the 40s.; but at the same time one does remember that during the war, when a man had to pay very much higher than the 40s. for each day that he did not pay the award, a great many employers risked their hand on the job, thinking they would get off where the workers were not organised—that they would never be found out. I think it was something like £5 a day under the Munitions of War Act for every day you did not pay the Award, and I know in Glasgow we have a very large firm where there are proceedings going on in the Law Courts in which the firm was prepared to risk the fine, which I think was £5 a day, and there are something like 3,000 women workers. In the first flush one would say "Yes," but when you see what employers will risk on a question of wages I do not think it would help very much.

6519. Supposing you went so far, say, as the Income Tax authorities do—that you meted them of 3 years back pay and penalty in addition: do you think that would be a deterrent?—I think that would certainly help. If it were said that where they were found out they had to pay every penny right back to the day the girl was employed, and a heavy penalty as well, certainly you would find employers to-day who would look to their laurels.

Sir Arthur Pease: You do not mean that the penalty would go back for 3 years, do you Mr. Bell?

Mr. Bell: No, the award—any arrears of payments should go back for 3 years.

6520. *Sir Arthur Pease:* I understood the Witness to say that the penalty was to be included at so much per day?—No. Then the last point I should like to deal with is with regard to the Appointed Members. I feel that it would considerably help the work of Trade Boards if the men and women who were put on by the Ministry as Appointed Members were men and women who had knowledge of industrial affairs; by that I mean men and women who know factory life. There are certain people now on who do not know factory life, and I feel that a person who knows factory life and understands the many difficulties in that life can more effectively give a proper view of the many speeches that arise before Trade Boards; whereas persons who have no practical experience—they may have it in theory, but I think it is true to say that one finds theory is very nice but it is not so helpful as knowing the practical work.

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QUAILL and Mrs. L. E. SIMM.

6521. But how would you get out of the difficulty of getting people who were not connected with the trade either as employees or employers?—I feel that we could get out of the difficulty, and I would suggest that it would be possible from the employers and the employed to draw up some panel of men for the consideration of the Ministry of Labour, and the Ministry of Labour could see that these people on that panel had some knowledge of practical affairs.

6522. *Mr. Bell*: Why is this practical knowledge so necessary in dealing with the fixing of rates; you are not dealing so much with conditions of trade as fixing rates. Why do you attach so much importance to practical experience?—I think that persons who are chosen as Appointed Members who really do not know much about the life of the worker cannot possibly sit on a Board in deciding any particular question unless they have in their minds a knowledge of the worker's life and the work in the factory to give a sound and considered verdict. All they can do is in a sort of so-far theory side just say, "Oh, yes, that is all right; that is what they should get." I think if you have a practical person the work of the Board will be considerably assisted.

6523. We have been told by witnesses who have appeared before us before that these neutral members of the Board, if I may so call them, have leaned too much to the workers' side, and have been too easily influenced by the arguments of the workers' representatives.—Well, I am afraid that this deputation's argument will be the other way. In coming into contact with all my colleagues who are on Trade Boards, they say that in the end the Appointed Members vote with the employers. That is what I have discovered to be the general opinion.

6524. *Sir Arthur Pease*: I think we gather that you are not quite satisfied with the Appointed Members?—With all due respect, we really are not, and we think that that might be something to be considered by this Committee, as to how we might improve the people who are appointed as Appointed Members.

6525. I must ask you one question arising out of Mr. Bell's question: do you want the Umpire to be associated with that particular trade, the Chairman or the Appointed Members, or only with trade generally?—Trade generally. I do not mean that they should be in every definite trade on the Board; I do not mean that at all. I mean they should have a knowledge of industrial affairs; that is how I use the term. Otherwise I should say they should have a knowledge of the trade of which they are Appointed Members or Chairman.

6526. *(To Miss Quaille)*: Whom do you represent?—*(Miss Quaille)*: I have been a Trade Union official for eleven years, or nearly twelve. I am on the Sugar Confectionery Trade Board and the Toy Trade Board; but before becoming a Trade Union official I was employed in the catering trade, so that I have some knowledge of that particular trade. I am not going to make a long statement, because I can see that you are getting rather uneasy, and I would be much more pleased if you would put up points for me to answer.

6527. We do not want to hear you, but if you can say you agree with what has been said before, that would be sufficient, and then we should like you to address yourself to any particular points which you wish to bring out. If there is anything you disagree with in the previous evidence, perhaps you would mention that?—The Committee know that I do not quite agree with the position of the match industry, because I cannot agree that even a Trade Board would not be necessary in that industry to protect the workers in that particular trade. I am bound to say that, because I think, after all, we are here to argue in favour of Trade Boards. I wish to make that point. I may say in the Sugar Confectionery Trade Board it is very remarkable that the older Trade Boards are in favour of the retention of the Boards. I think your experience will be the same. The Sugar Confectionery Trade

Board as a Board has passed a resolution that they are distinctly in favour of the retention of the Trade Board. Well, that was one of the first Trade Boards that was scheduled, and one of the trades where sweated wages were really being paid.

6528. You mean by the unanimous resolution of both sides?—Yes, and on that particular Trade Board there is a splendid working feeling, very often to the detriment of the Ministry of Labour. We have opinions very often on both sides of the Board which disagree with the Ministry, but it is on account of the difference between our knowledge of the industry and the legal point of view.

6529. *Mr. Bell*: Your knowledge and the Ministry's lack of knowledge?—I would rather say their legal point of view. On the Toy Trade Board you get a new industry entirely, where a new Trade Board has been set up practically only since last October. The first rates were fixed in June this year, and there is a reduction already before the Ministry for signature. That has been a most difficult Trade Board, and in that particular trade we have had statements that employers have been sent out of the trade because of the Trade Board; but, if I may say so, I do not believe those statements, because I do not think it is quite fair even for this Inquiry to be taking place at a time like this, when there is so much unemployment and so many other causes that one might say were affecting trade generally. In this particular trade this was really in the majority of cases a war-time trade, a trade which sprang up during the war. Many of the employers were only employers of mushroom growth, and when the industry became clear to some extent, when foreign competition came about, naturally these people who had only very little experience of the trade began to feel the difficulties, and I think that that really could not be a case that could be taken as having any weight on your judgment at all. The older employers in the trade are very often the better employers.

6530. *Dame Adelaide Anderson*: Are the older employers the most numerous?—No, they are not; they are the minority.

6531. The majority sprang up during the war or since?—During or since the war, yes.

6532. *Sir Arthur Pease*: You would agree, would not you, that if any industry cannot pay a living wage to the workers it would be better that the industry should cease to exist?—Oh, yes. I think that anybody with Trade Union experience feels that you are bound to take up that point of view—to de-casualise the workers. We feel it is better in the interests of the community itself; it is not wise to have a trade over-stocked with people at low rates; it is better to have the number of people required in the trade at better rates. I think that covers the point which was made with regard to the dressmaking trade. We do feel, and I think my Committee agree, that the Trade Boards really are now beginning to touch the very employers whom the Trade Boards were set up for; and we are compelling by means of the Trade Board organisation, and by organisation in the trade, the payment of proper rates. Smaller employers are bound to suffer from organisation in the trade, in this particular way. On the question of delays, I would like to say that in the catering trade you have an example where very low wages are being paid, and where no Trade Board has yet been set up, and agitation has been going on for some years asking for a Trade Board in this direction, and it is very necessary both on the hotel side and on the café side. There are hotels in London, even in a place like London, employing men at 15s. a week, and they have plastered up all round the hotel, "No tips." Of course, they are only money wages; some food must be included.

6533. Do they have lodgings?—No, not in all cases; a great many of them sleep out, though in some cases they sleep in. But where it applies to restaurants and cafés they all sleep out.

6534. Does the 15s. you mentioned as a very low wage apply to a man who has to sleep out and only gets his food indoors?—Yes, that is so.

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE,
Miss MARY QUAILL and Mrs. L. E. SIMM.

[Continued.]

6535. *Mr. Bell*: I think you are referring chiefly to women and girls?—The average wagee, I should say, for women and girls would be something like 8s. a week.

6536. *Sir Arthur Pease*: And their food?—And their food.

6537. When you are giving individual instances like this, I think you should be very clear to state what the exact conditions are.—I should say some food. They do not always get the quantity or quality of food one would expect them to get in a place like that. The quality as a rule is very different from the quality which is served to the customers, and, of course, even the workers like good food.

6538. Your point there is that you think it very important to have a Catering Trade Board established as soon as possible?—I do; I think it is very important, particularly from the women's point of view.

6539. *Mr. Bell*: I see you are a representative on the Sugar Confectionery and Food Preserving Trade Board?—Yes.

6540. I suppose you will be aware that in some cafés and restaurants they make chocolates and very often other kinds of sugar confectionery: does that bring them under your Board?—No.

6541. Do you think it ought to?—I may say I have already been on a deputation to the Minister of Labour on the question of the scope of the Sugar Confectionery Trade Board. It is felt that all food trades should be covered by one Board, and then sectionalised, as has been suggested, because the lines of definition and scope are so limited. Sugar confectionery must be made in a factory to come under the Trade Boards Act.

6542. So that if they are not in a factory they can compete with the factories and pay less wages?—That is so.

6543. *Sir Arthur Pease*: The making of cocoa and chocolate is included under the Sugar Confectionery Trade Board.—It is under the Sugar Confectionery Trade Board, but it all depends where it is made. That is how the definition is drawn up.

6544. I did not think that was so?—There is room for many more trades on the Trade Board.

6545. By all the Provision Trades, do you mean grocery businesses, and butchers, and everything; when you say food, do you mean all those should be in one group?—Yes, in one group.

6546. All food trades?—Yes, and then they should be covered by sections. We have some things inside the scope and some things outside the scope of the Board. We had a letter only the other day asking if cocoa beans that had to be washed and sorted on delivery came under the scope. Well, the answer was "Yes, if they are being made in the warehouse or factory of the chocolate and cocoa manufacturer; but if it is being done on the dock-side it is outside the scope." That is my point in regard to scope; the operation must be done on the premises of the manufacturer.

6547. If you are doing that in the docks I do not quite see how you are covered by inspection?—You do not come under the scope.

6548. Are there any other points?—I do not think so. If you wish to ask me any questions, I shall be glad to answer them. Of course we are here to say how much we are in favour of Trade Boards, because we believe they have helped the unorganised worker to an extent, and when you are helping the unorganised worker you cannot help also helping the organised worker. I think everyone will agree to that.

6549. *Mr. Bell*: Nothing has been said, as far as my recollection goes, as to any differentiation in wages. I think you come from Manchester. Would you be in favour of a lower rate being fixed for Manchester than for London?—No.

6550. Would you be in favour of a general rate being fixed for the same class of work all through the country, whether London, Manchester, or a country district?—Yes, because I recognise that it is a national minimum that we are fixing, and we can

only keep to it as a national minimum. Then all the other work has to be done afterwards.

6551. You are aware of the argument that the cost of living is much higher in London than in country districts?—Yes. I am also aware that the minimum rate of wages is not a living rate. You cannot fix a minimum rate from the point of view of the cost of living. I know it has been done, but I disagree with it.

6552. If you were basing the minimum rate on what you considered a reasonable standard of life for the worker, the reasonable standard might be lower in a country district than in London?—Well, experience does not always teach you that. For instance, I have gone into towns on the North Wales Coast where the cost of living has been higher than in Manchester; but still, the employer would argue that villages ought to be on a lower rate than large towns.

6553. You are perhaps referring to holiday times?—No.

6554. *Dame Adelaide Anderson*: Right through the locality—not in hotels or special places?—No, just on the actual cost of stuff being bought on the market.

6555. *Sir Arthur Pease*: That applies to places with seasonal trades—at seaside places, very often, their charges are higher to visitors than to people who are in the district?—I was not thinking of the seaside part; I was thinking of Flintshire, which nobody who had ever been there would think was a holiday place.

6556. *Mrs. Lyttelton*: It is the difficulty of transport and the poor agricultural country, and so on?—Yes, and their not being in touch with towns, which might help to make competition.

6557. *Dame Adelaide Anderson*: I should like to know what you really mean by the minimum wage; it is having regard to the state of the trade rather than the needs of the worker?—I do not think the needs of the workers have ever come under consideration; I think it is only the state of the trade that has been considered first. That is my experience of Trade Boards.

6558. Then in the Sugar Confectionery and Food Preserving Trade have the rates risen very much; I mean is the minimum rate really decidedly higher than it was before?—The rate has just been reduced, on November 24, to women of 18, to 7½d. per hour. It started at something like 3½d. or 3d.

6559. The first minimum fixed was 3½d. or 3d.?

6560. What sort of wage was it before?—I really could not tell you that; I have not the information.

6561. *Sir Arthur Pease*: What was the maximum rate? You say it has just been reduced?—It was 8½d.; it has just been reduced 1d. all round for men and women.

6562. For a week of how many hours?—48.
6563. That is 4s. a week reduction?—Yes. It was 44s. a week, which, after all, was better than our experience. I know in Manchester there were several firms we visited before the Act came into operation, and we found people working for 7s. or 8s. a week or less; but I could not tell you whether that was general.

6564. *Mr. Bell*: The 7½d. per hour now gives 30s. a week for a 48-hour week?—Yes.

6565. *Dame Adelaide Anderson*: And that is not a living wage?—No, I should not think so.

6566. In any part of the country?—I should not think so. We have always our own ideas, and principles, to think of. We have to do the very best for our own people, and judge as to whether what we consider would be a living wage would be giving them something better than they have ever been used to. I do not think the question of a living wage has ever been discussed.

6567. *Mr. Bell*: Living in Manchester, supposing you were under the necessity of securing board and lodgings, what would they charge you?—I do not think you would get it under £1 a week.

6568. Then you would have your own clothes to find in addition?—Yes, and tram fares.

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QAILE and Mrs. L. E. SIMM.

6569. You would be lucky to get it for £1?—But I do not want to put it too high. You would not get it under £1. But still, I have not much experience of that. I do not think anybody could take anybody in at less than £1 a week.

6570. *Sir Arthur Pease* (to *Mrs. Locke*): You represent the Laundry Trade?—(*Mrs. Locke*): Yes, and I am also on the Toy Trade Board.

6571. Are you a Trade Union official?—Yes, I am a Trade Union official. I feel that the previous speakers have so impressed upon you the great need which there is for retention of the Trade Boards that I shall only add very little in that respect. I shall be as brief as possible. I should just like to state that previous to the Laundry Trade Board being brought into operation, as we went round the country we ascertained that the approximate rate which was being paid for laundry workers was something like 14s. a week—that was the average wage. In many factories, the laundries, which we visited we found that that was the rate that was being paid, and was being paid up till the first minimum rate came into operation under the Trade Board.

6572. At what date?—November, 1919. At that particular time, I think, the cost of living was something like 125 per cent. above pre-war rates, so that you will quite understand, as far as the laundry workers are concerned, without any further evidence, that the Trade Board certainly has been the means of lifting these girls up and putting them on to a higher standard of living than was possible under the conditions previous to their coming into the Trade Board. Then with regard to the Toy Trade Board, I should support Miss Quaile in what she says, because I have visited factories. I will not say that the average wage paid previous to the Trade Board rate was from 9s. to 12s. per week, but I visited factories where they were paying the low rate of 8s., 9s., 10s., 11s. or 12s. per week, and I should imagine that the average rate that was being paid for toy workers would not work out at more than 12s. or 14s. a week previous to the first rate being fixed. The first rate was fixed, if I remember rightly, last June at 34s. a week. You will agree with me that there again the Trade Board certainly lifted women of 18 years up to a much higher standard than they could possibly have arrived at under the ordinary conditions previous to their coming under the Trade Boards Acts. In the Rope, Twine and Net Trade Board I will give one illustration which was given in our written evidence, and that is the case of one of the workers on the workers' side of the Rope, Twine and Net Trade Board. At the second meeting of the Board, I think it was, when we were dealing with the first proposals, this worker brought for our enlightenment and the enlightenment of the Chairman and the Appointed Members a billiard pocket net, and this billiard pocket net she pointed out they could make in, I think she said, 1½ hours at the very quickest they could work at. She was an out-worker, and she got 3d. for the hour and a half, which worked out at 2d. per hour. The very first rate that we fixed on the Rope, Twine and Net Trade Board, or rather the very first rate that was fixed on the Rope, Twine and Net Trade Board for out-workers, lifted those concerned from 2d. an hour up to 7d. an hour. Again, I am sure you will agree that the Trade Boards Acts certainly enabled those girls to get on to a much higher standard than they could previously have done without the Acts. I do not want to repeat what has been said, but we feel that it would be a retrograde step; we women of the National Federation of General Workers certainly feel that it would be a retrograde step if the Boards were abolished, because unscrupulous manufacturers would certainly take advantage of the position, and they would immediately reduce women down to the rates they were being paid previous to the Acts being put into operation. On the other hand, conscientious employers who would willingly pay the wage, through the unscrupulous employers pulling the rates down, which would create more competition, would not be able to sell their goods,

and they would be compelled in the end, in spite of themselves, to reduce the rates of the women workers, the result of which would be that many of these women workers would then have to come under the already overburdened Boards of Guardians for a supplementary rate to the inadequate wages to help them to live, and we feel sure that we do not want any more of that than we have got at the present time.

6573. Are you representing fishing net making as well as other branches?—Fishing nets come in the net trade.

6574. Of which you are a representative on the Board?—No, I am really representing rope, but it comes under the Rope, Twine and Net Trade Board; it is all one Board.

6575. We had considerable evidence of a definite character that a considerable quantity of nets was now coming from other countries which would have been made here except for the Trade Board, and not from countries which the exchange affected; which means, of course, a loss of employment in this country. Have you had the point brought to your notice?—That has not been brought to our notice before the Rope, Twine and Net Trade Board. We have not had anything mentioned with regard to foreign competition—not a very great deal, at any rate.

6576. It is the most definite information, I think, that we have had in all the evidence of large contracts going abroad for nets to foreign countries, and it is almost the only trade where the effect could be traced at all, or could be supposed to be traced, to the Trade Boards. That is why I mention it.—You will agree that that has nothing whatever to do with unemployment caused by the Trade Boards coming into operation—

6577. Well, the employers said it had.—I cannot agree.

6578. *Dame Adelaide Anderson*: As regards the Toy trade, I think the previous witness spoke of its having increased during the war and since the war. Is it now in the same condition; is it flourishing; is there good employment in the Toy trade?—Well, I cannot personally say that there is. The new trades that have sprung up, the mushroom growths to which Miss Quaile referred—a tremendous number of those have closed down, but the old works are going on.

6579. The pre-war firms?—The pre-war firms are quite all right.

6580. They are employing the same number of workers?—I understand so. Of course, we do not get to know these figures definitely. (*Miss Quaile*): We might say there is one firm in Scotland paying 1s. an hour in the Toy trade. They have a special class of trade which their competitors have never been able to capture. (*Mrs. Locke*): I would like to say here that we women were very disappointed at a certain action of the Minister of Labour. We went on a deputation last year to the Minister with regard to the cessation of the Temporary Wages Agreements, and to try and get the Trade Boards applied to the women who were under those temporary wages rates. We were not definitely promised by Dr. Macnamara, but it was suggested by him that the women who became unprotected through the cessation of those rates would be brought under Trade Boards; that a tremendous number of Trade Boards would be formed, and we feel—well, that the Minister of Labour has not quite done what we expected he would do, and many of these girls to-day are left unprotected. They are still not under Trade Boards, and there is a great need for the Trade Boards that were promised to be established.

6581. *Sir Arthur Pease*: Are you alleging that there are really a lot of them being sweated to-day—who have what you would call exceptionally low rates?—Exceptionally low rates. Take the Sack and Bag trade, for instance. I understand there is a firm—I could not give the name, but one of my colleagues has given it in her evidence—which is paying 18s

14 December, 1921.] MRS. LEONORA COHEN, Miss ELEANOR STEWART, MRS. C. A. LOCKE,
Miss MARY QUAILL and Mrs. L. E. SIMM.

[Continued.]

a week, though I should imagine that previously they would have been getting the stabilised rate.

6582. 18s. for women?—18s. for 18 years of age, which is much too small. I know you will agree with that. I should like just to have a word or two on the speeding up, which has been mentioned. I did not intend mentioning it, but I should like to say that with regard to hanging on after the rates are once fixed by a Board, we are held up sometimes, as was the case in the Toy trade, by the Minister. We were held up for some months previous to getting the rate brought into operation after it had been decided by the Board that it should be the rate. The Minister held the thing up for quite a number of months, and we feel we ought to protest against that, and see if something cannot be done to make the rates, once they are fixed by the Board, come into operation as soon as ever it is possible. The same thing appears on the Rope, Twine and Net Trade Board; when the 10½d. rate was to come into operation the thing was held up for months, and then sent back to the Board, and then back to the Minister, and it was not ultimately fixed, if I remember rightly, until someone in the House of Commons took the case up, and then the rate was fixed. Then, particularly with the toy girls, these girls were being paid at these sweated rates all the time these negotiations were going on, and it was a great hardship to the girls, and we feel we want more speeding up in the case of the rates brought into operation after they have been fixed by the Board.

6583. And also you want any modifications which may be made in the rates speeded up too?—Yes, we want the whole thing speeded up. Then in the case of overlapping, which has been mentioned, on the Rope, Twine and Net Trade Board we overlap with the Jute Trade Board, the Flax and Hemp Trade Board, and some other Trade Board, and we find it exceedingly difficult at times for our Board to be fair to the others, and, as Miss Stewart said, we feel that one Board to cover the whole of the kindred industries would solve that problem. Someone mentioned co-ordination committees. Well, on the Rope, Twine and Net Trade Board we have a co-ordination committee which has been in existence for, I should think, as long as the Board has been in operation, and I do not think that that co-ordination committee has ever once been called together. So I feel we want something that is going to be more helpful.

6584. You want a grouping of trades?—Yes.

6585. What group would you put the Laundry Trade in?—By itself; the domestic laundries and all kinds of laundries by themselves. Then on the question of inspectorate, I should also like to endorse what Miss Stewart said, that there is an absolute need for more inspectors. At the present moment we have 33 inspectors for the whole of the Trade Boards, and there are 60 odd Boards, I understand. You will agree with me that 33 inspectors are of very little use. I have a report of the inspector under the Laundry Trade Board for the year ending November 24, 1920, and in that year the inspector or inspectors—I do not know which—paid 2,766 visits. Now, then, if other Trade Boards are similar, and an inspector has to visit that number of times, or anything like that number of times, you will agree with me that it is a physical impossibility for 33 inspectors to do that, because, as I work it out, if one inspector could be supplied to one Board then she or he, as the case may be, would have to visit 9 cases each day to make up that 2,766 cases. On the other hand, as there are only 33 inspectors and nearly double the number of Boards, that inspector would have to serve two Boards, and each would have to put in 18 visits a day to make up that 2,766. So that you quite see that there is great need for the inspectorate to be increased, because so many girls are being done out of their money, perhaps in some cases unintentionally, and sometimes the employers are doing it on purpose.

Then there is the question of scope. That, again, I thought was not to come in, but seeing that it has been mentioned I should like to say that we

feel that there are many questions which ought to come under the question of scope. For instance, last May we went on a deputation from the Laundry Trade Board to the Minister of Labour and asked the Ministry of Labour to bring all these different laundries—hotel laundries and institution—under the scope of the Trade Board, but although we got the promise of the Department to go into the whole matter and, if possible, to bring these different institution laundries and hotel laundries under the scope of the Trade Board, up to the present time there has not been anything done at all. On the question of scope we want something done, and done speedily, because that is only one point out of dozens that could be made which we could have got had we known that we were going to deal with the question of scope. Then on the question of differential rates, we as a Committee belonging to the National Federation of General Workers are entirely opposed to having any differential rates. Take the laundry trade, for instance; we have been compelled to fix rates for Orkney, Shetland and for Cornwall much against our will, but, of course, that was carried in spite of anything that we had to say to the contrary, and we feel that it is not at all good for the trade. We ought to have a national minimum rate for the whole of one particular trade.

6586. On that point of a minimum rate, that is put in for the protection of the worker. If you put the minimum rate low enough to be merely a sustenance wage, or whatever you like to term it, in a country district where the worker lives at home and has not to travel any distance to her work, then you are putting it too low for the London worker who has to live a longer distance from her home and has to pay tram fares and train fares, and so on. If you put it low enough for one, it is no protection at all to the other, is it?—That is a difficulty which we are up against on every Board. We try to fix the rate, if we possibly can, so that it is high enough from the worker's point of view to cover the person who has the highest costs, and in the case of rural workers we find that there are so many other things that are more expensive to rural workers than they are to the town workers that usually the rate which is fixed has to cover the whole lot.

6587. But if you take the general rate of wages which are not under Trade Boards at all, you would not contend, would you, that the general rate of wages was not higher in London than in the country districts?—In trade union agreements, if that is what you are referring to, the higher rates are got in industrial centres because of the higher state of organisation. In the country districts organisation is not quite so high as it is in the industrial districts, as a rule.

6588. But where there is trade union organisation, if you like, the rates in one part of the country are quite different from the rates in other parts?—Yes, but rates which are fixed by trade union agreement are not always the barest level upon which one can live. They ought not to be: if they are, the minimum rate of a Trade Board is a rate which is fixed on the lowest standard.

6589. Looking at it really from the sustenance point of view, you must allow, I think, that it is more expensive to live in London than it is to live in a country district?—From some points of view, but from others it is not.

6590. Mr. Bell: Would you agree that it is also more expensive to manufacture in London than in the country?—Of course, on that point I cannot possibly answer. I do not know anything at all about the cost of manufacture.

6591. You perhaps know nothing about living in London beyond an occasional visit?—Yes, I do. I know a lot about living in London.

6592. But just forming an opinion from what you know of the cost of things in London—rent, rates, and so on—would you be of the opinion that it is more expensive to manufacture in London and that

14 December, 1921.] Mrs. LEONORA COHEN, Miss ELEANOR STEWART, Mrs. C. A. LOCKE, [Continued.
Miss MARY QUAILL and Mrs. L. E. SIMM.

the employer has more expense against him than the employer in a country district?—I cannot possibly answer that question. I do not pretend that I can.

6593. *Sir Arthur Pease*: Have you any other points?—As a worker who has been in London a tremendous lot during the last few years, and had to live in London sometimes a week at a stretch, I have found that many things are even cheaper in London than they are in the country districts.

6594. *Dame Adelaide Anderson*: Food?—Yes, food, particularly, is much cheaper than it is in many country districts, and clothing is much cheaper. It is much cheaper in London than it is in Newcastle.

6595. How about lodging?—I have had no experience of lodging.

6596. *Sir Arthur Pease*: I should hardly call Newcastle "country."—I am not calling Newcastle the country, but I was just comparing the prices between Newcastle and London.

6597. *Mr. Bell*: As against that, would you believe me if I told you that at the time when tomatoes in London were 1s. and up to 1s. 4d. a lb. I bought them in Bedfordshire for 4d. a lb. straight out of the green house?—I quite believe you, if you come from Bedford.

6598. That is a country district.—But I have found that when tomatoes have been 6d. a lb. in London they have been 1s. a lb. in Newcastle or in the surrounding districts.

6599. *Sir Arthur Pease*: Have you anything else that you wish to say?—I do not think that there is anything else, unless you would like to ask me anything.

6600. *Dame Adelaide Anderson*: I would like to understand your point with regard to what should be the test of a minimum wage. I mean, the Trade Boards are to fix a minimum wage; what is your view of the principles which apply in arriving at the minimum? Is it the cost of living to the worker, or is it what the trade can bear?—Naturally, as a trade union official and on the workers' side of the Trade Boards, I certainly—this is my own personal view—feel that the rate of living is the most important thing to base the rate upon—the standard of life for the worker.

6601. And at the same time you think it should be a fixed national minimum?—Yes, by all means with Trade Boards—not differential rates. I am opposed

(The Witnesses withdrew.)

(Adjourned to to-morrow morning at 11 o'clock.)

FIFTEENTH DAY.

Thursday, 15th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (Chairman).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

MR. J. BELL, M.P.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

SIR ARTHUR F. PEASE, BART.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

Mr. S. W. PASOALL, called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

When the Sugar Confectionery and Food Preserving Trade Board was first proposed, a deputation saw Mr., now Lord, Buxton, to protest against the board being described as sweated. That was the main objection, and it was met by Lord Buxton promising that in the House of Commons he would avoid the obnoxious word.

to them personally, and I think my Committee is opposed to them, too.

6602. So that in some places the minimum might be really a standard; it might be more than was absolutely necessary?—It might be in the case of unorganized workers in all trades, but in the case of organized workers we certainly always have above the Trade Board rates, and we have no difficulty in getting it.

Dame Adelaide Anderson: The object of my question is to clear the ground, as you understand.

6603. *Mr. Bell*: Supposing you were fixing a minimum, as you say, on the cost of living?—On the standard of life for the worker.

6604. The same standard of life then would apply to women, no matter in which industry they worked, so that you would ultimately arrive, would you not, at exactly the same minimum for women and girls—and men too, for that matter—no matter in which industry they were engaged? Would not that take you to a national minimum rate?—Yes, if you could get that national minimum high enough, but only on those conditions.

6605. You would say that it was high enough if it were fixed on a reasonable standard of life?—Yes, a reasonable standard of life; and I contend that at the present moment these Trade Board rates, good as they are and with all the good that they have done, are not sufficiently high to allow anyone to live at a high standard at all, or at anything like the standard at which they ought to live at the present time and with the present cost of living.

6606. *Sir Arthur Pease*: We are much obliged to you.—(Mrs. Simm): On behalf of my Committee I should like to thank you for the very kind hearing you have given us. I hope that we have not been very boring. It must be rather a trying subject, and we sympathize with the job which the Committee has. As soon as we heard that there was to be an enquiry we felt that we should like to come and put forward our plea, at any rate for the unorganized women workers especially, and to the best of our ability, with our limitations, we have done so this afternoon, and thank you very much for your kindly hearing.

Sir Arthur Pease: I wish to thank you for the assistance which you have given to the Committee in considering this very difficult problem.

In our case there was the fullest possible consultation with the trade—at all events, the Employers' section, which is all I am entitled to speak for—before setting up a Trade Board. The lack of this consultation before setting up Trade Boards under the new Act has been a fruitful source of trouble.

The Sugar Confectionery Trade Board started with a minimum wage of 3d. for women and 6d. for men, and the report of the Board of Trade Inquiry into

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

Earnings and Hours of Labour, published in 1909, shows that about one-third of the women employed in factories and workshops received less than 10s. a week. In our trade it was slightly better.

Some employers, of course, thought the heavens were going to fall, but they have found it possible to pay the higher wages since fixed and to pay their own way.

The total advance was from 3d. to 8½d. and from 6d. to 1s. 2½d. Unlike under some newer Boards wages were not fixed too high to begin with. They were increased as the war went on and the cost of living went up. Now, last month, they have been reduced by 1d. an hour both for men and women.

We had the advantage of a Trade Board being established at a time when prices were going up and rates of wages were bound to follow them. I believe that part of the recent outcry against Trade Boards has arisen from their being set up at a time when prices were beginning to fall and trade was becoming stagnant.

The Food Manufacturers' Federation as a whole undoubtedly favours the Trade Board system with certain reservations. As to that, I understand, all the employers affected by the older Boards are agreed. It has reduced sweating to a minimum—it would have completely destroyed it had it been possible to secure rates being paid by all the small manufacturers—it has not only benefited the workers in this respect, but also the manufacturers by removing one source of unfair competition and by improving factory management rendered necessary by the obligation to pay increased wages. It has led to better relations between employers and employees, and induced both sides to become more thoroughly organised.

The Board has undoubtedly had a steady influence and has added an element of certainty by the prevention of unfair competition by employers paying an unduly low rate of wages.

One witness stated that he had no experience of Trade Boards, perhaps that is true of more than one, and he added that he was under the beneficent sway of the Trade Unions.

Before the Trade Boards Act was passed, Sir Charles Dilke recognised as an objection to any large scheme of conciliation, as it was then called, for all traders that it would interfere with the activities of the great Trade Unions whose power he did so much to foster.

Our Board has always recognised the intention of the older Act and has acted accordingly, that the wages it fixes should be minimum, not standard rates. That being so, the Trade Unions concerned were not satisfied and brought pressure to bear on the larger firms who in their opinion could afford to—and many of them did—pay more. This led to the formation of an Interim Industrial Reconstruction Committee, to all intents and purposes a Whitley Council.

Government Departments, indeed, "recognise" officially the Trade Board rather than the I.L.R.C., but that is of no importance in our case where the sides are much the same. In any case I regard this official recognition of Trade Boards as a farce as they meet so infrequently, and in this respect the Act of 1918 is of no value.

Speaking for myself, and for those who voluntarily support the I.L.R.C., I prefer the I.L.R.C. system to the Trade Board system inasmuch as the parties meet with less formality, without the presence of appointed Members, and with powers of acting experimentally and promptly. Elasticity of method and promptness of action are most vital in industrial affairs.

But in our trade there is still need for both bodies as only legal compulsion will meet the case of the majority of small firms, especially those who do not belong to the Federation, much less to its Industrial Section which runs the I.L.R.C. and the time may not be ripe for the I.L.R.C. with fewer than 100 members, important though they be, to have compulsory powers.

I may add that there is a desire felt by many Joint Industrial Councils that for their most successful work they must have, under proper safeguards, compulsory powers.

When Appointed Members are appointed, the trade should be first consulted. This is done in regard to Government nominees on other bodies.

I personally do not attach much importance to the request that the Trade Boards should be transferred from the Ministry of Labour to the Board of Trade, for I assume that the same officials would do the work though under different chiefs, and wages are primarily a labour and not a trade matter.

But the opinion is universal that the Ministry of Labour arrogates too much to itself in regard to scope, of which the Board is the better judge.

There is one obvious remedy. The difficulties as to scope arise largely from definitions, none of which is thoroughly satisfactory. The proper course is not to include this or that, but to have a general broad definition and to provide by exclusion, i.e., in our case the manufacture of food generally except, say, sugar refining, flour milling, &c. In the main, large Boards are preferable to small ones. They tend to prevent varying rates in the same factory, which is always a cause of friction. There are a great number of enquiries concerning the scope and interpretation of the Trade Board orders. As a result of the report of the Committee set up last year by the Minister, a more satisfactory method of dealing with this has now been adopted. The opinion of those engaged in the trade is always of more value than a legal opinion on a question of fact or trade custom. It is in these instances also that the opinion of the representatives on the workpeople's side is invaluable.

Where there is overlapping of Trade Boards, the Trade Boards themselves should be invited to confer in order to de-limit boundaries. Reference should only be made to the Ministry of Labour in the event of failure to agree.

I referred to the superiority of the I.L.R.C. in prompt action. The Trade Board takes about four months before a variation becomes operative. This is unnecessarily long, though when the original Act was passed it was advisable to make haste slowly. In this respect the employers are at an infinitely greater advantage when rates are going down than are workpeople when rates are going up. In any case an agreed reduction upon which both sides are at one should come into force forthwith.

Another point, minor but not unimportant, is that when a Board has fixed new rates, say on December 1, they should become effective automatically on January 1, unless in the meantime the Minister had objected to ratify the change. This would remove uncertainty, which causes unrest, and would involve no change in the Act, but merely in proceedings under it.

There is one objection raised to Trade Boards wherein we have had some experience, namely, the presence of Trade Union officials. The proportion of these should not be excessive, but some are necessary for the majority of the workers, whose work and outlook are limited, is apt to be inarticulate and at a disadvantage compared with the employers.

Our Board is one of five which has established District Trade Committees, so that no rates of wages can become operative in any area covered by the District Trade Committee until the District Trade Committee have either recommended such rates or have been afforded an opportunity to make recommendations to the Trade Board on the proposed rates and such recommendations have been considered by the Trade Board. Moreover, a District Trade Committee once established cannot be dissolved until the Board itself is dissolved.

In the past it has frequently occurred that the members of the District Trade Committee have been called long distances, involving a night's absence from home, to attend meetings, the duration of which have not exceeded 30 minutes and in some cases five minutes. Many feel that the expense involved in such meetings is not justifiable, and they therefore desire that the Trade Boards Acts should be amended so as to allow them discretionary powers in referring Notices of Proposals to the District Trade Committees.

15 December, 1921.]

MR. S. W. PASCALL.

[Continued.]

The only practical advantage of these District Trade Committees is that they bring local employers and workers together, and they act to some extent as a safety valve.

I am going to make certain suggestions:—

1. That Trade Boards should be applied to trades—
 - (a) coming under the 1909 Act definition;
 - (b) where both employers and workpeople by a majority agree in their readiness to have a Trade Board. They should always first be given the opportunity of forming a Joint Industrial Council if they are sufficiently organised. That procedure should include something more like the old statutory enquiry rather than the provisional order of the 1918 Act.

2. I would differentiate between a minimum rate and skilled rates. The minimum rate for the lowest paid class of labour should be the only one fixed by the present method of voting, and should be the only one with which inspectors should concern themselves. Skilled rates should be fixed only by joint agreement between both sides, the Appointed Members not voting, but should be compulsory and enforceable through the Courts. This would simplify and lighten the work of inspection to a very great degree.

3. I think legal advice should be at the service of the Trade Board at the earliest stage of proposal. Very frequently what the Trade Board requires to do can be done in a different form of words, and legal advice at the beginning would often obviate a great deal of delay and friction later on.

4. In any purely technical matter or one where a custom of the trade is involved, the Trade Board decision should be final.

5. I would prefer that the appeal which now lies with the Minister of Labour should be with some non-political authority. I would like to emphasise the importance of a Trade Board being granted the right of voting by sides if it desires it.

Finally, I would emphasise very strongly the desire that the Trade Board should be more self-governing, and the procedure as free as possible. It was, I believe, very largely owing to it being left to the earlier Boards to make their own decisions and be masters of their own house, that the success of the 1909 Act was due. One of the respects in which the 1918 Act should be altered by the restoration of the 1909 Act practices should be in the substitution of greater powers for the Trade Board itself and the removal, as far as possible, of Governmental control.

May I say that I am expressing my own views in this evidence and not necessarily those of any of the Boards which are connected with the Consultative Committee. I only am responsible for any evidence I may give here.

Note.—It is to be noted that the Irish Board automatically fixes its rates lower than those fixed by the Board in Great Britain.

APPENDIX.

Memorandum re Trade Boards Employers' (Consultative) Council.

That Mr. Sydney W. Pascall, the Chairman of the Council, who has been requested by the Food Manufacturers' Federation to give evidence before the Committee of Enquiry on behalf of that Federation, be authorised to communicate to the Committee of Enquiry the following statement as being facts within his personal knowledge, namely:—

- (a) That he is Chairman of the Trade Boards (Employers') Consultative Council which has existed since 1919 in order to afford a common centre for the interchange of views between the Employers' Sides of Trade Boards on subjects of general interest to these Employers' Sides.

- (b) That the Consultative Council on 15th October issued a Questionnaire, relative to the working and effects of the Trade

Boards Acts, to the Employers' Sides of 42 Trade Boards operating in Great Britain, or in England and Wales, or in Scotland only, but excluding the Trade Boards operating in Ireland only. That replies to that Questionnaire were received from the Employers' Sides of 34 of these 42 Trade Boards, and that these replies have been submitted to and considered at a Special Meeting of the Employers' Sides of the 34 Trade Boards referred to.

- (c) That it was decided at that Special Meeting that the Consultative Council should advise the Employers' Sides of each of the 34 Trade Boards to give evidence on their own behalf direct before the Committee of Enquiry.

- (d) That it was further decided at that Special Meeting that no evidence should be submitted to the Minister of Labour's Committee of Enquiry by or on behalf of the Consultative Council, but that he (Mr. Pascall) he authorised to communicate the following statement to the Committee of Enquiry as being within his personal knowledge, a summary approved by the Special Meeting as representing the general impressions which emerge from a consideration of the replies of the 34 Employers' Sides to the Questionnaire:—

1. Dealing with the main question of the principles of a Trade Board system, it would appear that the preponderating opinion favours the continuance of some system which will provide for the regulation of wages enforceable by Statute on all employers in the trade concerned. It is generally recognised in the replies that the rates of wages fixed under the existing Trade Board system are "standard" rather than "minimum" rates, and a considerable body of opinion favours the view that the wage fixed should in future be confined to a purely minimum rate for the trade concerned. Very few replies have suggested how the word minimum should be defined, but, so far as dealt with, the suggestion is that it should be a rate which would be relative to the lowest class of labour in the least well-equipped factory in the trade concerned.

2. With regard to the administrative machinery, there is general dissatisfaction with its present condition. The preponderating view is that the administration of Trade Boards was more satisfactory when under the Board of Trade, and that the administration should be re-transferred from the Ministry of Labour back to the Board of Trade.

3. There is also a general consensus of opinion that the rates fixed by the Board should take effect with much less delay and that where a rate has actually been agreed by the two Sides of the Board it should take effect immediately without having to wait for the sanction of the Minister of Labour. It is upon this point that the replies approach nearest to unanimity.

4. There is also a widely expressed opinion that the Boards should be more self-governing, for example, in settling the definition of the jurisdiction of the Board and what falls under that definition, and also in instituting and carrying through prosecutions for non-payment of the rates. It is fairly common ground that the present system of inspection and prosecutions by the Ministry of Labour is inefficient.

5. With regard to the composition of the Boards, there is a fairly widespread expression of view that the Workers'

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

Sides comprise too many Trade Union leaders, and that only a certain proportion of these leaders should be allowed to sit on the Board, and that the remainder of the Workers' Side should be workers actually at the trade.

6. With regard to the Appointed Members, it is generally recognised in the replies that a Chairman is necessary, and in that connection some replies suggest that he should be a whole-time official. With regard to the other Appointed Members, opinion is divided as to whether or not these are necessary, and there is some dissatisfaction with the present method of their selection and a certain degree of opinion that the Board should be consulted in the appointment of these Members, and should have the right of veto.

7. On the question of voting, there is a strong body of opinion, to which only a few replies dissent, that there should be a right of side-voting on the requisition of either side of the Board, and also that the Appointed Members when they vote should vote individually and that their individual votes should be recorded.

8. On the subject of District Committees, the replies show that few of these have ever existed, and it would appear that the difficulties of creating and working them account for their playing so small a part in the Trade Board system.

9. Several replies refer to the difficulties attending the fact that businesses are sometimes governed by more than one Trade Board involving different rates for the same operation or worker, and there is a suggestion put forward that this difficulty should be met by confining the fixing of rates to one minimum rate only per class of worker, irrespective of the process in which that worker may be engaged.

(e) That Mr. Pascall shall make it clear to the Committee of Inquiry that any statements made by him other than the foregoing are to be regarded as his own personal views.

6607. *Chairman*: You are an original member of the Sugar Confectionery and Food Preserving Trade Board, which was established in 1914 under the Act of 1909?—Yes.

6608. You were from the first a member of the Scope or Administrative Committee, and of the London District Trade Committee of that Board?—Yes.

6609. You were Chairman of the Employers' Side of the Committee appointed by the Minister of Labour last year; and you are still Chairman of the Trade Boards Employers' (Consultative) Council?—Yes.

6610. You are also Chairman of the Interim Industrial Reconstruction Committee, covering four of the trades within the scope of the Board, and you represented the Food Trades on the Committee of the National Industrial Conference?—That is so.

6611. So that you have had considerable experience of matters connected with Trade Boards?—Yes.

6612. I think when the Sugar Confectionery and Food Preserving Trade Board was first proposed a deputation saw Mr. Buxton, who was then at the Board of Trade, to protest against the trades being described as sweated, and I think it was partly in consideration of that representation that the word "sweated" does not appear in the Statute?—Yes.

6613. In the case of the Confectionery Trades there was consultation with the trade—at all events with the employers' section—before the Board was set up?—That is so.

6614. Your Board started with a minimum wage of 3d. per hour for women and 6d. per hour for men?—Yes.

6615. I think that before the Board started the wages in some cases were very low?—In a certain fringe of the industry.

6616. The wages have from time to time advanced from the 3d. and 6d. per hour until they are now 8½d. per hour for women and 1s. 2½d. per hour for men?—That is so.

6617. They have lately been reduced by an Order of the Board by 1d. per hour?—Yes.

6618. You say, very truly, that your Board was established at a time when prices were rising, and the rates of wages were bound to follow.—Quite so.

6619. You trace part of the recent outcry against Trade Boards to the fact that they were set up when prices were beginning to fall, and trade was becoming stagnant?—That is so.

6620. I think you have come here to represent the Food Manufacturers' Federation, which is an organisation of manufacturers of food with practical experience of Trade Boards?—Yes.

6621. What is the view of that Federation as to the Trade Board system?—The Food Manufacturers' Federation as a whole undoubtedly favours the Trade Board system, with certain reservations. They desire to see certain amendments.

6622. Your experience is mainly, or perhaps wholly, of Boards established under the Act of 1909?—Our Board was set up under the Act of 1909, yes.

6623. The operations of that Board have been of benefit to the workers?—Unquestionably, and to the trade as a whole.

6624. And, I suppose, to the employers, by removing unfair competition?—Removing unfair competition, and removing an element of uncertainty.

6625. And it also led to better relations between the employers and the employed?—I think in the main, yes, though the relations were usually very fair previously to that.

6626. In fixing the wages, has the Board with which you are connected endeavoured to fix a minimum wage?—Solely.

6627. How have you been in the habit of ascertaining a minimum wage—by what standard?—The method is, of course, largely, that the employers put forward the state of the trade, and the workpeople's representatives put forward the cost of living, and, of course, their view of the state of the trade, and by argument and persuasion we eventually arrive at what seems to be a fair figure, having regard to those two main factors something that is fair, or as fair as possible, to the workmen or the workwomen, without bearing too heavily upon the smaller country trader who, after all, is the man who is least able to pay the higher rate of wage.

6628. You endeavour to fix the rate which that man can pay?—Yes.

6629. And I suppose that in the more favoured districts higher wages are in fact paid than those minimum wages fixed by the Board?—In the more favoured districts the Interim Industrial Reconstruction Committee comes into play. The trade unions, of course, were not content with the lower rate of wage which was possibly suitable to the country district or the smaller town, where the cost of living was low and the cost of labour also was low in competing industries, and they desired that the other factories which perhaps could afford it should pay a higher rate of wage.

6630. The Interim Industrial Reconstruction Committee is in fact, I suppose, in the nature of a Whitley Council?—It is a sort of Whitley Council—a half-fledged Whitley Council. We cannot have a full Whitley Council, because the labour section is not completely organised.

6631. How was the Committee formed?—It was formed from the employers' federation and from all the trade unions that we could get together. They have not got the trade fully organised. We only recognise trade unions in the matter, and the people who are not organised benefit, of course, by the work of the trade unions and the Interim Industrial Reconstruction Committee generally.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6632. Are some of the members of the Trade Board also members of that Committee?—Yes, they are very largely the same. I am a member of both, and several of us are members of both; Mr. Seeborn Rowntree is a member of both, and quite a number of others; and the same applies to the labour side.

6633. Do you find that the two can work side by side?—Not very easily. There are always difficulties; but it is the line of least resistance. We had either to have this Joint Committee or to have individual arrangements between each individual firm and the trade union, and that, of course, was very inconvenient, because it led to all sorts of difficulties and misunderstandings up and down the country.

In London, perhaps, we should have statements made as to what was happening in York, and in York they would be faced with something which was happening in Bristol, and so on, so that it became much more convenient that we should get together on a Joint Committee with the trade union members and make our arrangements jointly.

6634. Has the organisation grown since that Committee was set up?—I think so; not so much as perhaps it ought to have, but it has grown.

6635. Is there any union of workers in your trade, or are there other unions which take them in?—There is no union of workers in our trade. That is one of our difficulties. I am always telling my trade union friends that it would be very much simpler if we could meet with a union which was concerned solely with our trade, but unfortunately the members of our trade belong to different unskilled labourers' unions, the Workers' Union, and so on.

6636. *Lord Weir*: Would you agree that an efficient Trade Board is a satisfactory instrument for fixing minimum rates, and that a Whitley Council is a more satisfactory instrument for the regulation of wages over the minimum?—Yes, I think that would be entirely my view.

6637. *Chairman*: I suppose the Reconstruction Committee acts rather more quickly than the Trade Board?—That is one of its great advantages—that we can act very promptly, and are not hampered by any Act of Parliament. We make our own rules and alter our own rules by joint consent.

6638. And your decisions take effect more quickly than the decisions of the Trade Board?—Yes.

6639. *Lord Weir*: Is that particularly advantageous at present, when economic adjustment has to be made rapidly?—I think it applies both when wages are going down and when wages are going up. Perhaps it is a little more acutely felt now, because when wages are going down, if there is a legal obligation to pay a wage, you cannot, of course, have any voluntary arrangement to pay a lower rate for any particular purpose, whereas when wages are going up you can always have a voluntary arrangement to pay higher than the legal rate for a particular purpose.

6640. *Mr. Bell*: Can you give us any reason why you say an Industrial Council is better than the Trade Board for the regulation of wages?—I prefer the system. One thing is that we have the matter in our own hands; we do not have to depend upon the votes of outside Appointed Members, against whom, as a whole, I have no complaint whatever, but it is better, I think, that the matter should be in the hands of the people who are actually concerned with the trade itself.

6641. You are aware that the great difference is, of course, that with a Trade Board the rate becomes compulsory, and under the Whitley Council it is voluntary?—Yes.

6642. Taking your own trade, and the statement which you have just made that the workpeople are not efficiently organised—perhaps in some places like York, or Bournville, or Bristol they may be, but in other parts of the country not—supposing you had a Whitley Council and you came to the decision that the rate of wages should be so much, what guarantee would you have that the unorganised workpeople would be paid that rate of wages?—None at all.

6643. Would it not lead to unfair competition unless it were paid?—I think it would.

6644. Would you agree, then, that a compulsory rate is preferable to a voluntary one?—We want compulsory powers in many of the Whitley Councils. That is one of the things for which some of the Whitley Councils are most anxious. We have an Association of Whitley Councils, and we have passed a resolution on several occasions that Whitley Councils which desire the power should be enabled, under certain proper safeguards, to obtain compulsory powers for the enforcement of a rate.

6645. Are decisions of Whitley Councils generally unanimous, or are they decided by a majority?—All our decisions in our own particular case have been without a vote. Sometimes I have been the chairman, sometimes Mr. Bevin has been the chairman; we take year about: the employers take the chair one year, and the trade unions the next year.

6646. Do the Whitley Councils that you know of desire to have their rates made compulsory, even when they are not carried by general agreement?—I think a majority of the Whitley Councils want compulsory powers, but some are very averse to having them. There is a difference of opinion, but there is a general feeling that where they do want them they should be permitted to have them, under proper safeguards.

6647. Even although the rate has been carried by a majority vote?—I think so, provided there were a sufficient majority.

6648. *Lord Weir*: That difference of opinion is naturally associated with the degree of organisation, that is to say, where you have an unorganised trade the view would be that the agreed rate should be compulsory, but where you have a well-organised trade it does not matter so much?—No; I think that is probably correct.

6649. *Chairman*: You say something about Appointed Members. You think that in their appointment the trade should be consulted?—Yes.

6650. How many members are there on your Board?—We have three Appointed Members and 44 unrepresentative members, half each side.

6651. What do you say as between having three Appointed Members and having only an Appointed Chairman? Which do you think is the better system? We have had a suggestion that the Chairman only should be appointed, but that there should be some power, either for him or for the Board, to call in assessors with special experience when it is desired, those assessors, of course, not having a vote as the additional Appointed Members now have. Have you considered that?—It is really very difficult to say. One's opinion on a point like that would be so much coloured by one's own experience. If we had absolutely the right man as Chairman every time I think perhaps it would act well. On the other hand, if either side felt sometimes that the Chairman was leaning a little bit too much to the other side, it would be quite useful to have others who might perhaps redress the balance. I will not say that they actually do it, but one has that feeling sometimes.

6652. *Mr. Bell*: Supposing that, in the first place, with your Trade Board, the representatives of the employers and of the employed were first called together without the presence of the Appointed Members, but with a Chairman who was neutral?—Without a vote?

6653. Yes, without a vote—and that the Appointed Members were only drawn in in case of disagreement between the two sides, do you not think that there is a possibility that in many cases there would be agreement between the representatives of employers and employed?—I think if you were to do that it would be a terrible disadvantage to have the Appointed Members coming in later on, because they would have the disadvantage of having to exercise their powers without having listened to the discussion.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6654. You would have to start all over again, naturally?—Would not that be rather a cumbersome proceeding, and rather a costly one?

6655. It might be, but are you not of opinion that in the first place it would be an advantage to give the representatives of the two sides an opportunity of coming to an agreement?—It is infinitely better if it can be done. Wherever it can be done without the intervention of an outside body, I think it is very much better.

6656. *Sir Arthur Pease*: That is what is done chiefly in the organised trades, is it not?—Yes, that is what is done in our Whitley Council—in our own Interim Industrial Reconstruction Committee.

6657. The two sides first try to come to an agreement, and the *Umpire* or outside Chairman is only called in after they have disagreed?—Yes. Both sides take it in turns, as I explained just now, to provide the Chairman. We never have had to call in an outside *Umpire*; we have preferred to come to an agreement. We should call in help from outside in cases when we really could not come to an agreement.

6658. Do you not think that the discussions are much freer and more open when you have not a man sitting there who is ultimately going to decide in case of disagreement?—I think they are much more genuine. I think you are much more likely to express the real feeling which you have, rather than perhaps to put forward a case which you think would impress the Chairman or the Appointed Members. All the while at the Trade Board you are trying to impress the Chairman or the Appointed Members. That is the object, I will not say of every speaker, but of the leading speakers on both sides, anyhow; because sometimes other speakers are not quite so careful. At a Whitley Council anything that you say, if it is not absolutely sound from the trade point of view, is seen through at once; everybody there has experience in the trade, or has close connection with it.

6659. What you said just now you thought was cumbersome was really the practice in both the Whitley Councils and in the organised trades as a rule?—I think in most Whitley Councils they do not have any outside Chairman. On most Whitley Councils the chair is taken alternately by one member from the employers' side and one member from the trade union side.

6660. Then he has not a casting vote?—I think a good deal there depends upon the organisation of the side. Generally speaking, Whitley Councils, I think, vote by sides; that is to say the employers' vote counts as one, and the workpeople's vote counts as one, but of course Whitley Councils vary tremendously in their organisation. Some Whitley Councils have nothing whatever to do with wage settlements except as a final Court of Appeal. In the Potteries they have their Conciliation Board, and the Whitley Council only comes in when the Conciliation Board cannot agree. It is a sort of Court of Appeal. In other cases practically the whole of the time of the Whitley Council is taken up with wage settlements, and it does hardly anything else, so that there is very considerable variation in practice, but I think, generally speaking, it is all done on Whitley Councils by the representatives of the trade themselves, and not by calling in outside help unless they refer it to conciliation or arbitration.

6661. May I put it in this way, that although it is more cumbersome not to have your independent Chairman or Appointed Member present, there are very great advantages in having full and free mutual discussion beforehand, without him?—Certainly. I did not say that it was more cumbersome to have the discussion without a neutral Chairman; my point was that if you first of all had your discussion with a neutral Chairman, and then you set about having another discussion with the Appointed Members, it was rather cumbersome—if you are going to have any outsider in at all. I think you might do it by way of discussion, and I infinitely prefer that the first

discussion should be without anybody at all, whether Appointed Member or neutral Chairman, or anybody of that kind, but simply amongst the members of the trade themselves. I do not think they want any outsider; but if you are going to have discussion with an outsider of any kind, whether an Appointed Member or a neutral Chairman, I think that might be one discussion, and not two. That was what I used the word cumbersome about.

6662. *Mr. Bell*: You are aware that in the well organised trades, although they may discuss the matter without either a neutral Chairman or anybody else in the beginning, they may ultimately have to resort either to arbitration, or to the presence of a neutral Chairman who is endeavouring to bring about agreement?—Yes.

6663. Would the method which I suggested under the Trade Board be more cumbersome than that, which applies to well organised industry?—Yes, it seems to me that the method which you suggest would really be three steps, whereas in well organised trades you have two; the first step being you outsider at all, and the second step being an outsider present. In the case of the Trade Board I suggest that if you are to have two steps, the first should be no outsider present at all.

6664. The cumbersomeness of the method would only apply failing agreement. Had you not better have a cumbersome method than a dispute, if you can possibly avoid the dispute?—Certainly. Anything is better than a dispute.

6665. And if you have no provision, failing agreement, for anything else but a dispute?—I think I should agree with what was said; the only thing is that I do not see the necessity for having a neutral Chairman present at the first meeting. I think you had infinitely better have the first meeting without anybody present other than the parties to the discussion, and the second meeting to be whichever you prefer; either a neutral Chairman or the Appointed Members.

6666. Going back to the Trade Board, in your experience is there an impression on both sides, employers and workpeople, that after all the position is in the hands of the Appointed Members?—Yes, I think so.

6667. Is there a tendency then, on the part of both sides, perhaps to state an extreme case?—I think that would be human nature, would it not?

6668. I am trying to get at the facts?—I should imagine that that probably would be the tendency.

6669. So that the very presence of the Appointed Members would tend, in those circumstances, rather to bringing about a disagreement than agreement in the discussion itself, both sides having started off from an extreme position?—I think you are probably correct. I think, generally speaking, the average employer would rather come and put his cards on the table, and state as near a figure as he can to what he really thinks he can afford to give, rather than to start off with some extravagant figure first; and I think many of us have felt that about Trade Board discussions—that they have become too much a sort of Dutch auction, each side stating a very high, or (in the other case) a very low figure to start with, and then by a gradual process of bargaining coming together to arrive at a final figure.

6670. *Lord Weir*: Do you think that that feeling existed under the 1909 Act, before the war?—Yes.

6671. The same thing happened?—Yes.

6672. There was really no difference in the spirit of the meetings?—Not in the method of arriving at the figure.

6673. Some people have formed the impression that those early Trade Boards caused infinitely less grumbling and trouble than the new Boards?—We had a certain number of employers, even under that early Act, who thought that the end of the world had come so far as they were concerned. Of course, some people still dislike them in our trade, and in every trade, but it was only when they got experience that they came to see that after all they were

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

more of benefit than they were of harm. I think if we had had them established on a falling market, we should probably have had a great deal more outcry than we had, and a great deal more difficulty than we had.

6674. You have indicated here that these early Boards were evidently less adventurous; they took more care; they seem to have spent more time and exercised more caution, and to have gone more slowly than the new Boards. I think you say that, do you not?—I think they did, on the whole. Of course it is quite true that we were going into an entirely new field, and people are always more cautious when they are going into a new field; and I daresay the Appointed Members—of course we only had Mr. Aves then and his assistants; we had one Chairman for the whole of the Boards, and that was a great advantage—

6675. Do you think, for instance, that that caused any general co-ordination policy on the part of the Boards?—Unquestionably.

6676. So that if you take, for example, the question of minimum rate, which was, after all, the one thing in front of the early Boards, once you had the same interpretation and the same guiding meaning of "minimum," then you were apt to have fewer inconsistencies in those circumstances. Do you agree?—Yes, I should agree with that. I should think that was so. There is no question about it that the fact that we had the one Chairman and the one Secretary—Mr. Aves as Chairman and Mr. Reid as Secretary—in those days, was a very great factor in the success of the early Trade Boards. The other factor was that they were very largely self-governing, and when they came to a decision they could be pretty certain that that would be carried out. At the present time, of course, we have no such certainty; a great deal depends upon the Minister of Labour.

6677. *Chairman:* But it then depended upon the President of the Board of Trade?—It did. I do not know why it was, but when our decision was come to the Board of Trade sanction was more or less a formal affair. We did not get comparatively small technical questions raised, and our Orders referred back; our Order, once settled, was practically always issued.

6678. That may have been owing to the fact that, as Lord Weir has pointed out, you were rather more careful in coming to your decision?—I think that was partly it. It was also partly owing to the fact that we had then a Chairman who was in very close touch; and I think it was partly owing to the fact that either owing to the structure of the 1909 Act being different from that of the 1918 Act, or for some other reason, the President of the Board of Trade was able to leave more to the decision of the Trade Board than the Minister is able to leave now, under the 1918 Act. I believe that under the 1918 Act more direct responsibility is thrown on the Ministry, and less on the Trade Board.

6679. I am not quite sure in what respect that is so?—In the case of our earlier decisions, we understood that if we came to a decision it was a decision of the Trade Board, and it was the responsibility of the Trade Board, and if it were overthrown in the Courts, the Trade Board suffered in prestige and reputation. I understand that under the 1918 Act the decisions are the decisions of the Ministry of Labour, or certain of them are, and if they are thrown over the discredit rests on the Ministry, and not on the Board.

6680. I do not know where you find that. That may be the feeling, but as a matter of fact both Acts go upon the principle that the decision is the decision of the Board, subject to confirmation by the Minister.—That is very strongly the feeling of the Boards, and that really caused the setting up of that Committee to which I referred, upon which we did quite a lot of work and made a Report to the Minister. Some time ago there was a very considerable feeling of unrest among the Trade Boards, and we made representations to the Minister.

6681. That is the Committee upon which Mr. Wolfe was sitting?—Yes. That Committee was set up over

which Mr. Wolfe presided, and the Committee held that feeling very strongly.

6682. That leads to the next point, about scope. Questions of scope have been known to arise?—Yes.

6683. And now they are referred to the Minister, who, I think, certainly since that Committee reported, follows the practice of consulting the Trade Board?—Yes.

6684. Is that a satisfactory system now?—In my opinion it is much more satisfactory. I cannot suggest any further improvement at present. That deals with certain questions of scope. Of course, when two Trade Boards come into conflict it is more difficult.

6685. Even then the Minister can decide after consulting both Trade Boards?—Yes.

6686. But that decision is not binding at law, is it?—No.

6687. Should it not be made binding at law?—I think it should, if possible. I have not really considered what it would involve.

6688. It is the Minister who, after consulting those who are interested, fixes the area of the trade to begin with?—Yes.

6689. Therefore he does seem to be the proper person to decide whether a particular case comes within that area or not, subject, of course, to consulting those who best know the trade, like the members of the Board; but when that decision has been come to, is it not desirable that it should be a binding decision?—I think there ought to be some appeal. It is rather a big power to put into the hands of a permanent official.

6690. Would that appeal be to the Industrial Court, or to some other tribunal?—Either to the Industrial Court or to a body made up from members of the Trade Board themselves. There might be a panel of employers, a panel of trade unionists, and a panel of Appointed Members.

6691. Members of the Trade Boards, did you say?—Members of the Trade Boards themselves.

6692. *Lord Weir:* Rather than a judicial tribunal or a legal tribunal?—Yes, I think so. By a judicial tribunal you mean a court of law, I take it? I want the tribunal to be judicial rather than political.

6693. *Chairman:* Sometimes a tribunal is both legal and judicial?—I think in all appeals we are anxious that, if possible, they should be determined on their merits—that the appeal should be judicial rather than that any question, however vital, of political import should come in; and I use the word "political" not in any offensive sense; I mean the affairs of the country.

6694. I am sure you are quite right there; but between the Industrial Court and the joint council of Trade Boards which you suggest, you think, on the whole, the Trade Boards council would be the better appeal tribunal?—I think so. I have not sufficient experience for my opinion on this point to be of much value.

6695. There is one advantage in having a Court, and a small Court: that you get decisions on the same lines?—Yes.

6696. That is true, is it not?—Every time. It is certainly true.

6697. When a decision is given and published, other people follow it without going back again to the tribunal?—Yes.

6698. *Sir Arthur Pease:* You mentioned the question of the Chairman. I think you said that you had no objection to the Chairman, and several other witnesses said the same, "but—" Is not the real fact that you are not satisfied as to the Chairman of these Boards as a rule being strong enough and sufficiently practical?—You see, I am only on one Trade Board, so I can hardly say "the Chairmen as a rule." If I answered that question I should simply have to give my experience regarding our own Trade Board. On our own Trade Board we have had two Chairmen, and our first Chairman, Mr. Aves, was an exceptional man; he had the confidence of both sides, and was responsible for the success of the Trade Board movement in its early days more than any other single individual.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6699. I thought you were discussing the matter generally, as representing more than one Trade Board?—No, I am only representing the Food Manufacturers' Federation. I have connections with other Trade Boards, but I am simply the Chairman of the Employers' Consultative Committee; and I am handing in a certain document which expresses a sort of general census which we have taken, but I am not authorised to give evidence for any other Trade Boards, simply because I have not the proper experience. It is very much better with regard to the individual Trade Boards to have evidence from the Trade Boards themselves. Of course I can give my own opinion as to the general feeling among employers, as far as I know it, but that is hearsay to some extent, is it not?

6700. I asked you the question because I thought it would be invidious as to one Trade Board. I do not think I should have asked it otherwise.—I see. I think the difficulty would be met if we could have the power of objection. I have heard two precisely opposite opinions expressed by leading members of different Trade Boards about the same man. One man says how extremely he leans to the labour side, and the other man says what a fine, fair chairman he is, so that it is difficult to know what the truth was in that case; but if we have the right of objection then if we do not object we have the satisfaction of having had the right and not having exercised it, which removes an element of criticism and grumbling, does it not? I think if you gave us the right of objecting to any particular individual who might be nominated, even if we did not have the right of nominating jointly the Appointed Members, that would remove a considerable grievance.

6701. I thought that before you rather went further, and indicated that you would wish to have the right of suggesting names?—That would be the ideal, of course, but it might be rather difficult. If we had the right to object, it would, in my opinion, be sufficient.

6702. *Chairman:* Perhaps we had better conclude your views before we come to the memorandum which you hand in?—Certainly.

6703. You refer to the time taken in varying rates. I think we are fully informed as to that point. You say that a new rate fixed, say, on December 1st, should come into operation, say, on January 1st, "unless in the meantime the Minister had objected to ratify the change"; that is, you would have the date upon which the rate shall come into operation fixed at the moment when the rate is fixed?—Yes.

6704. And not at the moment when the Minister confirms it?—That is so.

6705. Subject to objection by the Minister in the meantime?—Yes. I think in that regard there is a difference to be made between the first fixing of a rate and the subsequent variation of it. The first fixing of a rate is a matter which requires much more care than the variation of it afterwards.

6706. When you expressed that opinion as to "new rates," you meant variation of rates?—Yes, I should say variation of rates.

6707. Then you refer to the presence of trade union officials; you say that there should be some, but there should be a limit to the number?—Yes, I think so. We find it, very frequently, a great advantage to have people who have actual experience of working in the trade on the labour side. They are not usually people who are able to put their case adequately, and if the trade union side consisted solely of them I am afraid that the employers would have a great advantage in putting their case; but it is an advantage to us to have a certain proportion, and a very fair proportion, of the Board consisting of people who actually have experience of working in the trade. Many of our employers have that experience, and I think the same is useful on the workpeople's side.

6708. You yourself are no longer actively engaged in the trade?—Yes, I am. I spend most of my time in it. Of course, that is where I earn my living.

6709. I rather gathered from the fact that you had so many activities in connection with the Trade Board that you might have to give your whole time to it?—I am afraid I have things outside as well.

6710. Then as regards District Committees, your experience is much the same as that of other persons, that they have not, on the whole, acted well?—They have been useless as far as we are concerned. The only possible advantage is that, as I say, they act as a safety valve. I think people in Manchester and Newcastle, and so on, are apt to feel that we up in London fix everything for them, and that we "put it over them," and that if they have the chance of expressing their opinion to some extent, it removes that feeling; but apart from that I do not think they are of the slightest use whatever in our trade. Of course our trade is purely manufacturing, and in that respect it differs from the distributive trades. There seems to be, from my experience, a remarkable difference between the manufacturing trades and the distributive trades.

6711. In what respect?—Most manufacturing trades are national in their competition; distributive trades are mostly local in their competition. It is an advantage to us to know that our competitor in Edinburgh is not paying a lower rate of wages than we are paying in London, whereas if we were distributing locally, and we had not to face any competition from so great a distance as Edinburgh, it would not matter to us; we should be much more concerned with our neighbour in the next street, and would not worry a bit about how much Edinburgh was paying.

6712. Have you considered the question of distinguishing between town and country?—We have on our Board, and we have a very strong feeling against it. We feel that competition is national, and that you must have a national rate. We feel that it would be extremely difficult to find any determination—any standard—upon which to base a fair rate—to decide where to draw the line. Some factory might be just outside the urban boundary, another one might be just inside, and they would have two varying rates. On the other hand, if you were to take such a thing as the local cost of living, you would be faced by such anomalies as that Norwich would have to pay a higher rate than Manchester, and so on. Those are the difficulties that we do meet with in our consideration of the question; so that the employers as a whole have very definitely formed the opinion that the rate must be a national one, and not a local one.

Lord Weir: Is that opinion and that feeling not affected fundamentally by your first interpretation of the minimum rate, that it is only a standard rate in the cheapest area and for the least efficient conditions?

Mr. MacCallum Scott: He does not say "in the cheapest area."

6713. *Lord Weir:* I am trying to use Mr. Pascall's own words.—I do not know. You are asking me now as to what motive the members of the Trade Board have, are you not?

6714. I am putting it in this way: that you have referred to minimum wages being fixed too high in certain Trade Boards?—Yes.

6715. Then you said that on your Trade Board you started with a more or less definite interpretation of "minimum." Would you please repeat your first definition of "minimum"?—I really forget what I said. I put it down in writing. If you want me to repeat it exactly I will.

6716. In effect I think it was "the least skilful worker in the cheapest area."

Mr. MacCallum Scott: Is not that in Section (d), Sub-section 1, of your memorandum?

6717. *Lord Weir:* No, it was a reply that the Witness gave.—It is quoted, and I think it is in Section (d), Sub-section 1: "The suggestion is that it should be a rate which would be relative to the lowest class of labour in the least well-equipped factory in the trade concerned." That is not in my evidence, as a matter of fact.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6718. You qualify that also by bringing in the area with the cheapest cost of living?—Yes.

6719. Then you said that it is a minimum for all places, but in that place it operates as a standard, and therefore you do not require to consider areas or area committees or variations, because you have already done so by making that the standard?—Yes, the minimum fixed, bearing in mind the cheapest area, and apart from the really obsolete factory, or the factory that you cannot consider; I mean you cannot consider people who really are out of date, and who could only be kept alive by scandalously underpaying labour; but bearing in mind the reasonably equipped factories and the cheapest living, we fix our minimum, and that minimum is the standard in that area, and other areas, of course, want higher rates than that, and then our other Council comes into operation.

6720. Quite so; that is where your complementary voluntary machine comes into operation?—That is so.

6721. *Chairman*: As Lord Weir points out, if you proceed upon that basis the distinction of areas becomes hardly necessary?—It certainly does not in our trade.

6722. *Lord Weir*: When you talk about low efficiency, does not that also affect your differentiation between the distributive trades and the manufacturing trades; that is to say, you would have no mercy towards a factory of low efficiency, but a grocer's shop of low efficiency in a rural district is rather a different thing?—Yes, it very often is. I have only general knowledge of these matters, but you get some quite small shops which are almost private cottages, and they do a very small trade in some remote village, and you might have great difficulties arising if you attempted to fix either a rate sufficiently low to take them in, or a rate which would be of any use at all in the big towns, without injuring them very considerably.

6723. Or a small country dressmaker's shop?—I should imagine that it might apply even more forcibly there, but there I am only speaking of what I have heard from other employers.

6724. *Chairman*: Now we come to your suggestions with which you conclude your memorandum. The first is "That Trade Boards should be applied to trades (a) coming under the 1909 Act definition; (b) where both employers and workpeople by a majority agree in their readiness to have a Trade Board." I do not quite understand the second condition. Where a trade is not organised, how can you get the opinion of a majority?—Under the 1909 Act it was necessary to have a Statutory Inquiry—I think that is the correct term. Under the 1918 Act all that is necessary is a Provisional Order placed before Parliament, and it has very often happened in the latter case that the Trade Board has been almost in existence before many employers, and possibly many of the workpeople too, have realised anything about it; but under the 1909 Act the Inquiry seems to have had to be very thorough and very complete, and the whole trade seems to have had an opportunity of knowing about the proposed establishment of the Trade Board before it was set up, and it is that, very largely, which I am aiming at: that the Inquiry shall be thorough. If the Inquiry were thorough, and there were very strong objection on both sides or either side, probably the Trade Board would not be carried through.

6725. Do you mean that no Trade Board should be set up except after a public inquiry?—I think I should go so far as that. I have not put it forward in my evidence.

6726. *Lord Weir*: Do you base that on a belief that there are certain trades upon which a Board has been established unjustifiably?—I do not quite follow the question.

6727. Do you believe that a Trade Board has been established for certain trades to-day where it is not justified?—I do not know, but I do know that certain trades have had their Trade Boards set up without being properly consulted, and that is as far as I go.

6728. *Chairman*: You know that there was no compulsory inquiry under the Act of 1909. It was only when a petition was presented to Parliament against a Provisional Order that the ordinary Parliamentary Inquiry was held.—Yes. That seems to have provided a very much greater safeguard and very much greater publicity for the setting up of Trade Boards than is the case now, under the present method. I do not know that that was really quite satisfactory. We did not have one in our trade; we simply had an interview with Mr. Buxton, and it was perfectly satisfactory. We were quite willing to go on under the undertaking which he gave us.

6729. There is a new provision for an inquiry in the Act of 1918 which did not appear in the earlier Act, that is that if objection is made to the Minister before he makes a Special Order bringing a trade under the Act, then he is bound to hold a public inquiry.—Yes, I am quite aware of that, but the difficulty there is that the Provisional Order very often becomes effective before the people who should make this objection realise what has happened.

6730. There is provision in the Act, is there not, for giving notice to everyone before the Order is made?—But it is an extraordinarily difficult matter to them. When you come to consider, for instance, some of these Distributive Trade Boards, you find that there are no means existing for notifying the hundreds of thousands of employees except by publication in the Press.

6731. I see the difficulty, but I think as a matter of fact notice is given widely in the Press, and also to any associations which have anything to do with the trade. I dare say that notice does not reach the individual grocer, and so on.—I am not criticising the officials at all; I am perfectly sure that they have done their best, but with all their skill and all their ability they have been unable to reach quite a large proportion of the trades concerned in many cases, and that has caused very great trouble.

6732. Would you not add another condition to the formation of a Trade Board: that the trade should be one where the organisation is insufficient?—Yes, I think either where the organisation is sufficient or where it can be made sufficient pretty easily the trade ought to have an opportunity of setting up its own Joint Industrial Council.

6733. Then you go on to another important question: the distinction between the minimum rate and a skilled rate. You say that the minimum rate fixed by the Board should be the rate for the lowest paid class of labour in the trade?—Yes.

6734. And the skilled rate should be fixed by agreement?—Yes.

6735. Of course, where there is an Industrial Committee the skilled rate will be fixed by that Committee, I suppose; or do you suggest that it should be fixed by the Trade Board, but by agreement and not by the vote of the Appointed Members?—I think that is a question for the trade concerned. There are only two trades which have an Industrial Committee, and it is quite possible that if those two trades were offered a Trade Board with the scheme I suggest, plus the compulsory power, they might accept that and put the two into one, because there are some of these Industrial Committees which I speak of which are very anxious to have the compulsory power.

6736. When you say "by agreement," do you mean by agreement of all the representative members of the Board?—Yes, the representative members of the Board without the Appointed Members.

6737. Do you think they should all agree, or would you have side voting?—I would leave that to the trade.

6738. What do you mean by the trade?—To the trade to determine. In our Whitley Councils, in some trades they find that they can work perfectly well by leaving their members free to exercise their personal votes. In other cases they vote by side voting, each side voting as a unit.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6739. When you say that you would leave it to the trade, do you mean that you would leave it to the Trade Board?—Yes.

6740. That is, to each side of the Trade Board to come to a decision?—Yes.

6741. *Mr. Bell:* In actual practice in a Trade Board meeting, if what you suggest were adopted, would not the position very largely be that the Trade Board itself would not know that there was any difference of opinion on either side. Would they not settle their differences apart from each other, and then say what they had agreed upon, even though it might have been by a majority vote?—That is the favourable position of the trade union side, but it is not the position of the employers' side. Unfortunately, sometimes on the employers' side they have representatives who, for various reasons, are not in sympathy with their fellow employers, and who do not regard their position as that of a trustee, but vote according to their individual opinion, which I gather from your suggestion is not your view of what they should do; and that really upsets the fairness of the thing altogether. For example, there might be some big employer—I am not suggesting that there is in any case—to whose interest it was that he should vote for the higher rate, even if it meant very considerable difficulty and suffering to his competitors, and he might do so. Then, of course, there is the question of co-operative representatives, who are sometimes on the employers' side of Trade Boards, but who, of course, are allied to the Labour Party—there is no secret about it—and it is very natural that they should vote with the Labour Party. They would be rather curious people if they did not, and they would at the same time be able to do that with a clear conscience, and yet not be able to upset the fairness and equilibrium of the Trade Board if we had side voting. That is the chief reason.

6742. *Sir Arthur Pease:* The minimum rates do not really affect the co-operative societies, because they are already paying higher rates as a rule?—I should imagine they are.

6743. *Mr. Bell:* I gather that it is your opinion, then, that owing to, shall I say, the peculiar position of the employers' side of some of the Trade Boards it is almost impossible to get agreement, even on the employers' side?—It might be impossible to get a unanimous vote, but you could easily get a majority vote. I take it that on the trade union side there would probably be a difference of opinion, and perhaps a majority vote.

6744. Supposing you get the majority vote in a meeting of employers, would the minority then elaim the right to exercise their individual freedom when they got back to the Trade Board?—I think so.

6745. Taking your paragraph No. 2, there is one thing which I should like you to clear up. You say that the inspectors should only concern themselves with the minimum rate, not with the rate fixed for skilled workers, and then you go on to say that the skilled rate should be compulsory. How are you going to make it compulsory if the inspectors have nothing to do with it?—You could make it recoverable through process of law in the Courts, and it will be just the same then as the Whitley Council rates, the only difference being that you would have the advantage that you would be able to enforce it. The worker could make a complaint or a fellow employer could make a complaint as to the rate not being paid. I would have it legally enforceable, but the point is that the inspection is a very difficult business, and a very costly business, and what you really want to do as far as your inspection is concerned, it seems to me, is to see that there is no sweating. That is the first business, at all events. If you said to your inspector, "Go and see that 1s. per hour is being paid," it would be pretty easy to ascertain; but if you say to your inspector, "Go and see that this elaborate piecework system is being complied with," the inspector needs a very great deal of training and skill and knowledge of the trade before he can really ascertain whether that is

being complied with. I was very much impressed with that in the Committee which we had. Inspectors came up, and some of the most skilled men gave us evidence as to the difficulty which they had in really getting to understand the complicated rates which were fixed by many of the Trade Boards—perfectly understood by the employers and workpeople in all the factories, apparently, but very difficult to an outsider. You only have to look through the whole schedules of rates which are fixed by some of the Tailoring Boards to realise the difficulties and complications. It does seem to me that if the inspector went round to see that sweating was abolished, and that practically the minimum standard of living was paid, then you could leave it to the trade unions, to rival employers, and to the workpeople themselves to see that the skilled rates were enforced, and they should be able to be enforced through the Courts of Law.

6746. *Chairman:* That would just put the skilled rate in the position in which a rate under the Act of 1909 was, which had not been made obligatory?—I think it would.

6747. There was a distinction, which is now abolished, under which a rate might or might not be made obligatory by the Minister. If it were obligatory, then it was a crime and an offence against the law not to pay it. If it were not, it still had a limited operation, and it might be recovered in the civil Courts?—Yes.

6748. *Lord Weir:* Could you suggest to us any form of words which would constitute a better guide to this term "minimum rate"? You speak of a minimum rate for the lowest paid class of labour. Could you carry that further? You point to us a picture of these fundamental anti-sweating regulations; you also agree that much of the trouble has been due to varied interpretations of that word. Could you help us in any way towards an interpretation or a definition?—I am afraid I do not quite follow the question. I have not objected to the words "minimum rate," and I have not suggested that the trouble has arisen from our difficulty of interpreting the minimum. I think we have all pretty well roughly arrived at an idea of what the minimum is.

6749. I thought you had clearly indicated that some of the Boards had set up too high minimum rates, and from the fact that they have scheduled them too high it must be assumed that they must have given another meaning to "minimum"?—I would suggest that possibly in those cases what has happened has been that the Appointed Members have been rather trying to take two steps in one.

6750. You create a standard?—Yes.

6751. Can you suggest any definition of "minimum" which would prevent them doing that?—I think you would get at that better by care in getting your Appointed Members.

6752. That is, getting more capable Boards?—I think so. I think it is a matter of give and take in the early days. Probably it is wiser, and it causes infinitely less trouble, if you fix your rate a little low to start with. Perhaps it sounds an unpopular thing to say, but you can more carefully proceed from the low upwards than you can from the too high downwards. If you get up too high you create all the trouble, the difficulty, and the outcry that we have been having lately, whereas if you proceed from the low upwards you gradually accustom people to the increased burden which they have to bear. When we first set up our Trade Board, people had been paying, I gather, something like 9s. per week in certain isolated instances, and they had to start away with paying 13s. per week. To people like that it was a pretty considerable addition. They ought never to have been paying 9s. per week, but they had done it, and it was only fair to give them a chance to increase gradually so that they could show whether they could pay their way under the new conditions. If they could not by the time the new conditions had a fair chance, then we had not any further sympathy with them, and we proceeded

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

to go higher, but I think the slower approach to the minimum rate is better than the too rapid approach. That is what I meant by my answer.

6753. *Chairman*: Is it not desirable, if it is possible, to get Trade Boards to act on the same principles one with another? I have often wondered whether that end could be attained by giving either side on a Trade Board some right of appeal to some other co-ordinating tribunal, either the Industrial Court or some Joint Committee of Trade Boards?—Yes, I think that would probably be a great help.

6754. Would not that tend in time to put all these rates on the same principles?—I think it would certainly tend to get the same principles applied, and it would remove a great many possible grievances which obtain, particularly in the newer and inexperienced trades. I think very often some of these higher rates which have been fixed too high have been fixed apparently through the inexperience of the employers. They hardly know what is being done. Perhaps they themselves pay these rates, and they do not realise that there are other employers in the trade who really have been paying much lower rates.

6755. *Mr. Bell*: I take it that you agree that it is desirable that a minimum rate should be fixed to cover all classes of work, but you prefer that those minima should be agreed between the two sides rather than be fixed by the Trade Board as at present constituted?—I think a little difficulty will arise there in certain trades. As a general proposition I would agree to it, yes, but in our trade, for instance, we do not fix rates for certain operations, we fix a minimum in our Interim Industrial Committee which would apply to certain factories.

6756. You speak of a minimum for the lowest-paid class of labour, and then you speak of skilled rates?—Yes.

6757. If the rate were fixed, that would naturally become the minimum?—Yes.

6758. At the beginning of your evidence you stated that you approved of the Trade Boards because of the elimination of unfair competition by the payment of lower rates, say, in one district as compared with another?—Yes.

6759. That unfair competition would continue, would it not, unless you dealt with more than the wages for the lower class of labour—not to the same extent, but it would continue?—I do not think it would have much effect in our trade, as a matter of fact. You are asking me now on a question of fact, are you not, not on a question of opinion?

6760. Yes.—If I do not think in our trade it would make much difference as a question of fact, because in the skilled operations the skilled men never have any difficulty about getting their rates. They are able to command their rates.

6761. *Mr. MacCallum Scott*: Have you any general idea as to the basis for a minimum wage? What are your chief factors which should be taken into account in fixing it? Is one of the chief factors the cost of living?—The cost of living, and the ability of a reasonably equipped factory to pay.

6762. The evidence has been very conflicting, but it has been suggested by some witnesses that it would be desirable to have a national minimum wage for all trades.—I should be very strongly opposed to that. I think it would be most fatal. You would either get a wage which was so miserably low that it would not be of any use to anybody, or you would get one which was so high that it would cause great hardship. The second point is, it at once introduces the whole question of fixing wages into the political arena, and that I think would be unfortunate.

6763. *Mr. Bell*: You say that the cost of living should be taken into account. Supposing that the cost of living in London is much higher than in some parts of the country, would you have different rates?—Not in national trades.

6764. Would you agree that where the cost of living is lowest as a general thing the cost of production to the employers is also lowest?—Not necessarily.

6765. But as a general principle?—No, not by any means necessarily. There are so many other factors

to be taken into account. I am speaking of our trade now; I cannot tell you of any other trades. If you take one particular pool of labour, you get much better efficiency than in another. It is perfectly wonderful how the efficiency in different parts of the country varies. Then you have such questions as the ease of supply of material and the ease of transport to a customer, and all sorts of factors which would come into it—the easy supply of power and the cheap supply of power, for instance. There are many factors which would enter into the matter, and which have to be taken into consideration before you can answer that question; but generally speaking, I think if you take the country where the cost of living is cheaper, labour is very often less efficient, and therefore you get a less output.

6766. Would you go so far as to say that the lower efficiency of labour in those districts is due to some extent to the low wages which they receive?—That would be a very interesting speculation if I could follow that.

6767. *Chairman*: Let me take your other suggestions rather quickly. First you think that there should be legal advice at the service of the Trade Board?—Yes.

6768. That goes rather on the lines of the recommendation of Mr. Wolfe's Committee?—Yes. I do not know that I do not go further than that. I think probably I should. It is a very tremendous advantage, because very often we want to express something in our Order, and we do it, whereas if we had a lawyer to express it for us he could express the same thing in a way which would be legal, but we express it in a way which is not legal.

6769. I suppose the secretary of the Board gives some assistance?—Yes. The secretary is most valuable, and it is a matter which we regard as very important that we should have the same secretary to all the Boards, with his assistants, as we have suggested in our report.

6770. *Sir Arthur Pease*: The fact is that after you have drafted your Order those who have been in negotiation or have taken part in the decision really want a fresh mind to go through it, to see that it actually expresses to the outsider what you mean? Is not that it?—It is more a question, I think, of a legal mind to see that it is in keeping with the Act of Parliament and with the law generally. We know what we want, but we are not lawyers, and we cannot express it in legal language which will run the gauntlet of an action in the Courts, whereas if we had had the advantage of a lawyer sitting opposite to us we should be able to say, "Now we want to say this," and he would say to us, "You cannot say that, it is not legal"; but we would say to him, "You see what we want to get at; can you express that in legal phraseology and legal form?" and he would say to us, "I can get it pretty near to what you want," and he would then put it down. The difficulty is that sometimes some of these matters are matters of the most careful adjustment between the two sides; it is a sort of bargain, and perhaps the legal adviser of the Ministry will cut out something which is an essential part of that bargain, and destroy the whole equilibrium of the bargain, whereas if we had known beforehand how far we could go, or how we could interpret the thing and how we could put it, we could arrive practically at the same bargain in legal terms.

6771. You would like that advice before the Order is made by the Board?—We should like the advice at the time of making the proposal, if possible.

6772. Then you say: "In any purely technical matter, or one where a custom of the trade is involved, the Trade Board decision should be final." What kind of question have you in mind there?—I would suggest any question of scope which is purely a question of technique.

6773. We have rather dealt with scope, have we not?—Yes.

6774. Then with regard to your paragraph No. 5, I think we have also dealt with that in the course of the discussion?—Yes.

15 December, 1921.]

Mr. S. W. PASCALL.

[Continued.]

6775. The two points are that the appeal which now lies to the Minister of Labour, should be to some non-political authority, and that side voting should be allowed; and finally, you have a general recommendation that Trade Boards should be more self-governing, and the procedure should be freer than at present?—Yes, quite.

6776. Although you have been expressing your own views, you also hand in a memorandum by the Trade Boards Employers' (Consultative) Council?—Yes.

6777. That expresses their views, and that shall be printed as an appendix to your evidence.—If you please.

6778. *Sir Arthur Pease*: With regard to the trade union representatives, I would like to get your point clear, if I may. You do not at all object to a trade union representative who really represent that trade and is acquainted with it, but what you do object to is a trade unionist who does not understand the trade being put upon the Board?—No, I have not any objection to a trade unionist who does not understand the trade being put on the Board so long as other people are put on as well. I do not think that my friend Mr. Bevin knows very much about making chocolate, but he is one of the best labour negotiators that I have ever met to work with. He never surrenders a point, but he is like an able lawyer—he not only knows his own case, but he knows yours, and you can talk to him in a way in which you cannot talk to a man who has not the advantage of his wide experience, however skilled as a cocoa maker he may be.

6779. *Chairman*: But you would not have the Board entirely composed of Bevin?—No, certainly not. One is quite enough.

6780. *Sir Arthur Pease*: I asked that question, because that is a point which has been made by several other witnesses.—I think the point about which we are very anxious is that we do want to have a certain number, perhaps half and half.

6781. They did not object to the trade union leader who had been brought up in the trade, but they did object to the trade union leader who had

been brought in without any intimate knowledge of the details of that particular trade.—I would rather have an able trade union leader who had no knowledge of the trade conditions than a less able one, however great his knowledge of the trade was; but on one Trade Board I was told that there were only three persons out of thirty who had had any previous experience of the trade. I do not know that it is a fact; I am simply repeating what I have heard. Of course, that is too small a proportion. If there are twenty-seven out of thirty who are just skilled advocates, it seems rather a waste of material; but in our case it is rather the other way round; I think we have only three or four trade union officials, and all the rest are people who have had experience, so that we have not any grievance, and we should not have any grievance if there were rather more, in our opinion.

6782. *Mr. Bell*: Supposing it were the fact that out of thirty there were only three who understood what they were talking about, would not that be a very inefficient representation, and prejudicial to the workers' interests?—I should think so.

6783. So that from the employers' point of view they would have no real reason for objecting to the workers being inefficiently represented?—I think they would, because I take it that it is very bad for the workers if they get a wrong rate fixed. If they get a rate fixed too high, so that it causes great unemployment in the trade, I think that is just as bad for the workers as it is for the employers.

6784. Perhaps you misunderstood my question. I agree that it would be bad for the workers, but would it not be good for the employers?—No, because I think it is to the employers' advantage to have the workers' side well balanced, and I believe it is to the workers' advantage to have the employers' side well balanced.

Mr. Bell: I am pleased to hear you express that opinion.

Chairman: We are much obliged to you for your evidence.

(The Witness withdrew.)

Mr. EDMUND HENRY MATTHEW and Mr. THOMAS MARSON TILL, called and examined.

The Witnesses handed in the following statement as their evidence-in-chief:—

EVIDENCE to be given on behalf of the BRITISH BRUSH MANUFACTURERS' Association by EDMUND HENRY MATTHEW, Director of The Briton Brush Co., Ltd., President of the Association, and THOMAS MARSON TILL, Chartered Accountant, Secretary of the Association.

The employers in the brush and broom industry are in favour of the Trade Board principle of settlement of wages, and consider the presence of Appointed Members on fixing the lowest minimum rate for unskilled workers is desirable. While the employers consider that the Trade Board should have the power to fix rates for skilled labour, owing to the want of knowledge of the Appointed Members of the various degrees of skill required for different operations, they should not be able to give their casting votes on the question of skilled rates in the case of dispute.

Our Trade Board also objects to certain of the powers retained by the Minister of Labour (referred to lower down) and considers that more freedom should be given to Trade Boards.

Administrative machinery of the Trade Board System.—The employers in the brush and broom industry consider that the work of establishing and administering Trade Boards should be transferred from the Ministry of Labour to the Board of Trade.

All questions of scope should be decided by the Trade Board, instead of as at the present time by the Minister of Labour.

The Brush and Broom Trade Board is strongly in favour of all the recommendations contained in the Report to the Minister of Labour of the Committee

appointed to make recommendations with respect to the work of Trade Boards and the administration of the Trade Boards Acts dated the 4th March, 1921, being adopted by the Ministry of Labour, which includes the establishment of an inspectorate at the offices of the Trade Boards. This Board is very disappointed that the Minister treated this Report with such scant consideration.

The Board appreciates the need for the number of inspectors to be limited owing to economy in the public services, but considers that the Minister should, if desired by a Trade Board, authorise a person nominated by the Trade Board to make the necessary inspection if no inspector is available.

The result of all inspections should be reported to the Board, and the request of the Board that a prosecution should be initiated should be complied with, unless the Minister's legal adviser recommends to the contrary.

The Board should determine the length of notice required in respect of any particular proposal, but no notice should exceed 21 days. The Minister's confirmation should not be withheld unless within 14 days in his opinion any objection is sufficiently serious to refer it to a body composed of a Chairman, two employers and two workers from another Trade Board to hear evidence and report.

Amendments in the present Trade Board system are also required with regard to Trade Board machinery, which will yield a quicker response in the alteration of wages to follow changing conditions in the industry, *e.g.*, the impossibility of issuing a new proposal until a previous proposal has not only been confirmed but the rates contained therein become effective.

Personnel of Boards.—The employers, apart from desiring a speeding up of the present system of filling vacancies, see no reason to complain of the method of appointment of employers' representatives, understanding that the Minister appoints those who are recommended to him by the employers' associations, and if he does not agree with those recommendations, refers the matter back to the employers' associations for further nomination.

They do, however, consider that it should be a rule that all representatives, with the exception of the Secretary of each side, should be persons at present or recently working in the Trade.

The employers are of opinion that the principle of Appointed Members should be retained. Appointed Members, especially the Chairmen, should not be whole time officials, but they should be persons of a judicial frame of mind with a knowledge of industrial conditions in their widest sense, and not engaged in industry. Obviously they should not be actively associated with any political party.

The employers in this industry consider that a joint request from both sides of a Board for the removal of an Appointed Member should be complied with, as he would be useless if he does not possess the confidence of either side. For the same reason a request repeated on more than two occasions from either side, should have the same effect with reasonable safeguards against the work of the Board being held up by repeated objections.

It is most important that Appointed Members should be compelled, as a part of their duty, in the event of equal voting, to give a casting vote, and not, as has occurred, to allow a motion to go by default rather than commit themselves to an expression of opinion.

While conciliation should play a great part in their duties, Appointed Members should be compelled, if conciliation is impossible, to give a decision.

It is desired to emphasise very strongly the unsatisfactory method by which the definition of a Trade Board's duties is arrived at. The result in our trade has been that certain operations if performed in a brush factory are governed by the rates fixed by the Brush and Broom Trade Board, but if performed outside a brush factory, they are free from any such restrictions, and consequently certain brush manufacturers are thereby considerably prejudiced.

It is strongly recommended that as all operations in the brush and broom trade in this country have to be paid for at the rates laid down by the Trade Board, that no brushes should be imported from other countries unless similar equal rates are being paid for their manufacture.

6785. *Chairman (to Mr. Matthew):* You are Director of the Briton Brush Co., Ltd., and President of the British Brush Manufacturers' Association?—*(Mr. Matthew):* Yes.

6786. *(To Mr. Till):* And you are Secretary of the Association?—*(Mr. Till):* Yes.

6787. What is the view of the employers of the Brush and Broom Industry as to the Trade Board system; are they in favour of the Trade Board principle on the whole?—*(Mr. Matthew):* We are in favour of it on the whole, subject to the reservations given in the evidence which we have submitted.

6788. We will take your statement, and make it part of your evidence, and ask you a few questions about it. You first say that the employers consider that Trade Boards should have power to fix rates for skilled labour; that means, of course, rates above the minimum for the lowest class of labour?—Yes.

6789. But you think that in those cases the Appointed Members who have not the technical knowledge as to the amount of skill required for each process should not have a casting vote?—That is so.

6790. So that the rates for skilled labour would be fixed by agreement of the two sides?—Yes.

6791. Leaving the minimum rate for the lowest class of labour to be fixed as at present by the vote of the whole Board, including the Appointed Members?—That is so.

6792. You say something about the transference of the work connected with Trade Boards from the Ministry of Labour to the Board of Trade. Have you anything more to say on that?—Our reason for that is that we have not a very high opinion of the efficiency of the Ministry of Labour. We were very disappointed with the way they treated the report which was made by the Committee at the end of last year, and further we have the feeling that the Ministry of Labour is, from its name, ostensibly set up—I do not say actually, but ostensibly—to consider one side or one class of the population of this country only, and that it approaches matters with a bias in favour of that side, and we consider that the Board of Trade would bring a more impartial feeling to bear.

6793. Have you any experience of the Board of Trade?—Not personally, because our Trade Board was only established in the last two years; but we are confirmed in our opinion by those employers who served on Trade Boards under the Board of Trade, who say they were far better satisfied than they are at the present time.

6794. I do not think we need discuss that further. Questions of scope, you say, should be decided by the Trade Board. Would you leave a Trade Board entirely free to say that any class of labour came within its jurisdiction?—Yes.

6795. Is not there some risk that the Trade Board might be tempted to enlarge the jurisdiction too much and extend its rules to workers and employers who were not strictly within the definition of the Board?—I take it that the Trade Board would merely express its opinion or give its decision as to whether certain processes were comprised in the definition of the Trade Board. If those processes were not comprised in the definition the Trade Board could not compel the employer or the worker to take notice of its decisions.

6796. Then you would leave the expression of opinion of the Trade Board as an expression of its opinion only, and not make it legally binding?—Well, I mean that the Trade Board could not include a trade which was outside the scope of its definition, and if inadvertently it did so, obviously that trade would not be included merely because the Board said it should be.

6797. Your Board is in favour of the recommendation of the Committee recently appointed by the Ministry of Labour as to administration?—Yes.

6798. Then as to inspection, you think that the Minister might authorise a person appointed by a Trade Board to make the necessary inspections?—The reason for that is that on several occasions, in discussing the matter of inspection, it has been pointed out to us that the Minister has not sufficient inspectors to make the necessary enquiries, and we appreciate that, owing to the need for economy in the public service, he cannot put on an unlimited number of inspectors. Therefore, when a request for inspection has been made there has been considerable delay before the request has been complied with, and we think when the Minister says the inspectors are so booked up for the next month or two that they cannot make enquiries, he should be empowered to give a person nominated by the Board his authority to go and make those enquiries.

6799. By whom would he be paid?—He would be paid by the Ministry.

6800. He would be appointed simply for the purpose of that one inspection—*ad hoc*?—Yes, *ad hoc*.

6801. It might be rather an expensive system, might it not, if it were widely used?—The Minister would have the option of declining to make the appointment if he thought the Board's requests were unreasonable.

6802. *Sir Arthur Pease:* What sort of person could you get to do that inspection?—We could probably find someone on the Trade Board or someone whom the Trade Board knew who was considered a fair and competent person to do the work.

6803. It would be hardly fair to send another employer into the office to examine the other man's books, would it?—No, we certainly should not send another employer. We might send, for example, the

15 December, 1921.] Mr. EDMUND HENRY MATTHEW and Mr. THOMAS MARSON TILL.

[Continued.]

Assistant Secretary of our Trade Association, who is not engaged in the trade in any way.

6804. If that were done it would not mean additional expense?—No, beyond, probably, out-of-pocket expenses.

6805. *Lord Weir*: Probably the cheapest thing would be to have proper inspectors and a sufficient number of them?—No, I think the point rather is that when a new Trade Board is established the need for inspectors is very considerable. After it has been working for a short time things have got into order. Employers at first do not perhaps understand the meaning of the regulations, and they need assistance. After the Board has been in operation for twelve or eighteen months it would work more or less automatically, with occasional visits from the ordinary staff. You might want an extra staff to begin with.

6806. *Chairman*: Your Board has quite a large number of Orders, and they are rather complex, are they not? If you had a special inspector he would have to master the whole of this literature before he was competent to make the inspection?—Quite.

6807. It would be better that, if possible, you should have an adequate number of trained inspectors, who would be quite independent, and who could do the work, if you could get an adequate number?—If we could get an adequate number. We do not suggest this in preference to a trained inspector; it is only when we are told that we cannot have a trained inspector, and then we want a stop-gap.

6808. *Sir Arthur Pease*: Of course, distance might have something to do with it, too. You might be able to get a local man in the North of Scotland instead of having to send someone all the way from London?—Yes.

6809. *Lord Weir*: In your trade do you think you have much evasion?—We have some cases. Of course, we do not have as full reports as we should like to have from the Minister of the inspections made. We have had reports of evasions.

6810. *Chairman*: You think the results of inspection should be reported to the Board, and that where the Board advised a prosecution, a prosecution should follow unless the legal adviser to the Ministry is of a contrary opinion?—Yes.

6811. Then you deal with the length of notice; you would leave that to the Board, I gather?—Yes.

6812. Is not it better to have a fixed time; it may be a shorter time than that now proscribed?—If the time is sufficiently short, that might answer the purpose without giving the Board the option; but certain small points crop up merely of a practice which has been so regularly established, and so generally recognised, that it seems hardly worth while to give notice at all.

6813. It has been suggested to us that a month should be allowed for objection in the case of a first rate, and fourteen days in the case of a variation of the rate: Would those times appear to you to be suitable times?—We recommend that the extreme length should be twenty-one days, but I think the time you mention would be appropriate. We realise that the first rate requires more consideration than the later ones.

6814. Then you say: "The Minister's confirmation should not be withheld unless within fourteen days any objection is sufficiently serious to refer it to a body composed of a Chairman, two employers and two workers from another Trade Board." Do you mean that the Minister should be bound to refer every objection in that way?—No, not every objection, but at the present time he considers the objections himself. We consider it would be more advantageous, if he considered the objection sufficiently serious, to refer it to someone with a knowledge of Trade Boards generally.

6815. Would you suggest that members of another Trade Board should be chosen? Would it not be better to have some central body representing all the Trade Boards?—Well, I had in my mind a panel composed of people on different Trade Boards from whom people would be selected to sit on this body.

6816. But you would probably agree that the Minister must be ultimately responsible, because he must answer to Parliament for his action?—I should say that if this body to whom the matter was referred gave a decision or recommendation one way or the other, the Minister should not have power to act in a contrary manner.

6817. You mean he must confirm the rate if that body so determined?—Yes.

6818. Who would look after the consumer?—I suppose the Appointed Members of the Trade Board can be looked upon as representing the consumer to a certain extent, and further, except in trades where there are monopolies, such as gasworks or railways, I do not think the consumer requires very much protection. The experience in our trade is that it is we who want the protection, and not the consumer. There is a general short time working in our industry at the present time because the consumer prefers to buy foreign-made articles at a lower price than that at which we can produce them here. As a matter of fact, we want a good deal more protection against the consumer than the consumer wants protection against the manufacturer. I mean when there is open competition in the trade; not, of course, when there is a trust or a monopoly.

6819. In your case there is open competition and there is foreign competition?—Yes.

6820. Which in itself gives the consumer some protection?—Yes.

6821. But you can conceive that there may be trades where there is not that competition, and where possibly the employers and the workers might combine to put rates up and pass them on to the public?—That is so.

6822. There the consumer might require some protection?—He would in those cases.

6823. You think the Appointed Members give him some protection?—I certainly do.

6824. Although you think they might be over-ruled by the joint votes of the two sides?—Yes. Then I may mention a previous point you mentioned with regard to the fourteen days for a notice. The only objection to a period less than twenty-one days is that it is necessary, perhaps, as a result of a Trade Board to call a meeting of the employers on the one side or the workers' representatives on the other side, and if they only had fourteen days from the time of the notice to the time of sending in objections the fourteen days may not be sufficient.

6825. It may be necessary to call what meeting?—The employers may wish to call their representatives from different parts of the country to discuss the matter, or the workers may wish to do the same on their side.

6826. Then do you suggest that it should be possible to issue a new proposal even though the other proposal has not yet been confirmed?—Yes.

6827. That cannot be done at the present time?—No.

6828. The facts may so change in the interval allowed for objections that by the end of that time even the rate may be not a suitable rate?—That is so, or it may be held up at the Ministry of Labour for consideration for such a long period that the second rate should have been in operation before it can under present circumstances be in operation.

6829. Then as to the personnel of the Boards, you are satisfied with the present method of appointing the employers' representatives, but you think that all representatives, except the Secretary on each side, should be persons working or who have worked in the trade?—Yes.

6830. Would not that be restricting it too much? I do not know whether you were here when the last witness gave his evidence, and whether you heard him say that it is an advantage to both sides to have skilled persons to argue the points. Do you differ from that?—Well, of course, we only have experience of our own trade, and we may be fortunate in the representatives on the workers' side in our industry. We have a Secretary of the workers' side, Mr. Mallon, who is not in the trade, and we have the Secretaries to the Trade Union, the old Secretary of the Trade

15 December, 1921.] Mr. EDMUND HENRY MATTHEW and Mr. THOMAS MARSON TILL.

[Continued.]

Union and the present Secretary of the Trade Union, neither of whom at the present time are working at the bench, and we find them on the whole very broad-minded people and easy to work with, and whatever the experience of other Trade Boards may be, we are not at all dissatisfied with the workers' representation on ours.

6831. Then you would not really confine the representation to one man, the Secretary; you would allow three, as you have now?—Those two gentlemen I have mentioned have been in the trade themselves, though they are not at the present time. What we should object to would be a person who had taken up the question of Trade Boards as a sort of means of livelihood, and who really had not any acquaintance with the trade.

6832. *Mr. Bell*: It would be a very precarious kind of livelihood, would not it?—I cannot say so; the Trade Boards are increasing at the present time, and it might be quite a happy one.

6833. *Sir Arthur Pease*: You say they should all have been engaged in the trade except one?—I think it is desirable that there should be one on each side. The employers very often have a Secretary of their Association who is not a manufacturer, and I think it is desirable. For instance, when two years ago our Trade Board was started, Mr. Mallon was appointed because he was conversant with the manner in which Trade Boards were conducted, and he was of considerable assistance. At the present time he does not attend so frequently, because the workers' side is more acquainted with the method of dealing with the matter.

Chairman: Then as to Appointed Members, you think that they should be retained, but they should not be whole-time officials; they should be persons of a judicial frame of mind with a knowledge of industrial conditions. That, perhaps, we need not further deal with.

6834. *Mr. Pugh*: There is just one point there. There has been an objection expressed before the Committee as to the Appointed Members. A suggestion has been made that instead of having Appointed Members, as there has to be a decision where the parties cannot come to a decision and someone has to decide, there should be some form of Court set up: What would your view be on that?—We are perfectly satisfied with our Appointed Members. We recommended in a former part of our evidence that they should not deal with skilled rates, but otherwise we are quite satisfied with the Appointed Members.

6835. And to adjust differences between the parties which cannot be settled by themselves?—Yes. They have a very happy way, as a rule, of bringing agreement between the parties.

6836. *Chairman*: Then you suggest that a Member might be removed at the request of both sides of the Board. Have you ever heard of a request of that kind?—No, Sir, but I think if one were made he should be removed.

6837. Do you think that any Appointed Member would be willing to stay on a Board if both sides objected to him?—I do not suppose he would, but I think he could if he wished to.

6838. *Mr. MacCallum Scott*: Is this merely a theoretical point, or does it relate?—It is quite theoretical; entirely.

6839. *Mr. Bell*: So that you are seeking to remedy a fault where there is not one?—Well, perhaps I may put it in this way. This is the result of an enquiry which was sent out to enquire whether individual employers had any suggestions to make as to the methods of appointment of the Appointed Members, and they stated they had nothing to complain about. We also asked whether the Trade Boards should have the right to choose their own Appointed Members or should have any powers of dealing with them, and this was our reply; but it really does not arise for practical purposes.

6840. It is really a matter of a Board having certain rights which it can exercise if it likes?—Yes.

6841. *Chairman*: Then you suggest that Appointed Members should be compelled in the event of equal voting to give a casting vote?—Yes.

6842. That applies, I suppose, to the minimum rate and not to the skilled rates?—Yes.

6843. And then you say that the definition of Trade Board duties is rather unsatisfactory. You say: The result in our trade has been that certain operations if performed in a brush factory are governed by the rates fixed by the Trade Board, but if performed outside are free from the restrictions?—Yes.

6844. What kind of operation is that?—That is in the preliminary processes of shaping and boring timber, and, of course, the difficulty in dealing with that is that you would be introducing into a saw miller's works an additional Trade Board to the one he is already operating under. A great many trades complain that they have a great many Trade Boards working in the one factory, and I do not see how you can get over that difficulty.

6845. This work is sometimes done in the brush factory?—If you have a large and well-equipped factory you do all processes of shaping and boring the holes into timber yourself, but certain smaller manufacturers buy these boards shaped and bored from some outside firm, and if that outside firm does not make brushes the employer is allowed to pay what rates he likes unless he is governed by some other Trade Board, which, as it happens, he is not.

6846. It would be very difficult, would it not, to apply the brush rates to that man while he was making those boards?—I admit it would, but at the same time we feel the competition.

6847. *Sir Arthur Pease*: Do the rates as a matter of fact really vary very much?—Well, we hear of very low rates being paid in certain parts of the country for the woodwork industry.

6848. *Lord Weir*: I notice in your schedule of rates an enormous number of piecework prices?—Yes.

6849. Apparently covering the whole of your industry. Do you consider it a satisfactory thing to give the force of law to piecework prices? Does it tend to stultify progress in developing their methods?

—I think that perhaps it does, in some cases at any rate. We may say that the reasons for those piecework prices being confirmed by the Trade Board were that for a great many years we have had a Trade Association which has agreed piecework prices with the Trade Union, and we were always confronted with the difficulty that whatever the figures are we are obliged to pay them, whereas people outside are not obliged to pay them. Therefore, we welcomed the opportunity when the Trade Board came along to compel all people outside the Association to pay the rates which the members of our Association were already paying.

6850. What happens when a man has a better way of doing a thing; how does he arrange matters then?—I do not think that quite crops up, because the piece rates only can be applied to certain specified ways of making an article. If you manufacture it in a different way from the way for which the piecework price is laid down, you are not governed by the piecework price.

6851. You then fix a piecework price for yourself with your workpeople?—The piecework prices laid down there govern almost entirely hand operations, where the operation is performed by one individual from beginning to end. If you sectionalise your work or introduce machinery, then piecework rates cease to apply.

6852. *Mr. Bell*: But with a piecework price in operation is not it the fact that the increased skill of the worker would enable him to finish the process more quickly, and at the week-end he would have an increased wage owing to his increased skill?—Yes—you mean as compared with what?

6853. That is, the production of the better-skilled worker would be greater, would it not?—Yes, but I do not think I quite follow that. If you have a piecework basis rate and the employer has to make a piecework rate from it, he obviously applies the same rate, I imagine, to all his employees, and the more skilled man would earn the higher wages.

15 December, 1921.] Mr. EDMUND HENRY MATTHEW and Mr. THOMAS MARSON TILL.

[Continued.]

6854. But if you adopt a piecework price so as to give a wage of, say, 40s. a week, it must come to that; that is to be the minimum; but if a worker has more skill than some other worker he is not tied down to the minimum price; he is working at piecework rates, and his wage will be considerably higher than the minimum?—There is no minimum. If we make a piecework rate that is paid to the worker; there is no minimum rate.

6855. It must, at any rate, reach the minimum that has been fixed?—Yes, it should do.

6856. And if with greater skill the production is greater, then, of course, it goes up above that?—Yes.

6857. *Sir Arthur Pease*: Are these piece rates standard rates or minimum rates really?—Standard rates.

6858. *Lord Weir*: These are piecework prices for specific operations?—Yes, they are not rates, really, they are prices.

6859. *Chairman*: Have you a piecework basis time rate as well?—Not for men.

6860. You have for women?—For women, yes.

6861. *Mrs. Lyttelton*: Are there a large number of women employed in the trade?—Yes, considerable numbers.

6862. More than men?—No, I think not. (*Mr. Till*): I should just like to emphasise the criticism that the whole machinery of the Trade Board is too slow, so slow in fact that the Trade Board is beginning to defeat its own object. It lags very far behind the changes that take place in industry, and as the procedure is to-day it cannot do anything else. You get a trivial alteration and it takes three months before effect can be given to it; it may hold up a proposal so that it is six months behind what you really want to do. If we are going on at that rate the Trade Boards will get very unpopular, I am afraid, and they will not meet the object for which they were formed.

6863. *Chairman*: I suppose the need for change often exists and becomes acute before it is possible to bring the Trade Board into action?—It is often acute before the Trade Board meets, and then you have to let your proposal time expire before the Order can be made.

(Adjourned for a short time).

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON, and

Mr. DAVID DOUGLAS, called and examined.

The Witnesses handed in the following statement as their evidence in-chief:—

SUMMARY OF OBJECTIONS TO FLAX TRADE SUBMITTED BY THE SCOTTISH FLAX SPINNERS' AND MANUFACTURERS' ASSOCIATION AND KINDRED ASSOCIATIONS.

1. It is estimated that two-thirds of the machinery in the trade is silent and that only one-third of the workers are employed, most of whom are only working 24 hours per week, while the normal number of hours is 48 hours per week. The whole flax industry is in a state of great depression, which commenced about August, 1920, and gradually increased, and it has been pretty much in its present position for a whole year. Much distress prevails among the workers, and the employers have all been losing very heavily. Employers in many instances have lost one-half of their entire capital within the last eighteen months.

2. As an example of the present state of matters it may be said that one of the representatives who will give evidence carries on all branches of the trade, viz.: bleaching, spinning and weaving, the full complement of workers being about 2,500, while for the last fifteen months his firm have only been able to employ 700 to 800 hands, and that only for 24 hours per week.

3. The Flax Trade may be said, roughly speaking, to consist of three divisions, viz.: heavy goods, medium goods and light goods. In the North-east of Scotland District, including Dundee, they are mainly engaged in the heavy and medium ends of the Trade, and manufacture canvas for commercial purposes and also certain classes of domestic goods, but are in no sense in the luxury line. The finer end of the Trade is carried on mainly in Fifeshire. Their goods go to all parts of the world, and they have to compete against the French, Belgians, Italians, Germans,

6864. *Mr. Bell*: What do you mean by a trivial alteration?—Supposing we make a trivial mistake, if you like, in a proposal, and you just want to alter it either up or down, you cannot do it without issuing another proposal.

6865. *Mr. Pugh*: And without having objections, too?—Yes.

6866. And consequently you have all the procedure to go through again?—You have all the procedure to go through all over again for a matter of detail on which we are agreed on both sides, and on which the Appointed Members are agreed also.

6867. *Mr. Bell*: You are not referring in any way to an alteration in rates of wages?—Yes, it might be.

6868. But that would not be a trivial alteration, would it?—Yes; the workers themselves would agree that it is trivial. It might have been a slight oversight. We did have one slight oversight; I cannot tell you what it was at the moment, but it was quite trivial, and it had to be the subject of a new proposal to put it right.

6869. You are probably aware that in some of the best-organised industries it is very common to come to an agreement that cannot be altered for six months or even twelve months from that date, by mutual agreement of the two sides. Is there anything in the Trade Boards any worse than that?—I take it that that is a special agreement, but in this case we are trying to fix rates, and we do fix rates, but owing to a little misunderstanding or a little error which you cannot adjust, it may hold up the whole proposal if you want to adjust it.

6870. That is, the agreement itself is held up?—The agreement itself is held up; the existing machinery of the Trade Board does not admit of anything else.

6871. *Mr. Pugh*: Then your point is that where the Board on both sides is definitely agreed to something, there ought not to be that delay in giving effect to it?—No; if you get men round a table who are definitely agreed you ought to have power to give effect to the agreed adjustment.

Austrians, Japanese and others, not to mention other firms in Scotland and England. The Irish firms are practically all engaged in the fine end of the Trade.

4. The conditions under which the Trade is carried on are greatly diversified owing to the geographical situation and local conditions. Some works are large and modern and advantageously situated as regards railway and steamship service, while others are small and situated in country districts with few, if any, of these advantages. Some works produce specialities, which are almost indigenous, finding a special market of their own, while others only make ordinary goods. The cost of transit is much greater in some cases than in others, while the cost of living varies a good deal according to locality. In no sense can the trade be said to be of a unified character, or placed on a level footing, and accordingly a uniform standard of wages cannot be equitably applied. A living wage in one part might be inadequate in another and *vice versa*. The manufacture of heavy sailcloth and the manufacture of fine damasks have no points of similarity except, perhaps, the use of flax. To say that the conditions governing employment are the same in Dundee as they are, say, in Freuchie is obviously absurd. Geographical position adds a sum equivalent to 10 per cent. of the wages paid in some cases, perhaps more. This means that for precisely similar goods one firm can pay 10 per cent. more in wages or reduce the price of the goods by an equivalent sum. This means that when it comes to a cut in prices and keen competition the generalised firm must fall out. The sequence of the collapse of the various towns in the North East of Scotland is a practical proof of this.

5. The Flax Trade has been carried on in Great Britain for hundreds of years and the old hand-spinning and hand loom weaving was a feature of the

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

country life up to the introduction of steam about 80 years ago. The trade has had many ups and downs in its time and has never been a fortune making industry. It has, however, a very honourable record and has in its time given healthy respectable employment to large numbers of honest, contented, capable people, who have made for stability and welfare of the country in their day and generation. For some years prior to the war, a steady satisfactory business was done. Works were going full time as a rule, and employers were making modest profits after paying an economic wage, by which is meant such a wage as the business can afford to pay after allowing a reasonable return on capital. The workers were in the main contented, the best proof of which was that there were very few disputes with their employers, strikes being almost unknown. If an employer did happen to make a large profit at any time the history of the trade proves that this was due to fortunate buying of raw material, which always fluctuated a good deal in price, according to the crop being small or large, which was mainly due to weather conditions. In times of war prices rose, and the employer certainly had his opportunity then, as there was no Excess Profits Duty to pay, and the rate of Income Tax was a dream compared with the present nightmare of taxation.

6. No one ever suggested that the Flax trade was a sweated industry, and it was never proposed to have same placed under the Trade Boards Act of 1909, the purpose of which (to deal with sweated industries) was generally approved.

7. During the war, the Flax trade, excluding the fine end, became extremely busy as the Government requirements were very extensive, and eventually all the works went under Government control and were employed solely, or almost solely, on Government orders. The Government, through the Flax Control Board, controlled the supply of raw materials, and allocated same as they saw fit at their own prices. Industrial Councils were set up under D.O.R.A. to arrange wages, which by November, 1918, had risen 150 per cent. on the average. The main difficulty of employers during the war was not the rate of wages, but the scarcity of labour, as latterly all able-bodied men of military age were fighting. Inexperienced youngsters were able to command wages up to 40s a week, which taught them a very bad lesson, but there was no help for it at the time. Some employers certainly made large profits, but Excess Profits Duty and Income Tax took the bulk of same, and most of what was left went into machinery and raw material, of which employers were obliged to keep stocks purchased at very high prices, the effect of which is seriously handicapping them to-day.

8. Little, if any, attention was paid to the passing of the Trade Boards Act of 1918, by the business community, as employers were only concerned with winning the war at the time, and no one in the trade contemplated that the trade would be brought under its operation.

9. The Flax and Hemp Trade Board was constituted in 1920. At that time the trade was extremely busy, and employers were given to understand by the Minister of Labour that they would have to choose between a Trade Board and Industrial Councils. None of them foresaw the tremendous depression in the trade which has since taken place, and not having seen a Trade Board in operation, it was imagined it might work well enough. It was seen realised in practice that the Trade Board was far too cumbersome, slow, and inelastic in its methods of working to be of any benefit to either employer or employee. It interferes with individual enterprise, and enterprise is sorely needed at the present time to help to restore prosperity to the trade.

10. The workers are well aware that their employers are losing very heavily, and the great majority of them are willing to adjust the rates of wages with their individual employers, according to their respective needs and circumstances, to help them to carry on and tide over the present depression. But the

Trade Board absolutely precludes such freedom of contract. The workers of Messrs. Richards, Ltd., Aberdeen, voluntarily petitioned the Minister of Labour, and also the Prime Minister, to withdraw them from the operation of the Trade Board, but without effect. The workers of Messrs. Paton, Montrose, did the same thing some months ago with the same result, and their works were closed down for about three months. The workers of Messrs. David Webster & Son, Bervie, also made a similar application to the Minister of Labour, but without result. Their works had to be closed down for a whole year from June, 1920, when the wages were first fixed by the Trade Board. But for the operation of the Trade Board, there is no doubt that agreements with regard to wages would readily have been arrived at between employer and employee, much public money would have been saved in the way of unemployment allowances; and additional contracts would probably have been secured. Wages represent in some cases over 50 per cent. of the selling price of the finished article, and if the price is to be reduced, which is the only way to attract business, there must be a reduction in wages, as the other costs of production have already been reduced to the utmost possible limit.

11. It is not alleged that the present depression in trade is due entirely or mainly to the wages fixed by the Trade Board, but the present wages are not on an economic basis at all, and the trade cannot afford to pay them. It might not be possible for some time, by the reduction of wages, to make contracts profitable, but a good deal of capital could be saved in this way, and so employers would be enabled to continue the struggle. For example, at a time like the present, when sales are subsidised from capital, and wages augmented therefrom, the greater the drain the shorter time the power to subsidise will last. Take a firm paying £1,000 a week in wages losing £200 a week, and having liquid reserves of £10,000. By the end of one year their reserves will be exhausted, and employment must cease. The workers will have received, say, £50,000 during the year. A 10 per cent. reduction in wages would have reduced the loss to £100 a week, allowing the firm to employ for two years in place of one, and giving the workers two years' wages, or £90,000 in place of £50,000—the firm at the same time having a two or one better chance of being able to continue employing.

12. A fixed minimum rate of wages is not good for either employer or employees. One effect is that many respectable workers—some elderly, others not so efficient as their neighbours—have to be dispensed with. Again, if two workers are drawing the same wage, and the one finds that the other is producing considerably less, the tendency is for the better worker to do less, which means that production goes down. The general effect of a fixed minimum wage is to reduce production. State interference or intervention between employer and employee is pernicious in its effect and strikes at economic working. In times of trade depression it is required to cut very keenly, and in order to do this it may be necessary to revise wages at short notice. Quick decision is essential in business, and Trade Boards do not move quickly. It takes months to obtain a decision from a Trade Board, and this to business people is no use. The 1918 Act prescribes that the Trade Boards Acts are only to be applied by the Minister of Labour to any trade which he considers does not have adequate machinery for the effective regulation of wages throughout the trade, but it is submitted that in the flax trade there is ample machinery, as the employees are either members of trade unions or have associations of their own which enable them to act collectively for their protection. The employers are also well organised.

13. It is stated that the existing Acts make sufficient provision for any trade being withdrawn from the operation of a Trade Board, because employers can make application to the Minister of Labour, who, if of opinion that the conditions of

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

employment have been so altered as to render the application of the Act to the trade unnecessary, may make a Special Order releasing the particular trade. This, however, leaves the matter absolutely to the discretion of the Minister of Labour, without any appeal. In this trade, repeated application has been made to the Minister, who has invariably replied that, in his opinion, the conditions of employment have not been so altered as to justify the withdrawal. What greater contrast there could possibly be between the conditions prevailing in January, 1920, when the Board was constituted and the present time it is hard to contemplate, and yet the Minister declines to move, and there is no means of inducing him.

14. A knowledge of trade is essential in fixing all production costs. To carry on this trade as all others a consumer is necessary and a knowledge of the consumers' limitations is essential. This is lacking by both Government and Labour members of the Trade Board. The arbitrary fixing of wages, regardless of whether a commensurate return can be got or not has been, and will be productive of unemployment. The idea that wages play such a small part in the price of the finished article, that, in the flax trade they are negligible, is erroneous and when put in practice disastrous. Take a daily example. A wholesale house know that they can sell at a certain price; they find a profit of, say, 1 per cent. necessary on this class of business. It is that 1 per cent. which gives or removes business. In ordinary business in the cheaper lines of goods 1/16d. or in finely cut lines 1/32d. per yard secures or loses the order. Fractions as low as sixty-fourths of a penny are in use. The combined wages paid in spinning and weaving may as already stated represent 50 per cent. of the finished value of the cloth. A practical knowledge of these and other facts is essential in any body which has control of about 75 per cent. of production costs, which is the proportion that wages bear to the total costs of production.

15. The Minister of Labour specified that Appointed Members shall be "Independent persons of standing not concerned with the trade concerned and independent persons without technical knowledge."

16. In the Flax and Hemp Trade Board the persons appointed have been persons without any business experience. It is entirely unreasonable that Appointed Members who have no knowledge of the business or its conditions should have in actual fact the decisive vote in all questions of importance coming before the Trade Board. In actual operation it has been found that the procedure of the Board has approximated to that of a Court of Arbitration with each side placing its demands at a maximum whereby the Appointed Members become Arbiters and generally have to decide all questions including those entirely of a technical nature.

17. Attention may be directed to an important point in connection with the minimum rate. Assuming, say, 80 per cent. of the workers to be ordinary workers in the Trade Board sense, i.e., workers of ordinary skill and experience in the class of goods in question, then a piece rate is acceptable when that percentage of the workers can earn by piecework a sum equivalent to the "piecework basis time-rate." It therefore follows that the other 20 per cent. being sub-ordinary are not employable.

18. With regard to the rates for learners it may be said that for six months from starting a learner is, on the average, unremunerative. It is, on an average, a year before their production reaches 75 per cent. of the average. During that time the work is more or less faulty, and the destruction of material, wages, costs of mechanical power, &c., make the starting of a novice prohibitive. The age distinction should be removed as a worker of 18 years of age, without experience, cannot be offered work at wages lower than an experienced worker at the same age except for the first six months. There are many cases of workers who would be glad to take a lower rate until they became efficient for a higher rate, but the opportunity cannot be given to them as it would be too much to pay for the work done, not to

mention the damages sustained. A further point is that young people who stay an extra year or two at school are prejudiced from getting employment as learners. But for the operation of the age rule a number of girls would have been by this time experienced workers.

19. The inherent principle of Trade Boards that the accident of age gives enhanced value to labour is illogical. It is to be observed that when the practical application of the principle threatens to demonstrate its fallaciousness, the Trade Board requests that it should not apply as in the case of spinners.

20. The inevitable pauses in employment, consequent on the change of machinery from one class of work to another, or arising from a breakdown or any other cause have now to be paid for. For example, if a worker is operating two units of machinery and one becomes inoperative, and is likely to remain so for any length of time, it is now imperative to send the worker out of the works, or pay double price for her production if she is making the piecework basis time-rate. Again, take the case of a fault developing in the motive power which could be repaired in a short time. In the past, in such a case, the workers stood by, and resumed with the minimum loss of time; now it means the emptying of the factory and hours added to unemployment.

21. A rate fixed by the Trade Board remains in force for six months, and in a falling market this delay in adjusting costs and prices makes a present of what business there is to our competitors and so creates unemployment. The effect of this in the future, as in the immediate past, is to stop at once all unremunerative employment. A wages bill of about 150 per cent. above 1914, as at present, will tend to result in a complete closing down. This was foreseen and pointed out in a letter addressed to the Minister of Labour on 18th February, 1921, by Messrs. J. & H. Pattullo & Donald on behalf of the Scottish Flaxspinners and Manufacturers, a copy of which letter is produced herewith. Making to stock, an important factor in securing continuity of employment, and stabilising prices, is not possible to anything like the same extent to-day that it was before 1914. Production costs at present are about 300 per cent. above the pre-war normal, and therefore three times the capital is required. Wages represent about 75 per cent. of the costs of production and wages to-day are the main item left, the reduction of which can cheapen our goods.

22. Fruitless quotations show that prices are too high for business, even when based on the bare costs of production, and even when they are being subsidised from capital. A concrete instance of this is given by a firm. Early this year they were offered a large order. It was found that an experienced weaver of over 18 could not make a wage of more than 25s. to 26s. per week on this work. At that time they had daily applications from weavers wanting work. They could have put a number to work immediately on the above-mentioned order but, obviously, if the worker could only earn an economic wage of 26s. a week, the firm could not pay the prescribed minimum of 32s. The position therefore was that there was work for weavers to earn an average wage of 26s. and there were weavers seeking work who would have been glad to accept that rate but owing to the operation of the Trade Board rates the firm were unable to take the order and the out-of-work weaver was unable to obtain employment.

23. The linen trade in Dunfermline and other parts of Scotland is very seriously handicapped by the Trade Board rates in competition with Ireland. The Trade Board piece rate to weavers is on the basis of 8d. per hour, but in Ireland the Trade Board is a dead letter so far as weaving is concerned and competitors there have been working since July on a 7d. basis, while a further reduction has either been fixed or is being considered. When this Board first came into operation assurances were given that the industry in Ireland would be dealt with on an equal footing, but that promise has not been fulfilled.

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

24. The Flax and Hemp Trade Board came into being at a very critical time. The war boom was ending and orders were increasingly difficult to get.

25. Warnings poured in from all purchasing sources that prices must come down or business would cease.

26. Most employers immediately faced the inevitable and began to cut the loss. If labour had assisted things would have been different, but they threw every obstacle in the way of cheapening.

27. Wages were stabilised on the artificial standard made possible under the monopolistic conditions ruling during the war, and until Europe began again to produce. The first Trade Board enactment came into force in August, 1920. By the end of that month machinery began to be silenced and the workers dismissed. By the end of 1920 80 per cent. of the flax machinery of Britain was silent, but the Trade Board was arranging still further to increase wages.

28. In December, 1920, an increase was passed by the labour and Government representatives on the Trade Board. It was not made operative owing to a compromise being come to between the employer members and the rest of the Board.

29. This compromise was to set up a Committee to report when the trade was in an economic position to have the question reopened—a somewhat tardy recognition that a trade with 80 per cent. of its machinery silent was hardly in a position to shoulder further burdens.

30. The labour leaders maintain that the actions of the Trade Board had no effect in producing the collapse of the industry, they refuse to accept anything but what they choose to call proof. Let the proof of this be applied by removing the industry from the cover of Trade Boards the clamorous opposition to this course by the labour leaders is the measure of the sincerity of their opinions.

Copy letter produced herewith.

1, Bank Street,
Dundee.
18th February, 1921.

Rt. Hon. T. J. Macnamara, LL.D., M.P.,
Minister of Labour,
Whitehall, London, S.W.1.

Sir,

The flax trade in Scotland is in a most dangerous and critical state. Distress unparalleled exists. Thousands of workers are unemployed and in two whole districts every loom and spindle is silent.

Those mills and factories which are working have much of their machinery shut down, are working a shortened week, and have been mostly manufacturing for stock at heavy financial loss.

Government, which urges us to reconstruct and as soon as possible get back to normal conditions, puts one of the greatest obstacles in the way in the shape of the Flax and Hemp Trade Board. This Board is composed of equal numbers of employers and employed, the latter being principally represented by trade union officials and the casting vote is in the hands of the members outside the trade, who are appointed by Government. Wages are the chief controversial point, and the power to pay wages must ultimately rest on the financial stability of the employer. A knowledge of the state of the trade and the prospects of business is absolutely necessary and must be taken into consideration in assessing the burdens that industry can carry. Neither the labour nor the Government representatives can reasonably be expected to know anything about the position of the industry and they are also without knowledge of trade prospects and cannot forecast the result of their enactments. The stabilisation of wages influenced by war conditions without any regard to the amount of work produced for such wages interferes with the normal laws of supply and demand, and any such arbitrary fixing of wages regardless of economic conditions is suicidal. The Board is far too inelastic as it fixes rates which cannot be altered for four months, and it is very unfair to labour, as by insisting on full payment being made even though only half the normal work can be done, it practically compels dismissal of workers. It is also dangerous in that it has assumed

that the flax trade, not only of Scotland but of Britain, is a trade of level excellence, and that it works under equally favourable conditions in all places. As a matter of fact the flax trade in Scotland is not one industry, but an aggregation of trades carried on in diverse places, many of them struggling against the economic conditions which are the result of geographical position. At no one time are all the branches of the flax trade equally prosperous or depressed. The variation may be in the future, as in the past, extreme. The fine damask trade for instance may be fully employed and the heavy sail cloth trade in such a depressed condition that, failing relief from some source, it must close down. Formerly when wages were adjusted between employer and employed unemployment was problematical, now the combination of the minimum wage and the four month currency of wages makes closing down a certainty during periods of depression. In the flax trade the continuity of employment is subject to the power of instantly changing to meet altered conditions, and it should be kept in mind that this trade has to meet and fight Continental, Asiatic and American competition.

Up to the advent of the Flax and Hemp Trade Board it was recognised in wages arbitration that the trade could only exist in outlying districts with the mutual co-operation of employer and employed. With disabilities intensified for outlying districts the Trade Board assumption of equality is disastrous. So long as the large and international character of the Board remains it will be impossible for the Scottish employer to be effectively represented. A reasoned case cannot be put up for the industry as a whole. Each branch of Trade in it must be considered and dealt with as a separate entity, which it really is. The existence of the industry and the employment of thousands depends on the recognition of this fact.

This letter is not dictated by any unfriendly feelings to labour but by a sincere desire to have our mills and factories again running and giving employment to our workers. The trade recognises that labour is entitled to be heard and it also desires to be in close and intimate touch with labour, but above all it desires to shorten the term of the present distress which can only be done by being in a position to take immediate advantage of trade when it re-appears, and this cannot be done so long as the Flax and Hemp Trade Board exists. To-day there is not a fabric made by the flax trade in Scotland which cannot be purchased from other countries at least 25 per cent. cheaper than our cost of production. The present position of the trade is that of 85 per cent. of the spinning and 75 per cent. of the weaving is already closed down and unless the flax trade is to become extinct in Scotland Government must remove the obstacle it has created. At a recent meeting of the whole trade it was unanimously agreed to express the views given above and to demand in the interests of all that the flax trade in Scotland be removed from the list of trades governed by Trade Boards.

On behalf of the Scottish flaxspinners and manufacturers we shall be glad to hear that the demand has been acceded to.

For the Scottish Flaxspinners and Manufacturers,
(Signed) J. and H. PATTULLO and DONALD.

6872. *Chairman (to Mr. Boase):* You are an employers' representative on the Flax and Hemp Trade Board?—(Mr. Boase): Yes.

6873. *(To Sir William Robertson):* You are in the same position; you are an employers' representative?—(Sir William Robertson): Yes.

6874. You come here on behalf of the Scottish Flax Spinners' and Manufacturers' Association, and kindred Associations?—(Mr. Boase): Yes, my Lord.

6875. How many employers do your Association represent?—I think in the Scottish Flax Spinners' Association there are about 60 firms.

6876. What proportion are they of the whole?—I should say about 90 per cent. of the whole of the firms in Scotland outside Dunfermline, which has an Association of its own.

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

6877. What is the position of your industry at the present time?—It is in a very, very depressed state.

6878. What proportion of the normal work are they doing?—I think in our evidence we state that about two-thirds of the machinery is silent, and about one-third of the workers are employed.

6879. To what do you attribute that state of things?—To the general depression of trade, but we also consider that the rates of wages fixed by the Trade Boards have contributed.

6880. Can you illustrate that point, and can you put your finger on any particular rate which has had the effect of diminishing trade?—Yes, I think there are one or two points in our evidence that bring that out.

6881. Perhaps you will come to that later on?—Yes, I should like to come to that later.

6882. Do you carry on more than one branch of the trade?—Do you mean personally?

6883. Yes, personally.—Yes, spinning and weaving.

6884. Are you the person spoken of in the second paragraph as having reduced your staff?—No, that is Mr. Douglas, of Richards', who is also one of our witnesses.

6885. You say in paragraph 3 that the Flax Trade may be said, roughly speaking, to consist of three divisions, namely: heavy goods, medium goods and light goods. In the North East of Scotland District, including Dundee, they are mainly engaged in the heavy and medium ends of the trade, and manufacture canvas for commercial purposes and also certain classes of domestic goods. Those goods go abroad, I understand, to a great extent?—A considerable quantity of them go abroad.

6886. Is there any competition with foreign firms?—There is very severe competition at the present time from France and Belgium.

6887. The wages there, I suppose, are below the level of the Trade Board rates?—Yes, they are below our rates.

6888. Sir Arthur Pease: Could you compare the rates?—They have varied considerably during the last few months. I know that in France about two months ago the employers there made a reduction of, I think, about 30 per cent. straight away. I cannot give you the actual percentage just now; if I had some time I could go into it; I have the figures, but I have not actually compared them. They are very considerably lower than our wages now.

6889. Even without taking into account the exchange?—I think even without taking into account the rate of exchange they are lower.

6890. Mr. Bell: Would you say the workers in France and Belgium are as skilful or as expert as those in Scotland?—I think so, from what I know of them.

6891. Have you any idea, then, of the difference in the cost of production between these countries and Scotland?—Not except in so far as wages are lower, and of course their taxation is lower, so their production expenses must be considerably lower than ours.

6892. Lord Weir: That is, if their methods are equally good and their facilities?—I should think so.

6893. Mr. Bell: That is contrary to the general experience of textile operatives on the Continent as compared with our own?—I am afraid I have no knowledge of that. I have never heard that they were supposed to be worse workers than we are.

6894. I do not say worse workers, but the production is not so good per worker.—I think I have heard that stated; I have no knowledge of it.

6895. Chairman: The Flax Trade is carried on in many parts of Scotland. I understand?—And England and Ireland.

6896. Partly in large cities?—Yes, partly in large cities.

6897. And partly, I suppose, in small places?—Yes, partly in small country villages.

6898. And the rate fixed applies to all?—Yes.

6899. Is that right?—I do not think so.

6900. Are the expenses of living different?—Yes, they vary in the country as against the towns.

6901. Has any proposal been made on the Board for differentiating country from town?—There were proposals made on the Board, and I think at one time

the idea was to go into districts, to divide it up into districts. I think it was felt that it would be very difficult to work with the districts at that time, although I think we are coming round now to the opinion that that would have been the only solution of our difficulties in that way, and really a sort of compromise was made between the labour leaders and ourselves on that matter, rather than have it forced that we should have districts they agreed to a lower minimum wage being fixed.

6902. Is that a minimum wage suited to the country districts?—Well, no; we hold not.

6903. Somewhere half-way, you mean?—Well, it was a sort of compromise, but still we consider it was too high.

6904. Lord Weir: It penalises some districts very severely?—Yes.

6905. Chairman: There is a difficulty in the manufacturing industry in having different rates, is there not? We were told by a previous witness to-day that whereas in the distributive trades it might be quite right to have differential rates in different places, the system would not work so well in a manufacturing industry which was spread over the country.—I have known certain firms in small country districts who have to pay far more for the transport of their goods, have to pay far more for their coal, yet they have to pay the same rates fixed as those who are more advantageously placed, and it seems to me that they must go out of existence. In our evidence I think we say that there is often 10 per cent. difference owing to the geographical situation of various firms.

6906. Lord Weir: Is it not really a tremendous handicap, a 10 per cent. handicap?—A tremendous handicap on the country districts, yes.

6907. And your suggestion is that if you have a minimum rate those businesses will have to go out of existence?—Yes.

6908. Would you look upon that as an entirely bad step?—I think it would be entirely bad, because I think many of those small businesses in country towns are the only means of livelihood of the girls and women in that district. Their men-folk may be engaged in agriculture, or whatever it may be, but that is the only method of adding something to the household wage.

6909. Chairman: I suppose if the minimum were fixed as a minimum for the lowest class of worker in the least favourable district, everything above that being left to agreement, that would meet this point?—I think it would to a certain extent, but, at the same time, our industry is strongly of the opinion that we ought not to be under the Trade Board at all.

6910. Lord Weir: Then how would you provide against what have been called sweated wages?—We claim that there never has been.

6911. But you can readily imagine that such wages might be applied if you left everything absolutely free?—Then I suggest you might keep on the 1909 Act.

6912. That is the Act which imposes the Board in the case of exceptionally low wages?—Yes.

6913. Mr. Bell: Is there anything to prevent differentiation in the rates with a Trade Board in operation, or is the general tendency to regard the minimum fixed as a standard?—I do not quite understand your point.

6914. The Trade Board fixes a minimum wage?—Yes.

6915. There is nothing to prevent an employer in a more favoured district, who can afford to pay more than an employer in a less favoured district, paying more?—No; it is a minimum wage.

6916. In your industry do all the employers pay the minimum, or is there any difference in the rate of wages paid between one district and another owing to different conditions?—I think as between one trade and another—because our industry is a conglomeration of trades—there may be some small differences. I think perhaps the majority of the people in the Flax Trade just now are paying the minimum wages fixed. I think there are other cases where they are

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

paying the same rate throughout. That is your point, I take it?

6917. Yes. Is it not the fact that before the Trade Board came into operation at all some of your country districts paid higher rates than the town rates?—I do not think so.

6918. I think you say that in your evidence?—I do not think we say that.

6919. I think you will find it in your own evidence?—I have no personal knowledge of such a case. All my knowledge of the trade shows that the towns pay more than the country districts.

6920. I will draw your attention to it again when I come across it.—Thank you.

6921. *Chairman*: There were some very low wages paid in this trade before the Trade Board was set up?—Do you mean in 1909, or when?

6922. Before 1909, yes.—Well, I think that looking at it from the point of view of wages as we understand them now, they look low; but I do not think that at the time they were comparatively low.

6923. Take the women's wages as found by the report of the Board of Trade Inquiry. Of the women, 41·7 per cent. were paid less than 10s. per week?—Is that women of all ages?

6924. No; adult women; and 49·1 per cent. over 10s. and under 15s.?—Does that apply to Great Britain, or Great Britain and Ireland?

6925. That is the United Kingdom; so that is over 90 per cent. under 15s. a week; and of the men, 49·1 per cent. were paid under 20s. a week—adult men. Those were very low wages?—How does that compare with agricultural wages at the same time for men in England?

6926. I have not the agricultural wages, but it compares badly with every other trade which is in this list, except the jute trade?—Yes, my Lord, but are you quite fair to us? I am not saying those wages are not correctly stated, but is it fair to us to have it taken as the United Kingdom? There is no doubt that the Irish wages were always very much lower.

6927. *Sir Arthur Pease*: Is Ireland a large proportion?—Ireland is far larger than we are.

6928. *Lord Weir*: That is, the influence of the Irish wages would seriously affect that figure?—That is so. If those were the wages for the United Kingdom, and Ireland employ more people than we do, and if they are paid lower wages, then, of course, naturally we would suffer. I think there is no doubt that we paid higher wages than Ireland did.

6929. *Chairman*: Was it not true that even in Scotland the wages paid were very low?—I think not, especially looking at it from to-day.

6930. Oh, yes, of course.—I think it appears that they were very low. I am quite sure that when we looked at it before the war we did not consider that wages were very low in comparison with other trades or other employments. For instance, I think that the agricultural worker, the man on the land in England, was seldom paid more than 17s. May I make another point. It is this, that we were not put under the Trade Boards Act before the war; we were put under the Trade Boards Act in 1919-1920, when our wages were not what you state; they were not low at all; on the contrary, they were very high.

6931. But did not the proceedings for bringing you under the Act begin before the passing of the 1918 Act?—Oh, no.

6932. We were told so.—I beg to deny that absolutely. I cannot think who told you that.

6933. I am told by an official of the Ministry of Labour that the investigation began in 1917.—(*Sir William Robertson*): I have no knowledge of that.

6934. Has Mr. Douglas any knowledge of that?—(*Mr. Douglas*): No. (*Mr. Boase*): I really honestly do not think it is true.

6935. I am quite sure you are telling us what you believe. I have no personal knowledge, but I will have the dates looked up if they are material.—Certainly the first that I heard of it was about the time when the Trade Boards Act was going to be passed.

6936. Even that was before the Act?—That would be about 1913, I suppose, and at that time we were

really never consulted as to whether we should be under the Trade Boards Act or not. We were asked to come down and discuss as to whether it was better for the trade; that is, after the Whitley Committee had presented its report as to whether it would be better for the trade to come under a Whitley Council or to come under a Trade Board, and there was difference of opinion, both on our side and on the labour side, as to which we should do, and eventually the labour side said that they did not want to come under a Whitley Council, and there the matter was left. The next that we heard was that we had been put under the Trade Board.

6937. That you would be put, or had been put?—That we had been put under the Trade Board.

6938. But was not there a long correspondence about it objecting to your coming under the Trade Board: I do not mean with you personally, but with members of your trade?—Yes, I think Sir William Robertson corresponded on objections. (*Sir William Robertson*): It was not until notice was given that we were to be brought under the Trade Board.

6939. That I understand, but it was before you were brought under the Board?—I have the letter here—September, 1917.

6940. Your Board was formed in 1920?—(*Mr. Boase*): I think in the beginning of 1920. (*Sir William Robertson*): We were asked by the Ministry of Labour to consider whether we had any objections and we said we had, and we had certain correspondence, and in view of two letters, copies of which I have here, which we received from the Ministry of Labour, we withdrew our objections, and I should like those letters to come before you.

6941. You knew that you might have claimed a public inquiry at that time?—Yes, and we were induced by these letters to withdraw our objections. (*Mr. Boase*): May I say that Sir William Robertson is speaking for a special part of the trade, that is, the fine end of the trade. I am speaking for the heavy end of the trade, and I state that we were not consulted, and as a matter of fact there is a considerable difference between myself and various members of the Ministry of Labour on the subject. They insisted that we were consulted, and I insist that we were not consulted; but I need not go into that, because there is that difference of opinion, and it evidently cannot be proved.

6942. I only raised the point because of what you said. Personally I feel there is very little good in going into this ancient history. The question is really what is to be done to-day.—Yes, but I think the point that I was making just now was that we came under the Trade Board Act, not because of the low wages that were paid before the war; these wages which you quoted just now I think had nothing whatever to do with us. That was my point.

6943. I see. Then we really are agreed so far. What you say agrees with what I am told, that the question was raised before the passing of the 1918 Act; but you say just while the Act was in course of being passed?—I think that is right.

6944. Then perhaps we can go on to some more important matters. You say that during the war the trade became extremely busy?—I would like to say there, during the war, the flax trade, excluding the fine end of the trade.

6945. And eventually all the works went under Government control?—Yes.

6946. The difficulty then was not wages, but persons to do the work?—Yes.

6947. The Act was passed in 1918, and when the Trade Board was formed you were still extremely busy?—At that time, yes; the heavy end of the trade was busy.

6948. When did the depression begin in the heavy end of the trade?—In August, 1920.

6949. *Mr. Bell*: And in August, 1920, was not that about the period when the general slump took place, affecting all textile industries?—Yes.

6950. Both those affected by the Trade Boards and those which were not?—Yes.

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

6951. Why, then, do you say that the operation of the Trade Boards has affected it?—We give various instances, I think, in the evidence. We distinctly mention that we do not attribute the collapse of the trade entirely to Trade Boards. We do realise that a great part of it was owing to depression.

6952. I think one of your points was that you wanted to get away from the Trade Boards, because you attributed your bad trade largely to the operations of the Trade Board, and that if you could get away from the Trade Board you would be able to provide more employment?—Well, that, I think, can be adduced from the evidence we give here, but I do not say for a moment that if you withdraw us from the Trade Boards Act we shall be able to put all our looms and spindles on to full time straight away. We need not claim that.

6953. Would you agree that in August, 1920, and the period immediately following, even if your workpeople had worked for no wages you then would not have been able to get orders?—I distinctly state we would have employed more people.

6954. I have seen statements made by employers, and in fact I have heard them, that even if the workpeople were working for no wage at all there were no orders to be got, and they would have to stop in any case?—Well, of course, it may be so in certain trades. I do not say it was absolutely so in our trade. It was very difficult to get contracts and work to do, but if the wages had been lower and had been going down, there is no doubt that employers would have been willing to go on and make goods for stock, which would have gone towards continuing employment through those months that followed.

6955. I notice you mention a wage of 26s., that orders might be taken at a wage of something like 26s.?—That was a specific case, yes.

6956. How would that compare with pre-war wages in actual value?—On what index figure?

6957. At the time you were mentioning. Let me put it another way, without taking any index figure: put it at 100 per cent. higher.—Your point then would be, if a weaver was being paid 13s. in pre-war days, would 26s. be the figure that she would be paid at now if the index figure was 100 per cent.? I think the reply must be yes.

6958. Would you regard 13s. as anything but a sweated wage for women of over 18?—I do not know what a sweated wage is myself; I find it very difficult to say. For instance, taking the question of wages in country districts, where men have got employment and where there are a lot of girls and women who would be willing to work for a certain amount, whatever they could get, say that the economic wage that the factory in that district was able to pay was 13s.—and by an economic wage I mean the wage that that actual factory was able to pay and keep going—would it not be very much better that these girls and women should receive 13s., which you indicate as a sweated wage, rather than receive nothing at all?

6959. If they were taking employment from other girls by unfair competition in another part of the country, I should say yes.—You would call that sweated labour?

6960. Yes.—Well.—

6961. *Lord Weir*: In connection with that question of competition, if you were actually losing trade to other people just now, I mean when you lose a foreign order, is that order placed with somebody else in another country, or is the order withheld: is the contract withheld on account of the price?—I think both cases occur. I think orders are sometimes withheld because the price is considered to be too high, and also orders are placed either direct with foreigners or with merchants in this country who buy in foreign countries.

6962. And you are definitely losing work which is being placed in other countries?—Absolutely definitely.

6963. *Mr. Pugh*: What is the percentage of wages cost to price in your trade?—It must vary very much with the price of the article, but we have taken an average here of 50 per cent.

6964. *Lord Weir*: We do not want to make any mistake. The 50 per cent. is 50 per cent. of the total production cost, including material?—Yes.

Lord Weir: Not like the jute people, who exclude cost of material.

6965. *Sir Arthur Pease*: 50 per cent. of the cost, or 50 per cent. of the selling price?—I think it has been taken as 50 per cent. of the selling price, which at the present time is certainly cost or under.

Mr. Pugh: That is the same thing.

6966. *Sir Arthur Pease*: But in normal times would it be 50 per cent.?—I do not want there to be any misunderstanding. We are taking 50 per cent. as a sort of average. There are cases which I could give you where it would be more than 50 per cent.; there are other cases where it would be less than 50 per cent.; but I am taking 50 per cent. as a broad and fair average.

6967. *Mr. Pugh*: That is on present rates?—That is at the present time.

6968. *Mr. Bell*: I do not know whether these percentage figures have been used somewhat loosely or not, but I want to draw your attention to them. 50 per cent. of the cost, if the cost was 40s., would be 20s., a difference of 20s.; and then if you put 150 per cent., which is your increase in labour, on the 20s., you get 50s., and then you speak of the cost of production being 300 per cent. higher than 1914; so that 300 per cent. on your 40s. would give you 120s.?—Will you please refer to the part of the evidence where that occurred?

6969. Yes, it is in your Clause 21. You say production cost at present is about 300 per cent. above the pre-war normal?—Yes, that includes, of course, not only wages but oil, coal, &c.

6970. *Sir Arthur Pease*: And rates and taxes?—And rates and taxes and so on.

6971. *Mr. Bell*: I understand that, but in one case where you take 50 per cent. for wages you get a difference of 10s., but if you take it the other way, and if you put 150 per cent. on 20s., making 50s. as the present wage, that is taking 30s. as the standard pre-war—?—But where is this point, if you will please show it to me. Is it in Clause 21?

6972. Yes, you get a difference of 10s. as between the 30s. and 40s., and if you take the same 40s. and put 300 per cent. on, you get 120s.?—But the 300 per cent. includes all other charges, oil and so on, and standing charges.

6973. I thought you were trying to make a point that all the loss of trade was due to the increased wage?—No, honestly I do not think that we are quite so foolish as to do that. We cannot say it is entirely because of the Trade Boards that our trade is in the condition it is just now. We really are not trying to persuade you that that is so, we are only saying that that is part of it.

6974. *Lord Weir*: I think it would be quite clear if you would tell us the increase in wage cost?—That is to say, what wages are just now?

6975. No, involving output and hours. You see, the wage cost of anything involves both output and hours and wage rates?—Do you mean by that the hours we are working at the present time?

6976. I should like your wage cost to-day as compared with your wage cost in 1914.—I am sorry I appear so stupid, but what I want to know is, do you want wage cost as representing working full time, and now in 1921—

6977. No, assume full time.—Then I think the figure we have given here, 300 per cent., is right. If we were to take the short time we are working just now, it would be much more.

6978. Then a portion of that, of course, is made up of increase in wage rate; another portion is made up, let me suggest, perhaps, in output, and another part of it in hours of work—the reduction in the hours? Is not that so?—Yes, we have reduced from 55 to 48.

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

6979. *Dame Adelaide Anderson*: Does it always follow that the output is less when you have reduced the hours?—Well, it is rather a difficult question to answer. Certain firms have found that it is so, other firms have found that there is not very much difference, but we have not had really very much opportunity of being able to answer that definitely, because when we reduced our hours from 55 to 48 we only had a very short time of working on that before the depression came, and we had to go on working 24 hours. Therefore it is very difficult to reply to that question.

6980. But you are no doubt aware that there are historic cases where a considerable reduction of hours produced not only an average per hour better, but a total production as good or better?—I believe that there are cases of that. I do not think it is so in our trade. I think in our own firm we can distinctly state that the reduction in hours meant distinctly a reduction in production.

6981. In output?—Yes.

6982. *Chairman*: If I may pass on in your statement, you mention that in some cases the workers employed are anxious to have the trade withdrawn from the operation of the Trade Boards, and have signed applications to that effect. Have you any personal knowledge of the circumstances under which those applications were signed?—I have no personal knowledge, but Mr. Douglas is Managing Director of one of the firms who did apply, and he can probably tell you.

6983. Then perhaps we had better postpone that until we hear Mr. Douglas. Then you say in terms in paragraph 11 that you do not allege that the present depression of pay is due entirely to Trade Board wages?—Oh, no.

6984. *Sir Arthur Pease*: But there will be no opportunity, as there has been in some trades, where a big order has been offered from abroad, for you to make a cutting rate and to say to your workers: "Now, we can get this big order, which will give you employment for so many months, if you will meet us by taking a lower wage." You could not do that?—I do not think there have been many big orders of that kind, but there have been numerous small ones. I suppose every firm in the trade has had the offer of orders at prices which they simply could not face because it would mean such an enormous loss, where they might have been willing to face it if they could have got their workers to join with them in reducing wages, which they were quite willing to do.

6985. Do you think the reduction in wages which could have been got would have been sufficient to balance it?—Well, in many cases I do not think sufficient to balance it, but if the firm was going to lose, say, 6d. a yard in weaving that cloth—this is only a hypothetical figure—if the workers had been willing to accept a lower wage and reduce the manufacturer's loss to 3d., then I think probably the manufacturer might have taken the order; but he was not going to lose the whole 6d. There have been many cases of that.

6986. *Chairman*: Is this trade well-organized now?—Very well organized.

6987. What proportion of the employees belong to Trade Unions?—Well, the Labour Leaders tell me that they all belong either to Unions or to Associations, or to District Committees or Works Committees—I forget what they are called. There is an extraordinary thing with regard to that, that I think I might mention here. I asked at the time at the Ministry of Labour why we were put under the Trade Board Act at all, and I asked whether it was with regard to wages. The reply was: "No, certainly not; it really is because the other side was not properly organized." I happened to mention this to two of the Labour Leaders, and they said, "Well, that is very funny, because we asked the same question, and we got the reply that it was because the employers were not properly organized."

6988. *Lord Weir*: When you speak of the trade in connection with organization of the Board, do you mean in Scotland or the whole trade covered by the

Board?—I refer here to the whole trade covered by the Board. As a matter of fact, outside Scotland there are not very many firms; some of them belong to our Association, although it is a Scottish Association, but there are very few outside people in England, except in Bridport, where they have an Association of their own.

6989. *Sir Arthur Pease*: Do you include Ireland?—Oh, no.

6990. Is Ireland organized, do you know?—Ireland is very well organized.

6991. *Chairman*: Are there many different Unions, or only a few?—In Scotland?

6992. Yes, in Scotland?—Oh, there are a good many different Unions; in fact, a great many, I should say.

6993. Is there no Union for this trade?—No. I suppose the Scottish Textile Workers' Union covers the various small Unions, does not it? (*Sir William Robertson*): They are affiliated to it. (*Mr. Boase*): They are affiliated to one big Union. They each have small Unions in the districts.

6994. *Mr. Pugh*: Has the position of the trade been represented to the Trade Union representatives?—Oh, they are very well aware of it.

6995. Have you discussed the matter with them—the condition of trade?—At the Trade Boards we have; I do not think we have outside. I think perhaps I might say we have pointed it out to them rather than discussed it with them.

6996. *Lord Weir*: If that happens on the Trade Board, why have not you got a rate which satisfies you, which meets the trade conditions? I mean, you were there on the Board for the purpose of fixing a minimum rate. Why do you fix a rate too high?—My reply to that is that we should have been very glad to reduce this rate from time to time, and quickly, but we cannot alter a rate that is once fixed. It has to operate for six months.

6997. So it is the machinery?—The machinery there is very bad.

6998. It is the machinery rather than the system that you are objecting to?—Well, I think the system also is bad, but in this case the machinery is certainly not elastic enough.

6999. *Mr. Pugh*: But normally six months is not an unreasonable period to maintain an agreement, is it—under normal conditions? Of course, now you are under abnormal conditions, and you have been for the last twelve months; but normally six months would not be too long to maintain an agreement, whether wages were going up or coming down?—It must apply to both, of course, both when wages are going up and when they are coming down. Normally it may not be too long. I think very often before the war more than six months passed without alterations of wages. We hold very strongly, especially being an export trade, that we must be able to change our rates in a much shorter time, and that whether it is up or down.

7000. *Chairman*: There is no difficulty when they are going up; it is when they are coming down.—Of course, we have not had any evidence of that. I am not at all sure.

7001. There is nothing to prevent you paying a higher rate?—No, there is nothing to prevent our doing so.

7002. *Mr. Bell*: You say "Because you are largely an export trade." You are not more of an export trade than the cotton trade of Lancashire, are you?—No, but they have not got a Trade Board.

7003. But they have an Employers' Association which generally asks the workpeople's representatives to agree, not to a six months' agreement, but to a 12 months' agreement, and they are working now under an agreement which will not expire in a less period than six months, during which they cannot ask for any reduction; so that I think you will see that without a Trade Board in operation these employers sometimes recognise that it is in their interests to have an agreement which lasts for some period. I want to take you back a little. You mentioned just now a figure; you said that the employer was losing 6d.

15 December, 1921.]

MR. NORMAN BOASE, SIR WILLIAM ROBERTSON,
and MR. DAVID DOUGLAS.

[Continued.]

per yard and that if the worker had been prepared to accept a reduction of wages equivalent to half of it, you might have been able to get orders. I suppose you were aware, when you made that statement—Excuse me, I did not make that statement. I made the statement that if we were offered an order at 6d. per yard loss, we certainly would have to refuse, but that if our workmen had been able to meet us by accepting half the loss, we probably would have been able to accept it. That was my statement.

7004. If they had been willing to accept half that loss, it would have represented more than their wages, would it not?—I used the figure of 6d., but perhaps I ought not to have used it. I ought to have said a loss of X pence, and said that if the workers would accept half X pence, we might have got the order.

7005. I think their actual rate of wage would come to something like 2d. per yard?—That may be. I am sorry if I misled you. It was only a figure of speech.

7006. *Chairman:* You might say ½d., or something like that?—You might say 1d. and put the workers' share at ½d. It was perhaps foolish of me to mention 6d.

7007. Then you deal with the Appointed Members. You say that you think they should be persons of business experience?—Yes; and I think also, and there is a feeling in the trade, although I do not think I mention it in my statement, that it is rather a pity that the Appointed Members should be members of various Trade Boards. I think, having fixed the rates on one Trade Board, they are very apt to have their minds fixed on those rates, and not to come with an open mind to the next Trade Board which they are going to attend; and that, also, I may say, refers to the representatives of labour.

7008. *Sir Arthur Pease:* And the representatives of employers?—I know of no case where representatives of employers are members of two Trade Boards.

7009. *Chairman:* We know several.—Then certainly it ought also to apply to them.

7010. *Chairman:* The Appointed Member who is a member of more than one Board comes with a knowledge of procedure which may be useful to him.—It may be an advantage from the point of view of knowledge of procedure, yes.

7011. I am taking these points shortly, because we have your written statement.—I may say that there are one or two small alterations in my statement, which perhaps I may be allowed to hand in. There are some typing mistakes which had better be put right.

7012. Do you want to add anything as to paragraph 17?—No.

7013. With regard to learners, in paragraph 18 you say that it should not be wage for age?—Yes.

7014. But that there should be an increase on the footing of experience, rather than of age; is that it?—Yes.

7015. I see that your wage for learners runs up a year at a time?—Yes, that is right.

7016. There is nothing to prevent your Board altering that, of course?—No, I suppose not. It is the principle that we object to; it is not the question of it starting at 10s. or starting at any fixed sum, and rising per year; it is the whole principle that we object to.

7017. What principle?—The principle of wage for age.

7018. But that principle you could alter. You could grade it in some different way, could you not?—That rather backs up, does it not, what I said recently; that the people who are members of various Trade Boards come to us imbued with the fact that every Trade Board is working on the wage for age system?

7019. Not every Trade Board.—Every Trade Board that I know about.

7020. At all events, you have not proposed on your Board up to the present that any different system should be adopted?—I do not think so.

7021. *Lord Weir:* It is within your power on the Board, is it not, to propose any system which you think is right? There is nothing laid down in the

Acts; the Board has the fullest freedom to settle its own methods and its own principles in regard to the juveniles?—That, I think, is true, but in any ordinary business you can change the thing by the day or by the week, but here you have no chance of doing so; you have fixed that, and it remains for six months, and then you have to have a meeting. It is not as if you could call the Board together every week or every month to discuss these points.

7022. Surely you do not want to change a principle like that more than once every six months, that is to say, during one six months to pay them by age, and during the next six months to pay them on a different principle?—Having adopted a wrong principle, you want to change it as soon as you can, and not wait for six months before you change it.

7023. You mean that the Board made a mistake, is that your view?—I think the Board made a mistake, yes.

7024. And they want to redress their mistake?—I think that they should. I doubt very much whether it will be done.

7025. *Sir Arthur Pease:* What would you suggest?—I would suggest beginning the learners at quite a low wage, and I think that I would also be inclined to suggest that the age should not go up by the year as it does now. One special point there is this: that young persons who are kept at school, say, for another year or two, under this arrangement which has been adopted by our Trade Board, have no chance of coming on as learners. I know of cases recently, and Sir William Robertson can speak to them, where firms have been willing to take in learners and wanted 20, 30, or 40 learners, in order that they might come on and learn the trade; but what did they do? They took them in at 14 and 15 years of age, but they would not take them in at 16 and 17 years of age, so that those better educated young persons who had stayed on another year or two at school had very little chance of being taken on as learners.

7026. *Mr. Bell:* Do you attribute the responsibility of that to the Trade Board?—Do you mean to the Trade Boards Act or to our Trade Board?

7027. Assume a young person of 14 years of age coming from school and coming to work at a certain rate; and assume that another girl stays at school two years longer, and develops a more active brain, and gets a better education, is not she worth more to the employer after that than the girl of 14 is?—No, not in our trade. It is skill of the fingers more than skill of the brain which is required to begin with.

7028. I know something about textile work.—Take a spinner. If you were a spinning master, which would you rather have, a girl of 14 years of age or a girl 17 years of age?

7029. If I were a weaver.—I asked you about spinning.

7030. I am going to put it in my own way. If I were a weaver, and I had the opportunity of teaching a girl of 14 years of age, or teaching a girl of 16 years of age, I should take the girl of 16 years of age every time, as a practical weaver.—At 2s. or 5s. more, or whatever it is—at the extra price?

7031. I am talking about how soon she would be able to assist me in my work—how soon she would pick it up.—But my point is this, that if you take a girl of 14 years of age you are going to take her as a learner at 10s. a week, whereas when she is 16 years of age you are going to pay her 18s. per week. You say that you would prefer to take the girl of 16 years of age, and to pay her 8s. per week more?

7032. Yes.—You would?

7033. I would.—At 8s. more?

7034. Yes, because I should get as much out of her at the end of six months as I should get out of the other girl at the end of 18 months.—I cannot subscribe to that.

7035. *Chairman:* Then you refer in your statement to the waiting clause. How does that work?—What clause is that?

7036. That is the clause under which you have to pay the employee who is waiting in the works. It is

15 December, 1921.]

MR. NORMAN BOASE, SIR WILLIAM ROBERTSON,
and MR. DAVID DOUGLAS.

[Continued.]

paragraph 20 of your statement?—Yes. I say in my statement: "For example, if a worker is operating two units of machinery and one became inoperative and is likely to remain so for any length of time, it is now imperative to send the worker out of the works or pay double price for her production"; that is to say, if a girl is working two looms and for any reason one loom goes out of gear, or a beam is not forward for that loom, in the old days the worker was only paid for continuing the single loom, but now that a definite wage is fixed which she has to get for the work and she cannot make that wage while she is working a single loom, the employers are very apt to say: "Very well, we will do without your services until we can give you your two units."

7037. *Mr. Bell*: So that you mean that if a worker is able to earn, say, 20s. on two looms in 48 hours, you claim the right to keep her there for 48 hours for 10s. per week?—I am not quite following that. That is not a question of any special length of time. It may be half a day or a day, or an hour or two, but we must, in order to work our business economically, pay her on production.

7038. But if it were an hour or two, surely you would not talk about sending the girl off the premises altogether or discharging her?—There have been cases where I know it has been done.

7039. But you know of many cases too where weavers have stood with one loom for weeks?—I do not think I know of them doing so for weeks.

7040. I do, unfortunately. In carrying out the same principle, if a weaver has stood with one loom rather than two for weeks, it means that she is working full time with a 50 per cent. reduction in wages. Is that not what it amounts to?—If she is working full time she has to be paid whatever the minimum wage is—32s.

7041. Yes, now.—Yes. It seems to me that what would happen would be this, that instead of employing two people, each working one loom, they would employ one person working the two looms.

7042. That is what would probably be the result, but surely employers are not going to contend that they have the right to work people full time at half wages?—I do not think that that comes in, because they would only be doing half work.

7043. They would be working full time?—But they would only be doing half work.

7044. *Sir Arthur Pease*: What would happen supposing an employee had been in work, say, for two hours of the shift, and both machines broke down? Could you send her out of the works immediately, or would you have to pay her for that shift?—We do not work by shifts.

7045. For that day, then?—If she would be unemployed for the rest of the day, we would send her out.

7046. You could split the shift?—We pay so much per hour; whatever the amount is—8d. per hour.

7047. And if she had been working one hour?—She would get her 8d. per hour, and if she was not working any more—if there were a breakdown or for any other reason she were not working—she would go home and she would not get any more.

7048. *Lord Weir*: Surely there is nothing in the Act which brings that about. That is the action of the Board, is it not?—I think that is right. I know that many of your criticisms of my evidence might take that form. I think it is quite true that a great deal of it may be said to be not against the Act, but against the working of it, but it is the effect of the Act as worked by our Trade Board.

7049. I want to go a little further with you upon that. Why did you fix such a large range of rates? Can you tell me why your Board did that? It fixed for female workers a minimum rate, "for all other female workers," that is, other than young workers, and that disposes of the female workers, but when you come to the male workers you fix rates for, I think, three classes or categories of workers. Why did you do that?—Which are the three categories?

7050. I will specify them: tenters, under-tenters, and dressers.—Those are foremen—skilled people.

7051. Why did you do it?—Because we think a person who is skilled should get more.

7052. But why did you fix rates for those people under the Trade Board?—May I ask: Is your point why did we not simply stick to the letter of the law?

7053. Absolutely.—Quite so—a minimum wage and nothing else.

7054. True.—I quite agree with you.

7055. Why not?—Because I think you may say that we were persuaded by labour and the Appointed Members to do it.

7056. *Mr. Pugh*: Of course you would have had to fix rates ultimately, would you not?—No, I cannot agree.

7057. I mean you would have had to make some rate for classes of labour that were more skilled than the class of labour for which you fixed the minimum?—No, I do not think we should have had to make rates. We might have had to pay higher rates. I think naturally people would pay more for skilled workers, but we, as a Trade Board, would not have had to fix those.

7058. You would not necessarily have fixed them under the Trade Board; is that your point?—That is my point.

7059. *Dame Adelaide Anderson*: They could not have been rates individually for each mill; they would naturally have had to be district rates, even voluntarily?—I think so. It comes down to that very much. If there are several mills in the same district, and one mill is paying more to its foremen, or whatever they like to be called, that mill will always get the pick of the foremen in that district.

7060. So that it tends to become the district rate for each grade, in any case?—I think it would, yes. I think there may be districts which are quite close to each other, where they may go across from one district to another if the wages are more in the other district.

7061. *Chairman*: Is there anything further on this page that you wish to emphasise?—I do not think there is. I think we have touched upon practically all the points.

7062. Is there anything on the next page?—I would like very much to emphasise paragraph 23. I do not know whether it will be allowed, but I would be glad if you would allow Sir William Robertson, who represents the fine end of the trade, to speak to paragraph 23. He knows more about it than I do.

7063. That is about Ireland, is it?—Yes, and if you could possibly see your way to hear Sir William on the subject now, I know that it would suit him very well, because he has got a special meeting that he wants to get away to attend.

7064. We shall be very glad to hear him.—(*Sir William Robertson*): There are only one or two points to which I think I need call any attention. When it was suggested that our trade should be put under a Trade Board, the question immediately suggested itself to us as to whether the Irish trade would be put under the Trade Board. We are in direct and keen competition with Belfast. The Scottish fine linen trade is largely centralised in Fifehire, my own county, and we buy our yarns from Belfast, and we are in direct competition with them, both in the home and in the export market. Belfast is rather advantageously situated for the linen trade, inasmuch as Ireland has always been a flax-growing country, and they have spinning mills there which we have not in Scotland, and they have a humid atmosphere, which is a great advantage in weaving linen; and Belfast is certainly humid. In that way Belfast has the advantage over us, and I wanted to make sure that she would not have the further advantage of not being under a Trade Board. I got an interview at the Ministry of Labour here in this building, and I put forward two points: I wanted to know whether Ireland would come under the same Trade Board, and I was assured, that it would not; it would have a separate Trade Board, but that a Trade Board in Ireland would take effect simultaneously with the Scottish Trade Board. That

15 December, 1921.]

MR. NORMAN BOASE, SIR WILLIAM ROBERTSON,
and MR. DAVID DOUGLAS.

[Continued.]

satisfied me for the time being. Then the other point, which I only want to mention in passing was, that I was very much afraid that a Government official would be made Chairman of the Trade Board, and I did not want a Government official brought in; but I was assured that that would not be the case, but that a Scotch Sheriff would, in all likelihood, be made Chairman. We have such confidence in our Sheriffs in Scotland that we raised no further questions; our objections were removed. Now what has happened? Our Trade Board was instituted, and I venture to say that it has been loyally worked on the part of both parties. In Ireland at the very first meeting of the Trade Board they got to loggerheads at once. I am speaking of the weaving, because there are two Boards there, Spinning and Weaving; in Scotland both of those operations come under one Board, but in Ireland they have separate Boards. As I say, at the very first meeting of the Weaving Board they got to loggerheads, and the employers left that meeting and have never gone near a meeting since. It is very Irish-like, I am bound to say, but it seems to pay. They have fixed no rates, they have put up no notices, and they have gone happily on their way ignoring everything, so that, as far as we are concerned, there might as well never have been a Trade Board appointed in Ireland at all. Now it is very unlikely, in my judgment, according to what I hear from Belfast where I have many friends, that that Board will ever be operative. I do not think from the point of view of the fine end of the trade, that I need say more in pleading that our trade should be exempted from the operation of the Trade Board, than to say that our biggest and keenest competitors are free. It was never, I think, contemplated that only a part of a trade would come under a Trade Board. I was assured that if any trade came under a Trade Board the whole trade would have to come under it. I can say this, that we are losing business every week to Ireland, I do not say entirely because of the Trade Board rates, but they can under-sell us. They get bigger production as a rule. They paid lower wages in pre-war days, and so on, but they have other advantages. That deals with that particular point.

7065. They have fixed some rates in Ireland for spinners, have they not?—As to spinners, I do not know. (Mr. Boase): Yes. (Sir William Robertson): That Board, I understand, is operative. I am a weaver myself, and speaking of the weaving the thing is inoperative.

7066. Even if the Board sat and fixed rates, they could fix rates lower than yours?—Yes, quite so.

7067. Mr. Pugh: Are there any figures available as to the rates which have been fixed in Belfast?—Yes, I believe in one place—I do not know which Board it was, but it must have been, I suppose, the Spinning Board, but in any case it was one of them—they fixed 7d.

7068. I was thinking of a comparison with your own figures?—In Scotland it is 8d. They have had a reduction quite lately. A Trade Union official told me that they had reduced wages in Ireland 25 per cent., and I believe that there is an intimation of a further reduction coming on now; the business is slightly recovering. But my point is that the great linen weaving industry of Ireland is free from Trade Board influence, and we in Scotland are not.

7069. Lord Weir: It is just like a colony or a foreign country?—Quite so.

7070. Mr. Pugh: Can you give us any figures comparing the actual wages being paid now in Ireland with what you are paying now under the Trade Board?—I am afraid I cannot. It is difficult for us to get them. I have tried to get those figures, and I have a letter here from an employer in Ireland, but they do not want to tell us too much. But they smile when they tell us: "Well, they left the Board and they will have nothing to do with it." There is one other point: I should like very much to point out what the effect of this Board has been with regard to young people. Mr. Boase has referred to it. We have had experience of it in my firm in the last

three weeks. We wanted some young people. The effect of the Board is that there is a hiatus just now amongst our workers. Eighteen months ago, when they came along and said: "You cannot take a child of 14 years of age into your place unless you pay her 17s. per week," we immediately stopped engaging. We could give them work to-day, but we have not got the young workers with the year's experience, or 18 months' experience. Now we wanted some young people and the wage has come down to 10s., so we advertised. The advertisement appeared in our local Saturday newspaper, and before 9 o'clock in the morning the manager was overwhelmed with applications by young people to get taken on. We did not want very many—something under a dozen—on that day. We have since engaged 24; but my point is this, that in our advertisement we said "girls about 14," and on the Monday morning I saw some women standing about with their daughters, and those girls were 15 and 16 years of age, and our manager turned every one of those girls down. Speaking as a weaver, I am rather surprised that anyone should say that he would prefer to engage a girl of 16 years of age at 18s. per week rather than a girl of 14 years of age at 10s. per week. As a matter of fact in weaving—linen weaving, anyway—it is the quick eye and the nimble finger that counts. We have an apprentice mistress who teaches these young girls, and a girl of 14 years of age is not very long in learning. We put her on simple work, of course. I would say this: a girl who has come in at 14 years of age and has been a year at the work is certainly a good deal more valuable than a girl who has come in at 16 years of age and has never been at the work, and yet in the one case you are paying the experienced girl 14s. a week, and you would have to pay the inexperienced girl of 16 years of age 18s. per week.

7071. Sir Arthur Pease: The experienced girl would be 15 years of age, because she would have had a year on the work, as compared with the girl of 16 years of age?—Yes, and we are getting the 15-year old experienced girls at 14s. per week, but to take on the 16-year old girl, who knows nothing, and to put her alongside, we should require to pay her 18s. per week. It is foolish. How did it come about? I was not a member originally, but when I was put on we had established the beginning wage at 17s., and when we did reduce it we reduced it from 17s. to 10s., which was a very drastic reduction, and we reduced the 24s. down to 18s.

7072. Lord Weir: But you did not change the system?—No, we did not change the system; that was our difficulty—that the system was there.

7073. Why did you not change the system?—I think we would have been met at once with this: "Well, it has only been in operation six months or eight months, and there is no doubt at all that, having come from the other Board—and I feel strongly on this, and agree with Mr. Boase that, having the same Chairman and nominated members, and largely the same representatives of the workers on our Board as on the Jute Board—they having come fresh from the Jute Board, where they had fixed a 22s. rate—I felt that the pitch was queered against us.

7074. Dame Adelaide Anderson: At the beginning of the fixing of rates for juniors and learners, was there any discussion of a possible alternative method?—Yes. It was carried by one vote of a nominated member. One nominated member voted for the original wages, and there was great protest all through the trade.

7075. What was the method preferred by those who were in the minority?—I think great exception was taken to the rates being too high for young people.

7076. Not another method?—No, I suppose those of us who knew nothing about it felt that this was the recognised thing with Trade Boards, and that this was the method they adopted. It is entirely novel to us.

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

7077. *Mr. Bell*: What happened in your trade prior to the Trade Board coming into operation with regard to these learners? Did you never take learners into the trade at 18 years of age, or even older?—Yes, and they just got the beginners' rate; but it was very seldom at 18 years of age. At 15 and 16 years of age, yes, and they were quite content to begin at the learners' wage at that time, which was 6s. for the first year.

7078. *Mr. Pugh*: How long would they be before they got to the full adult wage? Would that be when they got to be 21? At the present time you have got a five-year period?—No, from 14 to 18 years of age.

7079. It would be four years?—Yes.

7080. So that if a young person came in at 16 years of age there would be only four years to cover. What would be the practice previous to the Board?—We did not recognise it at all. We recognised no age. I have seen very small girls who were very quick, making a very good wage; but I was going to put in a plea for Scotland. We have always been proud of our education, and our parents have often suffered sacrifices to keep their children longer at school, but I confess I felt it very much the other week when I saw those mothers with their girls of 15 years of age asking for a job, and the manager turning them down. It is punishing the parents for keeping them longer at school, and I think that is a very serious matter. May I venture to say that I have noticed from some of the very short reports of the evidence given here, that some trades are in favour of being under Trade Boards. I think that is quite all right, but in the case of a trade where there is absolute unanimity of objection on the one side, I think it should not be put under a Trade Board. It really cannot be operated. If you get a united side in opposition to the operations of the Board, it is absolutely impossible to have efficient inspection. There are thousands of rates and when you go all over the country you will get into tens of thousands of rates, and the scrupulous employer is penalised, as compared with the less scrupulous employer, who will take the risk of being detected. It is being done to-day.

7081. *Mr. Pugh*: That will be more pronounced unless you have some compulsory machinery, will it not?—No, because we are open to compete, but in any case before the war we were not troubled; we paid no attention to the lower paid people; we felt that we were able to hold our own.

7082. How are you going to get at the less scrupulous employer unless you have some kind of coercive machinery, either in the form of a trade union or your Board regulations?—So far as we are concerned we never worried ourselves about the less scrupulous employer.

7083. Why worry now?—There is all the difference, I think, between being told that you must do a thing and doing it voluntarily. If a man comes along and tells you that you have to do a certain thing it has a hampering effect upon you, and it

is very different from feeling free to do the generous thing or the other thing.

7084. *Sir Arthur Pease*: Has it an effect upon the efficiency of the worker?—There is no doubt that if you fix a wage which was, shall I say, a little more perhaps than a living wage, or in some cases only a living wage, there is a certain mentality amongst certain of the workers who are devoid of ambition which will restrain them from earning more than that wage. Even in the old pre-war days we found that in the case of a pieceworker when she had got up to a certain wage—at that time about 17s. per week—she did not worry about the other day and a half of the week, and she was quite content more or less to mark time; but we had ambitious workers who would make up to 30s. per week—and I am still speaking of the pre-war days—and we have them to-day making over £3 per week; but you have a good many workers who are satisfied when they reach a certain wage, and they do not exert themselves beyond it. If you put the minimum wage up to meet that attitude you find that it immediately affects production.

7085. That is a matter of selection of your workers, is it not?—But you cannot do it when you are short of workers, and that is the mischief.

7086. You are not short now, are you?—Yes, we are. We had two-thirds of our place standing; we have only one third standing now, I am happy to say, but we cannot get workers. As I told you, we miss those girls who should have been learning 18 months ago.

7087. *Mr. Bell*: Would not all those statements apply to textile workers as a whole, not merely in Scotland but throughout the textile industry?—I do not know, I am sure, the conditions of some places. There may be ample workers in some places, and if you have abundance of workers—

7088. If the mentality of some girls is such that they will be satisfied when they reach a certain wage, you will not be prepared to say that that applies to Scottish girls, and not to English girls?—I do not know English girls, but I would not expect them to be very different from Scottish girls.

7089. So that you would not be prepared to say that there is any reason why girls in Scotland should be expected to work for less wages than girls in England?—I really have no knowledge. After all there is regulation of wages by what is going on in the district. If you are to get labour, you have certainly got to compete with what is going on round about you. We have not to compete with the Lancashire weavers, but we have to compete with girls who are employed in other industries up in our neighbourhood.

7090. *Chairman*: Is there any other point that you would like to put to us before you go?—I think not. I think the other gentlemen can exhaust the remainder of the evidence. I am greatly obliged to you for allowing me to speak now, because I have to attend a meeting of national importance.

(*Sir William Robertson withdrew.*)

7091. *Chairman (to Mr. Boase)*: We have almost finished your statement. You have given us this open letter which is contained in your evidence?—(*Mr. Boase*): May I add one word now on the question which Mr. Bell was putting to Sir William with regard to wages. There is a point which struck me when he was speaking and it is this: if you have a fixed wage of whatever the figure is—say 32s.—then if you have a worker who is not a specially good worker, who has got to earn that 32s., and alongside you have got other workers who are specially good, if they see that the not very good worker is getting 32s. they will be very apt to work down to that, and that does not help production.

7092. *Mr. Bell*: Of course that does not apply where you have a piecework rate in operation, does it?—It does if there is a minimum. I mean if you

fix a piecework basis time rate, they have got to earn 32s.

7093. Suppose that with the piecework rate based on either 30s. or 32s. it is possible for a good worker to earn 40s., do you not then encourage the good worker?—You do encourage her to work well, but my point is that she knows that she could get 32s. by working possibly only half her time, because she is a really good worker, and she is able to turn out an amount which would be as much as a girl who is not a good worker, and who is working alongside of her, can do it in double the time, so she is able to slack the rest of her time.

7094. Yes, but why should she slack half her time, if in half her time she can earn 32s. and in twice that time she can earn 64s.?—Because she is quite content with working the shorter time, and she is

15 December, 1921.]

MR. NORMAN BOASE, SIR WILLIAM ROBERTSON,
and MR. DAVID DOUGLAS.

[Continued.]

quite content with the wages she is earning. We have found it again and again.

7095. If you reduced the minimum from 32s. to 16s., would not the same thing apply?—No.

7096. One girl would be getting 16s. Would not the tendency of the other girl be, instead of doing double the work in the same time, to be satisfied with 16s.?—No, I think there comes a point when they are satisfied. Without any doubt there must be.

7097. A good worker will be satisfied with what she can get, I think. Do you agree?—No. We have often found that it is not so. The tendency—I do not say it applies to all, because many are ambitious, and will work hard and wish to make more money, but the tendency amongst a great many of them—is to work down to the minimum.

7098. *Sir Arthur Pease*: Were you not addressing your remarks in the first instance rather to the time rates than to the piece rates?—Well, it is the rate fixed. You see, this piecework basis time rate is the rate fixed per hour upon which they have to make the minimum, whatever it may be, for that class of work—let us say 32s.; and you fix X as the rate. I think we bring out in this statement—and this has not been touched on yet—a rather interesting point with regard to it: that if you fix a rate, and if after that rate has been in operation for two or three weeks it is found that 80 per cent. of the workers are able to make on that rate the piecework basis time rate, then that rate is considered to be operative even if 20 per cent. are not able to do that. Now it seems to me that that will simply tend very much to the result that the other 20 will be dismissed, because they cannot do the work, and the result of that will be that you will be able to reduce your rate because the 80 per cent. are good workers and will be able to make their 32s. on a less rate.

7099. Do you allege that when a rate has been on trial like that there is any tendency to work slack until the rate is fixed?—Under the Trade Board I have never known it. Under a stenting system I have known it.

7100. You have not experienced that?—I have not under the Trade Board.

7101. *Mr. Bell*: Without the Trade Board in operation have you had any experience of this, that employers have fixed a rate and then when they found that the workpeople could get above a certain wage upon that rate, as a direct consequence of the fact of their getting above that wage which the employers thought was sufficient, the employers have reduced the piece rate?—I have heard of that being done. There are, I think, two replies to that: either that the employers did not go into it properly or else the people when the rate was fixed worked very hard and turned out more. If the latter, I think that the employer was very short-sighted in reducing the rate.

7102. So that you would agree that whether the minimum is fixed by the Trade Board and that minimum tends to become the standard, or whether the standard is fixed by the employer—in either event—it is an evil of equal magnitude?—No, they are quite different. One case to which I was referring is what we call in Scotland stenting, that is to say, there is a certain amount of work which ought to be turned out, and we want to discover what the amount is which an ordinary good worker can do; let us say it is breaking, hacking, or whatever it may be, and let us say that the amount is 30 cwts. a week—just take that as a figure. We go into the question very carefully—I have been doing it for many years now—to find out what these people will turn out when they are working properly. We do not go to them and say: "We are going to have a trial," but we watch the people who are working, and we see the amount that they turn out. Then we fix the amount, and we say in our minds: "Now the amount that ought to be turned out is 30 cwts., and the amount that you ought to earn is so-and-so; we will take a bit off that, and we will give you so much per cwt. If you turn out your 30 cwt.

you may make a fair wage; if you turn out more you will make so much more—a better wage." I have done that again and again, and the result has always been extraordinary. There have always been a certain number who, to begin with, would make that wage; a certain number would be under it. When that stent wage was fixed it was extraordinary how everyone of them made not only that wage but very much more.

7103. Let me pursue that point a little further. When the employer has fixed a standard of that kind the good workers have earned as much as possible and have made considerably higher than what the employer originally fixed?—And the poor ones also.

7104. But under the Trade Board—?—There is no such thing.

7105. Because the Trade Board does something of that kind they do not try?—But it does not do so. It does not fix a stent at all.

7106. You say that when a minimum is fixed the tendency is for even the good workers to come down to the minimum. Where is the difference between the Trade Board fixing your 30s. or 32s. as a reasonable rate—I am not using the word "minimum" just now—and the employer coming to the conclusion that that is a reasonable rate? Is there not just as much likelihood that the good workers, although the Trade Board has fixed the wage in the one case—?—In the one case there is a minimum; in the other there is not.

7107. No, but the same principle applies to the good workers?—No. In my case the same principle would apply if I said: "I am going to pay you so much per cwt., but your minimum is going to be so-and-so." Then the principle would apply equally and comparatively; but I do not say so. I fix it from what I know they ought to be able to do, and I say so much per cwt. I do not make any minimum. The Trade Board makes a minimum.

7108. What you say in fact is: "If you get, say, 12 cwt. your wage will be so much, but if you get 13 cwt. you will get so much more?"—Yes.

7109. If they only get 12 cwt. then their wage approaches your standard or your minimum, but if they get more—?—You mean the Trade Board minimum.

7110. No, the standard or the minimum you have fixed.—I have fixed no minimum. That is where you are mistaking me. I have said, "I will give you so much per cwt., and to make a fair wage you ought to do so many cwts."; I say that to myself, I do not say it to them. I say to them, so much per cwt. And I fix no minimum. If I said to them, "I will give you so much per cwt. If you make 30 cwts., which you ought to do, the figure for that will be X, and I will pay you all X," then that would be comparable to the Trade Board; but I do not do so, so that there is no comparison between them.

7111. I quite understand you, but you missed my point, in this way: that if the majority of your workpeople do the 12 cwt., as you have alleged they would do, under a Trade Board minimum—?—I am sorry, but I am not following you. I do not think I have even mentioned 12 cwt. It does not really matter—do what amount of work?

7112. If they were winders, and your price was so much per 100 lbs., and if they did 1,200 lbs. in a week the wage would be so much, then the girl who did more than the 1,200 lbs. would get an increased wage. I know that there is no minimum fixed, but I was trying to get at the point where you allege that the good workers come down to the minimum because the minimum has been fixed by the Trade Board?—I say that the tendency is so very often, and I know it in practice. The difference between what the Trade Board does and what I suggest is that I have no minimum in my stents.

Mr. Bell: I have experience of thousands of women textile workers, and that is altogether contrary to my experience of them.

7113. *Mr. Pugh*: There is one point on paragraph 28 as to which I am not quite clear, where

15 December, 1921.]

MR. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

your statement says that the increase which was passed in 1920 by the Labour and Government representatives on the Trade Board was not made operative owing to a compromise being come to between the employer members and the rest of the Board. Who are "the rest of the Board?"—The Labour and Appointed Members.

7114. The Labour and Government representatives passed the increase?—They did.

7115. The rest of the Board must be something that excludes Labour and Government representatives, must it not?—No. Perhaps I might explain that. In December, when trade was extraordinarily bad, there was a proposal at the Trade Board to have an increase of wages. Originally, before that, we only had a minimum wage. They wanted to increase that minimum, and they wanted to bring in a lot of wages for skilled workers and to bring in various other people. We on the employers' side refused to agree, because that was raising the wages at a time when trade was extraordinarily depressed. After, I should think, about two days of argument, backwards and forwards, eventually it came to a vote, and the Appointed Members voted with Labour, and we left the room, and we said that we would not continue to sit on the Trade Board. Then the Chairman came and said that he was very sorry that we had taken up that attitude; was there not any way of getting out of it? I said that the only possible way I could think of getting out of it was that we should have this Committee appointed to go into the question and advise the Trade Board as to when it might reconsider economically fixing wages.

7116. Then "the rest of the Board" really means that the subsequent negotiations and the setting up of the Committee took place between the employers' and workmen's representatives, and then a compromise was effected?—Yes. The Labour and Government representatives voted in favour of the increase, and eventually, as I have stated, it was not made operative because a compromise was come to between the employer members—that is ourselves—on the one hand and on the other hand the people who voted for the increase, namely, the Government representatives and Labour representatives.

7117. It really means ultimately the same people?—The rest of the Board. There are three constituent parts of the Board: Labour, Appointed Members, and Employers. If you say that the Employers did something as against the rest of the Board, "the rest of the Board" surely must mean the Labour representatives and the Government representatives.

7118. I wanted to see how the Board was functioning, because I could not understand which "the rest of the Board" was, when the Labour and Government representatives were excluded.—I see your point. It might have been better stated, but the employers objected, and eventually came to a compromise with the rest of the Board.

7119. Lord Weir: I want to go right back to the beginning of your evidence, where you have said that you do not mind the 1909 Act.—I think that we said that it was generally approved of as applicable to sweated industries.

7120. You do not consider it applicable to this industry?—I do not consider that our industry is a sweated industry.

7121. It is purely upon that basis?—I did not consider even in the old days that it was, and most assuredly I do not consider it now.

7122. Mr. Bell: I want to make one point clear.—There was a point which you said you had in mind.

7123. It was a mistake on my part, to this extent, that it is not contained in your evidence but in the letter which has been supplied to us, which was sent to the Ministry by the Appointed Members of your Board, in which they state: "As regards the establishment of a uniform rate throughout the whole trade instead of a differential district rate it was pointed out"—this was after a meeting with the employers' representatives on the Board—"that in

fact before the war higher rates were paid in some country districts than in large centres."—I am sorry, but I really cannot reply to that. It is a document that I have never seen, and I did not know that it was procurable. I should like very much to have a copy of that document. You will excuse my answering a question on a statement which is made by an Appointed Member about which I know nothing whatsoever. I think myself the explanation must be that it is a misunderstanding. I have never heard it in all my experience.

7124. Chairman: We are much obliged for your evidence.—Is there any point that you would like to ask Mr. Douglas? You raised a point with regard to his employees.

7125. (To Mr. Douglas): Is there anything that you would like to add?—(Mr. Douglas): My business being exactly in line with that of Mr. Boase, I do not think that there is anything I need say, as I am quite in sympathy with all that Mr. Boase has said. We are in exactly the same line of business.

7126. We were told that some of your workers had signed an application to be excluded from the Trade Board. Is that so?—That is so.

7127. How did that application come about?—On their own account.

7128. Do you mean that there was no preliminary conversation at all?—Absolutely nothing. I have heard it indicated that there were certain influences brought to bear, even my own, but it is absolutely untrue.

7129. Mr. Bell: How did the workpeople get to know anything about making any appeal to the Ministry of Labour?—We have quite an intelligent lot of people, and they manage their own business, and they know exactly what they do.

7130. Mr. Pugh: It is not a usual thing for the workpeople to apply to have a reduction in wages, which, of course, is what it would mean.—I daresay not. Of course, there has been no opportunity for such a thing, but at Montrose the employees of Messrs. Paton did the same thing, and also the Kincardineshire employers, though in a slightly different way, and that is rather an important section of the North Eastern part of the trade.

7131. Mr. Bell: The statement is made that the workers voluntarily petitioned. Can you tell us who drafted the petition?—One of their own number, I believe. We have two or three men with us who are perfectly capable of preparing such an instrument.

7132. Chairman: Did they draw up this document?—They drew up the thing themselves.

7133. A type-written document?—They drew up the thing themselves.

7134. Who drew this up—the tenter?—Yes, he is a tenter.

7135. Britcher?—I believe that is the man. There are two of them. I do not know that he exclusively did it. There are two or three who are perfectly capable of doing it.

7136. Mr. Bell: Was the petition generally signed?—Of course, our numbers are greatly reduced, but I think at the time of the petition we were employing about 700 people, and of those 700, 650 or thereabouts signed; and I learned that there was no pressure and in fact no request made to the very young people about the place, and that may account for the others.

7137. Was the petition signed on the factory premises?—I could not tell you. If it was not in the factory premises, it would be in what we call our dining hall, which is adjoining, but I really could not tell you.

7138. But it is not a general custom, is it, to have a paper of that description passed round inside a factory, and for workpeople to sign it?—It is not a general practice. I never saw such a thing done before, but I am not in a position to say that it was not done there; but my impression is that the signing was done in our canteen. I never troubled to enquire.

7139. If it had been something which the workpeople wanted to do voluntarily, and an objection had

15 December, 1921.]

Mr. NORMAN BOASE, Sir WILLIAM ROBERTSON,
and Mr. DAVID DOUGLAS.

[Continued.]

been taken to it by the management, it would soon have been stopped, would it not?—It might have been stopped, yes.

7140. So that the workpeople must have known that the management approved of it?—I know nothing whatever of the details as to the procedure. They have a free hand to use the canteen for any of these purposes.

7141. The only point that I was trying to make was that if it is looked upon as being an unlawful thing for anything of this kind to be done inside the mill, if it was done the workpeople must have known that it was with the approval of the management?—They could not help knowing that, of course.

7142. *Lord Weir*: Have you such a thing as a Works Committee in your works?—We have. It is a changing body, but when anything happens upon which they want collective judgment there are a certain number of them that they rely upon.

7143. I take it that occasionally there will be opportunities when you can inform the workers through the Works Committee generally as to the state of trade, for example?—They are very well posted as regards that.

7144. *Chairman*: Is there anything else you wish to say?—There is nothing that occurs to me unless your Lordship has further questions to ask.

Chairman: No, thank you.

(Adjourned to Tuesday morning next, the 20th instant, at 11 o'clock.)

SIXTEENTH DAY.

Tuesday, 20th December, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. J. BELL, M.P.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MacCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Mr. JOHN TURNER, called and examined.

The witness handed in the following statements as his evidence in chief:—

STATEMENT OF EVIDENCE ON BEHALF OF THE NATIONAL AMALGAMATED UNION OF SHOP ASSISTANTS, WAREHOUSEMEN AND CLERKS.

The Need for the Trade Board System to be Applied to the Distributive Trades.

In view of the deplorable conditions prevailing in the distributive trades for a large number of the employees disclosed by evidence collected over a period of years, this Union came to the conclusion that it was absolutely essential, in the interests of those employed, that the Trade Boards Acts should be extended to Distribution.

(See "Minimum Wages in Distributive Trades," 1913 Edition—first published in 1910 by the N.A.U.S.A., W. & C.)

At the Annual General Meeting of the Union, held at Easter, 1914, the following Resolution was carried:—

1914.

"The Conference is of opinion that the extremely low rate of wages prevailing amongst those employed in the retail and wholesale distributive trades, make it urgently desirable that the Trade Boards Act should be so amended that the Board of Trade could make a provisional order applying that Act to all such workers.

"It also instructs the Executive Committee to make investigation with that object in view, and to obtain, prepare and present the evidence as to the necessity for a provisional order to the Board of Trade for its consideration, and in the event of the Board of Trade failing to comply, that a National Campaign be inaugurated to support the same."

Trades Union Congress Action.

In 1916 the Union brought the matter before the British Trades Union Congress, when the following Resolution was adopted:—

1916.

"This Congress is of opinion that the extremely low rate of wages prevailing amongst those employed in the retail and wholesale distributive trades makes it urgently desirable that the Trade Boards Act should be so amended that the Board of Trade could make a provisional order applying that Act to all such workers."

Similar resolutions were also adopted by the Scottish and Irish Trades Union Congresses.

Deputation to Board of Trade, 1916.

Mr. N. S. Beaton, Scottish Organiser of the Union, and a member of the Parliamentary Committee of the Scottish Trades Union Congress, accompanied a deputation of the latter body in 1916, prior to the setting up of the Ministry of Labour, to the Board of Trade, who then dealt with the matter of Trade Boards. He brought the Resolution to the notice of Mr. Runciman, President of the Board of Trade, and requested that the Government should extend the Trade Boards Act to Shop Workers. He claimed that the Shop Assistants had the whole support of the Labour Movement of the country behind them in this application.

Mr. Beaton submitted a mass of detailed evidence proving the payment of dreadfully low wages in the various sections of the distributive trades.

Mr. Runciman, in reply, expressed the opinion that a *prima facie* case had been made out for the distributive trades to be brought under the Trade Boards.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

In addition, he said, the Government were considering the whole question of a minimum for all workers, and added, he would approach the Shop Assistants' Union in the matter of evidence, when the subject had reached the stage for it to be taken.

Labour Deputation to Minister of Labour (See Schedule marked "B").

In February, 1917, a deputation from the Parliamentary Committee of the British Trades Union Congress was received by the then Minister of Labour, the Right Hon. John Hodge. The case for the extension of the Trade Board system to cover the distributive trades was presented, and a list of wages (as per Schedule marked "B") tabulated from various centres throughout the country, was presented to the Minister.

Minister of Labour's Reply.

In summing up the statements made by the deputation, the Minister of Labour said: "I may say that the whole problem is receiving attention at the present moment. I quite appreciate the difficulties connected with the task of organising the Shop Assistants, but I certainly think that the parents are very much to blame for the cases Mr. Turner has indicated to us. Take Neath, for an example. Why should the parents permit their children to go into a shop for so small a sum as 5s. per week? In cases of that kind we have to blame the parents as well as the shopkeeper. But the tendency of legislation in recent years has been in the direction of preventing the exploitation of children in this way, and this question is now receiving, at the hands of this department, a considerable amount of thought and care, our desire being to extend the Trade Board system if possible."

In the same year the annual general meeting of the union adopted the following Resolution:—

1917.

"This Conference notes with satisfaction that the Government is giving consideration to the question of extending the Trade Boards Act to the retail and wholesale distributive trades, and in view of the extremely low rates of wages prevailing among a large number of persons employed in distribution, this Conference is of opinion that the question is one pressing for early legislation."

In 1918, again, a Resolution, as follows, was adopted by the annual general meeting of the union:—

1918.

"In view of the extremely low rates of wages paid to a large number of persons employed in distribution, this annual general meeting of the Shop Assistants' Union, representing over 80,000 distributive workers, urges upon the Government the pressing need for early legislation, extending the Trade Boards Act to the retail and wholesale distributive trades. The Conference is of opinion that any rates of wages fixed as a minimum should be based on a normal working week of not more than 48 hours."

Ultimately, the Government declared its intention of amending the Trade Boards Act so as to make it possible to cover the distributive trades.

The following quotation is from the official report of the House of Commons Debate on the third reading of the Amending Bill on 22nd July, 1918. Mr. G. Roberts, Minister of Labour, said:

"My opinion is that, Parliament having sanctioned the principle of the establishment of trade boards in trades in which wages are low, should leave it to the Minister of Labour to select the trades which come within this category. It does not seem unreasonable to allow the Minister, in the exercise of his discretion, to bring in trades by the simpler procedure set out in Clauses 1 and 2 of the Bill. Moreover, this procedure does not abolish Parliamentary control, but enables Parliament to step in and veto the action of the Minister if in any case he has acted in an unfair or injudicious manner. The fact that the Trade

Boards Act is acknowledged to have worked well constitutes, in my opinion, good reason why its application to other trades, where needed, should be made easier and more expeditious. It was admittedly an experiment, and the procedure of provisional Order, being cumbersome and dilatory, has retarded its extension. Again, the war, of course, has diverted attention for a long time from social reforms of this character. Nevertheless, the necessity for a wide extension of this principle is really urgent. Before the war half a million women in the country were paid less than 13s. a week—in many cases less. It is true that rates have risen owing to the war. Still some, not employed on war work, are being paid very low rates of wages. After the war grave dislocation is bound to ensue and wages may slump with most undesirable social consequences, unless machinery is established to adjust matters on a just and humane basis. I feel that the state of affairs after the war may produce most lamentable results, unless machinery is in existence to take up the case of women and to adjust wages on a fair basis, and not simply on the old method of paying them just what they are able to command. These women, in the main, are unorganised. They are not in the fortunate position of many of the skilled artisans, and I feel that, as the problem will arise undoubtedly with great urgency, we must be prepared to meet it."

As here indicated, wages in distribution advanced very little during the war, and in the absence of effective organisation it was felt that a Trade Board was absolutely necessary.

The declaration of the Government to extend the Trade Boards Act to cover distribution was warmly welcomed by the members of our Union, and the following Resolution was unanimously adopted by the Easter Conference, 1919:

1919.

"The annual general meeting welcomes the announcement that the Labour Minister has decided to set up a Trade Board under the Trade Boards Act for the whole of the Distributive Trades with a view to dealing with the extremely low rates of wages paid to a large number of those employed in same."

"Seeing that the Distributive Trades are almost entirely of a home and domestic character and do not compete in the world's market, it is of opinion that there is no excuse for the low wages being paid."

"It is strongly of opinion that one Board for the whole of distribution should be set up with Sub-Committees for the various sections and that any rates of wages fixed as a minimum should be based on a normal working week of 48 hours or less."

Discussion in the Press and Employers' Associations.

During all this long period of agitation to get the Distributive Trades under the Trade Board system the question was very much discussed, not only in the columns of the trade press, but in the public press as well. Many Traders' Associations throughout the country discussed the question at their various meetings.

Employers Consulted.

When the Government decided to extend the Trade Board system to Distribution, the Ministry of Labour consulted the leading Employers' Associations, such as the Grocers' Federation, the Drapers' Chamber of Trade, and the National Chamber of Trade. Several meetings were held between the Minister and the Employers' Associations, and two conferences were held, at which representatives of various Employers' Associations and Workers Trade Unions were present.

One Board or a Number.

No opposition came from any Employers' Association to the establishment of Trade Boards at those conferences, with the one exception of the Chemical and Drug Trade, which erroneously believed at that time, it was possible to have an Industrial Council for the Drug Trade. The state of organisation, however, did not warrant such an assumption. Since

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

then the Drug Trade has decided in favour of coming under a Trade Board. At those conferences shop assistants' representatives urged one Board for Distribution with committees to deal with sections. In this they were joined by the National Chamber of Trade Employers' Associations in the main, however, preferred to have separate Trade Boards for each trade. The Ministry, in deciding to set up a number of Boards for Distribution, followed the line suggested by the Employers.

Trade Boards Welcomed by Employers.

Employers at this period did not seem averse to the setting up of Trade Boards. Trade Boards were, apparently, welcomed. Trade was brisk, and the workers were organising in our Union to the extent of 2,000 new members a week for some considerable time.

Wage Negotiations Rife.

During the period from 1918 to 1920 wage negotiations were being conducted all over the country. Dissatisfaction was rife amongst the workers owing to the low wages operating, despite the high cost and continually rising cost of living.

Positive Evidence of Low Wages Prevalent in 1913.

As an Approved Society under the National Health Insurance Act, we had, in 1913, on our books 1,117 women over 21 years of age whose wages were below 2s. a day, and the Employers were compelled, by the Act, to pay the full amount of Health Insurance. The number of women members insured through our Union at that time was 18,655. Since such a large number of women over 21 years of age were receiving wages below 2s. a day it is fair to assume that a considerable proportion, if not most, of those under 21 years of age, were receiving even less. There was no way of recording the low wages of those under 21 years of age. Unfortunately, since the amendment of the Health Insurance Act, 1918, the low wages records are not available for the Approved Societies, and so we are unable to give the number over 21 years of age receiving less than 2s. a day since that date.

This evidence of the low wages prevalent in 1913 is indisputable. No statements on the part of employers can possibly refute this.

It is well to remember, also, in connection with this particular piece of evidence, that since it was necessary for those who became Approved for Health Insurance purposes with the Union to take up Union membership as well, this made it impossible for large numbers of the lower paid distributive employees to become Approved through the Union, since they could not, out of the very inadequate wage paid, pay the membership contribution. This number, therefore, by no means represents anything like a fair proportion of women over 21 years of age who, at that time, were receiving wages below 2s. per day. It is, however, sufficient to indicate what a serious proportion, even amongst the better paid type of distributive employee, were receiving shockingly low wages.

Discontent Prevalent.

During the war 65 per cent. of our men members were swept into the armed forces of the Crown. This denuded our branches of many of the most active members, and over 100 branches had to be closed. The return of the men from the Army saw renewed activity. This could be largely accounted for by the treatment meted out to ex-sailors and soldiers.

See Schedule marked "C."

Schedule "C" will show the rates of wages offered to those men who had served their country. They naturally resented this treatment, and dissatisfaction was so rife that the Union was driven to increase its outdoor staff in order to cope with the demands for the services of Union Officials to negotiate wage-settlements on behalf of members.

The annual reports of the Union for years 1918 (pages 31, 32, 33, 34 and 35), 1919 (pages 35, 36, 37, 38, 39, 40 and 41), and 1920 (pages 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44) will show to what an extent wage negotiations were prosecuted, resulting in a gain of nearly 7 million pounds sterling increased wages

per annum for our members. In numerous cases withdrawal of labour was only averted at the last moment when strike notices were actually expiring.

Employers Stave off Wage Settlements on Grounds that Trade Boards would soon be Operating.

After the decision of the Government to set up Trade Boards for Distribution employers used this as an argument for staving off wage settlements, contending that, as a Trade Board was likely to be set up soon, it was better to await the establishment of the Trade Board. Trouble was only averted, in many of the districts, by temporary agreements, pending the setting up of a Trade Board.

Changed Attitude of Some Employers.

It will be seen that the low rates of wages operating in Distribution during and since the war caused grave dissatisfaction and unrest, so much so that apparently the Employers considered that a Trade Board was necessary, and would probably offer the best method of dealing with the wage question. Since, however, the industrial situation has somewhat changed there has been a change on the part of some Employers, and the workers feel that these Employers simply desire to take advantage of present trade depression to exploit the needs of the unemployed.

Opposition of Large Firms.

The opposition seems to have originated in the Incorporated Association of Retail Distributors. This body represents mainly the large general establishments in the West End of London.

Multiplicity of Rates Contention.

The bone of their contentions seems to be against the multiplicity of Trade Boards for Distribution, with a multiplicity of wage rates, and their alternative is the fixing of one national minimum.

The following quotation from the speech of Mr. Roberts, in the House of Commons, on the 17th of June, 1918, on the second reading of the Trade Boards Bill, deals with the question of one national minimum:

One National Minimum.

"But before leaving the Bill I would like to make a few observations on a point which we have been pressed to include in the Bill. It has been strongly represented to us that Parliament should fix a national minimum wage. This principle was the subject of a good deal of discussion when the Corn Production Bill was before the House. Whatever may be said in respect of any one industry, surely it must be seen that it is difficult for Parliament to agree upon any one figure which may be adaptable to every one of our industries or all the industries which are likely to come within the purview of the trade boards. I have been immensely attracted by the idea, which accords with a sense of justice, but on closer examination of grave difficulties that present themselves, it raises highly controversial questions as to the relationship of men's and women's wages, and it also raises, in an intense form, the question of the principle on which a national minimum wage should be based. The demand for fixing a minimum national wage arises from the feeling that every worker should be assured of a reasonable living wage. That, I believe, is how the demand originated, and I believe that everybody in this House will agree that every worker is entitled to a reasonable minimum wage."

"The question arises whether the wage shall be sufficient to maintain the individual or a family, a large or a small family, or a family of average size. Such diverse views are advanced on the whole subject that there is no chance of agreement in the community such as to justify Parliament to sanction, at this stage, one view or the other. Therefore, we aim at the gradual improvement of the conditions in our industries, recognising that we cannot accomplish all this by a mere stroke of the pen. The best method appears to be to bring the representative employers and workpeople together, and to set them

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

the task of improving their own conditions. Parliament has not the information regarding the conditions of all industries. Statutory figures are in the highest degree inelastic, and can only be changed by further legislation; and meanwhile, irreparable damage might be done. The Trade Board system is flexible, and allows ready adaptability to changing conditions and the prompt correction of errors. Therefore, we feel, however strong the sentiment may be in favour of the fixation of a national minimum wage, that it is far better and more expeditious to leave the fixing of the wages to trade boards and the various industries. The trade boards might ask power to be given to them to so fix rates that they would rise gradually, and allow the trades time to adapt themselves to the new conditions. That is the principle on which we have worked in our trade union experience—recognising that firms may have contracts that they have made upon the existing wage standards, and that to impose great advance upon them would be most unjust to them; at the same time, we have generally been able to compromise and make an arrangement whereby the advances, mutually agreed upon, were brought into operation by degrees."

We do not desire a multiplicity of Trade Boards. We have been against that from the very outset. The multiplicity of Trade Boards would be the outcome of the Employers own suggestions.

So far as the multiplicity of rates is concerned, that operates now, not because of Trade Board regulations, but because of the practice of firms in fixing wages by individual bargaining. Thus, a firm's pay sheets would show a marked difference in the rate of wages operating even amongst the assistants in one department doing similar work, and greater still between different firms and sections of distribution. To fix a national minimum wage would, we fear, be of little value to the workers in Distribution, because there is the danger that the rate would be based on the least-skilled and worst paid occupation in the country.

One Board for the Distributive Trade.

We think the whole difficulty could be got over by one Board, or at most two or three Boards, for the Distributive Trades, because there would be practically no need for differentiation in fixing the rates for the lower grade of workers, and sub-divisions of the Board could deal with rates for the skilled sections of workers.

Case of Old Workers.

In the minds of many of the Employers, judging by the statements of the trade press, they seem to be labouring under a misapprehension as to the powers of a Trade Board to fix special rates for types of workers which could very well come under the category of "sub-normal." They seem concerned about old workers particularly. So far as we know, there are comparatively few old workers in Distribution, but the Trade Boards put a very liberal interpretation on the term "sub-normal," and the Administrative Committee of a Trade Board would always be willing to give the most careful and serious consideration to specific cases. The whole desire in administering the Trade Board rates is to do so in a way that would create the least possible hardship to the individual worker and the individual employer.

Inspection.

Another ground of objection seems to be on the question of inspection. Some Employers hold ludicrous views regarding inspection. They conjure up in their minds thoughts of a score or more inspectors invading their premises to find out whether the proper rates are being paid covering a score or more Trade Boards. This is obviously absurd when it is known that there are only some thirty Inspectors covering the whole of the United Kingdom and dealing with a variety of trades. Inspection in the Distributive Trades need hold out no terrors to the honest employer. Inspection should be very easy as the complications of piece-work would not arise in Distributive establishments.

No Machinery for Regulation of Wages.

So far the desirability of a Trade Board as a means of securing a reasonable minimum wage rate for those employed in Distribution has been clearly shown. One other reason for Trade Board protection of employed persons in Distribution is that there is no adequate machinery existing for the effective regulation of wages throughout the Trade. Neither the Employers nor the Employees are effectively organised. Until within the last two or three years what Employers' Organisations there were had no power to deal with the conditions of employment of employees.

During the serious period of unrest during 1920 some of these organisations secured power from their members to meet representatives of the Union and come to agreement. While these agreements had a steady effect upon the position, and covered quite a considerable number of firms, it still left the greater part of Distribution without any means of regulating the conditions of employment.

The Employers' Associations are, for the most part, purely protective and consultative bodies, and, even so, have only a minority of employers affiliated to them.

Refusal to Renew Agreements.

During this year a number of Employers' Associations who had concluded agreements with the Union have refused to renew them and have left the Union to negotiate any fresh agreements with the individual firms. This has been the case with two Associations in the north of England.

No Power to Insist that Agreements be Observed.

In the case of another agreement a minimum wage scale and regulations with respect to other conditions of employment was embodied. This agreement was not, however, operated by all the members of the Employers' Organisation concerned, and only, in fact, for the most part, where the Union had a majority of the staff members. The Employers' Organisation had no power to insist that the agreement should be observed by its members, and the Union only where the staffs were sufficiently organised.

Hostility to Organisation of Employees.

While some of the Employers' Associations indicated a feeling of good will towards the Union, as already mentioned, they only represented a small minority of the Employers. A large majority of Employers, among them some members of the Associations who had indicated goodwill towards organisation among the employees, frequently expressed in an open manner their hostility to organisation on the part of their employees, but more frequently opposed it in a subtle manner. This has naturally hampered and hindered anything approaching effective organisation, and, to some extent, accounts for the fact that there is no adequate machinery for the effective regulation of wages and other conditions of employment throughout Distribution.

Conditions of Employment Vary.

The result is that the conditions of employment vary in a most violent manner, both in the same section of Distribution, in the same class of trade, and even in different firms in the same town and the same street. Here and there a considerate employer, refusing to take advantage of the necessity of those seeking employment, pays up to a reasonable standard fixed by himself. For the most part, however, wages and conditions of employment are fixed by individual bargaining, tempered, to some extent, by the custom of the trade.

Distribution a Parasitic Service.

As a large proportion of those employed in Distribution are women and young people, in the case of women—this employment being looked upon only as an interlude between school and marriage, accompanied, in most cases, by a desire to live at home—employers are offered the services of these women and young people at a nominal rate, not even sufficient to maintain them. Parents and guardians have, up to now, paid a large part of the wages bill of the employers, since the difference between what they

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

receive by way of wages and the cost of maintenance is met by them. The result is that, in the case of those women who have to maintain themselves, without the assistance of parents and guardians, are kept down by this competition to a wage insufficient to maintain them independently, and, in turn, the men who work with them, particularly in the drapery trade, are dragged down also, since they are driven, by necessity, to accept, through individual bargaining, the low wages offered. In this respect Distribution is a parasitic service, not maintaining itself, so far, at least, as the payment of services rendered to a large section of the employees is concerned.

Employees Desire Standard of Comfort at Least Comparable with Sweated Industries.

It is this position which a large number of employees desire to continue, while the employees are desirous that a minimum wage, at least sufficient to maintain them in a reasonable standard of comfort, should be established, one comparable, at least, with wages now being paid in what were, a few years ago, spoken of as "sweated industries." At present the wages paid to large numbers of employees in Distribution is far below this, and as there is neither effective organisation on the part of the employers or employees, and no immediate prospect of same, the application of the Trade Boards Acts seems the only method of capably dealing with the situation.

In the matter of low wages and ineffective organisation both points are proved—are, in fact, self-evident—and the desirability of Trade Boards being set up at once to remedy the bad conditions operating in respect to a very large proportion of the employees clearly indicated.

It has been urged that employers and employees can best deal with the conditions of employment without the operation of the Trade Boards Acts.

No Effective Organisation of Employers or Employees.

With this proposition we are in general agreement providing there is effective organisation on both sides. But, in view of the fact that a large proportion of those employed in Distribution are women and young people, that both open and subtle means are exercised on the part of a large number of employers to prevent their employees becoming organised, and that many Employers' Associations have no power to deal with the conditions of employment, that others, such as the Incorporated Association of Retail Distributors, while formulating wage scales for the staffs of the large firms affiliated to that body, refuse to negotiate, in any way, with the Trade Union representing in many cases a majority of these staffs, it is mere sophistry to urge that, under these circumstances, conditions of employment in Distribution can be independently regulated by negotiations between employers and employees.

Can Withdraw Operation of Act if Conditions Altered and Act Unnecessary.

The speedy application of the Trade Boards Acts to the whole of Distribution is urgently needed. Whenever, in the opinion of the Minister of Labour, the conditions of employment have been so altered as to render the application of the Trade Boards Acts to any trade unnecessary, he can withdraw the operation of the Acts. If, therefore, the employers were serious in urging the direct negotiations between employer and employee as the right and proper method of dealing with the conditions of employment they would encourage and not hinder the organisation of their employees in their Trade Union. The fact that so many do everything possible to hinder this would indicate that they desire things to remain as they are, with all its attendant social evils to a very large proportion of those employed in Distribution.

The only Boards Operating in Distribution.

The Minister of Labour has given notice of intention to set up a number of boards to cover various sections of the Distributive Trades. The only Board set up and operating is the Milk Distributive Trade Board. A Grocery Trade Board has been set up since June, 1920. Rates were proposed in September

and November, altered at the Objection stage in February, 1921, and sent to the Minister of Labour with these alterations. The Minister of Labour referred these rates back for further consideration, when they were again altered and again sent to the Minister. Entirely new rates were proposed in August of this year, confirmed by the Board at the Objection stage in November, when less than one-half of one per cent. of employers lodged objection. Less than two per cent. of the employers had objected to those of last year. Up to date no confirmation, even of these agreed rates to which less than one-half of one per cent. of the employers have objected, has been received from the Minister of Labour.

The notices of intention to set up boards have not been acted upon and the Distributive Trades remain with all the deplorable conditions of employment as bad as ever.

Investigators Dismissed.

A number of investigators have been dismissed and there is a growing feeling throughout the country in the minds of the Distributive employees that once again their hopes of some improvement in the conditions of their employment will be falsified.

Suggested Amendments.

Our experience with respect to the application of the Trade Boards Acts to Distribution has led to the feeling, (1) That amendment is needed to provide for more rapid fixing and confirmation by the Ministry of rates of wages, (2) That if more than three appointed persons are on any Board, those in excess of three shall be appointed from an equal number of employers and employed, so that these might act as expert advisers to the appointed persons, (3) That as the result of the Portsmouth prosecutions it should be made obligatory upon magistrates, in all prosecutions, to order the payment of back monies which should have been paid in accordance with Trade Board rates, and that this Order for the payment of back monies should be made, whether a fine is added or not.

In view of the fact that the conditions of employment throughout the whole of distribution for a large proportion of the employees clearly indicate very low wages being paid, and other conditions not even comparable with those in what were, prior to the Trade Boards being applied to them, considered "sweated industries," and for the other reasons urged, such as the absence of effective organisation, it is hoped that the whole of distribution will, in the immediate future, be brought under the operation of the Trade Boards Acts.

STATEMENT OF EVIDENCE ON BEHALF OF THE WORKERS' SIDE, GROCERY AND PROVISIONS TRADE BOARD (ENGLAND AND WALES).

A Desire for Minimum Wage and Regulation of Conditions of Employment.

For some years, certainly for the last decade, there has been a growing feeling amongst those employed in the grocery trade in favour of the establishment of a minimum wage. This feeling has been intensified as the result of the war, since during and since the war a considerable number of women have been introduced and retained as employees in the grocery trade. In addition, there is a large number of young people employed under 18 years of age. Except to a very limited extent, no effective machinery exists to regulate the conditions of employment. Except for young people under 18 years of age, there is no legal limitation to the hours of labour, and for these the Shop Hours Act places a limitation of 74 hours per week, including meal times.

Difficulty of Organisation.

While during the last decade organisation amongst grocery employees has increased, it is still of such a very partial character that it cannot claim to have any power beyond a very limited extent, mostly in the larger towns and cities. Apart from those employed by large private and the multiple shop firms, together with those employed by the Co-operative

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

Societies, great difficulty has been experienced in organisation, due, largely, first to the very scattered nature of the employment in the smaller shops and, secondly, because of the very low wages paid in the same establishments.

An Unprotected Occupation During the War.

During the war practically the whole of the male assistants over 18 and under 45 years of age, unless physically unfit, were taken for the Army, the grocery trade being an unprotected occupation. The boys, as they reached 18 years of age, were compelled to join up. Women substitutes largely took their place at much lower wages, plus a number of older men who had failed to find employment in the trade previously on account of their age.

The result of this was that trade union organisation amongst this section of workers was very much weakened during the war, and wages were not advanced as in many other occupations.

As the result of inquiries made 10 or 12 years ago, the very low wages being paid was disclosed. During the next three or four years, some considerable improvement was effected on behalf of those organised. This improvement largely disappeared during the war owing to the absence of the men, and a strong feeling in favour of not only the grocery trade, but the whole of the distributive trades being brought under the Trade Boards Acts developed.

Evidence of Low Wages submitted to Government.

Deputations to the Board of Trade in 1916—and subsequently to the Ministry of Labour, after the Trade Board Administration had been transferred to that Ministry—placed indisputable evidence before both Departments, clearly indicating the very low wages being paid to a large proportion of those employed in the grocery trade. This information was capable of verification, and we have every reason to believe that the investigation officers of the Ministry of Labour were convinced of its accuracy.

It is felt by the workers' side of the Grocery Trade Board that both reasons for the establishment of a Trade Board for the grocery trade, viz., low wages for a large proportion and ineffective organisation, have been clearly proven.

Unrest among Ex-Service Men on their Return.

Since the Armistice towards the end of 1918, and the return of the men to the trade, there has been a continually growing feeling of unrest and dissatisfaction. This was largely caused on account of them finding that poor as was their position prior to going into the Army, it was relatively worsened on their return by two factors, first, because the women had been accepting lower wages, secondly, because of the rapidly increasing cost of living.

No Foreign Competition to fear.

That there was no genuine economic reason for low wages in the grocery trade, can be shown by two facts, first, there is little or no foreign competition so far as the grocery and provision trade is concerned. It is almost entirely a home or domestic market which is served, and the fear that trade might be lost as a result of foreign competition on account of wages being improved, cannot hold to any appreciable degree. The fear of injury to the trade through losing any opportunities of trade in the world's market so often urged in the case of productive trades, cannot apply to a home trade such as grocery and provisions.

Profits allow for Adequate Wages.

Secondly, the profits which have been and are being made in the grocery trade, indicate that without any appreciable increase in the price of commodities to the public much better wages than are at present being paid to a large proportion of the employees could be afforded.

Dividends of Co-operative Societies.

In this connection, too, in so far as it applies to the co-operative societies, the "Co-operative News" stated, during September, that no less a sum than 26 million pounds was distributed to co-operative members last year in the shape of dividend. It is interesting to note that had only a quarter of this been distributed amongst the co-operative employees by way of increased wages, it would have enabled each one to have been paid about 14s. per week more than they were. This has particular application to the grocery trade, since the grocery departments are usually by far the largest conducted by co-operative societies. It must be remembered, too, that these dividends by way of rebate upon purchases, was distributed after paying generally 5 per cent. upon the capital invested, rent, rates and taxes, wages and all other overhead charges, while at the same time large sums were placed to reserve.

Variation of Wages.

Not only are the wages low for a large proportion of those employed in the grocery trade, but these vary greatly for similar work. If anything, there has been greater variation both between firm and firm since the war than previously, due to the disturbance which took place, and partially as the result of the introduction of a large number of women substitutes. This again has led to a strong feeling of dissatisfaction. Ever since, however, the Grocery Trade Board was set up, the very hope of this body fixing at least a minimum rate, has had the effect of allaying unrest.

Dilatory Tactics of Employers and Ministry, a Disturbing Effect.

Unfortunately, the long delay which has taken place, and the repeated referring back of the rates to the Board by the Minister when asked to confirm same, is having a disastrous and disturbing effect among the employees. The Board was set up in June, 1920, and had its first meeting in July of that year. In September proposed rates for men assistants were carried by the Board, against the unanimous vote of the workers who considered them insufficient on account of the high and rapidly increasing cost of living at that time, and in October proposed rates for women assistants were agreed to. In November proposed rates for male and female clerks and male and female cash, desk workers were carried, again against the unanimous vote of the workers who felt them to be inadequate in view of the still rising cost of living.

The Objection Stage. Substantial Alterations made in Original Proposals.

The next meeting, in February this year, the Objections to the proposed rates were before the Board. Although less than 2 per cent. of the employers lodged objections, the proposed rates which were those of employers in the previous September and November, supported by the Appointed Members, against the unanimous vote of the workers, these proposed rates were very seriously altered by way of modification. Young people 14 and 15 years of age who require protection most were entirely eliminated. The proposed rates for those 16 and 17 were substantially altered. The whole of the rates and ages over 21 years of age in the rural area were deleted, and the population of places which should come into rural area raised from 5,000 to 10,000. To these very substantial alterations upon the employers' own proposals, the support of the appointed persons was given. The arguments, however, used by the employers were, not that the original proposals were in any way wrong, or the form of such proposals in any way inaccurate, but that the cost of living had fallen in the interval and that serious modifications ought to be made because of this.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

Minister Unable to Confirm Rates.

When the altered proposed rates were sent to the Minister of Labour for confirmation, he stated that these alterations were too substantial for him to be able to confirm without fresh proposals going out at least for those rates which had been substantially altered. This afforded exactly the delay which apparently the employers had hoped to secure.

Fresh Proposals Carried on the Board.

At the meeting in March, that part of the original proposed rates which had not been substantially altered and were confirmable were again sent to the Minister, and fresh proposals carried to deal with that part where confirmation was impossible, because the alteration had been too substantial.

Employers' Appeal to Minister.—Proposals Sent Back to the Board.

As it appeared that this method was likely to overcome, at least partially, the difficulty which had arisen, the employers' side withdrew from the Board, and subsequently appealed to the Minister of Labour. In consequence, the Minister felt unable to confirm either that part which was confirmable or to go forward with the new proposals necessary in connection with that part of the rates which had been too substantially altered, and all the proposals were sent back to the Board for reconsideration. That part, however, which was confirmable was again carried at a meeting of the Board in May, and sent back to the Minister for confirmation.

Other Rates forwarded to Minister.—Employers again Appeal to the Minister.

On the 31st of May and 1st June rates for clerks and cash desk workers were considered and, with certain modifications, again sent forward to the Minister of Labour for confirmation. Again the Minister of Labour was approached by the employers appealing for non-confirmation of all the rates, on account of the fall in the cost of living which had taken place since these rates were first put forward in September, 1920.

Contrast between Workers and Employers' Tactics.

During the interval the cost of living had continued to advance till November, but no application had been made on the part of the workers for revision of the rates to meet this. The workers' side, therefore, felt that the employers should, now that the cost of living had fallen, be prepared to stand by rates which were their own.

Minister Delays in Informing Board as to his Decision.

The Board met again in July, expecting that the Minister would either have confirmed or referred the rates back to the Board for reconsideration. The Minister, however, had neither confirmed or rejected the rates, and apart from a discussion on certain matters connected with the trade, no business could be done, and a resolution, regretting that the Minister had not confirmed or rejected or communicated with the Board in any way, was carried.

Minister Refers Rates back to the Board for Reconsideration.

The Board met again in August, after the Minister had, as the result of the appeal of the employers, referred the whole of the rates again for reconsideration by the Board.

Agreed Rates Arrived at.

On this occasion fresh proposed rates were, on the second day, reached by agreement, and the Chairman, Mr. W. A. Willis, LL.B., expressed his pleasure, and trusted the rates would now be confirmed and become operative without further delay. It was also agreed that the Board should meet again, at as early a date as possible, to consider the objections so as to enable the rates, if confirmed by the Minister, to operate before Christmas.

Majority of Employers Withdraw from Agreement, Still Seeking Delay.

Unfortunately, when the Board met on November 15th, the employers immediately moved a series of resolutions attempting to upset the rates agreed upon between all parties at the previous meeting, among them one that the rates should not be confirmed until after the report of the Committee of Inquiry had been issued.

Small Percentage of Objections.

It is interesting to note that on this occasion less than one-half of one per cent. of employers had lodged suggestions to the much reduced proposed rates.

Some Employers True to Agreement.

It is only fair to state that at this Board meeting the representatives of the Co-operative movement, together with another employer, voted, together with the workers and appointed persons, in favour of sending the agreed rates forward to the Minister for confirmation. Evidently they felt in honour bound to stand by the rates which had previously been unanimously agreed to.

No Confirmation of Rates Yet.

Unfortunately, so far, no confirmation of the rates by the Minister has been published, and 18 months of effort on the part of the Grocery Trade Board is still in jeopardy. It is constant delays of this character which unduly try the patience of the employers.

Employers Play for Delay.

During the 18 months' sitting of the Grocery and Provisions Trade Board (England and Wales), while the employers' side was constantly playing for time, utilising the machinery of the Board for delay in fixing rates, employers outside were using the Trade Board as an excuse for not adopting the trade union programme. In November of last year, a goodly number of negotiations were pending, and in order to prevent open rupture the employers' side of the Grocery Board expressed a hope that firms in general would operate the rates then proposed forthwith. This was done by a number of multiple firms.

Trade Board used as an Excuse for delaying Trade Union Settlements.

Mr. Cahill, the spokesman for the employers, said in his opening statement that numerous agreements entered into between the employers and the trade union were intended to be tentative until and pending the decision of the Trade Board and, unfortunately, while no rates proposed by the Board have yet been confirmed by the Minister, these agreements have, in some cases, expired, and the associations with whom they were made are refusing to enter into fresh agreements, referring the union to the individual firms. The following is an example culled from "The Grocer" of December 3rd, report of the Nottingham Grocers' Association:—

"A letter was read from the secretary of the Shop Assistants' Union requesting the association to meet a deputation from that body with a view to discussing the wage question. After considerable discussion, Mr. Howson moved that a reply be sent that, in the opinion of the association, no good could be done by the proposed meeting, and calling attention to the fact that the association's former letter was not to be regarded as an intimation that it was intended to reduce wages, but was merely a formal withdrawal of the arrangement for the protection of the association's members."

Employers' Testimony to Union Officials' services in preventing open rupture.

Unfortunately, this delay is fermenting trouble and discontent. Mr. Cahill, in the same statement, said:—

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

"The employers cannot but feel that these unions have been of inestimable benefit, not only to the workers, but also to the employers, and they desire to place on record their sincere appreciation and gratitude to the trade unions concerned in their own trade. . . . Apart from this, the intervention of the unions has proved of the greatest benefit in facilitating business and maintaining good relations between the employers and their men."

Trade Union Agreements now abandoned. Embittered feelings aroused.

It is regrettable that the delay in confirming rates by the Minister has led to the abandonment of agreements come to by negotiation on the part of the unions, though nothing has taken their place, and except where individual firms have been induced to continue the agreement, the employees are feeling very bitter and are likely to show their discontent in a very marked manner unless either a rate is fixed or fresh agreements come to.

The Status of the Trade.

In the same statement, also, Mr. Cahill said, on behalf of the employers, that the employers desire junior rates such as will attract the best class of youth or girl into the trade, as they feel keenly the trade must be one of good social status if it is to preserve its previous position. At the same time, with respect to hours, he proposed, on behalf of the employers, a 48-hour working week.

We mention these points because, at the Trade Board meeting in November, at the objection stage, the employers practically threw all their original proposals to the wind and only endeavoured to secure further delay.

At the same Board meeting, the question of hours was discussed, the employers entirely changing their position, urging that a 48-hour week presented certain difficulties.

The Hours Question.

Within the past few weeks, the hours question has arisen in the trade press. During the war the shopping habits of the public entirely changed, due, in no small measure, to the policy of the Government for economy in light and fuel. In a very large number of towns, 6 o'clock closing became almost universal, and has continued ever since. The 48-hours week became a practice in trade union settlements, as the attached agreements will show. On the Grocery Trade Board the employers' side suggested, from the very outset, a 48-hours week. Rates of wages on this Board have been based on a 48-hour week, and no objection was taken to a 48-hour week until a few weeks ago. Any attempt to extend the hours of labour will meet with stern opposition on the part of organised workers. They have no desire to return to the condition of affairs that existed prior to the war, and we believe that the best employers have also no desire to revert to old bad conditions. They realise that long hours are bad economically, and have a very detrimental effect on the health and the physical fitness of the assistants. Even the present Shop Hours Act, limited as it is in its character, yet provides the means whereby the traders themselves can easily arrange for the closing hours to be regulated within a 48-hour week.

Under the Shops Act, closing orders can be made not earlier than 7 o'clock on five days of the week, or 1 o'clock on the half-holiday. If, therefore, closing orders are secured for 7 o'clock on four days of the week, 1 o'clock for the half-holiday, and 8 o'clock for the late night, and assuming that the shop opens at 8.30 a.m., with two hours, as suggested, for meals, this would give the actual hours (48) as follows:—

	Dinner.	Tea.	—
	Hours.	Hour.	Hours.
Monday, 8.30 a.m. to 7 p.m. ...	1½	½	8½
Tuesday, 8.30 a.m. to 7 p.m. ...	1½	½	8½
Wednesday, 8.30 a.m. to 7 p.m. ...	1½	½	8½
Thursday, 8.30 a.m. to 1 p.m. ...	—	—	4½
Friday, 8.30 a.m. to 7 p.m. ...	1½	½	8½
Saturday, 8.30 a.m. to 8 p.m. ...	1½	½	9½
Total number of hours worked ...	...	...	48

In some districts the late night would probably be Friday rather than Saturday, and, of course, the half-holiday varies. In all probability some amendment to the Shops Act will now be found desirable, and surely the Trade Board is the body which could deal with this question and make useful proposals for amending legislation. The Shop Assistants' Union would like to see the 7 o'clock limitation as the earliest hour removed, since 6 o'clock closing on the early days of the week, which began during the war, has continued in many provincial places and is still operating. It would be well to be able to put the seal, by way of closing order, upon those hours. In many Northern towns, the half-holiday begins at 12 mid-day instead of 1 o'clock; while, on account of many big firms paying their workpeople earlier in the week, Friday instead of Saturday is becoming the late night.

We might here state that the Shop Assistants' Union has been urging an amendment to the Shops Act which would enable the traders to close at an earlier hour than 7 o'clock by a majority vote, and that the shop assistants, as in New South Wales, who have been resident and working in a given district for a certain period should be allowed to vote.

The weakness of the present Act is that individuals with small shops, the owners of which may be employed in some other occupation, can veto, by their votes, the votes of employers employing hundreds on their staffs, and thus the closing regulation for the neighbourhood is jeopardised. At present, and for 40 years past, the big general stores do not, in the main, employ their staffs beyond a 48-hour week. The co-operative stores, catering for working-class custom, while many have a 48-hour week, some districts enjoy a 44-hour week. From this it will be seen that the needs of the public do not demand anything beyond a 48-hour working week.

At the same Board meeting the question of apprenticeship was referred to an Administration Committee, and it is well that at least something should be said respecting this matter.

The Apprenticeship or Learners' Question.

Within recent months there has been a desperate attempt made to revive the apprenticeship system. Apart from a few remote country districts and one or two multiple firms, the apprenticeship system has been practically a dead letter in distribution for the last two decades at least. For many years there has been lamentations on the part of traders and on the part of the trade press over the dearth of learners. The real reason behind this dearth was the fact that parents and guardians were not so anxious as previously to send young persons into distribution, an occupation where wages were low and hours were long. It was universally recognised that the old-time chance of an assistant becoming an employer was fading away. The multiple firms, limited liability companies, and co-operative societies had practically sounded the death knell to the prospects of assistants starting business on their own account.

Our contention is that distribution, if it is to attract and retain smart, young people, must offer sufficient inducements comparable to other occupations in the shape of wages, hours, and conditions generally. We, as unions, are not averse to an apprenticeship system. Our main concern is that the employers

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

shall not use it merely as a means of securing cheap juvenile labour, and that a proper apprenticeship scheme shall be drawn up whereby the apprentice can be guaranteed proper instruction and adequate remuneration.

We have always taken a very keen interest in technical education for those employed in distribution. Our desire has been to raise the status of the trade. Over 20 years ago our members took part in the establishment of the first technical class for grocers' assistants in this country at the Harriot Watt College, Edinburgh. During the war we were closely associated with the London County Council in the setting up of grocery classes for women who entered the grocery trade to take the place of men called to the Colours, and we have had a Joint Committee with the Drapers' Chamber of Trade and other bodies for learners' classes at the Central School of Arts and Crafts, so that it will be seen that we are with those employers who desire to see assistants well trained, but we also desire to see it accompanied by conditions which will make the occupation a desirable one from every point of view.

The following were the agreed rates as sent forward for confirmation at the meeting of the Board in November:—

MALE WORKERS.

PORTERS.

	Scale A per week.	Scale B per week.	Scale C per week.
Workers 24 years of age and upwards.	s. d. 48 0	s. d. 55 0	s. d. 56 6
Workers 23 and under 24 years	47 6	53 0	55 0
" 22 " 23 "	47 0	51 6	53 0
" 21 " 22 "	46 0	48 6	50 6
" 20 " 21 "	40 6	52 6	44 0
" 19 " 20 "	34 0	36 6	37 6
" 18 " 19 "	28 0	30 0	31 6
" 17 " 18 "	22 6	24 0	25 0
" 16 " 17 "	18 0	20 0	20 6

SHOP ASSISTANTS and all OTHER WORKERS, except PORTERS (excluding vehicle workers and persons employed in commercial travelling).

Workers 25 years of age and upwards.	51 0	61 0	63 0
Workers 24 and under 25 years	50 6	59 6	61 0
" 23 " 24 "	50 0	57 6	59 6
" 22 " 23 "	49 6	56 0	57 6
" 21 " 22 "	48 0	53 0	55 0
" 20 " 21 "	41 0	44 6	46 6
" 19 " 20 "	35 0	37 0	38 6
" 18 " 19 "	29 0	30 6	32 6
" 17 " 18 "	23 6	25 0	26 0
" 16 " 17 "	19 0	20 6	21 6

FEMALE WORKERS.

PORTERS.

Workers 23 years of age and upwards.	31 6	36 0	37 0
Workers 22 and under 23 years	31 0	34 0	35 0
" 21 " 22 "	30 6	32 0	33 6
" 20 " 21 "	28 0	30 0	31 6

" 17 " 18 "	18 6	20 0	20 6
" 16 " 17 "	15 0	16 6	17 0

Rates Agreed between Employers and Workers now before the Minister for Confirmation.

It is significant that these rates, particularly for women at 18 and for men at 21 years of age, are much lower than those now being paid in what were considered "sweated industries" and brought under 1918 Trade Boards Act.

It has generally been considered by the Trade Boards that a wage sufficient to independently maintain herself should be guaranteed to a woman 18 years of age, and sufficient to a man at 21 years of age to enable him to marry.

Rates Compared with other Trade Boards.

The rates being paid to women by the Retail Bespoke Tailoring Board, the Paper Box Trade Board—two trades which were brought under the 1909 Trade Boards Act—at age 18 is 37s.; to women in the tin box trade at 18 years of age, 36s.; to women in the paper bag trade, 40s. at 18 years of age; while the wage fixed, but not yet confirmed, for women at 18 years of age in the Grocery and Provision Trade Board (England and Wales) varies from 23s. 6d. to 27s., being anything from 16s. 6d. to 10s. per week less than is paid to women at 18 years of age in the so-called sweated trades.

In the case of men at 21 years of age, the rates fixed by the Grocery Trade Board (England and Wales), but not yet confirmed, vary from 46s. in the case of porters in Area (A) to 55s. for counter assistants in Area (C), viz., the Metropolis. The wages paid to men at 21 years of age in the toy trade is 64s.; tobacco trade, 61s. 6d.; stamped and pressed metalware, 66s.; stampers and burnishers, after two years' experience, 68s.; again showing a general disadvantage of, say, 5s. to 14s. against those employed in the grocery trade.

Declaration of Appointed Members.

These low rates fixed for the grocery, but not yet confirmed by the Minister, were partially explained by a declaration on the part of the appointed persons, which was as follows:—

"In view of certain misunderstandings which have come to their notice, the appointed members wish it to be understood that, in voting for the rates proposed and fixed by the Trade Board, they have felt obliged to keep in mind the capabilities of the least fortunately placed shops in the poorest districts of each area. They have not considered it their duty, nor, indeed, is it within their power, to enforce standard rates, and their rates ought not to be quoted in trade negotiations or any arbitration proceedings as evidence of their opinion of the rates which should rule throughout the trade."

While it is evident that in the case of the Grocery and Provision Trade Board (England and Wales) the rates that have been fixed are extremely low, lower even than those which were previously known as sweated industries, the workers' side would draw the attention of the Committee to the fact that it was generally understood that the very function of the Trade Board was to at least secure a reasonable

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

standard of comfort for the workers in any trade which came under its operation. That they believed to be the very reason for the existence of the Trade Board Act.

Rates too Low to be Injurious to the Trade.

It does not believe that these rates could, in any way, injure the least fortunate placed grocery and provision dealer in any part of the country. In this respect, we would like to quote W. Addington Willis, LL.B., in his "Practical Guide to the Operation of the Trade Boards Acts," page 60, where he says:

"But the necessary improvement of a rate of pay in the trade, ought not to be stopped or hindered out of consideration of a few inferior businesses which have hitherto existed on underpaid labour, and which are, and will be, incapable of paying the rate appropriate to workers in the trade generally."

Rates not Comparable with Rates Fixed for Sweated Industries.

It will thus be seen that the rates fixed, but so long delayed in being confirmed, are not even comparable with those now being paid in what were previously known as sweated industries, and are only such as were considered, by the Board, capable of being paid by the least fortunately placed shops in the poorest districts of each area.

Dislocation of Industry Objection.

It is being urged by the employers, at the present moment, that these rates should not be confirmed because of the dislocation of industry which has followed as a result of the war. This very position, however, which is now urged by the employers as a reason for not confirming the Grocery Trade Board rates by the Minister of Labour, is the very reason which led the Government to amend the Trade Boards Act in 1918, and so make it possible for the Grocery and Provision Trade to come under its protection.

Minister of Labour's Speech in the House, June, 1918.

The speech of the then Minister of Labour, Mr. G. Roberts, when introducing the Amending Bill, is very significant. The following quotation is from the OFFICIAL REPORT of the House of Commons, on Monday, 17th June, 1918. Mr. Roberts said:—

"Undoubtedly great dislocation of industry will follow the war, and that renders it particularly necessary that rapidly adjustable machinery should be available for setting up Boards in certain industries. I think this applies with particular force to the case of women. Many groups of women during the war have been able to elevate wage conditions to a more reasonable standard than heretofore, and it would be extremely undesirable, and undoubtedly would have a large number of undesirable social aspects, if they were to lapse back into the conditions which prevailed before the war. Moreover, there are other groups who have not, despite war conditions, been able to raise their status to anything which may be regarded as satisfactory. Therefore, it seems to make it more desirable that we should provide machinery to adjust wages to a reasonable basis, and in more accord with the spirit of our times."

Certainly the rates fixed and awaiting confirmation for the Grocery Trade, are of a most modest character and on a most reasonable basis, are, in fact, "in accord with the spirit of our times" as suggested by Mr. Roberts, when moving the second reading of the Trade Boards Amending Bill.

Ineffective Organisation on Both Sides.

It is well-known that organisation, both on the part of the employers and the employees, is ineffective for regulating the conditions of employment

in the grocery and provision trade of the country. Trade Boards were first set up in those trades where these two factors existed—low wages and ineffective organisation. They are the very reasons for the existence and extension of the Trade Boards Acts. The effect of a Trade Board is to fix a minimum which can be paid by the least fortunately placed employer in any trade, and to leave to individual or trade union action, the securing of something better for the more efficient workers employed in the highly capitalised and organised firms.

Merit Worth More.

As the minimum fixed is very low, it will enable the more efficient to secure something better by way of merit and bring them nearer to the wages paid to artisans and others in skilled trades, at the present time.

Improve the Status of the Trade.

It may possibly check the failures of other occupations coming into the grocery trade to the detriment of those who have been properly trained and taught the business. But this will not be by any means a bad thing for the grocery and provision trade. It will do what Mr. Cahill stated the employers desire, maintain and improve the status of the trade.

Publicity Desirable.

The workers' side of the Grocery Trade Board are quite willing for the proceedings of the Board to be made public. They feel that had this been the case during the last eighteen months, it would probably have drawn public attention to the regrettable and extraordinary delays which have taken place. The public would have desired to expedite matters, if only on account of public expense.

Colonial Example.

It has been stated that opposition has been shown to the Wages Boards of Australia and New Zealand. If so, it is evidently confined to a very small minority, because there is no indication that the Industrial, Conciliation and Arbitration Acts of Australia and New Zealand are seriously opposed. They are being constantly extended, amended and improved, and would seem to have become a settled question in these Colonies.

It should be added that when Mr. E. Aves, Commissioner on the Wages Board, Industrial Conciliation and Arbitration Acts of Australia and New Zealand reported to the British Government in 1906 he did so strongly in their favour, and the original Trade Boards Act of 1909 was partially the outcome of his report.

Democratic Control.

From the workers' point of view, the setting up and operating of a Trade Board for the grocery and provision trade is the only general application of democracy to it. For the first time, it enables employers and employees to come together and discuss matters of common interest to both, as well as to deal with the conditions of employment, and put it a bottom by way of a minimum. On this foundation it ought to be possible, with ordinary good will, to lift the trade for all concerned from the terrible plight into which it has fallen.

That the proposed rates now fixed by the Board and awaiting confirmation by the Minister show this to be the case is proved by the fact that they are not comparable for women at 18 years of age and men at 21 years of age to those paid to men and women at the same age in trades which, up to the application of the Trade Boards Act, were considered sweated industries.

The Trade Board does afford a means by which this discredit to the trade can be removed.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

The Area Question.

The workers' side feels that the present method of fixing areas according to population and varying rates along those lines is quite unsatisfactory. Certain places with a comparatively small population under a local authority, but within an industrial area, are subject to the conditions and cost of living of that industrial area. If areas are to be fixed at all, they should be fixed in such a way as to secure, at least, an equal standard of comfort for all those employed in the trade. If a satisfactory method of fixing the areas can be found, it is then felt there is no need for district committees, since they would lead to unnecessary delay and expense without any compensating advantage.

Blighted Hopes.

The statements here set out represent some of the views held by the workers' side of the Grocery and Provisions Trade Board (England and Wales) as arising out of the unfortunate experience of its nearly 18 months' existence. The extraordinary delay in getting any rates confirmed and operating is rapidly destroying the faith of the workers in the hopes held out by the Government when introducing the Amending Bill in 1918. When the Board was set up, the workers were led to believe that at least some improvement in their working conditions was about to be made. These hopes have now been so long postponed that bitter disappointment is taking their place. It is beginning to be felt that had they have relied entirely upon the growing power of their

Unions and concentrated their efforts during the past year and half upon increasing that strength more would have been gained than has been the case.

It is, therefore, urged that the Committee should draw the attention of the Minister of Labour to the unfortunate feeling created in the minds of those constituting the workers' side, with a view, if possible, of getting the rates fixed, confirmed, and operating at as early a date as possible.

CASES SUBMITTED IN EVIDENCE TO MINISTRY OF LABOUR, FEBRUARY, 1917.

FIGURES SUBMITTED TO MINISTER OF LABOUR, FEBRUARY, 1917.

(Various Branches.)

We give here a few particulars including extracts from letters received from branches.

Firm of Drapers, Neath.—Female staff. (Living out.)

Age	...	16	18	27	28	21	20	27	23
Experience	...	2½ years	3 years	8 years	16 months	12 months	6 months	8 years	8 months
Wages	...	3s.	4s.	12s.	10s.	5s. 6d.	9s.	12s.	10s.

Drapery Manageress.—Full responsibility, wage 12s. a week, commission averaging 4s. 6d. Trade turning out £77.

Drapery Firm.—60 hours a week, 2 years' experience, age 18, wage 1s. a week and teas.
 " " 11½ hours a day. Various deductions as fines. 11s. a week.

Dressmakers, Aberdeen.—(After having paid a premium for apprenticeship.)

Age	...	20	21	21	25	30
Wage	...	5s.	7s. 6d.	8s.	10s.	14s.

"One firm in Dumfermline is extensively engaging girls for their grocery shops and branches, and is binding these girls by written agreement that they will work till the end of the war, also that they cannot leave and take a situation in any other shop within three miles, fixing these girls with the radius agreement. He also reserves the right to dismiss any of these girls. The wages paid to these girls are 8s. with an increase of 1s. every three months."

Scunthorpe Branch.

"We have full knowledge of shop girls working in this town who are paid at the rate of 1s., 1s. 6d., 2s., and 2s. 6d. per week. A few weeks ago I observed an advertisement in the window of a Registry Office which read as follows: 'Scunthorpe, Shop Assistant, age 18, wages 5s. weekly.' In order to give this publicity I reported this to the Trades Council."

Rotherham Branch.

"It may interest you to know that I have been in touch with some of . . . (Rotherham Branch) women employees this last week.

"I find that they are receiving 9s. per week wages for a week of about 70 hours inclusive of meal times."

Women Grocers.—Result of inquiry. Average wage received in the few cases reported, 12s. a week, varying from 5s. to 24s.

Bazaar Workers.—22 women in bazaar at Derby, 75 hours a week, ages 23 to 31, average wages, 8s. 4d. None higher than 10s.

Proprietors of 1d. and 6d. bazaars who came into competition with drapers are perhaps the worst offenders. We give below a few particulars.

Swansea.

Age	...	21	21	22	24	24
Wage	...	5s. 9d.	7s. 9d.	5s. 9d.	6s. 9d.	10s.

Sunderland Branch.

The four names are of four women employed by the same firm having about 10 shops in various parts of this town, employing two or three girls in each shop.

We have been trying to organise them for some time, but now that the firm has got to know and has told them they will not employ anyone in the union, and unless they withdraw their membership they will be dismissed on Saturday. The girls are wavering, and do not know what to do. I have been trying to get them to continue with us, and have promised that the union will stand by them if they are dismissed. I find that these girls work 8.30 a.m. to 9 p.m., and in some shops to 10 p.m., also on Sundays, and get 5s. to 8s. per week.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

I have also been told that the firm has been paying full State Insurance, but they have told them that if they can pay contributions to the union they can pay their own State contributions, and so are going to rob them of another 3d. per week from their wages.

Firm of Drapers, Sunderland.

SCHEDULE C.

WAGES 1918 AND 1919.

FIGURES GIVEN IN NEGOTIATIONS.

EXTRACTS FROM CORRESPONDENCE.

WAGES OFFERED TO MEN RETURNED FROM THE ARMY, ETC.

Firm of Wholesale Grocers,
Kings Lynn,
February 21st, 1919.

DEAR —,

In reply to your letter of February 18th, we propose to reinstate you (any way for the present) at High Street as provision hand. You are, of course, still aware that although wages have gone up a considerable height, yet it is still more economical for us to employ girls rather than men; and although we have no wish to take advantage of an unfortunate position, yet common sense compels us to offer a wage which is compatible with the coming fall in prices and consequent loss of profit.

We go out of our way to give this explanation, and we trust that you will accept it in the spirit in which it is given.

The wage we propose to pay is 30s. per week. Should you not feel able to accept this, please notify us per return.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

Copy from Stockport letter.

Can you supply me with any information as to the salary being paid to managers of shops of Messrs. —? The one in our town is actually being paid 5s. per week less than when he enlisted.

I hope, therefore, you will endeavour to give me this, so that he may know exactly his position. Present wages, 60s. Thanking you in anticipation.

Yours sincerely,

DEAR SIR,

I beg to place my case before your notice, and to take a few moments to consider. Some time since I wrote you asking Union's scale of pay, and I received it. On receipt of same I wrote to my firm for rise of pay, and this has not been granted.

I am a branch manager with seven staff, and responsible for about £8,000 stock. I have eight years with this firm; this is the third shop I have been manager of (the other two were temporary), and my wages now are only £2 8s. When I was demobilised I accepted that amount because I did not know the union scale.

I therefore now look to the union for advice. Trusting to hear from you at your earliest convenience.

Yours faithfully,

Provision Merchants,
Princes' Street, Edinburgh,
October 23rd, 1919.

Sixty-five out of a total staff of 95 went into the Army.

Eleven killed. Those who returned have had to go on strike to secure a living wage. Until recently were working for 23s., 34s., 38s. and 40s. a week, and received advance of from 2s. to 5s. a week.

Fancy Warehousemen, etc., Plymouth.

Position.	Age.	Wage.

18	35s.
22	25s.
19	36s.

25s. to 28s. offered on return from Army.

Information obtained at staff meeting, Textile Trade.

I was engaged by above firm in May, 1895, at 24s. per week (dinner and tea). I am now getting £2 (eight rises of 2s. each in 23 years).

Do I deserve a 25 per cent. increase of wages? I will leave you to judge.

Get others to be frank with you, and you will be surprised at the clerical wages in this house.

Other firms.

Men returned from the Army being paid £30 per annum less than other men who had not served in the War.

In one firm a system operates under which wages advanced to £90 per annum living-in, and then an additional £10 was given for staff to live out.

To a woman member of the Staff of ———, Yarmouth.

February, 1919.

In thanking you for your services during the War period, we herewith enclose the final war bonus. Please note that no more monthly payments will be made.

The wages, however, have been adjusted according to the individual worker's abilities and speed in turning out work.

In these days of higher wages and shorter hours work must be speeded up and better time kept, or the wages will exceed the workroom earnings, and ultimately lead to the closing down of the making up departments.

It is hoped you will do your best to avert this.

Your future wage will be 12s. per week.

Firm of Confectioners, etc., Plymouth.

92	It is the practice with this firm to pay no wages to women assistants. After they served three years as apprentice without wages they are then allowed a small commission on sales, but no regular wages are paid to the women.			
93	After the women have served three years as apprentice without wages, they are paid various rates from 2s. per week upwards, rising annually by 1s. until they reach an average wage of 12s. per week.			
	These firms are the leading drapers in Cornwall and it appears to be the usual custom to get apprentices the first three years for nothing and it is quite common to expect the employees to spend all their wages with the firm (after they are out of their apprenticeship). The last time I was in Cambourne I was informed of a firm there who paid as low as 1s. 6d. per week to assistants, and the staff were expected to take their wages out in goods.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

Trade: Boots.

Employer: 180, Plymouth.—Branch manageress responsible for cash and stock from 8.30 a.m. to 8 p.m. (without any relief or meals) receives £1 per week without any commission. She pays 18s. per week for board and lodgings, 2s. per week left for clothes, etc. This firm have four or five branches in the district, but all employees are paid in proportion to the above, all say they are too poor to join the Union. The firm has been fined several times for violation of "Shops Act."

Employer: 181, Carlisle.—Manager, 45s. per week, with 2 per cent. commission on all takings. Average of total remuneration per week—£5 15s. The above schedule of wages from branch is a copy of the company's report which shows fully paid-up capital at £103,697, and that the directors propose to write off the goodwill—£10,000—to pay a final dividend 6 per cent., making 20 per cent. for the year and to carry forward £15,747.

Trade: Drapery.

Employer: 182, Truro and Redruth.—It is the practice with this firm to pay no wages to the women assistants, after they have served three years as apprentices without wages, they are then allowed a small commission on sales, but no regular wages are paid to the women.

Employer: 183, Cornwall.—After the women have served three years as apprentices without wages, they are paid various rates from 2s. per week upwards, rising annually by 1s. until they reach an average wage of 12s. per week. These firms are the leading drapers in Cornwall, and it appears to be the usual custom to get apprentices the first three years for nothing, and it is quite common to expect the employees to spend all their wages with the firm (after they are out of their apprenticeship). The last time I was in Camborne I was informed of a firm there who paid as low as 1s. 6d. per week to assistants and the staff were expected to take their wages out in goods.

Employer: 184, Glasgow.—Extract taken from letter received from Glasgow drapery branch, dated 4th May, 1921: "This member has been offered a situation by —, Glasgow, at a salary of £2 per week. Mr. — has been employed in the best houses in Glasgow, and has had 46 years' experience as a salesman. When he protested that this was not a living wage, informed that a woman could be got for 30s."

SCHEDULE F.

1. Typical Settlement, 1914.
2. Specimen cases of firms refusing or delaying negotiations on the plea that a Trade Board would deal with wages.
3. Disputes, 1919 and 1920.

Typical Settlement, 1914.

Scale adopted by a Co-operative Society, July, 1914.

1. Scale of wages for boys and juniors.

Age ...	15	16	17	18	19	20
Experience ...	1 yr.	2 yrs.	3 yrs.	4 yrs.	5 yrs.	6 yrs.
Wage...	8s.	10s.	12s.	16s.	20s.	22s.

2. Minimum wage for all male employees 21 years of age, 26s.

3. Advances to be made at the rate of 2s. per week per annum for four years in the case of men, as follows:—

Age ...	21	22	23	24
Experience ...	7 yrs.	8 yrs.	9 yrs.	10 yrs.
Wage...	28s.	30s.	32s.	34s.

4. Scale of wages for girls and female shop assistants:—

Age ...	15	16	17	18	19	20
Experience ...	1 yr.	2 yrs.	3 yrs.	4 yrs.	5 yrs.	6 yrs.
Wage...	7s.	9s.	11s.	13s.	15s.	17s.

5. Advances to be made at the rate of 1s. per week per annum for four years in the case of women, as follows:—

Age ...	21	22	23	24
Experience ...	7 yrs.	8 yrs.	9 yrs.	10 yrs.
Wage...	18s.	19s.	20s.	21s.

6. Minimum wage for branch managers (men in charge of branches and heads of departments), 58s., to be increased according to responsibility and/or length of service.

7. Minimum wage for branch manageresses (women in charge of branches and heads of departments), 24s., to be increased according to responsibility and/or length of service.

Specimen cases of firms who refused or delayed negotiations on the plea that a Trade Board would deal with the wages question.

— Stores, July 10th, 1919.

We are in receipt of your letters of the 7th and 9th inst. with reference to the question of wages in certain towns in South Wales, and we may say we are awaiting the decision of the Trade Board in connection with the matter.

November 29th, 1919.

We are in receipt of your letter of the 26th and are dealing with the matter to which you refer. Meantime, we are still awaiting the decision of the Trade Board.

A firm of wholesale grocers, Hull, June, 1919.

You doubtless know that the Government have organised a Trade Board, and we await their decision.

A firm of provision merchants, Bournemouth, July, 1919.

In face of the Wages Board about to be set up, I am not prepared to express any views on the schedule you enclosed.

A family stores, Osneystry, 14th May, 1920.

It is certain that are long a Trade Board will be established which will probably arrange the matter on a national basis: for these reasons we think that undue pressure should not be exercised at this present time.

A firm of provision merchants, Oldham Road, March, 1919.

The whole consideration of the question ought to be left until this (Trade Board rates) is decided.

30th June, 1920.

John Turner, Esq., General Secretary,
The National Amalgamated Union of Shop
Assistants, Warehousemen & Clerks,
Dilke House, Malet Street, W.C.

DEAR SIR,

With reference to your letter of the 18th inst., ref. L/52, on the subject of the minimum wage scale and the decision of my association to submit the question to arbitration under the Industrial Courts Act, 1919, I have to inform you that this communication was considered at length by a special meeting of the association held yesterday.

In reply, I was directed to state that the association does not propose to submit the matter to arbitration on the scale which was adopted at your Easter Conference at Glasgow, but that they are only prepared

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

to submit the matter to the Industrial Court on the rates of wages now obtaining. Further, I am to point out that the Trade Board for the Grocery and Provisions trade has now been established and that the first meeting of that body is to take place on July 20th, and in view of this, the association suggests that your union should reconsider the matter with a view to bringing the subject before the new Board.

Yours faithfully,

Secretary.

Disputes, 1919 and 1920.

To obtain any satisfaction in negotiations our members had to cease work in the following cases:—

- (a) London Tea Warehouse.
- (b) London Stores.
- (c) Dairy, Edinburgh.
- (d) Hairdressers, Glasgow.
- (e) Dressmakers, Huntley.
- (f) Stores, Aberdeen.
- (g) West-End Dressmakers.
- (h) Drapers, London.
- (i) Wolverhampton.
- (j) Portobello.
- (k) Aberdeen Dressmakers.
- (l) Dundee Dressmakers.
- (m) Falkirk, Stirling, Bannockburn Dressmakers.
- (n) Aberdeen Seed Trade.
- (o) Aberdeen.
- (p) Peterhead Drapery Trade.
- (q) West Calder.
- (r) Grocers, South Wales Branches, Ballot taken.

Some thousands of members were involved in the above disputes.

In most of the cases a settlement was reached after cessation of work, but in some instances, notably (h) and (i), even these extreme measures did not enable the members concerned to effectually remove the causes of grievance.

SCHEDULE G.

PROFITS IN THE DRAPERY TRADE.

(Handed in—not printed.)

7145. *Chairman:* You are General Secretary of the National Amalgamated Union of Shop Assistants, Warehousemen, and Clerks?—Yes.

7146. You come here to speak on behalf of the Union?—Yes.

7147. You are also, I think, Chairman of the Workers' Side on the Grocery Trade Board for England and Wales?—Yes.

7148. And you have given us a separate statement on behalf of the Union on that Trade Board?—Yes.

7149. You go first into the history of the movement and the method of Trade Boards for distributive trades?—That is so.

7150. And you refer to a pamphlet which has been published on minimum wages. I see the edition which I have is dated 1913. I suppose the first edition was earlier than that?—I think it was 1911.

7151. And you refer to the small wages then existing; that is in pre-war times?—Which have relatively remained the same, I might say; perhaps relatively they are worse now.

7152. You mean relatively to the cost of living?—To the cost of living, I mean.

7153. I was struck by the table on page 16 of the book giving an extract from the Board of Trade returns on cost of living for 1912. I see they take the middle zone of London as 100?—Yes.

7154. And they give the figures for other important towns?—I think I ought to say, as far as we could learn, as a result of the war, and probably partly due to rationing, the cost of living was made more uniform than is shown here in 1912.

7155. That is really what I was going to ask you. You think that the cost is to-day more nearly a uniform figure?—It is much more uniform now than it was then.

7156. That would apply, I suppose, as between the larger towns and cities, but would you say the same of the smaller towns and the country districts?—I would rather wait to get further evidence before I could express a definite opinion, because the question of rent would come in in country districts, as it did then. I am not quite sure about the variation between the cost of living—I should say, the cost of living as far as food is concerned is quite as great in the country districts as in the towns, and it is the rent which would make the variation. In fact, the cost of food is sometimes greater, paradoxical as it may sound, in the country. So much food is imported now, and if you want to get tinned goods in a country district—and most people do now require some tinned goods, tinned milk, tinned fruits, salmon, canned goods as the Americans would call them—they are higher in the country districts than in the towns.

7157. I can understand that. On the other hand, I suppose such things as eggs or milk might be cheaper?—Yes, milk would probably be cheaper. With regard to eggs it rather depends upon the season and how the local supply is. Again, if they have to have a reserve of imported eggs, they would be as dear or dearer in the country district at certain periods than in the towns.

7158. But your proposed rates on the Grocery Board do differ: they are divided, I think, into three scales?—Yes, that was carried in opposition to the request and the desire of the Workers' Side. We felt that there was greater uniformity—and we still feel that—in the cost of living than is shown in those areas and in those rates.

7159. But not complete uniformity?—Not complete uniformity, no. On that point I would like to say one word. If you are referring now to the question of areas, I think the method of defining the areas is wrong. They take population—I have set that out in my statement—but you will find that small places adjoining industrial towns are quite as high for the cost of living; in fact, they are suburbs, often, of the larger town, but the local authority is really still an independent local authority adjoining an industrial town, and the cost of living is identical with the town. Mostly you will find that a very serious drop in the proposed rate is made because the population is under a separate local authority, and because the population is under ten thousand. Without any relation necessary to the cost of living the rate is lower. I have had that strikingly brought to my notice from our branch at Batley, where the adjoining township, Birstal, I think it is—I am not quite sure of the name—an adjoining township quite close by, only a tram ride away, with a population of less than ten thousand has that serious drop if the rates are adopted.

7160. There is always a boundary question in everything, but how otherwise would you differentiate between the districts?—Our organisation was represented on the Reconstruction Committee for Furniture Removing, the warehousemen and the clerks, and they take industrial areas to define the rates, and I think it is much more equitable to take industrial areas irrespective of the question of the number of the population which there may be under a local authority than it is to take the arbitrary line of population, which may or may not have any reference to the cost of living.

7161. But where should we find an instance of the division into industrial areas?—Well, they did it, and that can be taken as a rough example. I was not on that Reconstruction Committee except at the beginning; perhaps Mr. Hoffman could explain how they did the industrial areas on the Furniture Removing. Mr. Hoffman was representing our Organisation on the Furniture Removing, and he can probably tell you the areas. (Mr. Hoffman): They

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

would take South Wales—the whole of the coalfields of South Wales, as an industrial area; the district round the manufacturing portion of Lancashire would be mapped out as another area, and the Clyde would be mapped out as another.

7162. Then what did they do with the country areas?—In between?

7163. The non-industrial areas?—They were included in that area.

7164. They were included in an area of their own?—In an area of their own.

7165. Were they anything like the building trade areas?—I am not acquainted with the building trade areas, so I cannot say.

7166. *Lord Weir*: That really means two divisions instead of three?—(*Mr. Turner*): There were three. (*Mr. Hoffman*): The Metropolitan, the industrial areas, and the rest of the country. (*Mr. Turner*): My contention was that the population is not a sound basis for varying the rates of wages. South Wales has been mentioned by *Mr. Hoffman*. At some of the small places in the coalfield the cost of living is identical with a town where the population would be, say, 15,000 or 20,000 or 30,000; there is no real difference. Even the rent is practically fixed by the same competition in the small place to secure houses as it is in the larger town, and there is no variation.

7167. *Mr. Bell*: Are you acquainted at all with the Manchester area?—Not very intimately. I know Manchester fairly well.

7168. Do you know the small place, Failsworth, which is sandwiched between Manchester and Oldham?—I do not know the place very well.

7169. Your contention is that the cost of living would be more or less equal in the two places?—I do not know enough about the two districts to answer that. Probably *Mr. Robinson*, who comes from the Manchester district, could answer that definitely.

7170. If I reminded you that Manchester, Failsworth, Hollinwood and Oldham are so close together that you walk out of one place into the others?—I know the Lancashire and Yorkshire Railway.

7171. A stranger would not know he had left Manchester and entered Failsworth. Under those circumstances your opinion is that the cost of living would be similar?—Not quite that; that was not quite the point I was trying to make. My point is that in an industrial area the population is not a sound basis on which to vary the rates in the way it is done on the Grocery Trade Board. We have had so many complaints from branches of ours in the country, where the assistants are affected, who have called our attention to this weakness, if I may so describe it, in fixing the area that I felt bound to bring it to the notice of the Committee.

7172. *Chairman*: I think your suggestion goes on the lines *Mr. Bell* is putting to you, that all these places would be in the industrial area?—As I say, I am not well enough acquainted with the Manchester-Failsworth district to express a definite opinion, but I do think that taking an industrial area as such, apart from the question of population, would be a sounder basis for fixing any varying rates of wages.

7173. You would have to put the boundary somewhere?—Oh, quite.

7174. You would have to call the area the area of certain Local Government districts in order to define it?—Yes. I am not quite well enough acquainted with how they managed on the furniture removing, but it has been done.

7175. I suppose you may do it by zones at certain distances from the centre?—The zones of industrial towns would certainly be divided; I have mentioned that before, but I do not like to give a dogmatic view about it. I only feel that the present method is so unsatisfactory that a more satisfactory one could be found.

7176. *Mr. Pugh*: Is this a variation of the minimum we are discussing?—Yes.

7177. *Chairman*: And instead of having minima for the three classes, such as are referred to in the Grocery Trade Board rates, you should have minima for these other three classes?—Yes.

7178. *Mr. Poulton*: You think that that is quite feasible to work out?—Well, it has been done on one, and if it has been done for the furniture removing I feel it could be worked out more satisfactorily. I quite agree that whatever we might get at on this question of variation, there would be certain to be some anomalies in different parts; but I feel that that would get nearer to a fair application of it.

7179. *Chairman*: I have the rate for the building trades, and there there is an elaborate list of places and a statement as to which exactly they come under.—Oh, yes.

7180. But your suggestion, I think, is rather simpler than that. Now I go on with the history. You refer to the resolution passed by the Union in 1914 in favour of applying the Trade Boards Acts, and again in 1916 to a deputation to the Board of Trade in that year, and to a deputation to the Minister of Labour in 1917, to the resolution of your Annual General Meeting in 1917, and again in 1918; and all those matters resulted in a declaration by the Government of the day of the intention of amending the Trade Boards Act so as to make it possible to cover the distributive trades?—That is so.

7181. Then came the Act of 1918, as we know, and you extract a statement by *Mr. Roberts*, the then Minister of Labour, on the question.—That was to show that when the Government were amending the Trade Boards Act they were anticipating a condition very similar to what we have at the present moment.

7182. That is a fall in wages after the war was over?—Yes.

7183. And a risk of dislocation of trade?—That is so.

7184. And your point, as I understand it, is that the Government had this very prospect in view when they passed the Act of 1918?—There are two things in this statement, *Mr. Roberts'* speech, which stand out, I think, very strongly. The first is that they were wanting to expedite the working of the Trade Boards, which had previously given, quite naturally, some dissatisfaction, and, secondly, that it was for the purpose, after having expedited the working of the Act, of meeting the very situation that we are now in.

7185. *Lord Weir*: You say in connection with that that they wanted to amend the 1909 Act. I do not quite understand the emphasis you put on amending the Act; was it simply to make it easier to establish a Trade Board?—Well, there had been some difficulty, as you will have seen from the evidence submitted to you. We had asked that it should be applied under the 1909 Act, and when the Board of Trade was approached on this matter, *Mr. Runciman*, who was President of the Board of Trade at that time, stated that he felt that a *prima facie* case had been made out, but he told *Mr. Beaton*, who was, I think, President of the Scottish Trade Union Congress that year, and was accompanying the deputation from Scotland, that the Government were contemplating legislation; and by suggestion, at any rate, the President hinted that they should wait till the Act was further amended, when distribution would be brought under it—that have come under the 1909 Act, but that was the plea with which we were met when we went by deputation on various occasions to different Ministers—that the Act was about to be amended, and, as you will notice here, it was to be expedited to meet this very situation that we are now in. Therefore we understood that we must wait until the Act had been amended before we could hope that it would apply to distribution.

7186. You felt all the time that you had a perfect claim under the 1909 Act to have a Trade Board?—We did, yes. We felt that the evidence that we submitted proved our case; in fact, it was admitted, as I say, by *Mr. Runciman* that a *prima facie* case

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

was made out, but, in view of the pending amendment, it would be still easier, as it were, to deal with the matter when the Act was amended. That is what we took to be the case.

7187. I still do not quite see how it would be easier?—I do not think anyone would misunderstand. You generally have difficulties in getting these Acts applied. You must remember that it had been in operation from 1909; it had then been in operation six or seven years, and only some eight or nine trades had been brought under it. In view of the proposed or intended amendment of the Act, it was a very excellent excuse, I take it, in the mouths of the Ministers, for further delay. I mean, we were not at all fobbed off from our belief that we should come under the 1909 Act, and we were given that hint, and we went on with our efforts to get the Act amended, feeling it would facilitate our coming under it.

7188. *Chairman*: The Minister may have meant that it would be easier to make an Order of the Minister of Labour under the Act of 1918 than to get a Provisional Order under the 1909 Act?—Yes, there are the Special Orders which are mentioned in the extract I am speaking of, giving facilities under the Act.

7189. *Mr. Poulton*: And the application is wider, is it not, in the second clause?—Yes; there are two points now that warrant the Minister of Labour giving notice of intention to apply the Act. Before it was only the bad conditions, but now it is lack of organisation on either or both sides. Even if the conditions are not proved to be extremely bad, if there is lack of organisation the Trade Board can be set up so that there can be the joint discussion on matters affecting the trade.

7190. *Chairman*: You must also have regard to the rate of wages even under the Act of 1918?—Yes, but that is not specific now for wages only. The two factors are there.

7191. *Mr. Poulton*: But I take it the point you wish to make here is that, although there is another Act, your organisation for many years prior to that Act, felt that the industry was such that it needed the help of the law to bring up these low-paid districts?—We had become quite convinced of that, and the reason I have put in the resolutions which were carried is as indicating the firm and growing conviction of our members in this matter.

7192. *Chairman*: What is the size of your union now?—About 100,000 members.

7193. Out of how many workers in the trades which you represent?—I should say there are nearly 1,000,000 eligible, but, of course, there are different organisations catering for them too.

7194. You have only about 10 per cent. in your union?—That is right, and we do not cater for the whole of those employed in distribution. We do not take the transport men or the men on the vans, the vehicle workers. Our membership is mainly amongst the retail salesmen and saleswomen, but we take all; we take from the managers down to the porters and the packers and the apprentices. Our membership is mainly amongst branch shop managers and the salesmen and saleswomen.

7195. Then, in 1919, you passed a resolution welcoming the decision to set up a Trade Board. Then you refer to discussions, the consultation of the employers, and then you pass to the question whether there shall be one Trade Board or more. I think ultimately it was found impossible to set up under the Act one Trade Board for all the distributive trades or for a group of them?—I think it was felt that it was, to use an American term, that they would be biting off more than they could chew if they attempted it.

7196. But apart from that, the Act speaks of the setting up of a Trade Board for a trade?—I think that there was a little doubt as to what constitutes a trade. We feel that distribution is rather a service than a trade, and we felt then, and we still feel, that from many points of view it would have been

better if an effort had been made, large as it was, to have one Board, and have sub-committees dealing with the special sections of distribution. We do not think distribution is, in the sense in which it was mentioned in the first Act of 1909, a trade in that sense; that is, a productive trade was most thought of in the 1909 Act; but really distribution is a national service, and there is a great similarity running through the question of salesmanship in any of those—I am thinking at the moment only of the salespeople. Probably there are numbers of others, but, at any rate, that is in my mind. Since the rates applicable to salespeople, whether in the ironmongery or the drapery or the grocery, do not vary very greatly—they do vary, but not very largely—it would have been possible to have had one Trade Board with sub-committees to deal with the different classes.

7197. Reserving, I suppose, to the Trade Board itself the ultimate decision as to the rates?—That is so.

7198. *Mr. Pugh*: Do you think that a Trade Board such as you suggest would get rid of what appears to be a difficulty of varying rates for the same occupations? That seems to be a very considerable ground of grievance; what is your view?—You mean the three different variations?

7199. If I may take a specific occupation, that of a porter, it has been stated that a porter coming under one Trade Board may be paid at a different rate from a porter coming under another Trade Board, and that these men may be working in a large establishment such as the multiple shop, and that this is attributed to having different Trade Boards for different branches or sections of the distributive trades?—Well, there is only one Trade Board operating in distribution at present, so that that cannot possibly be correct. What I would say is this, that there is greater variety—and, in fact, that is the unfortunate position, I suppose, of every occupation which is unorganised—in every section of distribution than there is between the different sections. There are greater varieties of wages being paid in the grocery trade than there would be between the grocery and the drapery as two trades. You see, there is only one distributive Board operating—the Milk Distributive Board.

7200. *Chairman*: Your point is that there ought not to be, and need not be, that variety; that the nature of the occupation of a salesman in a grocer's shop is much the same as that of a salesman in a draper's shop?—Yes. We have been able, as proof of that, to get our agreements with the large stores, such as the Army and Navy Stores, which covers every range of salesmanship and every kind of porter.

7201. There would be a special difficulty there if there were different rates for different distributive trades?—Yes; and what holds good with an isolated case, like the Army and Navy Stores, could be applicable almost to the whole of distribution.

7202. Have you ever thought of a division, of a grouping of distributive trades, whether they could be collected into two or three groups at the most?—Yes, that has been discussed, and I have mentioned it in my statement, and I should say one Board, or at the most, two or three. The reason for that was that we felt that the grocery and provision trade—dealing, perhaps, with milk as well in that case, and greengrocery, fishmongers, poulterers, butchers; all the food trades, so to speak—should be put on the one side, and the dry goods, as the Americans would call them, on the other, including drapery, furnishing, outfitting, and then perhaps another group for any miscellaneous trades which were not covered by those two. That was the alternative that we put forward when we were told that there could not be one Board, or that it was so difficult that they could not have one Board. That was our alternative.

7203. *Mr. Poulton*: I take it that there would be a sort of governing body, who would delegate their authority as was necessary in the varying sections of your industry, and they would report ultimately to the governing body for confirmation of what they had arrived at?—If you had the three it would not

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

matter very much, except this, that when Sir Robert Horne was seen by a deputation on this matter, he assured us that whatever number of Boards were set up it would be necessary to co-ordinate them, probably by the Chairman of each Board forming a co-ordinating committee, and perhaps, I take it, one each from the employers and workers of each. So that if there had been three there would have been a co-ordinating committee between the three. But the three were suggested when we were told that it was too unwieldy to have one, and they were not quite sure of the legal position, and many other difficulties that were urged, quite legitimately. We then put forward an alternative that they should take, as I say, the grocery and food trades on the one hand, the dry goods on the other, and a group for any miscellaneous trades which might be left out. That was given as perhaps a useful suggestion as an alternative.

7204. But the experience of your association apart from Trade Boards is confirmed, is it not, by what you state on the top of page 6, that you still believe you might have had one body dealing with the whole matter, only that the Department preferred to adopt the line suggested by the employers?—Yes. I think it is stated here that the National Chamber of Trade, which is a very important employers' association, representative of all phases of distribution, mostly from the smaller provincial towns where distribution is not so specialised as it is in the large cities, have joined with us in the desire for the Trade Board. I think the Ministry found the pressure of the sectional Drapers' Associations—say, the Ironmongers' Association, the Grocers' Federation, the Drapers' Chamber of Trade—each employers' association feeling that they were so important that they ought to have a separate Board; I think they found this pressed so strongly that they abandoned at a certain stage the proposal for one Trade Board. I think that had a great deal to do with it.

7205. *Chairman*: They went in for self-determination?—That is so; and, of course, I may say that the very imperfection of the organisation of both sides, particularly amongst the employers, where in the larger towns their organisations are sectionalised very sharply, made them stand for that position rather strongly. They each felt that their section ought to have a separate Board. Of course, there is really no end as to where it could go in distribution as to the number of the Boards. It is almost endless. The employers' organisations are getting to such a point that if each of them were going to have a separate Trade Board, I am afraid it would run into hundreds.

7206. *Lord Weir*: That tendency to go to a very large number of small Boards is, in your opinion, crystallising the anomalies in remuneration for exactly the same grade of work?—Yes, it would. Really there is no essential difference, as I say, in salesmanship between the different phases of distribution, but each Board would find itself working out very much the same as the others in spite of their asserting probably at the beginning that the differences were very great. I am reminded that so far as our own Union scale is concerned, we do not differentiate between the different sections. We lay down a national minimum which covers them all.

7207. *Dame Adelaide Anderson*: Do you cover wholesale and retail indifferently?—Yes.

7208. There are not varying problems for wholesale and retail distribution?—Not so far as minimum wage is concerned.

7209. I suppose you would not press very far that description, rather than definition, of national service as distinguishing the distributive trade from productive trades?—I only wanted to make the point that distribution is rather a service than a trade in the sense in which it was intended in the 1909 Act, which dealt really with production.

7210. As coming nearer to the person than the production does?—It is not producing something fresh; it is the manipulation of something that is already produced.

7211. *Chairman*: It is commerce and not industry?—Well, yes.

7212. *Dame Adelaide Anderson*: Of course, all manufacture in a sense is movement—is transport.—I know in the last analysis that is so.

7213. But you say it is at one end of the scale rather than at the other?—We do, yes. The word "trade" in the sense in which it was meant in the 1909 Act was when by the manipulation you get a new form coming out from that process. There is no new form of sugar because you wrap it up in a lb. bag instead of having it in a 2 cwt. bag. It is still sugar.

7214. *Chairman*: I think, apart from this question of one Board, you say that the employers generally welcomed the setting up of the Trade Boards?—Well, yes. You see, the stage at which the Government began to move after the Amending Act of 1918 was at a period when advances of wages were being asked for and the condition of the labour market was such that they could not resist them, and there is no doubt that the Trade Board was welcomed by them, because it would steady any increase of wages.

7215. The question of downward tendencies was not present to their minds, apparently?—They were not anticipating it quite so quickly, I think.

7216. *Mr. Pugh*: There is one point on the single Trade Board: The question has been raised before this Committee of district committees in addition to a single Board. What is your view as to the value of district committees, having regard to different conditions even in areas such as you have suggested just now?—Well, I feel that district committees, as far as I can make out, would be, not the fifth wheel, but, if I may put it so, the tenth wheel of the coach. They would in every way hinder the progress of the Board, and would be of very little, if any, value. They would merely emphasise certain local conditions without being of any value to the general application of the Trade Board system to the trade.

7217. Then you do not advocate district committees?—Not at all. I should say that, to my mind, they are not only useless, but rather harmful.

7218. Then how do you provide to get before the Trade Board, or the central body, if I may term it so, the conditions and the opinions of the more outside districts, particularly with regard to rural areas?—I may say the Ministry of Labour look after that very keenly and see that all phases of the trade are represented on the Board. I am speaking now of the only Board with which I have intimate acquaintance, the Grocery and Provision Trade Board (England and Wales), and we have had every form of employer and every part of the country represented on that Board.

7219. And you think there is no substantial ground for complaint?—I do not think so at all, none whatever. I may say that all the accentuated peculiarities of certain districts, which have undoubtedly been in existence on account of the unfortunate industrial depression, which has been accentuated in certain districts, has been emphasised very strongly upon that Board.

7220. *Lord Weir*: Do you mean that you have in view the fixing of two minima, one applicable to the cheapest area of living in the country, and then you would propose for any more expensive place extras on that; is that your view?—Well, no, on the contrary I have taken the perhaps rather rough method of the Furniture Removing and Warehousing Interim Committee as a method, which, perhaps, might be a little more carefully thought out, but which was more likely to bring what I believe is desired. What any organised body on behalf of its members requires or strives for is an equal standard of comfort for its members. I believe that the effort that is put forward, and I believe the intention of the Trade Board to any trades, is to secure to the workers at least a reasonable minimum standard of comfort, and, if possible, an equal standard of comfort for them all. Now, if it can be shown that there are varying costs of living, and they can be

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

made, I think it is only reasonable that they should be made. I do not think that there is the variation there was before the war. That tended to a uniformity. It tended that way; I do not say it has entirely blotted out the variations, but to take the population as the method by which you reach that equal standard of comfort, I am convinced is wrong. Whatever other method you may have, I am convinced that is the wrong one, and I think the other method which was applied by the Furniture Removing Interim Committee comes much nearer the intention, as I believe the intention to be, of securing an equal standard of comfort. That is why I put it forward as an alternative.

7221. *Mrs. Lyttelton*: Did you mean area committees instead of district committees?—No.

7222. You simply meant the division into these areas?—Yes, that you should have your Trade Board dealing with the whole of that, but if a method can be found by which you can have areas—

7223. Vary the minimum in those areas?—If it is really found to be necessary; and as I say, to my mind the war brought about a greater uniformity than previously. But if there is to be a variation, and as there is an intention to get an equal standard for all, you would have in that case to get a new method. Certain it is that the population method is not a sound one.

7224. *Chairman*: There is some difference between the country places and the big towns, and your area proposal would to some extent meet that?—That is so.

7225. *Lord Weir*: That is embodied in your own schemes, I believe, where you have a perfectly definite extra for London?—That is so; that is the Union's attitude. We know that London, with all that happened in the war on account of rent, is higher than anywhere else. We know that the cost of living in London is highest, and we have always had a higher rate for London, but we have not had any variation outside that, because, as I say, we felt it was tending to uniformity outside London.

7226. *Chairman*: Now you go to the evidence in favour of there having been very low wages in the distributive trades in past times, and you refer to the evidence which you had in your books in 1913. At that time there was a record kept of people who received less than 2s. a day.—There was a very excellent piece of information which one could obtain under the old Health Insurance Act. I believe that for purposes of administration, to simplify the administration, that is not now available; but I want you to remember, if you will, that this only applies to those over 21 years of age, and that a very large number, a large proportion of those engaged in distribution, and particularly in retail distribution, are young people under 21 of whom no record is shown here at all, that of our total women membership at that time the majority would be under 21 years of age; the total number of women in our approved section was 18,655, and we only had a record of those over 21 years of age; that of those over 21 there were 1,117 over 21 years whose wages were below 2s. a day.

7227. Out of the 18,600?—That is so, and the majority of the 18,000 were under 21, of whom no record could be obtained.

7228. Is that so? I see you give that as a figure of those over 21?—No.

7229. Yes?—Yes, I am sorry; I am afraid that is an error.

7230. Which is the error?—The error is that it is 18,000. I believe it was a much smaller number. I cannot say that we have the numbers under 21; I am only speaking of the general knowledge of trade with respect to that. It can, of course, be got by going through the records which we keep; we could find the exact percentage and the exact number, and if I might be allowed that reservation here, I should like to reserve further evidence on that until I have made further inquiry. This is a report from our Health Insurance Department, and I was discussing

this with the insurance manager, and he told me that he could not give me the number of those who were over 21 and those who were under 21; but I see that apparently in giving it here he has mentioned that they were over 21.

7231. *Mr. Poulton*: But apart from the Health Insurance statistics, you are quite satisfied, I presume, from your statement, as to the very low wages paid to a tremendous proportion of your membership at that period of time?—Yes. There is one other factor that must also be seriously remembered, that a very large proportion can never join our Union at the present time. In some cases they receive no wages at all; for the first few years that they are in the trade they go as learners; and then for a year or two after that their wages are only a few shillings a week—3s. or 4s. or 5s. or 6s. or 7s. a week—out of which it is quite impossible for them to pay a contribution to the Union, and therefore a large proportion at the present moment of those engaged in distribution it is impossible to think of organising. They could not possibly pay their contribution. Therefore, the only ones whom we have any record of are those whose wages are higher than is general. They were those who could afford to join our Organisation.

7232. *Chairman*: I suppose in the war wages did go up?—Oh, yes; but very slowly indeed, and not at all in keeping with the increased cost of living, and only in 1918, just before the Armistice, when the cost had risen so sharply, and when amongst our members there was very great unrest, were we able to secure some modification for them. Where they were unorganised a strange anomaly arose. Sometimes they found on account of the shortage of labour they had to pay a fresh assistant coming in a higher rate than they were paying the others. Those who had remained in continuous employment had very little advance indeed; perhaps the usual moderate advances as in houses where they gave annual increments on wages, and in most cases those increases had not been much larger than they would have been had there been no war.

7233. *Dame Adelaide Anderson*: Did the learners at that time get paid anything at all? Was there a change there owing to the difficulty of meeting the cost of living?—During the war?

7234. Yes?—I do not think that was altered.

7235. They still went on earning nothing?—Yes, and still are.

7236. *Mr. Poulton*: They still are?—Oh, yes.

7237. *Lord Weir*: At what age do you expect them, if I might so put it, to join the union?—We think that 16 years of age would be quite young enough to make a start, but they are recruited even now from between 13 and 14 years of age. You see the school-leaving age in many districts has not been raised, because the Fisher Act, except where they have schemes prepared, is not operating, and I believe the leaving age in many cases in the provincial places where no scheme has been prepared, still remains at about 13 years and four months on the average. Immediately they leave school they start work, and very often part of the time before they leave school they are employed for running errands, and so on; as soon as they leave school they go there the whole time.

7238. *Chairman*: Do you mean they go for nothing?—In many cases, yes. I wanted to supplement and go a little farther on that, except that another question was interpolated; but there was just the same chaos in the question of the learners in distribution as a whole as there was in everything else. Some employers make it a point of honour that they pay something from the first day that they can get the employment, and they make a progressive payment. Others get the employees for nothing.

7239. Are you speaking now of apprentices or learners?—I may say that except for a few country districts our peculiar form of apprenticeships—it is not really apprenticeship at all, though some of the firms have attempted to introduce apprenticeship—has been dead for 50 years.

7240. As regards the distributive trade?—Yes.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

7241. Then why should a boy who is not an apprentice run errands? It is not the sort of thing he wants to do?—It is not so much the boys; it is more the girls. In many cases they live in, and parents are glad to get their girls put into what they think is a respectable calling, particularly in the drapery trade. Evidence has been submitted which will bear that out, and they are prepared for them to go in some of these country districts for three years for nothing.

7242. That must be to learn the trade?—No more learning the trade than those who go in and are paid; in fact I should say it is rather with the firms who pay that the person who goes there would learn much more than the other.

7243. Still the purpose must be to learn the trade?—The purpose, yes, that is so; but what I want to point out is that there is nothing special to learn.

7244. In the drapery?—Very little; just the usual necessary knowledge. I am speaking now of the ordinary phases through which one who enters the drapery trade goes, and about which our Mr. Hoffman, if he submits his evidence later, as he has had experience in the drapery trade, will be able to tell you much more accurately than I could. I can speak of the grocery trade.

7245. You are speaking of distributive trades?—I am speaking of distributive trades in general now—that the girls particularly have been allowed to go, where they live-in, at any rate, and in some cases they get board and lodging; and in other cases board only where they sleep at home; and in other cases they are paid perhaps 1s. or 2s. a week for the first year, and 3s. or 4s. the next, and so on. Then at the end of the period of service with the firm they are getting very little more than that; they generally have to leave at the end of the period and seek a situation in the open market, and leave home if they want to be able to get anything like a reasonable wage.

7246. Lord Weir: Does that apply to a substantial percentage?—It applies to a very substantial extent indeed.

7247. Supposing we take the trade you know most about?—Not so much the grocery trade, because before the war in the whole country there were only about 15,000 females, and some of those would be in the old Census as shopkeepers; they did not discriminate between the shopkeeper and the assistants in the Census.

7248. I was thinking of young people?—I think in the 1911 Census there were 19,000 women employed in the grocery trade altogether, which would include a great many women who keep little grocery shops; but during the war, of course, women came in much more quickly.

7249. I was asking about the young people in the grocery trade—the percentage of young people who are not paid?—No, there would not be so many people in the grocery trade.

7250. So that among the males there would be none?—Amongst the males there would be none; that is so.

7251. And among the girls you think a small percentage?—Perhaps amongst the girls a certain percentage, but it would be very small. I do not think it applies very much to the grocery trade. If you remember, I made the qualification with regard to the grocery trade when I spoke of those who come for nothing.

7252. Now come to the drapery trade. With regard to the young girls who are not paid, have you any idea what percentage?—I have not.

7253. I want to get a picture of the condition of things?—I should think probably a matter of 5 or 10 per cent. of the girls, who up to quite recently have gone into the grocery trade, have gone in with no wages at all at the beginning; and then you would get a larger percentage who received just a shilling or two, probably where they live-in.

7254. Chairman: You said up till quite recently. Has that state of things altered?—Yes, the war undoubtedly made a considerable alteration. Girls did

not go into the trade so readily for nothing as they had done previously, although it still operates to some extent—to a smaller extent than before.

7255. Mr. Pugh: Is the tendency to revert to the original position now?—Yes, the tendency at the moment, with trade being so bad, is that parents would be very glad indeed to get their children somewhere as they get to 13 or 14 years of age, even if they only got their board and lodging.

7256. Mrs. Lyttelton: As I understand, you think the ability to join the Union is some kind of test of the time when they are beginning to get decent wages. Can you give us any idea of what is the average age—and I think this was the object of Lord Weir's question—at which the young female enters the Union?—Well, we have members so young in cases where during the war they were earning wages, that we had associate members under 16.

7257. And now?—Under the Trade Union Act you can only take them as Trade Union members at 16 years of age. We have an associate section and they can transfer into the Union.

7258. But have you a very large number of members under 16?—No. Our associates during the war went up to about 3,000 or 4,000, but they are now down to a few hundreds. That is an indication of the difference; they cannot afford to pay. A change has taken place. That only just comes to my mind; it more or less strengthens the reply I gave to Mr. Pugh with respect to the present tendency.

7259. Chairman: Then you refer to the returning soldiers at the end of the war, and you have given us some samples of offers of employment to them at rates which you represent as low?—Yes.

7260. In one case 30s. a week, in another case 25s., in another case 12s. a week. If we print the schedule with your evidence, you probably would wish the actual names to be omitted?—I have no desire that the names should necessarily appear; I am only anxious that the evidence should be there. We only give the names as a matter of good faith. Might I also say that at the period when these men were returning from the war in the early part of 1919, and later, the cost of living was in the early part of 1919 120 per cent over pre-war, and you would have to cut those wages in half and a little less to get a pre-war idea as to the value of the wages.

7261. You were able, in a good many cases, to secure better wages for these men?—Yes. There were, I am sorry to say, some disputes as the result of this, men returning and finding actual money wages as much as they were before they went to the war, and made applications for increases which were refused. In cases where they were in the Unions, they would, of course, ask the Union to intervene on their behalf, which we did, and in one or two cases it led to disputes, the men withdrawing their labour, because they felt it was quite impossible to live. Perhaps the worst phase of it is that when these men, old servants who came back, had been driven into dispute, the new men who were taken on were taken on at a wage which was relatively to the increased cost of living, somewhere near the wages they were paid pre-war, which had been refused to the men who had given earlier service to the firms and had given service to their country in the war.

7262. At all events, you intervened and did your best?—Yes, and in a number of cases were successful, and in others unsuccessful.

7263. Then you say that some of the employers postponed their answer in view of the probability that the Board would be set up?—Yes. We were constantly being met with that about that time. The employers said, "Well now, we have sent someone on; we have arranged with one of our representatives to go to a meeting which had been called by the Government with respect to the Trade Board." Perhaps they would make a compromise; they might in some cases increase it, and in either case they would say: "Now you must wait and see what the Trade Board is going to do." A large number of employers used the fact of the Trade Board being about to be set up as a reason for not increasing the rates.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

7264. Then you quote from the speech of Mr. Roberts, the Minister of Labour in June, 1919, dealing with the proposal for one national minimum wage. He criticised that with great force, and you are in agreement with what he said then?—Yes, I may say that I served on the Joint Industrial Committee, and this matter was discussed on the Committee, which brought forward its report, and we were driven, after long discussions, to take the view that the Trade Board was the only machinery that we could rely upon to secure the establishment of a minimum rate of pay. We did not abandon entirely the idea of a national minimum wage for adults, but we were driven to this conclusion, that even if a national minimum wage were set up, it would only be one to secure to adults a national minimum below which the Trade Boards could not go, which is quite another view. It would stabilise nationally a minimum for adults at 21, below which the Trade Boards would not be able to go. The conclusion we were driven to was that it was rather to strengthen the position of the Trade Boards.

7265. Still, I gather you agree with what Mr. Roberts says, the difficulty of fixing one rate for all the trades?—The difficulty was so great that we recommended on that committee that there should be an inquiry, because we felt so insecure, if I may say so, that we felt an inquiry ought to be made into the whole question.

7266. You are speaking now of the Industrial Conference?—Yes. I was on Committee No. 2, which dealt with the question of wages and hours, and I am afraid—though it is purely an expression of opinion—that this is being used by employers who, if you had a national minimum to-morrow, would urge—or, if it was being proposed, that would be better—would urge that it would be impossible if this was confronting them at the moment. It is urged now, because the Trade Board is confronting them; but if it was the national minimum that was confronting them, they would be as opposed to the national minimum, or perhaps more so, than they are even to the Trade Board at the moment.

7267. It is fair to say that not many employers suggested a national minimum before this Committee—one employer did?—One rather powerful organisation of large stores has been most arduous in using that argument through the trade Press, and with other employers' associations; and we feel that it is not sincere.

7268. Mrs. Lyttelton: You mean they feel that it is a lesser evil than a Trade Board?—No; we feel it is put forward because they think there is no prospect of it coming into operation.

7269. Mr. Poulton: And therefore would prevent other work being done which might be of value to employees?—Yes, quite so. It is a blocking motion.

7270. You have already discussed the question of one Board for the distributive trade, and you refer to the old workers, and you say that the Trade Boards put a liberal interpretation on the term "subnormal." I do not follow that observation of yours?—They can apply for exemption from the rate.

7271. Not for subnormal workers; only those who are ill or under some physical deficiency?—Well, they are generally spoken of as subnormal.

7272. Oh! no; we use the word subnormal in a different way.—Then I withdraw the term if that is so. It has been so used on the Grocery Trade Board; in fact, it was used in this way, that subnormal was intended to mean somebody who was suffering from some physical or mental incapacity.

7273. I see. Then you used the term in a different way to that in which we have used it?—Yes. I am only using the term in the sense which it has been used on the Trade Board of which I have been speaking.

7274. I follow what you say; but will you now deal with persons who may be thought of as subnormal; that is, slow workers, people who have no physical defect, but who are still very much slower workers than the ordinary worker? Is there a way of dealing with them?—I think the Grocery Trade Board has

been far too inclined to deal with those people; in fact, the rates which have been fixed have assumed that all persons other than subnormal persons of the character that you have described will receive wages on account of merit higher than that fixed by the Grocery Trade Board. Two points have led to extremely low rates which have been proposed on the Grocery Trade Board, and which have been fixed by the Grocery Trade Board; one that there were there workers who were not specially marked out for merit, ordinary workers if one might so describe them, slow workers, and the other that they have always had to keep in mind the smallest shopkeeper who was least favourably placed, and what he could afford to pay, and that—and I shall have to call your attention to it—probably makes for the exceedingly low wages fixed by both Boards, which are lower in Scotland than on the English and Welsh Boards. For women at 18 years of age in Scotland the rates are less than half for women porters than the rate at 18 which is now paid in what were previously known as sweated occupations. That is an indication of what I should call the terribly low wages which have been fixed by the Grocery Trade Board to meet the very complaint that you are now urging—not quite so low in the English and Welsh. There we have rates from 25s. to 28s. 6d. at 18 included in one of the schedules set out before you, and marked so that you can see them more readily; you will see what they are at 18 and 21. That is in the Grocery Trade Board: it is special evidence on their part, but it is arising now on the general evidence. Those rates have been fixed by the Trade Board to meet that very class of worker which you are now describing, and they have urged, of course, that salespeople are not only paid at a fixed wage, but are paid higher wages for merit, which is perfectly true; they are paid on commission to stimulate them in their sales, and that is subnormal to the low rate which has been fixed, or to meet the very worker who could not show any special ability.

7275. In fact you tried to make it a real minimum affecting everybody without prejudicing those who receive a higher rate?—That is so.

7276. Lord Weir: The meaning of it is that it is not only a minimum rate, but it is a rate which, in the fixing of it, you hope will be paid to the minimum percentage of the trade?—Yes, unless there is some physical incapacity which makes it even lower than that.

7277. Mr. Poulton: And then you find no difficulty in meeting those cases?—None whatever. It has been proposed to set up a joint committee to deal with those matters.

7278. In practice you see no difficulty in dealing with those matters?—None whatever. We should take each case on its merits.

7279. Mr. Pugh: In fixing your wages, how do you deal with those special cases which have been placed before the Committee, such as seaside resorts where the trade is almost entirely seasonal? Do you find any difficulty in regard to those particular areas?—No special difficulty. The hours question is a little different there: the Shops Act has a special clause exempting from the half-holiday for four months as a maximum on condition that the employer gives 14 days' holiday with full pay, but there are very few seaside places which have taken advantage of it. I doubt whether there are half-a-dozen. That is a fairly good indication that there is not much in it.

7280. The matter is one quite within the capacity of the Trade Board to deal with—I think so, if it so desired, but there is no evidence that it has been brought to the notice of the Trade Board that there has been any special difficulty. There would be special conditions during July, August, and September in seaside places, there is no doubt, but, as I say, the Shops Act does contain a special clause suspending the half-holiday up to four months. One or two places have it for only one or two months, one or two have it for three months, but I do not know of any that have had it for the full four

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

months; and the fact that there are only a small number which have applied for it at all indicates, to my mind, that this is no very insuperable difficulty.

7281. *Chairman*: Of course they would have to pay overtime?—Yes, they would have to pay overtime upon that, and considering that the seaside trade brings a very good harvest to the shopkeepers, I think they should share that harvest with those whose work makes it possible. I think it is very equitable that it should be so. They are forfeiting in that case their half-holiday; and I may say that in the case of the Shops Act it is one of those cases where it seems impossible to be able to enforce it, because the local authority are the people who have to enforce the Shops Act, and it is very difficult to get a local authority to take up a case for an individual who has not received the 14 days' holiday with pay; but it is in the Act. That was the intention of those who promoted it. On the other hand, the Trade Board secures to the person who does the extra work, the extra pay.

7282. It is said, and there is something in it, that in those places the working out of season is very slack indeed?—In those cases the staff is dismissed every year. We have our members who go to a seaside place and return from it after the season is over. In popular seaside resorts there is probably a 50 per cent. increase in the number of assistants in the shops during the season.

7283. *Mr. MacCallum Scott*: Is there a corresponding decrease in employment in some of the large towns from which people go to the seaside?—Yes, because those assistants who go to the seaside are coming from those places. As the change of population takes place, they apply for a position at the seaside, and they are not replaced in the town. That is really what takes place, and it is through the free play of economic law, I take it.

7284. *Chairman*: Then you say that there is not at present any effective organisation for regulating wages?—That is so.

7285. That means, I suppose, that your Union does not cover the greater part of those employed in the distributive trades?—Unfortunately not.

7286. *Mr. Poulton*: May I ask a question on the point of inspection. Do you think that this view which some of the employers hold is due to the fact that the work is comparatively new, and that they have not yet got into the procedure and the effective working of the Trade Board, or is it due to absolute opposition to any one coming into their place at all?—I think there is probably a combination of reasons for it. You see many of the distributive establishments have just for the first time had the dressmakers and milliners—I am thinking now of the drapery trade—brought under the Trade Board, and it is something new to them. Then the employers themselves, although they stood for separate Trade Boards, are complaining of the rates which will arise out of the separate Trade Boards.

7287. Which they themselves separated?—Yes, which they themselves stood for; and that is, unfortunately, the case of the employers right through this whole question of the Trade Boards: they have largely by their own action created the very problematical difficulties which they afterwards say are so great. Undoubtedly, if the picture which is drawn by some of the employers were true, of the large number of Trade Boards that they are going to have in the big stores, it would be possible that there would be some considerable difficulty over the question of inspection, but even then I am confident that after all the different Trade Boards are set up there will be such a common denominator, so to speak, for the rate of wages for the sales people at least (about whom I can speak best), that an inspector would find no very great difficulty in doing the work; but I have mentioned in my statement how fanciful this difficulty is, as you will realise when you remember that for the whole of the Trade Board work of this country there are, I understand, only about 30 inspectors; so that I do not think our stores will get any special attention. If they are able to pay them an annual visit, they will be very busy.

7288. *Mr. Pugh*: The point seems to be that while you may inspect large stores, it is impossible, under present conditions, to inspect the very large number of smaller businesses. Can that be met in any way by utilising the inspectorate which I think has to operate in connection with the Shop Hours Act under the local authority?—I do not think so. Our experience of the Shop Hours inspectors is not a happy one. There are very few of them. They are under local authorities—and it would be, I am sure, bad that your inspectors who have to inspect shops should be under the control of local authorities—and those who have been appointed, for instance, by the London County Council are now given other duties which I should say take up 85 per cent. to 90 per cent. of their time, so that they are fully occupied, and more than fully occupied, and the shops inspection is quite a minor part of their duties now. Here and there, I believe, there is an odd shops inspector who is confined to that work; I think Dublin has one, or had one—I think he is still there—and there may be one or two other local authorities, but they are very few, and I am afraid that the local authorities would resent any additional expense being placed upon them. I think the control of the inspectorate is a duty which the Ministry of Labour should have, if it is going to continue to have the administration of the Trade Boards Act.

7289. *Mr. Poulton*: It was put forward here as one of the ways by which inspection could be minimised, that is to say, by which a multiplicity of inspectors coming into a place could be avoided, that they could well perform the functions of the two positions and save two individuals coming in?—I consider that one inspector can do the whole distribution quite easily, and also can quite understand all the technicalities of dressmaking and millinery quite easily, and most of the other domestic trades which are associated around distribution, and carried on in some cases by distributive firms.

7290. Because of the lack of piecework?—There is no piecework in it; it is very simple. It is a question of pay and age, and is very simple of verification. But I have another view—it may not be shared by all—that the workers' organisations will be the watch-dogs with respect to this matter—that they will save the expense of inspectors to a large extent. I should like to see the Unions given the same powers with respect to any infraction of the Trade Board rates by employers as they had, to take the employers to the Munitions Courts. I think it would get over a great deal of the difficulty of public expense, and it would be more effective. The workers affected would turn more readily to those whom they knew in their trade—their fellow workers in the trade, even if they were not members of the organisation—than they would write to the public authority or apply for a proper inspector to come. That is my view for what it is worth—that that would be the best method to get the Acts properly applied, and it would certainly save public expense. I do not think that any inspectorate, unless it is very numerous, can hope to be effective by itself, and I think that the Unions should therefore be encouraged and helped by giving them the necessary powers to do the work.

7291. Have you sufficiently developed that view to enable you to give us an outline of how you consider that would be done? Would it be done by any local officer who might go in and have a right to demand to have a look at the books, or should it be under proper regulations by authority of the executive officers of the Union?—I should think myself that the Trade Union official, either the local or national official, would be the proper one for the complaint to reach. National inspectors who would go round and have the power, as you say, to enter and to inspect upon complaints which would reach the Union through the workers affected, would be a very effective method. I think you would require both.

7292. *Mr. Pugh*: As far as the Union is concerned, you rely upon reports from workers as to the failure to apply the Act?—Yes, that is so.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

7293. *Mr. Bell*: Supposing the Union were given power to prosecute, how would you get evidence sufficient to satisfy the Court?—I think the onus of proof would have to be on the part of the employer that he paid the worker. You could not, of course, take the prosecution unless the worker was prepared to come into Court to state that he or she was not receiving the rate.

7294. So that ultimately your view would be that the wage book would have to be produced?—Quite so.

7295. Have you thought at all of extending that so that the representative of the workers—not to call him a Trade Union official, although in most cases it might be a Trade Union official, but a representative chosen by the workers—should have the right to inspect that wage book?—I think that would be a very excellent idea. It would be like the check-weighman of the miners.

7296. Have you got shop committees in the distributing trades?—In some cases where we are organised.

7297. Then it would be a practical possibility for the representative of the shop committee to have the right to see the wage book, would it not?—It would.

7298. As is done in Germany, for instance, under the Workers' Councils?—Yes.

7299. *Chairman*: I do not quite follow the need of that. I expect it is my fault. If a worker is paid less than the Trade Board rate, he goes to the Union and says: "I am paid less than the Trade Board rate and am prepared to swear to it." Is not that enough?—The criticism that is offered is that it might be a little difficult to prove the case if the employer stated that he was paying it. You would want some proof of the two statements.

7300. Of course, once the employer came into Court he would have to produce his book; but I thought it was suggested that at any time the workers should be entitled to see the wage book. Is that what is suggested?—No, what is suggested is that, say, the Secretary of the Shop Committee—we have Shop Committees in some houses where we are well organised—should have the right to inspect the wages book, and see whether the whole of the staff were receiving the appropriate rate; and I think it would be a very good thing if that were the case.

Mr. Pugh: It would be really to prevent things going into Court. Our experience in organised trade is that there is no difficulty in seeing a wages book if there is any dispute as to whether the workman is receiving the wage or not. The suggestion is that that might equally be applied to trades coming under the Trade Boards if there were a representative of the shop committee similar to what there is in the ordinary industries.

7301. *Lord Weir*: Is it not the case that really in practice the larger establishments where you might reasonably expect to find Shop Committees, are the very establishments where you are not going to have evasion, and where you do not have evasion?—No, I do not think we shall have any trouble at all with them.

7302. The real difficulty in inspection is connected entirely with the small, out-of-the-way places?—No, I would not go quite so far as that.

7303. I mean the places where there is no question of a Shop Committee?—Here, I think the hint from Mr. Pugh is a very good one, that in all the houses such as you speak of—the large business houses—no prosecution would be necessary; it is merely necessary that it should be brought to the notice of the firm and it would be complied with at once; it would be an error rather than an intention. I have no hesitation in saying that that would work. We have that wherever we have agreements; our Shop Committee does exactly what is being suggested now. If a member at a certain age is not getting the wage fixed by the agreement for that age—perhaps they have overlooked the age—and if it is brought to the notice of the Committee they may communicate (if it is in London) with Mr. Hoffman, or with myself, or sometimes without doing that the

Committee go straight to the secretary or manager in cases where they have access at once to him, and his attention is called to it and it is put right straight away. I am sure that that would happen in most cases where we have Shop Committees, but even to avoid the necessity of their going to the manager for fear it might be thought that that were a little too interfering, it might be an advantage if they could have access to the wages book to make sure, because that might obviate their going to the manager or secretary, and would make quite certain that the wage was being paid.

7304. *Dame Adelaide Anderson*: Would you think that there was a risk of strained relations if any special power over and above that natural one were given to the Union officials to prosecute?—I do not think so.

7305. I mean you have a Trade Board, with negotiations between both sides. If one side were given special powers against the other side, other than the natural one of negotiation and agreement, and fair access to the documents, might it not militate against the making of harmonious agreements in the Trade Board?—I do not think so. With the big firms where they are quite prepared to face all these matters and deal with them as business matters, it does not lead to that strained relationship which it does in the case of the smaller firms, with perhaps 10 or 12 men, where (without wanting to be at all unfair), perhaps they consider themselves little Tsars who can do just as they like, and to dare to ask a question is looked upon as almost an impertinence on the part of those whom they employ.

7306. But I was asking more about the extra right to prosecute, which I think was suggested, so as to obviate the necessity for an independent impartial inspector. Of course, in Factory Act prosecutions it is practically only the inspector who prosecutes, but there is this negotiating power with the Trade Unions?—I think there must be inspectors. I am convinced of that; but what I feel is that the best policy, and the one which would be more effective even than a large body of inspectors, would be that supplementing the appropriate number of inspectors to deal with the matter who have powers of inspection, the organisations of the workers themselves must be alive to see that the Trade Board rates are paid. That is really what I feel. It must be an agreed settlement, and in the main will probably be more effective, and will involve no public expense in watching over and seeing that these rates are operative.

7307. *Chairman*: Do you mean that every Union which has a member in any shop or any place should be entitled to see the books?—I think that would be a good thing if it were possible.

7308. It would create considerable difficulties, would it not?—I was not thinking of that. May I just say that I was not urging that at first; my point which I wanted to make, and which I was trying to make just now, was that the many organisations and the many branches of large organisations, and the members of these organisations alive to their own interests, would be bound to be able to accomplish more in seeing that the rates are paid than even a considerable increase of the inspectorate, which would be a public expense.

7309. I know that that is your general statement, but I wanted to bring you down to the details of it. What you suggest really is that every Union which has any member in a shop should have a right to see the books, is it?—I had not gone as far as that. I should want to think over that question a little carefully before I can give a considered opinion.

7310. That is why I put it to you?—I have not sufficiently thought over it, as I say, to be able to give an opinion, but the point I was striving to make when I first made this remark was that the Unions have no definite power. They had with respect to the munitions of war. They could take a case into Court. The Minister of Labour is the prosecutor in these cases.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

7311. I suppose the member can?—The member has power, yes, but what I want to point out is that the member is so isolated, and frequently so weak, that he has to suffer what he feels to be a wrong, unless he can turn to somebody perhaps nearer to him than even an inspector of a public authority.

7312. I suppose the Union could support the member in prosecuting?—It could do that, yes. It is not quite clear whether the Union can. Certainly with respect to the dressmakers we have taken cases into Court on their behalf, and have won them, but I think the Ministry of Labour takes the view that they should be left to initiate the prosecution. I think that the Union should have a definite status, so to speak, in this matter.

7313. Even in cases where proceedings were taken by the Union, were they not taken in the name of the member?—Yes, they would be bound to be.

7314. That could be done to-day?—Yes, it can be done, but I feel that a further recognition of the right of the Unions to do so on behalf of the members would be one of the best things to see that the Trade Board rates were operated.

7315. *Lord Weir*: As a matter of fact, to-day you really have the whole force of the Union operating in support of its members; is not that so?—Yes.

7316. I mean any member who goes to the union gets his case very fairly dealt with, surely?—Yes, but as I say, suppose we report a case to the Minister of Labour, it takes a considerable time; it is so slow and it is really unsatisfactory. This is a point which arises on this question of inspection. I do not want to see a huge increase of public expense, especially just now—no one does—but we want to see that rates, when they are fixed and confirmed, are paid, and I feel that no reasonable increase in the number of inspectors could be as effective in that direction as the widespread organised assistance of other workers would be.

7317. *Chairman*: I suppose, as the Acts get better known, people will be more ready to enforce their rates?—Yes.

7318. And with the assistance of the trade unions will be more able to do so?—That is so.

7319. Really in the end you think that that may be a greater sanction to the Acts than inspection?—Yes. There are two points; I want to say that the fear of the employers with respect to the inspectors is not well founded, and, secondly, that I think that the workers themselves can hope to see their rights enforced more through their unions than they can through inspectors.

7320. *Mr. Bell*: I think you would agree that it would be much more easy for the Trade Boards to fix rates than to get those rates paid after they are fixed; so that that would drive you to some efficient system of inspection?—Quite so.

7321. Or some other method which would secure the payment of the rates when once they have been fixed?—Yes.

7322. I want to ask you a question with regard to the good feeling which was referred to. If on the side of the workpeople there were some organisation which could secure the payment of the rates fixed, are you not of the opinion that that would tend to good feeling?—I believe it would, because if all the employers could feel that it was being applied and operated by all the rest of the employers, it would remove a good deal of the feeling of irritation on their part which they feel if they are not sure that the rates are being paid.

7323. Will you agree that the difficulty will not be with the large stores employing a large number of workpeople so much as with the small shops where there are only two or three employed?—Two or three, or perhaps a larger number than that—what I will describe as firms which are trying to beat their way, some of them of very considerable importance, but very strongly competing firms.

7324. Supposing that some organisation representing the workpeople were given the power to enforce the payment of these rates where they have found evasion, would that tend to keep cases out of Court

and also tend, I will not say to compel, but to induce the employers loyally to carry out the decisions of the Trade Board?—I think a good many employers would risk whether an inspector came along or not. The employer would take chances as to whether he did not come out best, so to speak, in running the risk if it were only the inspectors who were going to see to the enforcement of the rate, but if he knows that every assistant is on the alert, and that the organised workers have certain rights to take action, he is much more likely to comply and pay the rates, and I should like to see encouraged, as far as possible, anything that the unions can do in that direction.

7325. *Lord Weir*: Would not that presuppose that this union worker in question is working for a wage which is an evasion of the Act? Do you mean that this tentative worker, of whom you speak as being on the alert, is working at a lower wage than the Trade Board rate?—No, but, for instance, he may know of cases. The workers do not always look after their own interests. You may get workers who do not even know what rate of pay should be paid for their age, although the rates have been posted up, and all the rest of it. On the other hand, there is a considerable percentage, naturally, who feel that their own position is menaced by a low wage, and if the feeling were encouraged among the workers that it was their duty to deal with questions of that sort, I am confident, as I say, that payment of the rates generally would be more thorough than it would be if it were left just to inspectors.

7326. The difficulty is, of course, that it is the unorganised part of the trade where evasion would be greatest, and that is the most difficult part to get at?—That is quite true. That is a very serious difficulty.

7327. *Mr. Poulton*: Assuming that the improved machinery about which we have been talking were brought into existence, and that the official, as representing the employee, was unable to adjust the matter—I can quite understand that sometimes it might be a question merely of a *bona fide* oversight—then in order to get over the difficulty raised by Dame Adelaide Anderson about the inspectorate, would it not be worth considering as an alternative method that the inspector should take the prosecution, if there is to be a prosecution, rather than the official?—I think that in itself would still require a considerable increase of inspectors, and I may be wrong, but I feel that as far as possible the organised workers should conduct their own case, so to speak—that it would be healthy from every point of view that that should be encouraged.

7328. *Mrs. Lyttelton*: Do you suggest that the prosecution taken by the union officials should be paid for by the Government?—No.

7329. You think that the union should pay itself?—Yes, that should become—and it really is—part of the function of the Trade Union to see that the proper rates are paid; and the workers engaged should be their own guardians of their own rates, which, I think, is a healthy thing to do.

7330. *Chairman*: There is nothing new in that. They can do that to-day.—Quite so.

7331. *Dame Adelaide Anderson*: That has been going on for years in the productive industry, has it not?—It has.

7332. *Chairman*: The only thing in this that is new to me is the suggestion that was not made by you, but was rather put into your mouth, and that was that the union should have a right to look into the books of every tradesman in the country. That was what was suggested?—That was not what I suggested.

7333. No, I know.—But I do not know that it is altogether bad.

7334. You mean to say that the union should have all the powers of a Government inspector, and should be entitled to go round from place to place and see every man's books. Is that what you are really asking?—I would not go so far as that. I would not like to commit myself so far as that.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

7335. I did not think you would.—I am turning this over in my mind as I sit here, and not wanting to commit myself without looking all round it. But we are asking for legislation which will give the union on behalf of its members, or the member himself if he wishes to do it, the power to inspect the books of the big multiple companies who have their managers guaranteed, and who, when there is a shortage of the stock, dismiss them without the power of their examining the books to satisfy themselves that the shortage is an accurate and true one. The union, on behalf of its members, has been able to get the privilege (as it is at present) of inspecting the books in one or two cases, and we have found errors which have put the matter right.

7336. That is, you have inspected them by agreement?—Yes, but do you not see the terrible injustice which might ensue if we had not access to the books and the right to inspect the books? Those men are dismissed and black-listed unless they will pay to the guarantee society whatever the shortage is, although it may be a false shortage and not a true one.

7337. Of course we are getting far away from Trade Boards now?—My only point is this, that you seem to be, if I may say so, a little alarmed at the idea of the union inspecting books. I was remembering our union's desire on another matter to inspect the books of the different firms.

7338. Do not say I am alarmed. I am surprised, that is all. I want to finish this part of the evidence before the adjournment if we can. I think you next say that there is no sufficient machinery now to secure a minimum wage. That is without the Trade Boards, I suppose?—That is it; there is no effective machinery, but partial only.

7339. You say that some employers who had concluded agreements with the union have refused to renew them, and have left the union.—That is so; they have left the employers' association in some cases.

7340. —have left the union to negotiate fresh agreements with individual firms?—That is so with two large associations on the retail side in the Manchester area, with their offices in Manchester. The Manchester and Salford Grocers' Association and the wholesalers with whom we had agreements with our members in both cases referred us to their individual members for settlement, and we have been able to secure it in some cases with the individual members, and in others not. It means that the old collective arrangement has broken down. They feel that the changed situation gives them the balance of advantage now by making individual bargaining.

7341. So that is a further reason for— For the desire for a Trade Board; that is so. It leads to great variety of payments. Only when your organisation is fairly strong are you able to maintain reasonable rates.

7342. That leads to great variations in the conditions of employment?—That is so.

7343. Then you say that many of those employed in the trade of distribution are women and young people, and that therefore they do not get wages sufficient to maintain them, and they rely upon help from their parents?—That is so.

7344. That is not altogether wrong, is it, in every case?—No, I do not suggest it is in every case; but I think it applies much more to the distributive trades than to any other. I should think that the exploitation of young people is now greater in distribution than in any other occupation in the country, and it goes on to an age when they ought to be self-supporting. During the very first years of learning something one would expect that there should be some support, but I feel that distribution can afford to pay at least to a woman of 18 years of age, after she has had two years' experience, a sufficient wage to enable her to be self-maintaining. I draw attention to the very bad effect which that has upon the other workers, because those young women who are being partly maintained by their parents are such bad competitors against the young women who have no parents or guardians to fall back upon. It keeps the wage

down for all of them; it keeps the wage below the self-maintaining point; and it is because of the fact that there is such a large number of women and young people in distribution that we feel a Trade Board to be absolutely necessary.

7345. Mr. Pugh: Is your trade affected by the question of parents who keep their children at school, say, up to 16 or 17 years of age, and then seek to put them into distributive trades? I think your wage rate starts at 14 years of age, does it not?—Yes. Well, we do not put forward a rate until 16 years of age, and the Trade Board is not fixing any rates until the workers reach 16 years of age, I am sorry to say. We wish they could have done in the Trade Board.

7345a. Have you any difficulty with regard to the rate to be paid to young people who may have been kept at school, say, for a couple of years longer, entering the trade at 17 or 18 years of age? That is one very great difficulty which has been put before us: that you cannot start them at the rate which should be paid at 17 or 18 years of age; yet, of course, you are not allowed to start them at the commencing rate paid to the girl or boy of 16 years of age?—I am afraid that in the first place the number of those who enter the distributive trades of the kind that you speak of is very small indeed, and that it is one which is being used for pointing out the difficulties of new entrants. I believe that in Australia new entrants to a trade are allowed three months, if I remember rightly; the rate for the new entrant has to be fixed between the court and the union and the employer, and at the end of six months the new entrant has to go on to the appropriate rate. I think if there is any difficulty as to new entrants into the trade that can be overcome even by the Trade Board. The Trade Board can deal with that according to age.

7346. Has it power to do so under the Act, having regard to the definite wages which have to be paid according to the rate?—Upon that particular point I am not quite sure. As they deal with questions of apprenticeship, I take it that they have power.

7347. Chairman: Some Trade Boards have fixed the rate of learners according not to age, but the length of employment.—I am reminded that the Scottish Grocery Board has made that arrangement for new entrants. Of course, they are not confirmed yet, they are only fixed, but they have made that arrangement subject to the confirmation of the Minister of Labour. What I mean is that when you come to examine the difficulties which are being put forward by the employers, those difficulties evaporate to a very large extent. They may be quite sincere and honest in the belief that those difficulties would arise, but they are not true. I wish that the school age could be raised to 16 years, so that there would be none entering the trade before 16 years. I think it is wrong to exploit child labour in the way in which it is exploited, particularly in the cheap bazaars and places of that sort, where they are paid atrociously low wages, and are frequently worked long hours. I think that the school and the playground is the proper place for children up to 16 years of age, but it is not so at present. The Fisher Act, which would have given to local authorities power to carry the age up to 15, is not operating yet, and we have to face the fact that at the moment, at any rate, they can enter the distributive trade at even 13 years, or 13 years and 4 months in many cases, and if there are the late entrants to whom you refer when you speak of rates being fixed at 17 and 18 years of age, remember that as far as regards the only Board, the Milk Distributive Board, which has yet come in, the Grocery Trade Board is not fixing anything below 16 years of age for England and Wales.

7348. The point which I think Mr. Pugh was putting to you does arise upon the scale of the Grocery Trade Board. A boy of 16 years of age must get 18s. per week. Supposing he does not enter the trade until he is 17 years of age, he may have no experience and no special capacity, but you must pay him 22s. 6d. per week from the beginning because of his age, not because of his value, and so if he is 18

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

years of age he must have 28s. per week. I am taking Scale A for the moment. It has been put to us by a good many witnesses that those rates do prevent the employment of learners if they happen to be over the lowest age?—I think your Committee should press for figures with respect to this matter. I should like to know the number of young people over 17 years of age who enter the grocery trade—I am talking now only of grocery.

7349. Of course we cannot have the figures with regard to the grocery trade, because the rate is not yet in operation. There may be none. I am thinking of other trades.—I think those who put this forward should be pressed for what number of people they speak for. I venture to say that it would be a fraction of 1 per cent. I know the grocery trade very intimately; I worked in it for over 20 years as an apprentice, an assistant, and a manager; and cases are very rare indeed where any lad enters the grocery trade at over 17 years of age. Here and there you will get the failures from other trades coming in, but, as I say, compared with the whole they will be very small indeed in number, not sufficient to make any serious difficulty to the trade. Of course, for a younger man who has tried his hand, for instance, at engineering—I could not imagine it, but supposing he has done so—and he is now between 17 and 18 years of age, and he comes to the grocery trade—as I say, having regard to the conditions of the engineering trade I could not imagine that he would do so, but suppose for the purpose of argument that he did—I cannot see any very great hardship in the employer who wanted particularly to engage this special youth having to pay the appropriate rate in the grocery trade.

7350. The case put to us is not the case of an employer wanting to engage a special youth, it is the case of a special youth wanting employment, and being unable to get it because of these high rates.—I can only say, then, that I do not think any hardship would be imposed on the grocery trade—and I am only speaking at the moment for that trade—by the very rare cases which would occur of such an application being refused.

7351. *Mr. Bell:* This would not apply so much to boys as to girls, would it, because a boy of 18 years of age has much more strength than a boy of 16 years of age, and his strength might obtain him a situation against a boy of 16 years, and his strength, of course, might warrant the employer in giving him the higher rate?—What I feel is this, that these rates are not the rates which are being paid to boys at the same age in unskilled operations. Ordinary labourers at that age are receiving double this money, and I cannot see that it is any hardship in the grocery trade.

7352. *Chairman:* You are not dealing with the point.—Perhaps I am not quite clear upon it.

7353. It is not a question of hardship to the grocery trade, it is that these young people do not get employment at all. We have had letters from inspectors to say, "I cannot get a single one of my young people into any trade in the place because of these rates."—Of what age are those?

7354. I cannot tell you off-hand; I have sent for the letter. I should like you to look at it.

Mr. Pugh: I suggest that it does not occur very much in the grocery trade.

Witness: I think you are discussing hypothetical cases which do not occur.

7355. *Chairman:* No, it is not hypothetical, it is just the other way. Perhaps I am wrong in putting them to you, because, as Mr. Pugh reminds me, they do not occur in your trade. I only put it because it occurred to my mind, but really it is not a matter with which you are able to deal, because those cases do not occur in the distributive trades. But they are not hypothetical, but real cases which I have in my mind.—Only hypothetical so far as distribution is concerned?

7356. Well, they are not cases which occur in distribution.

7357. *Mr. Poulton:* There have been cases on the women's side. Objections have been raised here, and the extreme cases I remember are those of girls who are apparently kept at school at great sacrifice, as we are told, to give them a superior and better education, and then when the parents want them to have some training on the women's side in the drapery, millinery, or dressmaking trade they have found that they cannot come in, because the employers cannot afford to pay the rate as the girls had had no experience and had had no knowledge of the trade.—I can only say that I should think myself that if they are children of special education the parents must be suffering from some mental disability if they would dream of putting highly educated children like that into the distributive trade.

7358. *Mr. Bell:* May I put it to you in this way? Supposing there is a vacancy in one of the shops for a girl, and the work which is required can be done equally well by a girl of 16 as by a girl of 18, will the fact of the rate being fixed at 16 and fixed at a much higher rate at 18 keep the girl of 18 out of employment so long as there are girls of 16 available?—I think it is very possible that it will, but that will operate whether they are new entrants or others. The simplicity of most of the junior work in distribution is such that I have known lads come into the provision trade, and within six weeks they have been put on to what was considered a man's work. Nowadays in the grocery trade, with its highly specialised conditions, there is no question of skill left. The mysteries of the trade which there used to be, and which were hinted at a little earlier in the evidence, have gone.

7359. *Lord Weir:* If there is no question of skill left, why do you carry the grading of your labour up to 28 years of age?—Because the employers insist on it, and we are not strong enough to resist it; that is the reason.

7360. It has nothing to do with skill?—The only thing that arises is this: there is no doubt that in positions of responsibility questions of judgment arise in which experience is valuable, but for the ordinary assistant under the Grocery Trade Board we on the workers' side tried to keep the minimum at 21 years of age, but the employers went, as it were, behind us to the appointed persons, and to get over the difficulty of getting a reasonable wage at 21 years of age offered to carry it up rather higher at 25 years of age. It has been the custom in distribution to have annual increments in some of the large houses, and it is a partial custom of the trade to carry on higher rates.

7361. *Lord Weir:* And now you make it a statutory custom?—That is what is being done, not at our request on the workers' side. You see, the rates that are being fixed there are so low, even at that age, that I know nothing that justifies it at all. I know of only one other profession in which a man is not considered to be fully qualified before he is 25 years of age; I think that is the case with a surgeon; he cannot practise as a surgeon until he is 25 years of age; but then, having become a surgeon, it carries very high professional fees. The rate of wages here that is being fixed on the Grocery Trade Board for shop assistants as such at 25 years of age is such as would be earned in many unskilled occupations at 18 and 21 years of age, and it is really inflicting a double apprenticeship to put such low rates as that upon the assistant.

7362. *Chairman:* Your evidence is getting very far away from the matters into which we are enquiring. We are not revising rates fixed by the Trade Board.—May I come back to the question of new entrants. I do not want it to be felt that we are resisting, or at any rate that I am resisting, any proposal for arrangements being made for new entrants. I do not wish that impression to go out. I think if a Trade Board considers that it is desirable, it should have the power to make some arrangement for a lower rate to be paid for a probationary period.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

It is done in Australia, and it is done in some Trade Boards here, and apparently can be operated.

7365. *Mr. Poulton*: You see no objection, I take it, to making the Act so elastic that you meet those cases?—Yes, apparently it can be done. It has not been raised, strange to say, on the Grocery Trade Board, because the question of apprenticeship, a very important question which has been discussed in committee as well, was deferred.

7366. *Chairman*: Then is there anything else in your statement which you would like to emphasise? You deal with the standard of comfort; I think you have spoken on that. Then you deal with the effective organisation of employers and employees, and after that you say that the application of the Act can be withdrawn if conditions are altered. I am not sure that it is very readily done?—No, but provision is made in the amending Act, and in the Whitley Report it was specially referred to. My point is this, that in many cases the employers are urging that they would prefer to have a Joint Standing Industrial Council. We agree if the organisation is sufficiently effective to make that possible. Unfortunately, a considerable number of distributive employers have not been favourable to organisation on the part of their employees. We have had many cases of victimisation, because they dared to hold membership with our Union. We say in reply to the employer that the Trade Board will actually continue to operate as long as there is not effective organisation on both sides, and the conditions are bad; but that if, as the result of the operation of the Trade Board, conditions are improved, and organisation on both sides has improved to the point where it can maintain those conditions, they can then have the Joint Standing Industrial Council which they say they prefer. That is the point which I wish to make in that part of the evidence.

7365. If the Minister of Labour so decides?—Yes, quite so, and I take it, as it suggests, that if he felt convinced that the conditions had been so improved he would raise no objection.

7366. *Lord Weir*: If you have a Trade Board for the distributive trade, and that Trade Board carries out what you might call the full regulation of wages and conditions, will that not really be harmful ultimately to organisation?—That has been argued pro and con a good deal.

7367. I want to know your view?—I think only experience can show whether that is true or not. In any case I feel in justice that since I am convinced that only the Trade Board can lift up those at the bottom in distribution and give them something approaching what is paid to other workers in other occupations, whether it affects the organisation of the workers or not we must press for a Trade Board, particularly in view of the fact that such a large number of women and children are engaged in distribution whom we could hardly hope to get organised at least for another half century.

7368. *Mr. Bell*: So that you would agree that the objects for which the organisation exists are more important than the organisation itself?—Quite so.

7369. *Chairman*: Then you have a few practical suggestions at the end. You suggest that amendment is needed to provide for more rapid fixing and confirmation by the Ministry of rates of wages. I think we have heard a good deal upon that, and we need not trouble you further on it. Then you suggest that if more than three appointed persons are on any Board, those in excess of three shall be appointed from the number of employers and employed. I think that only applies to the Grocery Board; there are very few others with more than three Appointed Members.—I gave that as a suggestion of my own, arising out of my own experience. I feel that perhaps it would be well if in all cases appointed persons had one from each side to advise them.

7370. You do not mean one from the members of the Board on each side, but one on each side from outside?—I would not mind at all which it was, as long as it was there. What I have felt is this: that negotiations have gone on on the Board, and the appointed persons have been seen first by the

employers—they take precedence—and an impression has been left upon the appointed persons which no evidence or argument could entirely remove. When the workers' side have had their interview, I have felt that that impression—and in some cases I am of the opinion that it was quite an erroneous impression—could never have been left upon the minds of the appointed persons had there been someone present who could, from the workers' side, have made the situation clear to the appointed persons.

7371. You mean to say that they should not see either side alone?—I think it would be a good thing. I will not say that they should not see either side alone, but, at any rate, that they should have, if I may say so, the confidential advice and guidance of those who do know, before they allowed their minds to get so impressed.

7372. *Mr. Pugh*: What do you think of an appeal from the Board to an outside authority, such as the Industrial Court?—In what circumstances?

7373. I think the principle is rather this, that instead of the Appointed Members you should have a chairman, and then if there were any points upon which the Trade Board could not agree, you should have an outside body such as the Industrial Court to refer the difference to?—My point of view with respect to that is this: as I say, I do not know that I am right, but I feel that the appointed persons do occupy a position in the Trade Board which it perhaps would not be altogether wise, from a public point of view, to remove. If I understand it aright, I take the appointed persons to be those who more or less represent the public. These rates are going to be paid by the public. It is not quite the same as arbitration, although it is somewhat analogous to arbitration, and it is this very element of the appointed persons which makes the difference between this and ordinary arbitration, and therefore I myself would not like to see the element of the appointed persons entirely removed from the Trade Boards. That is only an individual opinion. I do feel that there are weaknesses in it; I have felt it, of course, in my own experience; but I would like to find a way by which any weakness that there is in it could be removed, or obviated, rather than to see the removal of the appointed persons altogether. I think it would lessen public confidence in the Trade Boards, if the appointed persons were removed, and only a Chairman with a casting vote were left. I do not know whether, in some instances and with some difficulties, there might be another body to go to. That I have not really considered.

7374. *Chairman*: Then your third point is that it should be made obligatory upon the magistrates in all prosecutions to order the payment of back moneys. They have that power now, have they not?—They have that power. There are undoubtedly difficulties here again, but the main thing is that these people should have been paid certain rates which have not been paid, which by law belong to the worker.

7375. The magistrates have got the power to do it now if application is made?—Yes.

7376. And if they do not do it there is an appeal?—Not necessarily.

7377. Why not?—They can fine the person concerned, and they may or may not—that is my point—order the payment of the back money.

7378. They may fine and they may order, but you do not suggest that they should order unless they think it right?—What I do feel is that if it is proved that the pay which was due to the worker has not been paid, the magistrates should have no option but at least to try to secure to the worker what is due to him. That is not in dispute.

7379. That is the duty of the magistrate now, is it not, if a case is made?—But he may. I mentioned the Portsmouth prosecution. In that case the magistrates did not order the payment of the back money to which those workers were entitled. I can conceive of cases where the employer had not the wherewithal, and I can conceive many extreme cases of difficulty, but I think that should not be left

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

to the magistrates. This may be shockingly bad on my part, and I know that it presents many difficulties, but I do feel, in view of what has happened at Portsmouth, where a very partial feeling was shown, that they should not have the option whether or not to order the payment of back pay. That option ought not to be there. The workers were entitled to this back pay and the magistrates should order that it be paid. It should be obligatory upon the magistrates to order it to be paid. It is not for them to decide how it is to be paid. I do feel that it is giving to the magistrates too much discretion, and as the magistrates may happen to be fellow employers, there is a very kindly feeling which the Act gives them the power to exercise towards their fellows. I think that is a case where there ought to be no option at all.

7380. *Dame Adelaide Anderson*: Is that because you think the worker may be too weak to act on the power to recover wages by any other proceeding?—I do think so. I think if it comes before a magistrate that part of it should not be optional. I am not so concerned about the option as to whether he is fined or not, but I think if employers knew, for instance, that if a case went to the magistrates the order would be made that they should pay, they would be much more likely to pay than if they knew that if their case goes before the magistrates they will be fined, but they may not be ordered to pay the back pay.

7381. You mean if the magistrate convicts, then he ought to go on to order the payment of arrears?—Yes.

7382. Provided, of course, that the arrears are proved to be due?—Yes, that is so.

(Adjourned for a short time.)

7383. *Chairman*: We will now come to your second statement, Mr. Turner, which contains the evidence which you give as Chairman of the Workers' Side of the Grocery and Provisions Trade Board (England and Wales). We have your statement, which we will print as part of your evidence; and the Committee will be glad to hear you if you wish to enlarge on any points of special importance.—I should like to call attention to one factor in the first paragraph, that probably the grocery trade is less regulated than any other trade in the country. The only regulation in regard to hours of labour is for young people under 18 years of age. Under the Shop Hours Act the number of hours allowed for them is 74 hours, including meal-times, or a working week of 66 hours. The occupation is almost entirely unprotected. At the end of the war there was considerable unrest. This unrest began at about the time of the Armistice; men came back from the war finding the conditions in the distributive trades exceedingly bad from a wages point of view; the cost of living was more than double; a good many women had entered the trade and had taken the places of the men, and wages were lower as a result of the war instead of being higher. My Association was concerned with the London County Council in giving six weeks' training to ex-service men, and at the end of six weeks they were fully qualified to take a good position. The women, even while they were doing identical work with the men, were paid less. If there was a woman buyer in the drapery trade who would go to Paris and do the buying she would get her salary and a commission, but a man taking her place would get a salary 30 per cent. higher. Even now any firm employing a woman expects to pay her less than they would pay a man.

7384. Partly on the ground of efficiency, and partly on account of the cost of living?—I think the cost of living to a woman would be quite equal to the cost of living to a single man, if not rather higher. I am speaking of a case where the efficiency is equal; just because it was a woman they would expect to secure her services or less. Women have always been accustomed to get less wages than men, and they expect to get less. Women as a rule take less than men when they are young, and they continue to take less

when they get older. Having got accustomed to pay women less than men, not necessarily because of their lower level of efficiency—although I think, on an average, the level of efficiency among women is lower than among men—employers still pay women less, simply because they are women. It is remarkable that women who stay in business often show wonderful efficiency, and often become more efficient than the men; but on the average I should say that among the younger people the men are the more efficient.

7385. On the average it is not untrue to say that women are less strong, and, on the whole, less efficient than men?—That is so, but the difference in wages persists even where that difference of efficiency has disappeared.

7386. *Dame Adelaide Anderson*: What is the view of your Association with regard to the payment of women?—I have taken the illustration of a buyer in the drapery trade to show that a woman is paid less because she is a woman. So far as our organisation is concerned, we ask for equal pay for equal work, and in the case of managers and buyers we ask for the same salary, although we are not strong enough yet to insist upon it; but where a woman is doing the same work and taking the same responsibility as a man, our view is that she should be paid the same salary as the man.

7387. *Mr. Pugh*: In the mantle trade is there much difference between the pay of women and of men?—I think in the mantle trade the pay for men and women would be pretty nearly equal; indeed, that is the custom of the trade. To some extent this is so because men come very little into the mantle trade, and it is a woman's high-trained salesmanship which is required. I do not think there is any particular occupation where women are more efficient than men, but in many cases the efficiency of the sexes is fairly equal. Generally speaking, I think that in the main women do not concentrate quite so much on business when they are young as a youth does. The result of that is that up to 21 or so the efficiency would be greater on the side of the male sex. If a woman continued in the distributive trade and did not get married, if it is an occupation where there is an equal opportunity, I think she would become equal in efficiency with men. My Trade Union has fixed a scale, and have asked for a rate for women equal to four-fifths of that of men, applicable to the age of 22. We did not get that, but that is our Union proportion. We have secured an agreement in a number of cases where four-fifths represented the difference between the sexes.

7388. *Lord Weir*: As a result of the substitution during the war of females for males has that remained?—I do not know the figures. There is no question about it that in the grocery trade there must be many times as many women serving in the trade as before the war. There is no doubt that many ex-Service men have not been able to get back into the trade. There are thousands of men in all sorts of occupations who did not want to go back into the distributive trade when they left the Army; thousands of them preferred to go into some occupation of which they had acquired some knowledge while they were in the Army. What is happening now as a sequel to that is that now that trade is bad, these men are driven out of those occupations, such as semi-skilled occupations in engineering, and they are now registering at the Employment Exchanges, perhaps, as grocers, and are seeking employment in the grocery trade because they are unable to find a position as a semi-skilled man in the engineering, and they are being sent to different firms—we have evidence of that—sometimes at very low rates of pay; but they chose, and would have preferred to go to a better-paid occupation than the grocery trade.

7389. *Mr. Pugh*: Have you discussed the matter of the ex-service men on your Trade Board?—No.

7390. It is competent for you to discuss it?—It would be, but I think you will see that it is a matter which has been passing away to some extent. I am afraid we concentrated a good deal on the position as it was, and for the future.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

7391. *Chairman*: Then you say with truth that the provision trade is mainly a home industry and that there is no substantial fear of foreign competition?—That is so. That is one of the very great arguments that is used in many manufacturing trades, that they have to face foreign competition, whereas with distribution this is a home market in the main and there is not such a fear existing.

7392. *Lord Weir*: Of course, you agree that you must not carry that argument very far. You put up the cost of living and therefore you put up the cost of other things.—I think I have told you that. If you will take the next paragraph or two you will see that I have met that. In the very next paragraph I state this. In this respect I think my statement was not quite finished before I came away; but in our schedules we have put the profits of some of the large grocery firms for you to see. That has been supplemented since I have been here at Montagu House by a further schedule, which with your permission I should like to have duplicated and sent in as a statement. It is giving the profits of a number of grocery firms for last year, and in other cases for last year and part of this; and I should just like, if I may, to read out a few of these items. The Home and Colonial paid a dividend of 22½ per cent.; the International Tea Company's Stores paid a dividend of 12 per cent.; the Maypole Dairy Company paid a dividend of 37½ per cent.; Lipton's, Limited, paid a dividend of 12½ per cent.; Williamson's, Limited, paid a dividend of 12½ per cent.; the Star Tea Company (which is connected with Ridgways, Limited) paid a dividend of 25 per cent. I see Ridgways is shown separately, though the two companies are really under one directorate, trading under different names. Ridgways paid 15 per cent. Those are just a few supplementary ones; the others you will find in the schedules which have already been handed in, showing the sums made by various companies. I have mentioned the fact that the Co-operative Societies last year distributed back to the purchasers a sum of £226,000,000, and that if a quarter of that amount had been distributed by way of increased wages amongst the Co-operative employees covering the whole of the employees, it would have meant an additional sum added to their wages of nearly 14s. a week.

7393. *Chairman*: Do the Co-operative Societies fix high prices?—No, they have to fix their prices similar to those ruling in the district in which they are operating. You might occasionally get what we know as a "cutting" grocer, whose prices would be less than those of the Co-operative Society, but the Co-operative Societies would not follow that cutting; nor do they charge the high prices which are charged by certain high-class shops in certain districts. They generally make their prices similar to those which the ordinary working-class grocer would be charging his customers; otherwise they would not be able to keep their custom.

7394. Their custom is more secure than that of the ordinary grocer, is it not, because they can depend on their members to come to them?—They could not depend on that unless they followed the prices. That is the fact that compels them to sell their goods at similar prices to those ruling generally in the district.

7395. *Mrs. Lyttelton*: I suppose the wage-earners are consumers and they get their share of the returned money either in the wages or in the bonus?—Yes. If a man was earning 24 a week and he spent 10s. on grocery, his return of the 10s. for grocery does not compensate him for low wages.

7396. Not entirely, but it does not mean he does not get anything back because he is a consumer as well as a wage earner?—Oh, quite, that is so; but there is still this point. After paying 5 per cent. on their capital—which is the general rate; less in one or two cases, and in one or two cases a little more, but it is about 5 per cent., that the Co-operative Societies pay on their capital to the members—after paying that and their wages, their overhead charges, their rents and all the rest of it, there was

£226,000,000 returned by way of rebate upon the purchases; and had a quarter of that been added to the wages bill of the Co-operative employees of the country it would have worked out at just about 14s. a week more; and I may say that on the whole Co-operative Societies are paying better wages than are being paid in most of the private trades. They are somewhat similar to what are paid in the multiple firms.

7397. *Mr. Pugh*: They are attached to your Board?—Oh, yes, they are represented on the Trade Board.

7398. Before you leave the Co-operative Societies, what do you think of the suggestion that there should be separate Boards for the Co-operative Societies as distinct from the private traders?—I do not think that should be, myself. If you begin to do that, why should not there be a separate Board for the multiple firms; I cannot see where your division would end. You would get a number of Boards for one trade. It is the very fact that the Board covers all the different phases of that trade that makes it of value from a trade point of view.

7399. You do not think it would be practicable to deal with the distributive trades properly if you severed them in the way suggested?—I do not think so; I think it would lead to inevitable trouble.

7400. *Mr. Bell*: Is there anything in the argument of the employers that the representatives of the Co-operative Societies who sit on the Trade Board are more representative of the workpeople's interests than they are of the employing class?—I do not think so; really, if anything, they are concentrated as consumers and the Co-operative Societies are compelled to think out their problems through the channel of the consumer; and that is where there comes, if there comes at all, I do not say exactly a clash, but a divergence of interest. That is because the Co-operative Society concentrated all their thought on the consumers' side of the question. They may be work-people; they may be members of management committees, or directors of Co-operative Societies (who are often wage earners). All their management is devoted to securing in the most economical manner the commodities they require as consumers.

7401. That is really a dividend.—The dividend is the way in which that is expressed; but some Co-operative Societies—there may be one or two—pay no dividend.

7402. If you will pardon me, I am rather getting to this point: there is no special reason why they should favour the workmen's side?—No; except that the Co-operative movement has in all its teaching, taught consideration for the wage-earner, and that is undoubtedly used to some extent by the employer so that they may say "Well, you have always put forward so and so as an ideal and you ought to live up to it," and to that extent it has been used, but not beyond it. The Co-operative Societies as such are employers of labour; and as the large Co-operative Societies are the consuming Societies, even where they come to production—and they are developing their productive side very much—it is always for the purpose of the consumer.

7403. *Chairman*: I suppose it is true that they are not typical employers of labour. They represent, as you say, more the consumer than the employer?—Yes; but you see in that they become employers, they become employers to operate the distribution of the goods that they wish to consume.

7404. *Mrs. Lyttelton*: They are also running a great many farms, are they not?—Oh, yes. To show you how far co-operation and the multiple firms have gone in the grocery trade, and perhaps to give the Committee an idea, I may say that the trade is undoubtedly going through, and has been now for 30 years going through, a somewhat similar phase to that which manufacture went through in the break-up of the smaller home industries when they went into the smaller factory position. I have here a book published by Mr. and Mrs. Webb on the consumers' industries on which they are able to get some facts which indicated that when rationing was on, both for sugar and for butter, that the Co-operative Societies

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

for sugar had certificates which enabled them to distribute for 26 per cent. of the whole of the estimated resident population of Great Britain. Then with respect to foreign butter, between them the multiple firms and the Co-operative Societies distributed 46½ per cent. of the foreign butter which was rationed by the Government. Now that is a fair indication as to the extent to which the grocery trade has passed from the old-time small single shop proprietor into the hands of Co-operative Societies and multiple firms, and so have created a large permanent wage-earning class, which class can hope for no more than to become a branch shop manager, or a departmental manager, or a general manager, and sometimes perhaps in a multiple firm, as a number have done, to get on the Boards of Directors of those firms. They do not now become the single private shop proprietor. That is not their ambition now. Already about half the grocery trade is being done by the Co-operative Societies and the multiple shops. Most of the multiple companies to-day are Limited Liability Companies, though there are a few, like Sainsbury's and Greig's who are private firms. If you take the Co-operative Societies and the multiple shops, half the retail trade is being done by them. That has created a very singular position—that they are curtailing opportunities for the young fellow who might want to start in business for himself. When I was an apprentice 40 years ago the apprentice always had in his mind the shop he was going to have. For half of those in the trade to-day there is no such hope, and that tendency is rapidly growing. The proportion is getting larger every year.

7405. His hope is to become a manager?—His hope or his ambition is to become a manager or a buyer or someone holding a better position in the hierarchy of wage-earning or salary-earning people.

7406. Mr. Poulton: Previously his ambition was to become a proprietor?—Previously he always expected that. When I went into the business nearly 43 years ago everybody expected to become a shopkeeper.

7407. Lord Weir: This point has another side—it vastly helps organisation?—From the consumer's point of view and the public point of view no one can question that. Please do not think that I am girding at this except to indicate to you one thing—

7408. I thought you wanted to point that out; I thought that was one of your points?—The point that I wanted to make was this. I have read the evidence that has come before your Committee and I find that employers have been urging that they are being ruined, or will be ruined, if these rates come in. I want to say to this Committee that the little shopkeeper, as he was known half-a-century ago, is not being ruined by rates; and if he can only keep his head above water by paying these very low wages, then the sooner he is ruined and the more quickly the operation is over, the better for everybody. That is the point I really wanted to make.

7409. Mr. Poulton: Would you say that the high wages—I am now using a term which has been used here—which are being paid, especially to learners, has been a serious factor in causing unemployment?—I do not think it has affected it at all. Of course there have not been any high wages at all yet.

7410. I am only using the phrase.—If it did come in I do not think it would affect unemployment at all. I believe that the distributive trade is being run by the least number of people that can manipulate the quantity of goods that the public want. I do not think you can reduce the number of employees.

7411. And you do not think the scales set up are unreasonable?—I think the scales are too low; that is my personal conviction; certainly the rates that have been fixed on the Grocery Trade Board are too low, but we wanted to get agreement. Of course, there had been the settlement of the Scottish Board, and Mr. Willis, our Chairman, was very anxious to get agreement, and he urged both sides, seeing them separately and seeing them together, to come to an agreement; and the reason for the agreement, which has not worked out satisfactorily, I am sorry to

say, was this. It was suggested that if we agreed the rates—though he admitted they were low; everybody admitted they were low as compared with the rates being paid in other occupations—but if we got them by agreement there would then be no reason for the Minister not confirming them promptly and quickly. It was on the assumption that the Minister of Labour, seeing that they were agreed rates, would confirm them; and then having got a bottom put in we might later on perhaps be able to improve them. On that understanding the workers' side, after a good deal of hesitation and reluctance, did agree, and it was an agreed rate on the last occasion—the rates that are now being shown.

7412. Chairman: We understand that there were two or three trials. You have given us the history of it in your statement?—That is so.

Chairman: Perhaps we need not go through that in detail.

7413. Mr. Pugh: There is just the point about alleged dilatory tactics, that that has a bearing on the general question of delay which it is contended takes place in regard to giving effect to the decisions of the Board. Do you take the view that the time allowed is somewhat too long; do you generally support that view?—I do feel that; I feel that a month or two was lost on our Board last year, and that when we came to the objection stage in February—mind you, you must remember these were the rates of the employers against the workers—although the objections were very small, they succeeded in getting the Appointed persons to agree to a considerable alteration of those rates. They went to the Minister, and were referred back to the Board because the alterations made were substantial, though they had been the employers' original rates as carried against the vote of the employees; but they cut out the rates at 14 and 15, which is an age which required protection most; they reduced the rates at 16 and 17, in the case of the youths 2s. and in the case of the girls 1s.; they cut out all rates over 21 years of age in the rural areas, and they increased the population for the rural area from 5,000 to 10,000. Now, the Minister said there were some of those which were confirmable, but there would have to be new proposals for the new area from 5,000 to 10,000, and that the 2s. alteration with respect to youths of 16 and 17 was too substantial. The Board made alterations and sent back those parts which were confirmable to the Minister; but again the employers, although it was their rates which had been altered, interviewed and had incessant pressure brought upon the Minister, who sent them back again because the conditions had changed owing to the protracted period—protracted by the employers. Conditions had changed, so they were sent back again to the Board for complete reconsideration. That complete reconsideration went on; we got these agreed rates which are now the subject before you in this memorandum. When I tell you that the total number of objections from the whole of the employers on these agreed rates was 644, of which 617 were from employers and 27 from the workers—workers mostly objecting because they were too low, but the whole of them only amounted to 644 out of 133,000 employers who received these rates to post up—it will show you the small number of objections which reached the Board in two months to those agreed rates.

7414. Chairman: Now shall we pass on to where you say the delay in confirming the rates has led to the abandonment of some of the agreements.—Agreements, as mentioned in my previous memorandum, had been come to with a number of employers, and they have now, I am sorry to say, been abandoned, and it is leading to a good deal of trouble with our members, naturally. We are having to take up negotiations with individual firms, which is a very long proceeding, and some we cannot get agreements with at all, and with only a few of them are we able to get continuance of those agreements, and with others settlements of a modified character.

7415. Lord Weir: When you say the agreements were abandoned, do you mean they changed the

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

arrangements at the end of the agreement, or that the agreements terminated and were not renewed?—That is right.

7416. And if they were not renewed, did they make a change?—They generally held for 12 months, say; they vary according to the period they hold for. When the time came for the renewal of the agreements the associations now are refusing to renew agreements, and are referring us to their individual members.

7417. And are they changing, or are they carrying on on the old agreements?—No; they are changing.

7418. When an agreement terminates do they alter the wages?—The peculiar thing is this. Until quite recently we have had no such thing as collective bargaining between organised employers and organised assistants; that grew up as the result of the unrest some two or three years ago. Employers' associations who had no power to negotiate wages were given power by their members to get settlements. What they are doing now is, they are hoping the Trade Board will not operate. They feel that the changed circumstances have made a difference, and the associations who previously had been given power to negotiate have had meetings and have decided that they will not negotiate. They are practically back in the old position of four years ago, when they had no power, and they are referring these questions back to their members. They say that they have no power now to renew agreements, and that we must make agreements with the individual employers.

7419. What is the effect of it all?—The effect of it is that the old agreed regulation of wages between employers and employed has disappeared. Some employers are still inclined to enter into individual agreements, but it is going back to the old agreed variations of rates, many men being reduced. They are going back to individual bargaining.

7420. *Mr. Pugh:* But if you get the Board established will that remedy it?—That will put a bottom in; that will fix a minimum. To-day they are throwing the men back on individual bargaining, and, naturally, it is with very great difficulty that we have been able to keep our men at work in many cases. We are not wanting, just now particularly, to create any trouble, or to have any trouble; but the men are resisting it very much.

7421. *Lord Weir:* That means again, if they are resisting it, that there is a definite break in the wages: is that it?—Yes, quite; but that is not quite the point, or not the only point, shall I say. The point is, we are modifying many agreements, I am happy to say; we are modifying quite a number of our agreements when they expire. Only a fortnight ago I was in Leicester negotiating a continued agreement between the Shoe Distributors' Association and our Union for the whole of South Wales. I am glad to say that while two firms have broken away, most have remained, and I am glad to say that I was successful in negotiating a settlement for the whole of South Wales, which is to hold for six months. That means we have a settlement with some 800 shops in South Wales for the boot trade.

7422. *Mr. Poulton:* Would you therefore say, in view of this additional experience of the past 12 months, that that has confirmed the view of your Association that you want a Trade Board to prevent these unscrupulous employers doing this?—Exactly, to put a bottom in below which they cannot go, and thus take advantage of other employers, and to prevent their saying "We will not have any further agreement; you must do the best you can." At least it will put some bottom in for the men and women employed in the trades. We feel that that is the only thing that can be done under the circumstances. I think the employers would have been much more likely to have gone on with the agreement, but I think they have come to the conclusion that the Trade Boards are not going on. Notice of intention for a number has been given, but they are not proceeding with them, and the employers have come to the conclusion that there is not going to be any regulation of any kind. And while I am glad to say that quite a number of reputable firms are preferring to have some

form of negotiation with the organised assistants, there is a considerable number, and I should say a larger number, who, feeling that there is going to be no regulation in distribution, are going to throw it right back again, and that will mean that men and women will be left to individual bargaining unless they are members of an organisation which can speak for them.

7423. That would seem to suggest that you may get back to a position where it might be called a sweated industry?—It never has been anything else. For a section of the people in distribution it has always been a sweated industry; but, for instance, take our organisation, with managers and other people downwards. We have members of our organisation who are in responsible positions, and who are earning over £1,000 a year, and quite a number of members earning up to £500 a year; but for every member we have at £500 a year we have quite a number earning perhaps 25s. or 30s. a week—hundreds of them—and there are thousands so far down that they cannot pay their contribution to the Union, earning less than £1 a week.

7424. *Mr. Bell:* Going back to that other point, I understood you to say that you submitted agreed rates to the Minister of Labour?—That is so.

7425. Can you tell the Committee what would have happened with a well-organised trade on both sides if the representatives of employers and employed had agreed on a rate?—I am afraid I have not had the experience, but I take it that it would have been enforced—that the workers would have withdrawn their labour in any firm where they would not have agreed to it.

7426. That is, in any trade or industry without a Trade Board but well organised, an agreement between the two sides would have brought the rates into operation?—Yes, quite.

7427. Did the Minister give any reasons why he did not confirm an agreed rate?—The month elapsed last Friday, and I have heard of no reason up to the moment. When they were referred back to the Board before, he said that with the changed circumstances they ought to go back to the Board for reconsideration; but the month for these agreed rates expired last Friday, and we have heard nothing from the Minister as to whether he intends to confirm them or not.

7428. *Chairman:* Is it not the fact that the employers were not on the Board when the rates were finally passed?—No; when they withdrew from the Board it was over the alterations they had made as a result of the objection stage to the first rates, which were their own rates, and they withdrew from the Board when the Board decided to go on establishing new proposals for the 5,000 to the 10,000 which were left uncovered because of those alterations, and the Minister said he could not confirm that; but these rates are agreed rates that are now before us.

7429. Did the employers vote on these rates?—The employers voted in favour of these rates; it was unanimous.

7430. *Mr. Poulton:* You are quite clear about that, are you?—Quite.

7431. *Chairman:* Do you mean at the stage when they were proposed, and also at the stage when they were fixed?—No, not when they were fixed.

7432. Let us have it clearly, please?—When rates come to be fixed it is on the objection stage.

7433. After objections, yes.—I have shown that there were 644 objections, all told.

7434. I am not asking you about whether it was right or wrong, but as a matter of fact when the rates were fixed it is not true to say that the employers voted for them?—No, it is not true, but it was on the proposal stage.

7435. You will see that it is very desirable to be accurate?—I want to be perfectly accurate. These rates were proposed and unanimously agreed to. On the objection stage the employers brought forward a number of amendments, though they had agreed, and

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

it was understood that at the objection stage, too, it should be agreed. It was understood that it was a settled question with respect to that.

7436. The purpose of advertising the rates, or the proposed rates, is that the Board shall reconsider the proposals when the objections have been received?—Yes.

7437. When the objections were received the Board did reconsider the rates, and at that stage the employers did not vote for them?—No, they did not.

7438. *Mr. Pugh*: May we just have that clear. You have got a Board which is supposed to be representative of your trade both on the employers' and on the workers' side. The people on the Board agree together as to what the rate shall be, or as to what rates shall be put forward subject to certain objections being raised outside. What I want to get clear is, are the objections raised by people outside the Board, or by the actual persons on the Board itself?—Outside.

7439. So that so far as the Board itself is concerned, and so far as it represents the trade, there was agreement; but the Board had to take into account objections from outside, and on those objections disagreement afterwards ensued?—Yes, that is so; and the number of objections from the outside was very small, as I have already indicated; but they then brought forward a number of amendments excluding people of 50 years of age and over—I forget the other amendments; I think they are mentioned here if I am not mistaken. I think I have dealt with that point.

7440. Is it possible to get finality by an arrangement of that kind?—Well, we did. May I say that there was a break on the employers' side on this occasion. I think there were about 18 on each side who were at this meeting of the Board, and the two co-operative representatives and one other employer broke away. On some of the resolutions, not on all, one vote of the Appointed Members carried these rates.

7441. *Mr. Bell*: This seems to be one of the weaknesses—or it may not be a weakness—of the Trade Boards Act, that with an agreed rate submitted to the Minister for approval, and then an opportunity for objections being given, it does not seem to lead to any finality. What is your opinion about that?—My opinion is this, that if the Minister is going to decline to confirm the rates because they are not always agreed, particularly on the objection stage, it is in the power of either side continually to bring forward further amendments, and so employ such obstructive tactics that no rates can ever be operated.

7442. *Mr. Pugh*: Of course, you are dealing with compulsion there, which is rather a different problem; but having a good deal of experience of other wages boards, similarly constituted and so on, I am wondering whether it is not possible, even where the rates have to be applied under compulsion if necessary, for similar methods to be adopted to facilitate the work of your Trade Boards as apply to Wage Boards in other industries; can you suggest what can be done sufficiently to get the opinion of the trade as a whole before you fix your rates, so as to avoid the subsequent delay arising from continued objections when the rates are published to the trade?—Well, as less than half of one per cent. of the employers raised objection I was, rightly or wrongly, convinced that the amendments that were brought forward by the employers on the fixing stage were not serious objections with respect to the rates at all, but were merely put forward for obstructive and delaying purposes.

7443. *Chairman*: But it is easy to say that.—It is; but I am bound to record my feeling.

7444. It is better to avoid imputations if you can. We have had very few such imputations made before us.—Of course, I very much regret having to say some of these things. I went on to the Board, and especially in view of the statement read there on behalf of the employers, I believe everybody connected with the Board had very high hopes indeed;

but the employers have shifted their ground every time when it seemed that the Board was coming to grips; they seemed to want in some way to elip from the position. They admitted that they had completely changed their view, as they had completely changed their tactics.

7445. *Mr. Pugh*: Of course, that does not get you out of your difficulty. The fact remains that whosoever fault it is, you have a procedure which means that when this Board, representative of employers and employed, comes to a mutual agreement, that cannot be made effective; you have got to go back to the trade, and there is an opportunity for all sorts of objections, and you have to keep repeating your work. I am anxious, if it is possible, for you to help us by saying how in some way or other that can be avoided, and how to make the ordinary methods of wages boards apply; that is to say, how can facilities or means be provided whereby the Board can express to the fullest possible extent the views of the trade, so that its decisions, where they have been arrived at mutually—that is, by agreement of both sides—can be made effective as soon as possible?—Well, I take it that the reason for the sending out of these proposed rates and the waiting for objections is that the Board, as a Board representing the trade, is not quite sure whether the trade as a whole accepts—if I may so put it—a ballot in which both employers and employed vote. They can send in objections; it is like having a ballot after a tentative proposal has been made.

7446. Is that because your Board is not sufficiently representative?—I think two months is far too long. I think, say, two weeks is long enough, giving a few days in which they would receive the proposals; a week ought to be long enough to make up their minds one way or the other. I dare say they make up their minds in 10 minutes. I think two weeks would be quite long enough instead of two months for the objections to reach the Board. But my point is this: had there been heavy objections, heavier than to the first proposals, I could have understood that the employers might have felt that they had misjudged the position, and that even those reduced proposals that were agreed to were onerous; but in view, if I may call it so, of the ballot vote of the whole trade of this country, in which it is estimated that there are, I think, three or four hundred thousand people engaged, and you only get 644 objections, and on those objections the employers begin to try to break up what had previously been agreed, it seems to me that there was everything to show that we had well met the most difficult circumstances of the grocery trade in those agreed rates. Only 644 employers out of that number objected to the rates; that is, 644 out of 133,000 employers. It would indicate that the vast majority of the employers thought those rates reasonable rates, and yet in face of that—that is my point—when we have agreed rates, and less than half of one per cent. have objections to them, the employers set to work with a series of resolutions to try to upset them.

7447. *Lord Weir*: Might I point out as a very large and almost overwhelming factor, the very great change in general values during the period of these negotiations?—That is true, but there has not been such a serious change in values between the agreement stage and the objection stage two months later; and the rates agreed to were so low as compared with the rates being paid in other occupations. I have here a list of the rates, which I will pass round. (*Documents handed.*) This list shows in several occupations the rates for women of 18 years of age, and so on. It is on page 18. The rates agreed for people of 18 to 20 years of age in the rural areas were 23s. 6d., and in the towns 25s., and in London 26s. 6d. Now you can compare those rates with the rates which are being paid to women in other occupations—32s., 34s. and upwards.

7448. *Mrs. Lyttelton*: These are the last rates agreed upon, which are not yet in operation?—Yes.

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

7449. So that they were agreed rates?—They were agreed rates on the proposal stage, and you see the number of objections we had. If you take the men again at the age of 21—I have purposely drawn that red line on page 18—and the women at 18, and compare the rates which are being paid to men and women in what were notoriously sweated occupations, and the rates now being paid—there are three marked which came under the original Act—I think that meets Lord Weir's point.

7450. *Lord Weir*: I was not questioning actual rates at all, but I was questioning the difficulty of fixing a rate for a period when you have a very large change in conditions; I was considering effective machinery for doing it.—The Ministry has already communicated with the Trade Board, and I think the Board on both sides was pleased to hear it, stating that they would not stand out for the full period of four months; that the Minister would facilitate the rates being varied, which would apply either upwards or downwards. Both sides were pleased with that; so that suppose even the rates which I have shown, which are very, very low, as minimum rates which were agreed on the proposal stage to which so few objections were received, were confirmed, the employers might in a couple of months give notice—in fact, they could give notice at once as soon as they were confirmed—to reduce them again, and within a month or two it would be possible to get even a lower rate fixed; if the cost of living continued to fall, the wages would fall commensurate with it.

7451. *Chairman*: That is so at present.—At present it can be done. The Minister has said he will not hold it up. The Act gives him certain power—I forget the exact wording; he says it is not necessary that it shall be held to the four months. The letter was read to the Grocery Trade Board.

7452. I think you are confusing two things; so far as the continuance of the rates is concerned, the period is six months, is it not? It is there that the Minister has power to reduce; the two months allowed for objections cannot be reduced, if I remember rightly?—That is right. It would take about four months, and he said if anything could be done to facilitate the variation of the rate he would do it.

7453. That would have to be done by Act of Parliament.—Immediately one rate is confirmed, power should be given—

7454. I thought you were talking of reducing rates, four months is the time that is usually taken?—Well, he offered some facilities which would make it a little less than that.

7455. I think this only arises because you think it your duty to impute certain motives—which always, to my mind, weakens a case—but the point put to you was that there was this element, that during the three months or so which elapsed between the proposal of these rates and the fixing of them there had been a drop in prices and in wages?—Oh, quite; there is a fall in the cost of living, certainly.

7456. It was put to you that that was a reasonable point for the employers to take into consideration when the time came for actually fixing the rates?—But they did not, my Lord. If you will just follow it, I have tried to go through it—they did not move any reduction of the rates except as regards women under 21, and to exclude men over 50. They were not proposing a change of the rates.

7457. What were they proposing?—They proposed certain modifications.

7458. Are not those changes?—But not changes of rate throughout.

7459. What were they, then: what modifications were they?—I should like to give them here, if I may. One was that the rate should not be confirmed until after the Report of the Committee of Inquiry had been issued. That was one resolution. Another point was to vary the hours from 48 to 52, and to exclude all women under 21 and men over 50, and modifications of that character. I think, as far as one can judge, they felt that there was nothing before the Board which could justify them in wanting to vary the rates. They did not bring forward the

proposal that because there had been a slight fall in the cost of living the wages should be varied right through because of that.

7460. *Lord Weir*: That change in hours, of course, you agree is a difference of approximately 10 per cent. in wages?—Quite; but my reason for saying what I did—and, as I say, you can only take it as an opinion—was that these were brought forward with a view to delay when we were right up against the period when if it went forward, it looked as if the rates were going to be confirmed.

7461. *Mr. Bell*: A Trade Board in an industry not well organised was really intended to take the place, say, of the Joint Board in a well-organised industry. Can you tell us what would happen in a well-organised industry if a small minority of the employers were allowed by the rest of the employers to hold up an agreed rate?—Well, I think they would withdraw the labour from the firms who refused to comply if they were well organised.

7462. Do not you think the tendency would be to end the agreement between the two associations?—Undoubtedly it would; it would break it up.

7463. So that what would break up agreements between well-organised employers has a tendency to weaken the operations of a Trade Board which is operating amongst badly-organised employers and workpeople?—The same move, so to speak, would have the same effect on the Board. It is the only place where the employers and employees meet, and have the power of meeting together, in an unorganised or only partially organised trade. It is the only place where they have the power to meet together to discuss these matters.

7464. *Mr. Poulton*: Have I understood you correctly, that what you really mean to convey is that attempts in this kind of way are being made, and apparently successfully, to hold up what you consider ought to have been rates put into operation by altering small points instead of altering the basic foundation?—Yes. As I have mentioned, the majority of the Board fixed the rates. The whole attitude of the employers had completely altered in those two months. Each time as we seemed to approach the fixing and the confirmation of some rates, the employers immediately altered their ground every time, right through. They admitted that that was the case. I had to make the same statement on the Board, only more strongly than I am doing here; and the employers admitted that it was so.

7465. *Mr. Pugh*: Of course, you might have that in any case, but the question is, what practical means can be adopted to facilitate the machinery of the Boards? The period subsequent to a settlement being arrived at seems to cause a good deal of delay, which possibly would cause irritation on both sides. Can you suggest a practical means to be adopted?—I think the objection stage could be shortened, as I have said, to two weeks, instead of two months. There is no need, to my mind, for the Minister to take a month to confirm. I should think it ought to be possible within a week to say "Yes" or "No" to the confirmation of rates which have been fixed.

7466. That is when they are mutually agreed?—I do not see what purpose is served by the Minister not making up his mind more briefly. There may be some purpose. Whether it is felt that these are so wide that he ought to take a longer time to consider, I do not know; but I should have thought a week would be long enough. When the whole matter has been threshed out in detail by the Board, and the rates have been approved and fixed, surely a week ought to be long enough for the Minister to make up his mind whether he can confirm or not. That would shut out at once a matter of nine weeks between the proposal stage and the confirmation stage when the rates are brought into operation.

7467. *Chairman*: Is there any more you desire to say on that point?—I think not.

7468. What is your next point?—The question of hours is mentioned here, and I set out a Schedule. A point is made that it is difficult, if not impossible, to do the trade in the 48 hours. May I say that on

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

this point, as on so many others, the employers' point of view has shifted. When Mr. Cahill, on behalf of the employers, made his opening statement, it was the employers themselves who suggested a 48-hour week. It therefore would indicate that it is not because of the difficulties of the trade, and that the trade cannot be done in the 48-hour week—the period of the war proved that to be quite wrong—but it is because of the changed circumstances, and the feeling that now they can get something more elastic for their trade, that they are pressing it forward. This was another case where they admitted that they had changed their minds, and they put forward the difficulty of the person who is in the trade, but is not, perhaps, working in it; his wife may be minding the shop—a little general-shop keeper. There are powers under the Shops Act to regulate the hours of trading—a week of 48 hours; that is possible with 7 o'clock closing. Seven o'clock is the earliest possible closing hour under the Shops Act; that would be for five days in the week, and would give one late night, when the shop would shut an hour later, 8 o'clock. It would be quite easy under the Shops Act to secure local orders for closing on four nights in the week at 7 o'clock, shutting at 1 o'clock for the half-day holiday, and at 8 o'clock for the late night, whichever that may be, Friday or Saturday, or whichever day was most convenient; and by giving 14 hours for dinner and 2-hour for tea, that would work out at a 48-hour week. There is really no difficulty even for the small shopkeeper, and certainly it has been proved by the war that the business can be quite easily done within the 48 hours.

7469. *Mr. Pugh*: Is there anything to prevent the Board dealing with those details?—No; the Board is only concerned in fixing the normal week for the purpose of overtime, and we did agree on the Board to a modification which was to the employers' advantage, that with those who had been accustomed to covering up, as long as the time spent was under one hour each week, there would be no charge for the overtime—giving an opportunity to cover up in the provision shops. It generally takes anything from five to ten minutes, and that will not be counted as overtime as long as it is under the hour. So that so far as any special difficulties of the grocery and provision trade are concerned, as one who has served my time in the trade and has been in the business for 20 years as assistant and manager, I say that it is inaccurate to say that any of these things are impossible of application to the grocery trade.

7470. *Chairman*: What has been the usual number of hours in the grocery trade?—They have varied from 46 to 80, and in exceptional cases they have been even more than that.

7471. I mean in the ordinary case?—Ordinarily I should think they would be about 54. They have been reduced during the war, and they are unfortunately beginning now steadily to extend again. I am reminded that in all our agreements, where we have agreements, we have a 48-hour week—44 hours in the wholesale trade and 48 hours in the retail trade.

7472. Then you pass to apprenticeship.—On this matter I notice a statement has been made to the Committee that the workers' side objected to apprentices. That is inaccurate. What we objected to were proposals that the rates for apprentices should be below the Trade Board rates. I have the minutes of the Standing Committee here which show that to be the case. It was urged that apprentices properly apprenticed and trained were much more valuable. They were more valuable to the employer and more valuable to themselves. Yet while they were urging this, the first proposal was that there should be considerably lower rates right through the apprenticeship for those who were indentured apprentices. Remember, the apprenticeship system has been abandoned by the employers themselves during the last 30 years. There is only a little of it lingering yet in country districts. A new form of learnership is in operation with one or two of the multiple firms; but it is seldom for more than a year. But they

came forward at the Standing Committee with a definite proposal, and I asked if their proposals meant that the total amount that would be paid to the apprentices would be less or more than the total amount that would have been received had someone merely entered the trade without apprenticeship, and they said it would be more. They proposed that the first year should be 50 per cent. of the Trade Board rate; the second year 60 per cent.; the third year 75 per cent. of the Trade Board rate; the fourth year equal rates, and the last year 125 per cent.—that is, 25 per cent. more. I found, however, when I worked these out after I got back to the office, that the statement of the employers was inaccurate. On scale 1 the proposals would mean that the apprentice would receive on scale A for the rural areas £41 6s. less over the five years than he would have done if he had taken the Trade Board rate. On scale B he would receive £42 11s. 6d. less, and on scale C—the London area—£45 18s. 6d. less. Now, Sir, you suggested that we should not impute motives. I quite agree, but when it is obvious one cannot help seeing it. The whole of the effort of the employers has not been towards apprenticeship, since it is they who have abandoned it; but now they have confronting them proposals for a Trade Board, they are most eager for apprenticeship. They are, however, eager for it only if they are able to get it cheaper than if there was no apprenticeship. This seemed, as I said on the Board, a case where virtue would be its own reward. If it was true that the apprentices became more efficient assistants as the result of proper apprenticeship and training, they would, therefore, be much more valuable to the employer than the ordinary learner, and yet you will see that they are proposing to pay them less. That is my answer to the proposals of the employers with respect to the question of apprenticeship. I also sent round to see how it worked out.

7473. *Dame Adelaide Anderson*: I suppose the giving of training costs the employer something?—A lad who goes into a grocer's shop earns his money from the first day he goes in. May I just point out here that they agreed to certain rates for those who are not to be properly trained, while for those who are to be properly trained and be made more valuable, they are proposing to pay them less. During the last 30 years they have not been training them properly, I will admit; they had to pick it up, and they succeeded in picking it up. May I point out that in the growing multiple firms very little of the old skill that was required is now called for. That point was made by Mr. Cahill in his opening statement as a reason for low rates. The tea is packed. Many of the technical points that the assistant had to learn in the old days have now passed away owing to the specialisation of packing, and the result is that the grocery trade, certainly in the large multiple firms, is a matter of passing over to the customer certain things required, ready packed for the most part.

7474. *Lord Weir*: You say that as a Union you are not averse to the apprenticeship system?—That is so.

7475. Is that the strongest policy you have as regards apprenticeship for your craft?—I regret to say that we do not consider there is much craft left in it now.

7476. So that is the way you put it: You are not averse to an apprenticeship system?—That is about as strong as we can put it.

7477. It is a well-known practice in a large number of other industries?—Yes; but this is not an industry.

7478. Would not that explain the figures in your calculations? I mean there are apprentices who get paid definitely less than learners in many trades, are there not?—I could not speak for other trades. I can only speak for the grocery trade.

7479. I think many of the Trade Boards have quite definitely lower rates for apprentices than for learners?—That may be so. I am not disputing that.

7480. But you think that differentiation is unsuitable for the grocery trade?—May I put it this way I think it is wrong that one lad should go to a grocer

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

and be apprenticed for five years. If he learns anything different from that which is learnt by another lad who enters another shop without apprenticeship, it is of no value to him as a small grocer. Take tea blending. When I was an apprentice, I was able to take out a recipe for the mixing of tea. The porter was not supposed to keep the recipe, but the apprentice could. Tea blending is no longer done by the small grocer. If anyone learnt tea blending and tea mixing, he would have to seek a situation with one of the large multiple firms, because the small grocer no longer blends his tea; he cannot buy it in sufficient quantities. It pays him better to buy it ready blended by one of the big firms like Brooke Bonds or Payne's. This specialisation has taken away all the value of apprenticeship so far as these matters are concerned, and the learner going to the other shop without apprenticeship would take in the five years' learning period so much more money. The one is under an agreement to stop; the other is free, when he has learnt, say in three years, all the trade can teach him, to go anywhere in the open market and get his wages. This the former cannot do. This is what Mr. Cahill said in his opening statement: "Dealing only with shop assistants, the labour of the ordinary shop assistant at 21 is ranked a little higher,"—that is, than the porter—"but practically speaking the shop assistant also is to be ranked, for the purposes of a minimum wage, as comparatively unskilled labour, as their duties nowadays are substantially limited to handing over the counter articles already packeted in exchange for the purchase price." That is not our statement; that is Mr. Cahill's statement on the Trade Board. As I say, we are not averse to apprentices; we have not opposed it on the Board. We did suggest three years instead of five, and we felt that they should not be paid as apprentices less than the Trade Board rate. If there was any differentiation, we felt the apprentice should receive a little more, because he ought to be a rather more efficient employee. In any case, over the whole period, if it is to be five years, he should not receive less than he would have received as a learner over that period.

7481. *Chairman*: What is your next point? I see you set out certain rates and you compare them with rates fixed by other Trade Boards?—Yes, in other occupations. I have taken three of the old sweated industries.

7482. They are no longer sweated industries, are they?—Well, they came under the Board. May I develop that just for a moment? If the grocers are objecting to these low minimum rates, it would indicate that they know that the rates being paid at present are much lower, else there could be no objection to them; and those rates which are proposed are much less than is now being paid in trades which were brought under the original Trade Boards Act.

7483. *Mr. Poulton*: Because they were sweated trades?—Because they were sweated trades.

7484. *Mr. Pugh*: But they are no longer sweated trades; that is the point?—Quite. That will show you how anxious we are that the grocery trade should be in a similar manner improved.

7485. *Lord Weir*: In your statement you say: "It has generally been considered by the Trade Boards that a wage sufficient to independently maintain herself should be guaranteed to a woman 18 years of age, and sufficient to a man at 21 years of age to enable him to marry." Is that your interpretation of what you are called on to do by the Act in fixing a minimum?—I have seen that expression somewhere.

7486. But you sit on the Board yourself. Is that what you are applying yourselves to?—Yes. I feel that to be the case, but it is not my own original suggestion.

7487. That is how you feel it personally?—Yes. I think the point urged—I forget now who it was that urged it—is one with which I am in entire agreement.

7488. Do you act on it? That is what I mean?—As far as possible.

7489. *Mr. Pugh*: There are two sides to discuss that, I suppose?—In what way?

7490. I mean if you put forward that as a principle on which you want rates fixed, the other side have a say in the matter as to whether this is to be the principle applied or not. You do not necessarily carry your rate because you think it ought to be carried?—No; I am afraid the rates which are carried would not enable a young woman at 18 in the grocery trade to maintain herself at present, or enable a man in the grocery trade at 21 years of age to marry, or even begin to save in order to marry.

7491. Of course they are minimum rates?—Yes. As I say, the objection of the employers to them is a very clear indication that they know that many rates being paid at present are much below them. If you take porters you see that a man at 21 years of age gets 46s., 48s. 6d., and 50s. 6d. Shop assistants get 48s., 53s., and 55s. You practically have to cut those rates in half to get the pre-war rate of pay commensurate with the present cost of living. One has to remember that as far as the shop assistant is concerned, the cost of maintaining his personal appearance is much greater than it is in many occupations. No assistant could hope either to get a position or to keep one unless his personal appearance was kept fairly good. In the grocery trade he has to find himself with clean aprons during his work, and clean linen, and yet while the claim upon his dress is like this, his suggested rate is so terribly low. If I might give an illustration it might interest the Committee to show the change which has taken place. You know that under these rates all the vehicle workers are excluded. That was because the rates for vehicle workers are so much higher. When I was an apprentice—and there are others here in the grocery trade who can confirm this—the first hand in a grocer's shop was expected to get just double what the man who drove the van got. Where I was apprenticed, the first vanman, who drove the pair and looked after the horses and was as good as a veterinary surgeon in looking after them, received exactly half what the first countermau got. And it is customary to-day for the man behind the counter, if the goods are delivered safely, to take out of the till 1d. or 2d., which he records in the petty cash, as a sort of safe-conduct money to the carman because he has delivered the goods safely. It happens to-day that the man who delivers the goods is often getting better wages than the man who throws him out 1d. or 2d., so far has the rate of pay of the organised workmen changed as against that of the unorganised respectable shop assistant.

7492. *Chairman*: Now what is your next point?—The rates as compared with other Trade Boards; and I have also brought to your notice a declaration made on the part of the Appointed Persons which explains the very low rates which exist.

7493. *Mr. Poulton*: Could you amplify that a little? I am interested in that. I have read this passage two or three times this afternoon, and I have wondered whether there is anything behind the whole thing?—There is. The workers' side approached the Appointed Members over this. We felt we wanted to get a rate fixed. We wanted to get a bottom in because there is no bottom to the wages which are being paid in the distributive trades. I have shown that there are some working for nothing, and yet the rates which are being proposed were being used against the workers' side in negotiations with the large employers. There were even proposals from employers who had paid the higher rates to come down to the Trade Board rates. It was becoming exceedingly difficult for those of us who had to conduct negotiations for organised workers to meet the objections of the employers, and we put to the Appointed Persons the difficulty we were in. As the result of that, they made this declaration, namely, that the rates are minimum rates, and are not intended to be the rates for assistants of special merit, or assistants who are working for the larger firms. The Appointed Persons, sitting between and hearing all sides, considered that the least favourably placed shopkeeper should pay these rates to his assistant in a small shop. That justified us in saying to employers who wanted to reduce rates to the Trade

20 December, 1921.]

MR. JOHN TURNER.

[Continued.]

Board rates, "Yours is a highly organised firm. The men you have are experienced men and are justified in receiving something considerably over the Trade Board rates, because our own Union rates are very much higher than the Trade Board rates."

7494. The rate that was fixed, if I mistake not, was a minimum rate?—It was.

7495. So that your minimum is actually based upon this statement that it is not merely a minimum, but would be a sort of extra minimum, because they have based it on the least fortunately placed shops in the poorest district of each area?—That is right. That brings me back to another point. You will remember the Chairman asked me about the subnormal worker, and this is really proving the point I was then urging, namely, that the rates that have been fixed on the Grocery Trade Board are not expected to be paid to, what shall I call him, a shop assistant with any merit or qualification, but they are only expected to be paid by the very poorest shopkeeper. It is an irreducible minimum for the trade, and it is left for the Trade Union, or for the assistant with personality and energy, to be able to get considerably more than those rates. It really meant the slow worker. A little shopkeeper in a poor district cannot get the best type of assistant. He would not work there; he would want a better class shop. It was really to meet that type of assistant that the rates had to come down, to meet the case of what one might describe as the poorest type of assistant who is chiefly engaged by the poorest type of employer. Therefore, the rates are cut down to the irreducible minimum.

7496. *Lord Weir*: And have become true minimum rates?—Absolutely.

7497. Which are understood to be payable in the trade—also to the minimum percentage of workers?—That is so.

7498. *Dame Adelaide Anderson*: And abandoning really the principle of ability to maintain yourself?—I urged that on the Board, but the Appointed Persons had to put it that the evidence they had received made them willing to accept a very low rate. It is left for the workers in more highly organised firms, particularly in multiple firms and the Co-operative Societies, to organise and get a higher rate than this, as one which will give a reasonable standard of comfort.

7499. That is really to get to the top?—That is so.

7500. *Mr. Pugh*: Suppose that these minimum rates had been confirmed, would that have meant an advance to the workers in this industry?—It would, I am sorry to say. It would not mean it to members of our Union. As I have said, we have had to resist the attempt to bring them down to the proposed rates of the Trade Board; but to a very large number of employees in the grocery trade I regret to say it would mean a considerable improvement.

7501. And then the Appointed Members on your Board felt that they were agreeing to rates which were so low that they deemed it advisable to place on record a hope that these low rates which they had agreed to would not be quoted in any arbitration proceedings or anything else affecting workers in some other industry?—That is so. And, of course, the settlement we just recently got with our adjusted agreement with the Army and Navy Stores, only a week ago, does not come down to the Trade Board rates. They are a highly organised Society, and it would be disgraceful if they should pay the minimum which the very poorest shopkeeper in the worst situated district is expected to pay. But I must say that the Army and Navy Stores prior to there being any organisation, were paying even worse than some of these proposed rates, because one has the effect of always dragging down the other.

7502. *Lord Weir*: You say that if that rate were confirmed, it would bring up a very large number of the low-paid people in the grocery trade?—I regret to say so. It is self-evident on the face of it, because the employers would make no objection if they were paying something higher. We have drawn up a schedule of the low wages paid which shows the result of our recent investigations, and proves what

I have said. I would like to give a quotation here as a sort of proviso to that. It is from Mr. Willis's book on Trade Boards. He says: "But the necessary improvement of a rate of pay in the trade ought not to be stopped or hindered out of consideration of a few inferior businesses which have hitherto existed on underpaid labour and which are and will be incapable of paying the rate appropriate to workers in the trade generally." That is Mr. Willis's view with respect to the purpose of the Trade Boards Act—that if there should be a few inferior businesses which are hurt by the application of the Trade Board that ought not to hinder its application to the whole trade. They certainly would be very, very few, because the small businesses in the grocery trade do not employ anyone at all. It has to be a business of a considerable size before it employs anybody beyond the proprietor; and if he is doing sufficient business to employ an assistant he is doing sufficient turnover and volume of business to pay the rate.

7503. If he cannot pay the rate he is better out of the business?—Quite so.

7504. *Chairman*: Then you refer to the argument of the employers at the present moment that these rates should not be confirmed, and you say that was the purpose of the Act of 1918?—Exactly. Mr. Roberts, I think, put it very forcibly in his speech on the Second Reading of the Amending Bill. It is just this situation which is being urged by the employers why the rate should not be confirmed, and yet it was just this situation that the Act was amended to meet.

7505. And you say that Trade Boards were first set up in those trades where there were low wages and ineffective organisation; that you think is the right principle?—Yes.

7506. You say that the effect of a Trade Board is to fix a minimum which can be paid by the least fortunately placed employer in any trade, and to leave to individual or Trade Union action the securing of something better for the more efficient workers employed in the highly capitalised and organised firms?—That is so.

7507. Then you speak about the proceedings of the Trade Board being public?—It has been urged before this Committee that the sittings of the Board were private—that they were secret. That was urged in a manner which appeared to the workers' side as if it was something which was an argument against Trade Boards. If that is so, the workers' side at any rate, have no objection to the proceedings being made public. They have nothing they wish to hide.

7508. I do not remember that suggestion being made?—It was in the evidence of Mr. Cahill; that seems to be the implication behind what he said—that it was a secret meeting; something done in secret and that they did not have the limelight of publicity and criticism. We should court publicity and criticism as far as the workers' side are concerned. I do not think the employers, however, would be likely to fall in with the views of their own spokesman in that respect.

7509. You mean that you think it desirable that the Trade Boards should sit in public?—I have no objections to that.

7510. But do you think it desirable?—I am bound to say there are many arguments against it; but if the employers are going to urge that as a reason why rates should not be confirmed, then we would welcome, and would ask for, publicity and criticism.

7511. Then you refer to the Australian example.—That is because again you had statements put before you which seemed to imply that Australia was very anxious to get away from its Wages and Conciliation Acts. Our inquiries would indicate that it is nothing of the kind, but that they are attempting to improve and extend them. As Commissioner Aves was to report on the Shops Act, we also saw his report with respect to the Wages Boards.

7512. Then you refer to the area question.—I developed that a little this morning. I said that I did not think the population method was the best one.

20 December, 1921.]

Mr. JOHN TURNER.

[Continued.]

7513. Then you ask that the Committee should draw the attention of the Minister of Labour to the feeling created in the minds of the workers.—I am afraid it is really not within the province of your Committee to make recommendations of this character, and that is only put in here because it is contrary to the suggestion that you should advise the other way from the employers' side. We are not urging that seriously for your Committee to undertake; but we feel, as the employers' side have put forward the proposal that you should recommend against this, that we were justified in the rebutting evidence in asking you to do the contrary.

7514. *Mr. Poulton:* I take it that despite the disappointment to which you say you have been subjected, you still feel, looking at the matter broadly—not from the point of view of your Union but from the point of view of the nation—that Trade Boards are in the interests of the people?—Undoubtedly.

7515. But you want in addition to what you stated in your previous statement, more elasticity?—Yes. It sounds paradoxical, but it wants a little more tightening up and a little more elasticity. I think if the Boards did not take so long over their work it would be a great improvement. We shall have sat for 18 months by next month on the Grocery Trade Board hammering this thing out. That is too long. Some method ought to be applied by which decisions could be arrived at more quickly, whether they are for downward or upward movements. I think that the Trade Board system has just that elas-

ticity which enables it to meet the changing conditions in industry which no national minimum award as a statutory matter could give. Whether there should be a national minimum wage below which no one should go at 21, which should be binding on all the trades at adult age, I am not quite sure; but certainly we could not hope, by getting national wages, for anything like the elasticity that there is with the Trade Boards, which can follow in one direction or the other the changes which take place. I have seen no proposals at present—although, as I say, I sat on the Joint Industrial Committee No. 2, where we discussed the subject very fully—which seem to meet the difficulties of the situation anything like as well as the Trade Board system. I had not then had the practical experience of the Trade Board that I have had since; and although I am very disappointed with the result of the Grocery Trade Board—I think all the workers' side are bitterly disappointed with it—I still feel that if the Trade Board idea could be perfected and amended and improved, it would give the best machinery for dealing with industrial situations.

7516. *Lord Weir:* You would agree that for the initiation of a new set of rates to become statutory for an industry, you would require infinitely more time than for a variation of a rate?—Quite; I do agree as to that. But I think 18 months is too long even for a start.

Chairman: Thank you.

(The Witness withdrew.)

Mr. J. R. LESLIE called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

STATEMENT OF EVIDENCE OF Mr. J. R. LESLIE, Organising Secretary of The National Amalgamated Union of Shop Assistants, Warehousemen and Clerks, Chairman of The National Minimum Wage Committee of the Union, and Secretary of the Workers' Side, Grocery and Provisions Trade Board (England and Wales).

I desire to supplement the evidence submitted by Mr. John Turner, General Secretary of the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks, and Chairman of the Workers' Side, Grocery and Provisions Trade Board (England and Wales) and to lay special emphasis on a few outstanding features.

(1) *Rates in Association with Union Rules.*

The special duty of the National Minimum Wage Committee of the Union, is to consider carefully all matters appertaining to wage question. In formulating wage proposals, the Committee has always borne in mind the strength of the organisation to enforce rates, and the application of such rates in accordance with Rule 25, Clause (2) of the Union:—

"Rule 25, Clause (2).—Members must not accept situations or offer their services in any district at a lower rate than the minimum fixed for the district. Immediately any violation of this Rule is discovered it must be reported to the Branch Committee, who shall investigate the case, and if proved, inform the Executive Committee, who shall, after warning the member, have power to suspend the member from all benefits until the Rule is complied with."

This accounts for the very modest requests of the Union.

(2) *Withdrawal of Labour only after Ballot Vote taken and Arbitration Refused.*

The policy of the National Executive Committee, has been not to approach firms or sanction withdrawal of labour unless at least 65 per cent. of the staff are organised. A withdrawal of labour only occurs when all efforts at amicable settlement has failed, and only after a ballot vote of those concerned has been taken.

Strikes in distribution have not been obviated because of employers anxiety to recognise collective bargaining, or grant concessions readily. The services of conciliation officers have been constantly called upon to prevent open rupture, and arbitration has always been offered. Despite this, settlements have been avoided by many employers, until strike notices were tendered. The following outstanding disputes within recent years, emphasise this contention.

(3) *Outstanding Disputes During Armistice Period.*

A firm of grocers, Edinburgh, declined to recognise the Union or concede the Union rate of wages. The employees to the number of 88 out of a staff of 90 ceased work as a protest. Here ex-service employees with long service in the firm, were paid the miserably inadequate wages of from 33s. to 50s. for salesmen.

Thirty-two women in a dairy company's shops in Edinburgh left work in consequence of the firm's demand that they should sign a statement to the effect that they were satisfied with their conditions.

A stores, London. The employees, numbering 4,000, had to take similar action, and after two days strike, arbitration was resorted to.

At Wolverhampton, a firm of drapers presented their staff with the alternative of leaving the Union or the service of the firm. This because of overtures to improve the wages of the staff. Two-thirds of the staff, 87, refused to resign their Union membership, and were out of work several months.

At Bath a strike was only averted at the last moment in one of the largest general stores by the intervention of Captain Ham, of the Conciliation Department. Here ex-service members of the staff were receiving as low as 30s. per week, and the settlement meant an average advance of 20s. per week.

(4) *Ex-Service Men Taken Advantage of.*

During the Armistice period the Union was kept busy dealing with wage negotiations arising mainly out of grievances of ex-service men. Numbers of these men gladly accepted a chance of returning to civil life, and employers took advantage of two factors. One, the anxiety of men to get back to civil life and find employment. Second, men not realising the change in the cost of living until their return.

20 December, 1921.]

Mr. J. R. LESLIE.

[Continued.]

While in the Army their needs were provided for them. When once out of the Army they quickly discovered that much more than the pre-war rate of wages was necessary to meet their requirements (see Minimum Wage Committee Report, page 35 of the Annual Report, 1919).

(5) *Multiplicity of District Rates.*

Much has been said as to multiplicity of wage rates and wage by age. The policy of the National Minimum Wage Committee has been to simplify rates and decrease number of scales. Experience showed that in the 42 District Council areas of the Union the difference in rates amounted to approximately only 2s.; it was therefore decided to have only one national scale for the whole of the country, metropolitan area excepted.

(6) *Wage According to Age.*

A minimum wage according to age has always been the policy of the Union, and no serious objection has been taken to this. Only since Trade Boards began to be discussed did employers voice objections. In all the Union literature it has always been emphasised that merit and position should warrant more than the minimum asked. If true of Trade Union rates, then surely more true of Trade Board rates.

(7) *Lack of Organisation among Employers.*

Wage negotiations have been mainly confined to individual employers as little organisation exists amongst employers in distribution. Only in the last issue of "The Grocer" a leading article says:—

"In the annual report which was presented and adopted at the meeting of the North Eastern Council of Grocers' Associations, in Newcastle-on-Tyne, on Wednesday, regret was expressed that some of the Grocers' Associations which were brought into being during the war period are for various reasons lapsing. The complaint is not peculiar to the area embraced in the work of the North Eastern Council; from all parts of the United Kingdom there have recently been expressions of regret—and in some instances disgust—that so many of the retailers, who, during the period of food control, national service and other difficulties arising from the great war, flocked into the existing Grocers' Associations, or formed new ones for defensive purposes, are now reverting to their former policy of ploughing a lonely furrow."

This exemplifies the individualistic character of distribution, demonstrating the need for Trade Board machinery.

(8) *Underpayment of Workers.*

Underpayment of employees is not confined to small traders in certain localities, but occurs in some large firms. One large grocery firm dismissed certain girls after the Armistice, and offered applicants 18s. who had been earning 28s. and 30s. in other firms. The Union had to appeal to the Employment Tribunal at Brighton on behalf of these women.

(9) *Character and Composition of Workers' Side of Grocery Trade.*

On the character and composition of the workers' side of the Grocery Trade Board (England and Wales), I venture to say the workers' representatives are as representative of the grocery trade as the employers' side. Of the 39 workers' representatives, all are employed in the trade with the exception of ten or twelve Trade Union officials, most of whom have been in some section of the trade and have a wider and more varied experience of the trade than the average employer. The Shop Assistants' Union, which caters for the bulk of those employed in the trade, and is representative of the largest number organised, has only two officials, who were elected as Chairman and Secretary respectively by the workers' side—both of whom were apprenticed to the grocery and provision trade.

(10) *What the Trade Requires.*

The workers' representatives believe they are quite as competent to judge what the trade requires as the employers are. They are desirous of raising the status of the trade.

On the apprenticeship question they naturally want to see some guarantee of proper training, and not merely leave the training to be the function of some school instead of the employer. Proper training and an adequate wage would lift the trade out of its present chaotic condition.

The only objection urged to apprenticeship by the workers' side of the Grocery Trade Board was when it was suggested that the wage rate should be less than that provided for young people by the Board. The workers have always desired apprenticeship under proper conditions; it is the employers who have abandoned it during the last 30 to 40 years.

(11) *The Fate of the Old Men.*

To suggest the exclusion of workers of 50 years of age from the provision of a Trade Board, speaks volumes. Taken in conjunction with the objection to junior rates, and the fixing of rates up to 25 years, it bespeaks a shorter period for the enjoyment of full rates than probably any other occupation.

(12) *The Working Hours.*

On the question of working hours, two facts ought to be noted. First, no objection by employers to a 48-hours' week has been made until within recent weeks. Second, Co-operative Societies offer a fair criterion as to the needs of the public. Members of Co-operative Societies fix the hours of their Stores, and they are not likely to arrange them in a manner to inconvenience themselves as customers. Long hours and low wages have been the bane of the Distributive Trades. While organisation on both sides is imperfect, the Trade Board system offers the only solution to the present situation.

7517. *Chairman:* Mr. Leslie, you are the Organising Secretary of the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks?—Yes.

7518. Also Chairman of the National Minimum Wage Committee of that Union?—Yes.

7519. And also Secretary of the workers' side of the Grocery and Provisions Trade Board for England and Wales?—That is so.

7520. You have heard Mr. Turner's evidence, and you desire to supplement it?—Yes. There are just one or two points I would like to emphasise. I have seen in evidence a good deal of that which has been said about the happy relations between the employers and the assistants, and about the fact that there have been very few disputes in the distributing trades. I am afraid that the employers can hardly lay that flattering unction to their souls because of the treatment meted out to the staffs; it has rather been due to the methods that have been adopted in dealing with negotiations. It is outlined in my statement how, first of all, we have never made extravagant demands, for the simple reason that we have got to take into consideration how the rules of the unions will affect the members. It would be a very serious handicap to our members if we asked too high a rate at any time and laid it upon them that if they accepted less they would be penalised by the union by being deprived of benefits, or perhaps being expelled. Therefore, the Minimum Wage Committee has been very careful in drafting union scales. At the same time, when we approached employers, we have tried every means possible to effect settlements amicably, and have invariably offered arbitration so that a strike was absolutely the last resort after everything else had failed. But despite that, you will see that in the Annual Report for 1920 there are 10 packed pages of the negotiations which we had throughout the country. Those largely arose as the result of the return of ex-Service men from the Army. I have mentioned in my statement what happened when they came back. You know that a goodly number were very anxious to get out of the Army, and they simply accepted jobs for the sake

20 December, 1921.]

Mr. J. R. LESLIE.

[Continued.]

of getting out of the Army. While they were in the Army, as everything was provided for them, they had no idea what the difference in the cost of living meant; but after they had resumed employment and they began to realise what it meant, they saw the need for organising and for asking the Union to take action on their behalf. You will see quite a number of disputes occurred as a result of that. Take the first one I have mentioned where 88 out of a staff of 90 ceased work. Now there were ex-Service men being offered a wage of 30s. a week at a time when the cost of living had reached 120. The firm absolutely refused to negotiate or do anything, and ultimately the men went on strike. The same thing occurred in quite a number of places. I have here copies of agreements that were submitted to employees which they were asked to sign. There is the case of one of the company firms which asked the girls to sign the following: "I am at present satisfied with my wages and conditions in your employment, and am prepared to leave this question for the future in your hands." If a girl did not accept that then she was to sign the following statement lower down: "As I am not satisfied with my wages and conditions in your employment, I herewith tender my resignation, which will take effect as from Saturday, the 20th September." Those girls refused to sign that form and to leave the Union, with the result that they came out. The Army and Navy Stores was of course a notorious case. At Bath I had to go down there to one large firm who had employed ex-service men at 30s. a week. At Wolverhampton there was a large firm where the girls were given the option either to hand in their cards to the employer, or to leave the service of the employer. They refused to leave the Union, and were out of work for several months. Therefore, happy relations only exist as long as the employees are prepared to leave their conditions entirely in the hands of the employers. Immediately the employees start to organise you find that these happy conditions do not exist. It is true in distribution that probably a goodly number of employers are, I should say, about a century behind employers in production from the point of view of accepting collective bargaining. It is something new to them, and they do not like it. That probably accounts for their opposition to interference on the part of a Trade Board. Then unfortunately victimisation has been far too common, and that has prevented organisation. Assistants are handicapped because of the terrible weapon that the employers possess in the matter of secret references. You see, if an assistant goes to another employer, the prospective employer writes to the old employer, and it is sufficient for the latter to remain silent to prevent the employee securing another situation. That has acted as a very considerable barrier. Then comes the question of wage by age. I say there has been a considerable amount of objection to the question of wage by age. Strangely enough, we never heard very much about that objection until the Trade Board came into existence. It has been the policy of our Union all along. We have always fixed it by wage by age. It is quite true that age generally works in association with experience; and we have contended from the very outset that wage by age was a necessary protection. We have always adhered to that, and it has never been very, very strongly objected to; in fact very little was said about it until Trade Boards came into existence.

7521. *Mr. Poulton*: On the whole has that worked out satisfactorily?—It has. In all our agreements you will see it is wage by age. As a matter of fact, that has been the practice of distribution as a trade.

7522. *Mr. Bell*: I notice that the suggestion was made that the employers had asked that Trade Board rates should not apply to females under 21?—Yes, that is so.

7523. What effect would that have had?—It would have had a considerable effect because the wage under 21 was so small. If they were left uncovered under 21 it would have been a very small wage for women.

7524. Suppose those under 21 had been exempted from the operation of the Trade Board, what effect

would it have had on the employment of females 21 and over?—If they exempted those under 21?

7525. What I am trying to get at is the possibility of paying a much lower wage to a female under 21 than the rates fixed by the Trade Board for those of 21 and over?—If they could get the female rates reduced to that rate, the effect would probably be that they would employ considerably more women.

7526. Under 21?—If they could get them exempted.

7527. Carry that a little further. Suppose those under 18 were exempted or those under 16 were exempted, would that have a tendency towards the employment of a larger number of those to whom the rates did not apply?—We object very strongly to the exclusion of those under 16. We saw the danger, but at the same time we had in our minds the possibility of the Fisher Act operating within a very short time.

7528. *Mr. Poulton*: In view of the difficulty which your colleague pointed out to us, suppose those women had been exempted, would it not only have had an adverse effect upon the women, but a very adverse effect upon the male employees?—Certainly.

7529. *Chairman*: You say that under-payment is not confined to small traders?—Quite. There is one large firm in particular which is notorious in that respect. I had occasion to deal with this particular firm when, after the Armistice, they dismissed a number of their women. It was supposed at the time that they were dismissed in order that men might be employed. But other firms had dismissed women, and instead of their taking back the men they advertised for women. The women went and applied for the situations and were offered 18s. a week—women who were earning 28s. and 30s. a week in their previous situations. We had to go to Brighton to the tribunal to appeal for them at that particular time because they were sent to this particular firm for a situation, and when they refused it because of the low wage, they were refused benefit. The Chairman of the Appeals Tribunal upheld our contention and considered that the women were quite justified in refusing to accept such a low wage. That was in connection with one of the large multiple firms.

7530. *Lord Weir*: Does that still obtain?—Yes; in that particular firm the conditions have always been very bad. They employ a considerable number of women. I can give you the name of the firm. Then as to the character and composition of the Board, I saw evidence given by a gentleman who is not a member of the Board, and he made a statement that there was a large number of Trade Union officials on the Board who had little knowledge of the trade, and therefore were opposed to the apprenticeship system. There are 39 workers' representatives on the Board. Out of that 39, I think roughly there are 10 Trade Union officials, and I believe that out of the 10 there are seven who have been engaged in the trade in some section or another. Mr. Turner, as he pointed out, was in the trade. I also served my time as an assistant and manager; and Mr. Turner is the Chairman, and I am the Secretary of our Union, so that we know exactly what the conditions are.

7531. *Mr. Bell*: What do you mean when you speak of a Trade Union official?—I mean a full-time official.

7532. So that there is a possibility that when the other witness gave evidence and dealt with this matter he was considering a member of the Committee on a Trade Board as a Trade Union official?—It is quite possible.

7533. And in that regard it would be quite true to say that practically all of them are Trade Union officials, if you are going to regard members of Committees as officials?—Yes; but that cannot be said about the Grocery Trade Board.

7534. *Chairman*: I do not think anybody said there were more than 10. But there are 10 full-time Trade Union officials in the proper sense?—That is quite correct.

7535. But you say there are only three who have not been engaged in this trade?—Only three to my knowledge. I am not quite sure that the three have not been engaged in some section of it; in fact I

20 December, 1921.]

Mr. J. R. LESLIE.

[Continued.]

learnt only the other day in the course of conversation with the representative of the Vehicle Workers that he had been three years in the grocery trade, but, to use his own words, he was so "fed up" with it that he went outside.

7536. At any rate, there are not more than three?—There are not more than three. Of course we contend that with the varied experience they have had as Trade Union officials they probably know more about the trade than an individual grocer who has probably not been outside his grocer's shop.

7537. On the apprenticeship question, I understand you agree with Mr. Turner?—Yes. On the question of apprenticeship there was one point we emphasised. We wanted to know from the employers in the grocery trade what they intended in the way of giving proper training to the apprentices, because many of the grocers cannot give proper training to apprentices; they have not got the facilities. As against that they put up the Incorporated Institute of Certificated Grocers. We contended that the grocers ought not to take advantage of a school in order to escape their own obligation to train the lad. Any assistant, or any learner, could take advantage of the school himself. Why should they therefore take advantage of this school to have a young lad and to tell that young lad, who is an apprentice, to go to this school and so get him at a less rate than that fixed by the Trade Board? Another thing was that they were not prepared to fix any limit to the number of apprentices to the number of journeymen. They were to be unlimited. Therefore, there was nothing to prevent them starting a shop with quite a number of young lads and perhaps only one or two journeymen. It would be impossible for one or two journeymen to instruct those lads properly.

7538. Suppose the proportion of apprentices to journeymen were properly dealt with, and there was good security that the apprentices would be taught the trade, do you still think apprenticeship is a good thing?—Yes; as a matter of fact, I have had more to do on the Grocery Trade Board with the question of introducing technical education than any man on the Board. It is over 20 years ago when a partner in the firm of Honeyman & Wilson, of Edinburgh, died and left a considerable sum of money on behalf of decayed grocers, as he said, or for the better education of grocers' assistants. The Union took the matter up at the time; we thought there were plenty of charitable organisations to look after decayed grocers, and we wanted better instruction for the coming generation. The result was that technical classes were started at the Heriot-Watt College. Those were the first technical classes of this description started in this country. From the very outset we have never been opposed to apprenticeship; we have encouraged it. It has been the employers who have given it up, and it is only recently that they have sought to revive it.

7539. It is not so important, I gather, in your trade as it is in a manufacturing trade where there are special processes to be learnt?—I should say that is so; but there is this that can be said for it: It was recognised that the average grocer, unless he had had a proper training was practically at the mercy of the wholesaler or of the manufacturer. At those classes they were given instructions with regard to the adulteration of foodstuffs. Demonstrations were given showing how foodstuffs were adulterated, and all that sort of thing. I do not know, however, that there are many grocers in the country who can instruct their apprentices in that direction.

7540. The art of blending seems to be one of the things to be taught?—Yes.

7541. Dame Adelaide Anderson: There is no objection to apprenticeship training being given at the Heriot-Watt College or elsewhere is there?—No; we do not object to that. We do object, however, to employers seeking to take advantage of the fact that because an individual is characterised as an apprentice he should get lower rates. A lad could go to the classes on his own account.

7542. It does not matter whether the grocer gives the instruction personally or through someone else

whom he supplies. The main point is that the training should be given and given for a grocer?—Quite.

7543. And although it might not be so important for a grocery worker as for a manufacturing worker, general knowledge about the industry might be infinitely valuable?—Certainly it might be very useful.

7544. Anything to train the intelligence to understand the articles handled would be of value?—Quite. Then there was the point about seeking to exclude men of 50. They only want them after the age of 50 if they can get them cheap, and yet they do not want to give the men full rates until they are 25 years of age. That is a shorter period for workers to have full rates than in any other occupation I can think of. It is only between 25 and 50 when they are to be entitled to full rates.

7545. Mr. Poulton: Would you agree that, if there are any special cases, the Board should have full power to deal with them?—Yes, quite. We asked them to state whether it was mental or physical disability, because when we looked at the other side the majority of the employers were over 50 years of age. Then there is the question of the working hours. I notice it was stated that the Co-operative Societies could hardly be taken as a criterion. I think they could be taken as a very good criterion, for the simple reason that the Co-operative Societies are owned and controlled by their own members. I do not think that the average member of a Co-operative Society would go to a meeting and vote for something that was going to inconvenience them, and they decided at their meetings what the hours should be. In the North of England it is common to have a 44-hour week, and in very few cases that I know of is it more than a 48-hour week. They cater for a working-class custom. If that can be done by Co-operative Societies there is no reason why it cannot be done by others. If you take the West End firms catering for the other section you find there that they work less than the 48-hour week. Therefore, I see no reason why a 48-hour week could not be observed. The question of 48 hours being too short never arose until we reached the objection in the month of November this year. For 16 months it was never raised on the Board. For 16 months not a word was said against the 48-hour week by the employers.

7546. Chairman: We had some evidence on the point. Is there anything in the point that at certain places there is more trade at one season of the year or one night of the week, and that the old custom was for the worker to do the extra work in return for having rather a slack time on other days or at other times in the year—a sort of give and take?—There is always provision made for a late night under the Shops Act. Friday and Saturday have always been considered late nights. That could be operated on the 48-hour week quite easily, and provision could be made for it accordingly.
